Get out much? Part 1: I got into my car with a friend and we both noticed a pleasant smell. He asked what it was, and I said I wasn't sure. We drove around for a while, commenting on how yummy it smelled; I was convinced there was unwrapped food in the car. It turns out a bottle of Rasberri Absolut had been slowly leaking for several days. At least we were right about the yummy part.

It's tilting! I was taking my tray back when 3 girls swooped in front of me. They couldn't just put their stuff on the belt though, oh no. They stood there for 3 minutes trying to organize their plates and cups so they would all fit on one tray without falling off. I just wanted to throw my stuff on top and yell "JENGA!"

Breakin' the law: I got another parking ticket (same place as last time). I really don't care, actually. If you don't pay it, it just get put on your bill for the semester. Let's see, a $28,000 cost for the year and you just added $10? Well **that** broke the bank…

Dr. Livingston, I presume? Have you seen the tent in the Mardrigal Line that has the wooden supports? It looks like it belongs on an African safari. I keep waiting to see an old guy sitting in front of it with a brandy snifter and an oversized pipe.

Our Lady Blindness: For the first 15 minutes of the concert, I was convinced that we had been lured there for the sole purpose of blinding us with the stage lights. That was the first time I was at a show where more lights were directed at the audience than the band. I still see spots.

Get out much? Part 2: There was a sporadic mosh pit and crowd surfing at the concert. Now, I guess during a more intense song, Our Lady Peace could inspire that kind of thing. But no, it usually happened during the tame songs… the ones you'd expect to slowly sway to at a middle school dance. I guess that's what happens when you're stuck out here in the mountains. "Is that music?" "Uh, it's Barry White." "Sweet! MOSH PIT!"

Security, report to the front: Luckily, there was enough security at the concert to repel a small invading army. I think the ratio of security to crowd was 1:4, which, face it, is necessary in this crazy little town. They were very effective though. Only one person made it onto the stage, but security could hardly be blamed for it. He was a security guy himself.

NOT so Trivial Revolutions

New campaign leaves important changes behind

Genna R. Welsh

If I were to describe to someone the hottest topics in the gossip of Juniata in the past few years, one of the first subjects mentioned would undoubtedly be our endless construction.

Within this topic, the most recent development is the new Halbritter Center for the Performing Arts, a monument that embodies Juniata's pride in construction.

Following closely behind the Halbritter is certainly the von Liebig Center for Science. But there is another.

Before I tell you about this huge construction project which is freshly completed, I would like to take a moment to contrast its magnificence against a few tidbits of needed construction repair that have been left untouched here at good ole Juniata.

In Good Hall, room 222, you might notice paint chipping. In my recent three classes in this room, which must be the most-used room in the building, I couldn't help but wonder, "Does the paint falling off that wall and onto my book bag contain lead? Or should I merely be concerned with the Agent Orange that my sneakers absorbed while walking through a JC lawn on the way to this class? And worse, could the two cause a potential noxious reaction when combined?"

Good Hall does have a new amenity, however. For a few days, room 320 hosted a new blind. Not quite as spectacular as the blind that makes the Susan von Liebig theatre a black box, this blind could double as a pumpkin costume for Halloween when painted orange and stuffed…or simply as a garbage bag for carrying your everyday trash.

So you must be pining to know what the new magnificent feat of construction is on campus. I like to call it the "Unofficial Chuck Knox-Endowed Outdoor History Lounge for Historical Contemplation." You know what I'm referring to—that new circular patio behind the I. Harvey Brumbaugh House and Humanities, which seems to serve little foreseeable purpose as of yet.

My point is that, in a campus where diversity workshops painstakingly work for racial and cultural acceptance (which should be championed), we must support these types of diversity when expanding and improving our campus, as well.

I mean, does anyone else think it's unfortunate that the library, the Enrollment Center and Good Hall—which, as our main social science building, is vital to our liberal arts college and in which even our natural science majors are required to take classes—are inaccessible to the physically disabled?

Halbritter and von Liebig are accessible, and that is optimistic, but we must be mindful of what necessary changes we're forgetting about while building a newer, better Juniata. But this is just my opinion on all the construction that causes such a buzz and clank around our community—and the construction that neglects to make a sound.

Juniata Bubble

continued from page 6

the New York Times several times a week and explained, "I feel disconnected if I don't know about the issues that will affect my life or already are affecting my life." He went on to say that by not paying attention to issues in the headlines like the economy, social security or the war in Iraq, we are going to be unprepared to handle the world once we break free of the bubble.

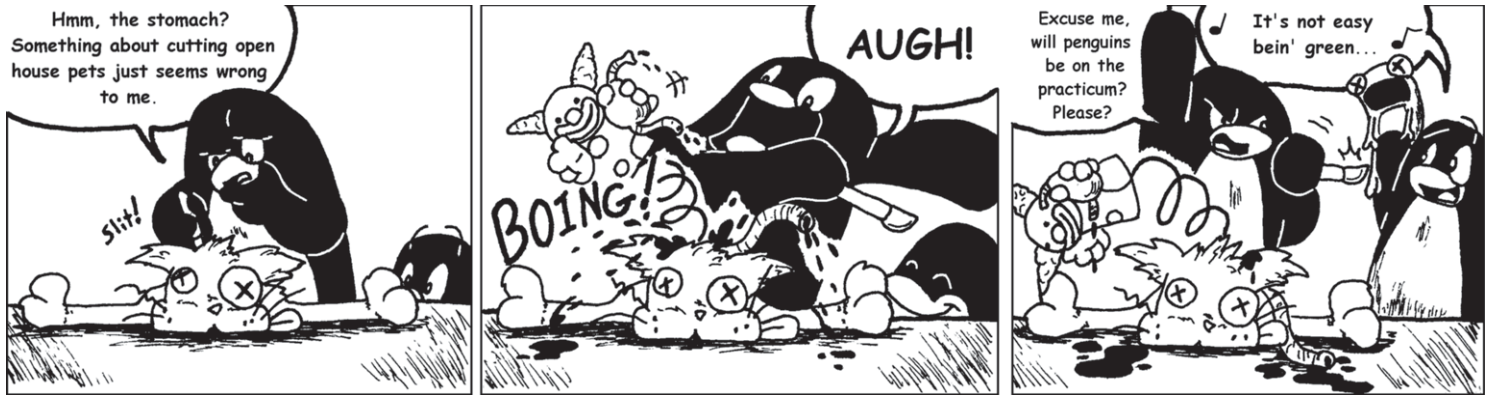
Do students really care enough to want to know what is going on, or are they content to reside within themselves? We cannot expect to make a difference in the world if we are unfamiliar with the events that are shaping their lives.

Assistant Dean of Students Dan Cook-Huffman understands the busy schedule of students, but he also said, "Students should take more seriously the idea of being informed citizens."

Cook-Huffman explained that keeping informed affords students the right to put their voices out there and improve the world for future generations. He said, "Students won't be able to make a difference until they realize what they think and what they do matters."

Once students reach college however, finding out world news becomes a burden that can only be alleviated by actively seeking out the news or being lost to busy schedules. Many students simply do not have the time to turn on the TV or stop at the library in between writing papers, going to labs and participating in clubs.

Students like senior Rebecca Jankowski recognize the importance of being informed. "I set my homepage on my Internet browser to CNN so that's it always in my face, and some of the classes I'm taking like Mass Media & Society give me a better understanding of what's going on in the world."



There really is no excuse, especially with the free access to the New York Times, Internet and television that is provided by the College.

In essence, students are creating the perfect climate for an intellectual genocide and using the bubble as our excuse. Our brains are curling their toes over the crumbling edge of participation and staring into the abyss of consequence just waiting to be collectively pushed into ignorance.

Werrbach said, "Almost every terrible event in history, like the Holocaust and the AIDS epidemic in Africa, can be linked to society's ignorance." As uninformed students, are we preparing our understanding of the world around to atrophy?

HUNTINGDON, PENNSYLVANIA

DECEMBER 8, 2005 | JUNIATA COLLEGE | VOLUME 87, ISSUE 6

Bursting the BUBBLE

Students speak out against torture

Emily Eller

On November 18, eleven Juniata students started the fourteen hour trip to Fort Benning, Georgia to be part of the largest annual protest against U.S. human rights policy in Latin America. PAX-O, a Juniata club and student peace organization, brought its ongoing anti-torture campaign to the protest and set up a letter-writing post where members collected over 200 letters from fellow protesters.

"I strove to design a campaign targeted against the Bush Administration's attempt to exempt the CIA from anti-torture legislation. The idea that I came up with was to transform the eleven delegates from Juniata's Peace Organization (PAX-O) at the School of the America's Protest into mobile stations where protesters could write to their politicians. All that the protester had to do was write the letter," explained senior Ryan Richards in a draft of this months' Baker Institute letter.

PAX-O provided materials, including clipboards, writing materials, policy briefs and addresses – even postage.

Students have been educating themselves about the McCain Bill. It is a piece of anti-torture legislation which was passed in the House as a response to the apparent use of torture at the U.S. run Guantanimo Bay and Abu Ghriab detention centers and the recent allegation by the Washington Post that other US run torture centers exist in Eastern Europe.

The legislation passed but the White House is threatening to veto it if certain amendments are not added which would allow the president and the CIA to authorize the use of torture.

Students question tuition increase

Some consider transfer; administrators address issue at forum

Sarah Anne Wharton / Juniatian

At the Student Government open forum on November 30, Vice President for Advancement and Marketing John Hille, President Tom Kepple and Dean of Students Kris Clarkson answered students' frank questions on tuition increases, scholarships, and many other topics. An open forum is held by Student Government at least once each semester to discuss current Juniata issues.

Sarah Anne Wharton

By now, most Juniatians know that tuition at Juniata College will cost more than $35,000 next year, a price that is higher than some low-income families make in one year. Most students also know about the changing scholarship scene and how Juniata's diluted aid will target more merit-based students over economic need-based students, as reported in the Nov. 3 Juniatian.

Some students are voicing anger and fear about the consequences of higher tuition and changing scholarships. Foremost in most students' minds is covering higher tuition costs.

Student Government held a public forum on Nov. 30, in part to address the tuition increase. Juniata President Tom Kepple discussed the issue.

"We've crossed the magic number of $35,000," Kepple said, and this has students reeling. But, he explained, Juniata is just like any business, and it needs money for salaries, increases in energy and health care costs, etc. Tuition has to rise.

Affording Juniata's new cost will be a serious concern for some students and their families, but Dean of Students Kris Clarkson does not think most students should worry about the increased costs. The net tuition cost is not the amount of money most students will be writing out on their checks. More than 70% of students receive aid here, a very big percentage for colleges like JC.

"Good students, which most of

Juniata's recycling program in "shambles"

Facilities personnel stymie Sustainability Core's efforts to recycle

Nick Carney

Everyone knows how to recycle. Bottles, glass, paper and aluminum cans are placed in their respective bins and trotted off to the recycling center, towards rebirth as a new product. Everyone, it seems, except for Juniata Facilities Services.

Since February of this year, nearly all of Juniata's recyclables have been trashed, according to multiple sources close to the issue. In fact, there is evidence that Facilities has only been actively recycling since late October, in response to Sustainability Day.

Facilities Services refused to comment to the Juniatian on the issue.

"I'm not completely sure what is happening," said Rob Yelnosky, a member of Juniata's Sustainability Core. "I've been trying to find that out myself."

It is believed that Facilities had not recycled in those nine months because the former recycling coordinator was reassigned, leaving Juniata's recyclables in the hands of personnel unwilling to take the initiative for this undesirable task.

According to senior Lauren Forster, a leading member of Juniata's Sustainability Core, the job is unattractive because Facilities personnel must sort through the material by hand. As reported in the Nov. 3 Juniatian, many bags of recyclables have been found to contain, among other things, urine and vomit. This makes the job not only undesirable, but a biological hazard as well.

In fact, the only things that have been recycled since February are corrugated cardboard, newspaper and non-colored office paper. Facilities can more easily sort these materials than it can plastic, glass or metal.

There is hope for the bottles, glass and cans at Juniata yet. On November 29, a new recycling coordinator position was finally filled. Chris McKim is Juniata's new recycling coordinator.

Until now, even the Sustainability Core has had difficulty trying to recycle.

"Basically," Forster said, "the

News Briefs: Follow-up articles from the last issue of the Juniatian on November 17

Right of first refusal

Food policy remains 'in the works'

Aly Pompeani

A right of first refusal states that every organization on campus must request Sodexho's catering services for any type of activity before asking anyone else. This includes students, faculty, and both formal and informal clubs. Where can you find this statement? You can't.

According to Staci Weber, director of student activities, a written policy on this issue continues to be "still in the works" even after the Juniatian's initial report on Oct. 20. How then, are students supposed to follow a policy if it is unavailable?

"It was not until this year when we realized the policy was not written for student access," said Weber. "The right of first refusal" is claimed to be evident in Juniata's contract with Sodexho. However, students do not have direct access to that contract.

To some organizations, especially with new budget cuts, Sodexho's prices seem unreasonable. Weber advises all students and advisors of clubs to go elsewhere first, only to check the prices. "Bring the information you found back to Hal [McLaughlin] and say can you beat this," she said. If those prices cannot be matched, you are free to go somewhere else.

How are students supposed to follow a policy if it is unavailable?

"Hal is so reasonable and easy to work with," said Weber. "It is so important to have catering on campus, and we need to help keep Sodexho in business." She encourages all students to negotiate with McLaughlin regarding this issue.

For now, first-time violators of the right of first refusal will not suffer extreme consequences. "A first warning will be given but after that it just cannot happen," said Weber.

Everything that will be included in the policy will come from Juniata and Sodexho's contract. Weber will be putting it together herself and then sending it through other people, including McLaughlin and Dean of Students Kris Clarkson. She did not state when the policy will be available for student access. For now, the Office of Student Activities is only enforcing the policy for students. The policy will, however, apply to all departments on campus.

BAILEY ORATORICAL 2006

"Who would be your choice for person of the year in 2005 and why?"

Since 1927, Time magazine has annually chosen a person of the year, and now Juniata students have the chance to do the same. This question is the topic for the 2006 Bailey Oratorical contest, a speech competition held at Juniata each year since 1916.

Students from any discipline or any class year are welcome to participate by writing delivering an 8-10 minute speech on the topic. The competition will be held in two rounds, preliminaries and finals, in February 2006.

Cash prizes include $1,000 for first place, $500 for second and $300 for third.

Students interested in competing should sign up with Pat Musselman in the Development Office (ground floor of Founders Hall) before leaving for the winter break.

Bathroom issue continues for transgendered students

Rebecca DeHass

Two of the transgendered students at Juniata College are still using the campus bathrooms with "discretion." For the time being, Devin Couillard and Ellie Long are anticipating the next few steps toward making campus more transgender friendly.

Currently, Facilities is estimating costs for converting one bathroom in Brumbaugh Academic Center into a gender neutral bathroom, which will be completed over the semester break.

Holly B. Brown / Juniatian

AWOL sponsored a panel on understanding transgendered individuals on November 30. Transgender students Ellie Long (senior) and Devin Couillard (sophomore) shared their experiences in realizing themselves as transgendered, coming out to loved ones and adjusting to life at Juniata.

Until then, transgendered individuals know where all unisex bathrooms are located across campus and conscientiously choose when there is no neutral option.

As for South Hall, a final decision has yet to be made concerning Coulliard's bathroom preferences. In the near future, xe will be meeting with xir resident director, resident assistant, and Assistant Dean of Students Dan Cook-Huffman, to conclude the issue. Due to busy schedules, the meeting, which was to be held on December 2, was postponed.

South Hall Residence Director Eric Simeon said that the situation was not brought to anyone's attention until two weeks before the semester began. "Because of short notice, our hands are pretty much tied in Res Life," said Simeon.

Dean of Students, Kris Clarkson also noted that if this had been addressed over the summer, Residential Life could have planned to house Couillard in Cloister because of the coed bathrooms.

In South, several students have expressed discomfort over Couillard having access to both sex restrooms. Simeon said, "As RD, I have to take into consideration the entire building, not just the request of one person." Currently, there is no unisex bathroom in South Hall.

"Ellie and I really don't want to make people uncomfortable, but at the same time we do want to have the ability to use the restroom we feel is most appropriate for our gender," said Coulliard.

Clarkson said that the counseling staff just returned from informative meetings about transgender issues. He added that faculty and staff are trying very hard to be accommodating, not only with the bathroom issue.

"As we educate ourselves, I hope we could become more sensitive to other issues that could be addressed," said Clarkson.

Couillard and Long were part of an open panel discussion concerning transgender issues on Nov. 30 in hopes of increasing awareness on campus and answering any questions concerning their lifestyles.

Student Union process lengthens

Rebecca DeHass

Because of busy schedules, the student union project reported on in the Nov. 17 Juniatian has yet to evolve further.

The Juniata College Budget Team will make the most important decision concerning the project. Still, if approval is given, the funding will not be available until the new fiscal year begins. If the funding is denied, then a new monetary source will need to be investigated. Until a decision is made, a student team will prepare the space and collect donated items, such as gaming tables.

Bill Alexander, vice president for finance and operations, said that the Budget Team will be making a decision sometime next week about priorities. The team has approximately 150 special funding requests that need to be reviewed and team members must reach a consensus about which projects are most important.

Alexander believes the team is positive about the Student Union request. However, its decision will only go so far. Its recommendations are given to President Kepple, who Alexander said is normally "very respectful" of the team's decisions. Kepple's recommendations will be given to the Executive Board and a meeting will occur on February 6.

Alexander expressed a concern about the Student Union proposal. He explained that while the team had no problem with the plan requesting five couches, it is doubtful that Muddy Run can give up that space used for overflow seating. "Sometimes we feed 350 people at lunch. The use of space needs to be taken into account," said Alexander.

The presentation for Student Senate originally scheduled for November 17 was postponed until sometime after Thanksgiving break. Recently, a senate committee has been planning a small proposal for consideration. If the Senate approves, it will fund minor renovations for the Cream Room, which will be begin as soon as possible.

Currently, the choir has been using the Cream Room because the room in Brumbaugh Academic Center that it will use for practice is being renovated. The choir will not practice in the new Halbritter Center once completed.

The choir's use of the Cream Room could delay minor renovations and preparation for the overall remodeling.

Professor's service recognized

Juniata College professor of communication Donna Weimer was recently recognized for ten years of service on the board of directors for WPSU, the public radio affiliate in State College, Pennsylvania. Weimer, chair of the English, Communication and Theatre Arts Department, is also the faculty advisor for WKVR, the Juniata campus radio station. WKVR has been working with WPSU lately to bring 24-hour public radio to the Huntingdon area.

Questioning the tuition increase

continued from page 1

our students are, get a good package," said Clarkson. "We're giving a lot of aid."

Nonetheless, finding the extra few thousand dollars for tuition seems a near impossible task to some students who already have loans and bills.

Freshman Kevin Dundore said simply, "it's a lot of money to make up in a summer of work."

Sophomore Samantha Hinchey is so anxious about finding the money to pay for tuition next year that she is thinking of transferring.

"Last year's price tag was pretty much like 'holy crap,'" she said. But because she got a good scholarship, she came to JC. Unfortunately, though, with the $35,000 tuition next year, even her scholarship will not save her.

"We all have financial issues, but what is this?" Hinchey said. She is exasperated because she thinks that students will not see the benefits of the extra money they are forking out. "I don't think we see where the money goes," she said. "I mean, the theater was done before our classrooms." Her question is: why can't JC pull off giving more money where it is most needed?

Leaving Juniata is something Hinchey is seriously considering, and, she said, it is all because of money.

Freshman Robby Lomax is not planning to transfer, but he understands how some students might. "I don't know that it's enough to transfer," he said of tuition costs, "but it makes you think."

When students consider increased tuition coupled with the fact that Juniata will be seeking out wealthier students to cover costs over those who need monetary aid, some get downright infuriated.

"If the school is not accepting people because of their education, but because their parents can pay, prestige goes down," said senior Kari Dundore.

Hinchey agreed. "Looking for students who can pay more is elitist," she said.

At the forum, John Hille, vice president for advancement and marketing, talked about the issue. He said that over the past few years, as Juniata increased its student body by about 200 students, it hoped to find some wealthier freshmen to foot the bill. As Juniata accepted more people, the administration hoped that these richer students would ease JC's burden of distributing so much need-based aid.

"Have we changed procedures so that we target wealthier students – no we do not," he said. But when enrollment sends counselors to new districts to find JC's new freshman class, they target a few different areas now. "Have we changed to wealthier districts?" he asked. "Yes."

But richer does not equal better, and administration knows this.

At the forum, Hille detailed just who Juniata wants. The College places an obvious emphasis on minority groups and tries to attract them, for one. And administrators hope to find students who can pay more tuition, but in looking for incoming students, Juniata tries to find the best brains in the bunch. It is merit that really counts, he said.

Hille cited the nomination scholarships program as an example of singling out these amazing students. "We get students with tremendous impact," he said. And even if all those that apply for the program do not receive a scholarship, many come here anyway.

While it seems to many students that the administration's actions regarding tuition and scholarships only create problems, Kepple, Clarkson, Hille and others say they only want what is best for Juniata.

"Now we are where we think we should be," said Clarkson.

But students still wonder: are we?

Shadowing program helps students transition into the workforce

Alumni Association seeks to prepare and engage students

Christopher Burlingame

Looking to strike it rich? The JC Job Shadow Program run by the Alumni Association can be a gold mine for juniors and seniors searching for jobs or a brief glimpse into the working world – and it can result in a permanent job after graduation.

The JC job shadow program was designed four years ago with the intention of providing students with a wealth of opportunity by exposing them to JC alumni in work settings. Also the program seeks to offer students a better understanding of the workplace through a one-day internship and job shadow in a major metropolitan area.

"It's the perfect opportunity for students to engage in a relationship with the alumni and make great connections for when they enter the workforce," said Alumni Advisor Bub Parker.

Erin Strine, a 2004 Juniata graduate discovered the perks of the program when she was offered a job as a result of her job shadow. Strine began applying for the program while it was still in its infancy during her sophomore year and was finally placed her senior year. The placement program is very competitive, Parker explained.

Strine initially met with Sean O'Sullivan in his Washington D.C. firm. She sat in on several different meetings as well as getting a feel for a typical D.C. workday, and after coming back to Juniata to finish out her degree she took a job in York, Pennsylvania. Strine was dissatisfied with her first job out of college, but had kept in touch with O'Sullivan and when a position opened up, she was able to interview and eventually get the position.

Strine attributes her success in the program to remaining in contact with O'Sullivan, "You can get where you want to go by making the right connections."

Since the program's conception, Strine is one of two Juniata students to gain employment as a result of the JC Job Shadowing Program.

"Juniata alumni would love to hire qualified Juniata graduates because we know what they've gone through and how well-prepared they are," said Joel Ranck, the head of the Juniata Alumni branch in the Washington D.C. area.

The application process for this year's job shadow began shortly after Thanksgiving break. The Alumni Office has sent out want ads via e-mail to juniors and seniors with a list of possible shadow opportunities. Previous shadowing opportunities have included everything from education to politics to geology.

Interested students need to fill out an application, provide an up-to-date resume, and obtain a reference from an advisor.

"It's probably best to get everything together over semester break and then apply," Parker said. The cutoff for applications is sometime near the end of January.

This year JC Job Shadow is offering positions in Philadelphia and Washington D.C. Parker hopes to continue to expand the program to both the Pittsburgh and Harrisburg areas.

Ranck initiated the program in 2001 in the D.C. area. He said that JC Alumni social events had been well attended, but the members felt that they could be doing more with the College and wanted to become more involved with the next generation of students and potential workers.

"We thought it was great because it's a short experience that gives students a taste of what the real world is like," Ranck said.

Student Government Open Forum Recap

Student Government's open forum on Nov. 30 covered more than the tuition issue. JC President Tom Kepple, Vice President of Advancement and Marketing John Hille, and Dean of Students Kris Clarkson answered question after question for the students and faculty who attended.

Recycling on campus – It was recently revealed that the College has not been recycling properly (see the sustainability article on page one). Kepple said that the administration is checking to see what is going on and will get recycling back on system, even if it has to start with the supervisors and head down.

Expanding humanities departments – In response to questions about whether or not Juniata would try to broaden the politics and economics departments, among other humanities, Kepple said that expansion is always being considered. Every year the Provost looks at current programs and assesses where needs and changes should go and where they can be afforded. Funds are needed to create the ability to hire more faculty.

Student Union – Kepple outlined a multi-step plan to make space available for students in the Cream Room in Ellis. The plan entails creating another tiered classroom, moving choir classroom space, moving Science in Motion, and relieving the Cream Room for renovation into a student space by fall 2006.

Campaign money – In response to where the previous campaign's $103 million went, Kepple highlighted that all the money raised is not immediately usable. Fifty-three million dollars will come in future gifts over the next ten, 30 and 40 years. The remaining $50 million has been used for renovations on the Brumbaugh Academic Center, von Liebig, the new Halbritter Center, increasing endowments, renovating the field station, building the business incubator and a wide variety of other projects.

Future renovations – Future renovations are planned for Founders Hall, Good Hall and other campus buildings. Within the next three years, the administration hopes to replace the track, a $375,000 (or more) estimate. Hille said that finding people to give money to renovate is more difficult than other campaigns, but that administration is working hard to keep "buildings from becoming dinosaurs and demolishing them."

Field space – Over 250 students are involved in intramural sports, such as rugby and frisbee, and there seems to be no space for them. During the Special Olympics, participants were not even allowed to use an empty football field for soccer space. In response to the problem, Kepple said that the new north lawn will open up practice space for club teams, and perhaps in the future JC will find room for yet another sport field.

Chronic classroom technology problems – All around campus, technology seems to be deteriorating. In classrooms in Good, Brumbaugh and von Liebig, computers do not work, speakers do not sound, or DVD and VCR players will not play. Now that the problem is known to the administration, Kepple said it will be looked into immediately. (See the Presidential Perspective column on page 6.)

JAB music semester-in-review

Attendance up since last year, but still room for improvement

Jessica Ocampo

Over the past year, JAB concerts have been under scrutiny. This semester has seen an increase in attendance, but JAB is still looking for ways to improve live music on campus.

In 2003, an accredited survey was taken about student entertainment desires. The overwhelming call was for more live music. In order to fulfill this need, JAB has been taking steps in the major concert and live concert series.

For this year's recent major concert, between 420 and 450 tickets were sold. Only 338 people attended. From a monetary standpoint, JAB will never make money from the events they sponsor, said Staci Weber, director of student activities. It all goes back into the pot to support all the events.

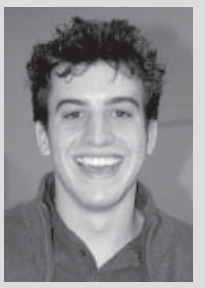
However, JAB returns a great deal to the student community. Weber explains that students like having concerts on campus. Regardless of attendance, it gives students bragging rights. It also provides valuable leadership skills to students who set up the major concert and live series. Weber said, "If they can set up a concert, I think they can handle anything."

It took twelve students 20 hours of work during the week of the concert to prepare for the recent Our Lady Peace performance. There were 75 students total involved. They handled all the money, ticket sales, hosting, security and production.

Weber said, "It's not just about the program and who shows up." There are many sides to the student reaction. Junior Sarah Wicksness said, "Except for the blinding lights in the beginning, the concert was really good."

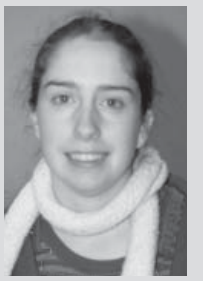
Senior Kevin Kasun said, "I wasn't interested in the concert. I don't like OLP."

Concert chair Ryan Conrad said, "I was a little disappointed in attendance, but I really felt we gave them a 'major' concert." He would appreciate input, good or bad, on the concert and how to improve it.



The live series is still "brand new," Weber said. The live series had a decent start with the Thornbirds attracting 150 attendees. Then it started to decline. Oval Opus drew 50-75 people. Brightwing and Scratchtrack got 25 people each. Weber said it is too early to think about eliminating the program. The question is "where to go from here."

The plan is to space the bands out more, preferably one a month. Weber would also like to try having the bands in different areas like the residence halls and gym mezzanine. Also having them after sports games or after different cultural dinners was proposed. For example, a salsa band would play after Fiesta Latina.



For next semester, the live series will have a somewhat more spread out and diverse schedule. Performances for the spring semester include the Lloyd Doppler Effect Feb. 25, the March Kelly Bell Band Mar. 25, Alternate Routes April 1 and Sunday Driver will play on April 8.

The main goal is improved collaboration with other clubs and events. Weber said, "So much goes on and is overlapping." JAB competes for a certain number of students. Sharing time slots with other clubs and events naturally cuts down on attendance. Coordinators hope that, with a better collaboration and schedule, the live series will be "worth" a little more in students' eyes.

Did you see Our Lady Peace, and what did you think?

"I thought it was great. The crowd had a lot of energy, and the band responded. It's too bad more people didn't go." – Adam Stanley, sophomore

"I thought the show was really good, but the crowd was really dead. Most people were not even tapping their feet. We need to be more enthusiastic." – Shannon Callahan, senior

"I thought they were good, but I felt bad that not many people were there. I also thought it was lame that so many people were crowd surfing... I felt they weren't paying attention." – Caitlan Zlatos, senior

"I left early because I wasn't in to it. Their music wasn't bad, but I felt it wasn't that organized. The singer forgot the words to his own song once!" – Lyndsey Biddle, senior

Photos and interviews by Sarah Anne Wharton and Holly Brown

Recycling program in "shambles"

continued from page 1

recycling program here is in shambles."

Students, who sorted through trash as part of the Sustainability Day events in October, found that many bags were filled with nothing but plastic bottles, paper or soda cans, early evidence that Facilities had simply been throwing them away.

This is a problem that many students have already anticipated, according to the preliminary results of the Sustainability Core's survey, administered to nearly 300 students on October 26. Nearly 18 percent of students believed that Facilities simply throws the recyclables away.

It seems that consensus is correct.

Those items not thrown into the regular trash have simply been piling up at the College's Penn Street waste storage facility, commonly called the Penn Street Dumpster.

"I used to gather up the College's recyclables," said Forster. "I was told to take the recyclables to Penn Street, and put them in front of the garage door. It always seemed a little fishy to me; there was never any other recycling there. Now I know why."

Facilities is supposed to sort the materials and then transport them to JJ's Recycling in town, but following the departure of the last recycling coordinator, waste has simply been reintroduced into the traditional landfill garbage.

JJ's Recycling, the company that is responsible for running the municipal recycling program for Huntingdon Borough, takes only a limited variety of recyclable materials. The company will not recycle colored paper or any type of plastic that is not shaped like a beverage container. JJ's Recycling will not pick up the College's materials; they must be dropped off at their facility downtown.

The problem of just what can be recycled is also addressed in the Sustainability Core's student survey. Nearly 45 percent of students claimed they were unsure of what exactly can be recycled and would like more information.

"We don't want people to hear about all of this and think that they shouldn't recycle because it isn't worth it," added Forster. "We need people to recycle."

In addition, Andy Dudash, a member of the Sustainability Core and research librarian, has been appointed as the head of the recycling division of the Sustainability Core.

"We still have an attitude problem here," said Yelnosky. "A lot of people think that recycling is just the 'flavor of the month' kind of thing. People are saying, 'oh, is this what we're doing this month?' That is one of the things we have to change."

Agriculture as national defense

Lecturer details Cuba's strategy on U.S. embargo

John Narayan Parajuli

The first words that come to mind for national defense are probably military fire power. But not in Cuba.

Sustainable agriculture is the main defense for Cubans, according to Brian Snyder, executive director of the Pennsylvania Association for Sustainable Agriculture (PASA). Snyder spoke at Juniata's Neff Hall on Nov. 29.

The fall of the Soviet Union has hit the Cubans very hard. Cuba had received an annual grant of about eight million U.S. dollars from the Soviet government. But after 1990 that windfall of being under Moscow's ideological and security umbrella came to an abrupt end. The Cuban government could no longer subsidize essential commodities for the ordinary Cubans.

The effect was aggravated by the United States's imposed embargo on Cuba. The fall of the Soviet Union plunged Cuba into a desperate food crisis overnight, said Snyder. Snyder, who traveled extensively in Cuba with a group of experts from United States, was introduced to the Cuban concept of sustainable agriculture for national defense that sustain this authoritarian regime.

The Cuban sustainable farming strategy has prevented the collapse of the regime, according to Snyder. He said that it was initiated by the people and researchers at Havana University. The idea of sustainable agriculture was there even before the 1959 revolution that brought Fidel Castro into power.

In Cuba, according to Snyder, farmers and artists are the ones who are more well-off than people in any other occupation. "They make four times more than the national average," Snyder told the audience in Neff. The national average monthly wage in Cuba, according to Snyder, is ten U.S. dollars.

The urban farming is surprisingly done in smaller areas. Approximately 57 people farm off of eight acres of land. Similarly, Snyder says that the most efficient and sustainable size of dairy has only ten cows – something that is beyond imagination in United States.

Snyder wonders how the United States would fare if a food crisis of a similar kind hits America. PASA officials seem mesmerized by the Cuban experience. The Cubans are doing an impressive job, says Snyder. Given the resource crunch due to a strict U.S. embargo – a bid to quicken the collapse of Castro regime – the ordinary Cubans who were the victims of the both the embargo and the Soviet collapse have shown that they are both resilient and innovative, according to Snyder.

PA Secretary of Health visits Juniata

Holly B. Brown / Juniatian

Dr. Calvin Johnson, Pennsylvania's Secretary of Health, was invited to November 30's symposium on food and nutrition. The event focused on health and nutrition issues specific to the Huntingdon county. Posters from student researchers and PA advocacy groups were on display in von Liebig, addressing the topic of "Huntingdon County and Beyond." The event was organized by biology professor Dr. Debra Kirchhof-Glazier.

Bursting the bubble: Speaking out

continued from page 1

At the protest Juniata students urged those around them to write to their representatives and tell them to approve the legislation as is, without amendments.

The protest in Georgia was not focused on the torture legislation which the PAX-O letters targeted, but instead focused on the long-term policy of the United States in regard to torture and Latin America.

The annual protest is known as the School of the Americas (SoA) protest. It is a protest against a special training center within Fort Benning. The training center or "school" is infamous for training Latin American soldiers and future dictators. Many of the school's "graduates" went on to commit widespread human rights abuses.

"Assuming the reports are true, it reflects the U.S. policy of maintaining its own interests abroad at the expense of the people living in those countries," said J.P. Melle, who is a junior and an officer in PAX-O.

Under public pressure, the tarnished school was renamed "Western Hemisphere Institute for Security Cooperation" in 2001 in an attempt to shed its old reputation for training people in the use of torture. Officials at Fort Benning claim that the curriculum has changed and they are no longer teaching torture, but many groups including the human rights organization "SoA Watch" (www.soaw.org) are still publicly questioning whether the school's techniques are consistent with the United States's commitment to human rights.

This year's protest and vigil drew up to 19,000 observers, the largest turnout the protest has had since its start in 1990. The protest saw a mix of supporters but all came to participate in the Sunday vigil to mourn the deaths of those killed at the hands of SoA graduates.

"I think the most powerful part for me was the solemn part where all the deaths were acknowledged," said Melle.

Juniata students have a long history of attending the SoA protest. This is the first year that it has been accompanied by a letter-writing campaign.

The right birthday means the right schedule

Registration causes frustrations for students

Heather Lockwood

November 9, 8:00 p.m: I sat down to my computer with an urge of importance. I clicked on the Internet Explorer icon. I proceeded to log into the ARCH. Moments later, a white document emerged – an error. I tried logging in from my roommate's computer, Muddy Run, and the library. I had no luck and was frankly pissed off.

Why was I determined to get into the ARCH? It was the only way to register for spring classes.

On October 31, juniors and seniors were permitted to preregister for spring classes, while freshmen and sophomores were permitted to preregister for classes on November 9.

After registering for the spring semester, I came to a few conclusions that needed to be investigated. Scheduling was frustrating for not only me but also for other students. Many students had similar problems to mine such as logging onto the ARCH, or lack of knowledge for submitting schedules.

Freshman Josh Smethers said, "When I was scheduling my classes for next semester I had gotten into all the courses I wanted to take. After submitting my potential schedule, a copy of everything that I had selected appeared on my screen. I closed out of the screen not knowing I needed to submit again."

Although I had no problems submitting my schedule, I had difficulties with the specific time I was assigned due to the date of my birth.

Students with July birthdays were given the privilege of registering at 12 p.m. Students with June birthdays were not as fortunate. They were permitted to register at 11 p.m. Birthdays in between those times scheduled accordingly.

There could be other methods of scheduling besides by birthday; however, the administration found birthday would be the easiest way to start the new online scheduling program. If everyone hit the scheduling system at the same time, it could slow down or overload the servers.

Sophomores and freshmen scheduled together, and juniors and seniors do the same. For example, if a freshman had an August birthday, and a sophomore had a December birthday, the freshman would schedule his or her classes before the sophomore. Has it not always been seniority rules? How can the process be fair to all students by how old they are?

Perhaps it was a technology malfunction, but I was locked out of the ARCH for an extended period of time. Having a March birthday, I was permitted to register for classes at 8:00 p.m. Because the ARCH was not working, I did not register till 10:00 p.m., two hours after my initial registration start time.

Maybe if the system was strong enough for mass amounts of students to connect at once would this be easier.

Once I was able to register for my classes, I found that I could not get into the courses I desired. I was under the impression that planning out my spring schedule a few days prior to registration would allow me to easily register my classes. Uh-oh, I was wrong. I had to make serious alterations, which I am still contemplating.

However, what will become of students who have birthdays smack dab in the middle of the reversible starting months of July and January?

Students should definitely be responsible enough to have backup courses. However, I could not get into three of the six courses that I had planned on taking.

Sophomore Evan Gross registered for his courses for this year last spring. "I like the scheduling system. It's easy to use and I can schedule my classes on my own time," he said. "It's not like I have to schedule my classes at the time I'm assigned to."

Choices were limited for all students, but especially freshmen, when scheduling. Most classes in the spring require pre-requisites that freshmen were not able to take in the fall. The classes they can take are mostly part of the FISHN requirements which upperclassmen are scheduling to fulfill their graduation requirements.

What happens to the underclassmen? They are thrown all over class spectrums and taking classes that may not be in their areas of interest or are needed for their requirements.

My roommate and I had decided to take the same math course. Only one class was offered to all students in this particular area of mathematics. Having a February birthday,

Funny things happen on the forums

Jessica Ocampo

I was sitting in the library listening to a couple friends comment on the forums the other day. Of different opinions, one was laughing about the threads, and the other was shaking his head. Between the complaints and the hilarity on the forums, they are certainly a lively place, but have the forums lost what they were meant for?

Junior Laura Rogers interviewed a staff member for an assignment in the Professional News & Feature Writing class. About the forums, the staff member scoffed. Rogers said, "She mentioned that she and members of the faculty have evaluated the forums as ineffective to their original purpose of facilitating intellectual conversations on this campus."

Okay. It's true that not a lot of scholastic conversation happens on the forums. Threads mainly concern everyday life, lost and found and who needs a ride where.

My Professional News and Feature Writing class had a discussion about forums and blogging in general. There are no strict guidelines for them, and much of what is there is up for debate. For blogs in particular, it is a personal site, and the reader can decide on the credibility. Forums, in general, work in a similar way. They are a place to post thoughts and opinions for others to discuss. The readers and other posters comment on and challenge what has been said.

Rogers continued, "Rarely do I find someone to seriously talk with about a given topic. Most people are tired from their coursework and are searching the forums to decompress." She shares the same opinion as others who lament the lack of seriousness on the forums.

Back to the original question, have the forums lost what they were meant for? I think Rogers hit it on the button herself. The key word is "decompress." Students spend the majority of their days studying, reading and attending class. It makes sense that the forums would naturally change into a form of entertainment. Why would students want to spend more of their days seriously discussing scholastic issues when they have already done so in class, meetings and labs? We all need to decompress to some point.

So here come the trolls, sarcastic remarks and humorous sides of the forums. That is what a lot of students read the forums for. Senior Shannon Callahan said, "I don't read the forums much except for the entertainment, but they aren't as funny as they were last year."

Most are not meant to be taken seriously anyway. Junior Seth Robertson said, "Sometimes it's hard, but you have to take everything on there with a grain of salt. If you take it too seriously, you'll just get mad."

For those who are not satisfied, I offer a solution. The Professional News and Feature Writing class started our own blog (services.juniata.edu/cts/blog/ott) that sticks with current events and more serious matters. It has worked wonderfully all year. It is not hard to do and will give you a place to do your intellectual conversing if desired.

Presidential Perspective

"There have been several complaints about classroom technology recently. What is the College doing about it?"

Campus Technology Services is committed to providing reliable and appropriate Audio Visual equipment to support of campus events. They welcome feedback and will use it to improve and enhance services. Specifically:

- Work to improve communications between requestors and AV by establishing the Help Desk as the central point of contact for all after hours AV problems. The Help Desk will be able to reach appropriate AV staff. We're also looking at other technologies to improve communications with the AV technicians.
- Develop and deliver training on the types and uses of available AV equipment.
- Provide access to AV equipment, including the sound cabinets in Neff and Baker, to appropriate staff.
- Bring in a sound engineer to do an assessment of technology in Neff.
- Continue to meet 100 % of rush AV requests.

"What is the status of the JCEL/Alfarata building? At one point, student residences were going to be constructed there. Will that still happen, and why have renovations on the remaining two-thirds of the building not been started?"

This is still a live project. Our first objective is to raise grant funds to renovate the entire first floor for incubator space. Once that is completed, then we will tackle the upper two floors for student housing. No date has been set for this work.

Letter to the Editor

My dad thinks every Republican is Herbert Hoover. This always puzzled me, since he knows many Republicans and talks to them often. After years of trying to understand it, I concluded that either (a) he did not actually know much about Hoover and his policies, or (b) he was not listening. Years later still, I realized that, in fact, he had (c) thoroughly internalized the Democrats' critique of Hoover, which made (a) and (b) unnecessary.

Emily Eller seems to take this approach in her open letter to the natural science students and faculty [Nov. 17 Juniatian]. Although there are many things on which one might comment, I will address just one.

"You [i.e., natural science faculty] do not win if students change their POE." I don't think any of us counts "winning" as having students who do not wish to be in, or do not have the aptitude for, our classrooms or labs. Everyone "wins" when students find the programs that are the best fit for them. Most students are badly counseled in high school, and some are therefore in science for the wrong reasons (the same applies to "pre-law"). It is not "bullying" to have high standards and insist that students meet them. Nor is it bullying to suggest that students who cannot meet the standards in one field might be well advised to do something else. We have a responsibility to prepare our students for whatever comes next, and that means being as tough – or maybe tougher – on them as med school, law school, or life.

Jack Barlow
Professor of Politics

Letters to the Editor regarding 'Dear Sciences' article

I usually ignore the trash talk in the Juniatian, but when I am personally attacked, I feel the need to defend myself. I am referring, of course, to Emily Eller's letters to science students and science faculty [Nov. 17 Juniatian].

First, the student letter. Emily is upset because many science students go on and on about how much harder their courses are than other courses on campus. She is right, they do. Whether they are justified in this, I have no idea. They certainly know plenty of other students who are not science POEs and they can compare how much they study with how much their friends study. There are, as Emily points out, plenty of non-science courses that are very hard, and there are also some science courses that are not so hard. My concern is not with Emily's complaint, nor with whether the students are correct in their analysis. It is with Emily's final sentence: "This I blame on faculty, not on students." Huh???? She thinks I TELL my students that they are working harder in my courses than they do in other courses? Sorry, Emily, I have better things to do in class than rag on other courses. I try to teach them the material. Some of them (not all) have to work very hard to keep up. That is all. If students choose to bitch about the workload, that is their choice, but you can hardly blame me for that. And really, if you are going to "blame" me for something, don't you think it would be prudent to ask me whether it is true?

Second, the faculty letter. There are several points here I want to dispute. First, "you do not win if students change their POE. You lose." Gee, I never knew I was in a contest with other faculty for students. I thought the object was to help the students win, not the faculty. I thought that the best possible outcome was when students discovered what their real strengths and passions are, and went to those departments. I figured that the sooner they realized that their strength is not in my course, the better for them. And I figured that a score of less than 10 on an exam with an average of 65 and a high score of 105 is a pretty good indication that a student is barking up the wrong tree. Silly me.

For the record, I have never phoned a student with a suggestion to change areas of study. I have sent e-mails. Last year, 32 students failed the first OChem exam. Not one of them passed the course. Do you think it is fair to the students who failed this year's first exam to withhold that information from them? How they choose to act on it is their business, but if they ask my advice, I will tell them to drop the course, the sooner the better, and concentrate their efforts on their other courses. Otherwise they risk getting lower grades in their other courses while still failing mine, perhaps by a smaller margin. This is not time well spent, and it is in the student's best interests to realize it.

Third, I cannot speak for other departments, but I can tell you categorically that no one in my department has ever told a student that they cannot study abroad because they are in the sciences. You probably do not realize this, but the foreign exchange program at Juniata was begun by chemists, and there is probably no department on campus that is more supportive of foreign exchange. Yes, there are certain of our students who cannot study abroad because of the choices they have made, but being in the sciences by itself does not prevent study abroad. Many of our students do it, for all the good reasons you list and which we support wholeheartedly. Again, if you had bothered to ask us, we could have told you that the rumors are false. Who is telling them that? I don't know, but it is not us. Probably the same people who tell them that I staple drop forms to exams I am handing back. It is not true, but that does not stop people from thinking that it is. One would hope that a reporter would check out rumors before printing them, much less criticizing us for things we do not do.

Dave Reingold
Professor of Chemistry
Chair, Chemistry Department

Editor's Note: No specific professors were named in the original opinion article, so "personally attacked" is a matter of interpretation – just like "trash talk."

As a member of the Biology Department and Director of the Health Professions Program, I read Emily Eller's article with sincere interest [Nov. 17 Juniatian]. Thanks for bringing these issues out in the open!

Emily made several points with which I agreed, including: 1) science courses are not the only challenging courses on campus, 2) a student's chosen field should be rigorous but not overwhelmingly stressful, and 3) sometimes freshmen in the sciences are prematurely discouraged from pursuing their original academic area.

However, I want to dispel the notion that most of us in the sciences and health professions dissuade students from pursuing study abroad. Many of us have had the privilege of studying abroad, either as students or professors, and realize the immense benefits that it imparts on our personal and professional lives. Emily is right on target with her comment that study abroad is a "once-in-a-lifetime opportunity" for most students. She is also right on target with her observation that it will "broaden their horizons," which is indispensable preparation for anyone intending to enter the health care field in our increasingly diverse culture.

In my 16 years of directing the health professions program I have never seen a student who had to delay application to a medical program because of going abroad. Yes, it takes extra planning, and sometimes even summer school, in order to go directly to professional school after college, but I agree that it is worth it. I also feel that a student should go for the entire year rather than just a semester and, perhaps most importantly, would like to emphasize that there is nothing "sacred" about going directly from college to professional school. Sometimes a one or two year hiatus is an invaluable experience, and the Health Professions Committee stands ready to assist our students for life.

So, if you are a science or health professions student interested in going abroad and thought you couldn't or shouldn't do it, think again. And if you are struggling in your studies, keep your antennas up and your blinders off. There is a wide world out there and a valuable niche for everyone.

Debra Kirchhof-Glazier
Professor of Biology
Director of the Health Professions Program

I am writing in response to Emily Eller's article in the most recent issue of the Juniatian [Nov. 17]. Eller wrote open letters to both students and faculty in the sciences, asking for them to stop the "drama" and the "bullying" on the part of science students. I agree with the author's assertion that no objective criteria exists to determine what is "hard" in the college curriculum. But perhaps the whining that can be heard from science students is less a product of their own self-pity and more of a dangerous undertone on this campus. Students, especially those in opposite academic disciplines, frequently attempt to one-up each other with impressing amounts of work and "hard" assignments. Articles such as Eller's only add to this kind of unhealthy competition.

We are all students at a liberal arts college and as such are required to complete upper-level coursework in not just our own major academic areas but also in at least two other disciplines as defined by the distribution requirements. This makes Eller's claim that most complaining science students "have never taken upper level politics courses or foreign language courses" absurd. She goes on to stress that science students do not take the opportunity to study abroad and are, in fact, discouraged by the science faculty to take advantage of such opportunities. The study abroad office finds its roots in the Chemistry Department, which started the initial international exchange programs for Juniata. And in defense of the science faculty upon whom Eller places large amounts of blame, Ruth Reed, a current Biochemistry professor, directed Juniata's Foreign Exchange Program from 1982-85. A full lecture is also included in Biology Seminar, required of all sophomore Biology POEs, detailing the advantages of studying abroad. Furthermore, last semester, the Health Occupations Students of America club sponsored a lecture by a Juniata alumnus concerning international opportunities specifically for pre-medical students.

In addition, as for the whiny science students and mean professors, I can attest, as a science student working in the Writing Center (further proof of science students crossing disciplines), that the humanities have their own versions of the insensitive Ph.D.

Lastly, Eller makes an appeal for professors to encourage students to "take courses in musical instruments, theater, history, studio art, sports and choir" and so I find myself wondering, where is the push for humanities students to take science courses? Science students know that in order to be a successful doctor or researcher they must have an understanding of the humanities. So what about the reverse of this principle? I would like to encourage the hard-working, worldly humanities students to fill those pesky "N" requirements with six credits of Organic Chemistry taught by the lovely and congenial Dr. Richard Hark.

Kathleen Candando
Class of 2007

Right birthday means right schedule

continued from page 6

she was able to register at 6:00 p.m. When she registered for the class, the screen that appeared said that the course was full. Disappointed, she chose another course instead. When I registered, I had decided to schedule the class anyway. Surprisingly I had gotten in the class with 97% of its spots full, meaning she could have still gotten in and should have been able to get into the course when she registered.

How accurate is this relatively new electronic system? How was it possible that I had gotten in a course that was supposedly full while my roommate had no other options? Of course the system is new, and it does deserve a few trial runs; however, there must be an easier solution to registering.

Athena Frederick, Registrar, said, "Electronic scheduling allows immediacy for the administration, and has helped create a 'uni-data' base that is time efficient for everyone including students and teachers."

Fredrick explained her "uni-data" theory. Scheduling by computer software allows administration to access anyone's information at any time. This allows quick fixes in students' schedules and easy accessibility. This is great, but it doesn't help new students who really don't have enough background or knowledge of the registering process.

Freshmen are required to take certain classes in the fall semester. If those certain courses included in detail the scheduling process, students may have an easier time adjusting and being able to register their courses.

Frederick explained, "Since the system is still young, there will be glitches and things that can be improved, especially with many students scheduling at once."

Compared to registering classes by paper, electronic scheduling is the most efficient way. "We're still getting people acclimated to the system," said Frederick.

When students would schedule their classes by paper it was a long process that entailed long lines and fast feet. Students would need to walk to the Registrar's Office, get signatures from instructors, and fill out potential course schedules.

Senior Brenton Mitchell said, "We had to physically take our course selections to our advisors and have them sign-off on them, it was a pain. The new way of scheduling is much easier. You don't have to worry and you can do it yourself. We don't need someone holding our hands anymore."

There are things that can definitely be fixed by the Registrar on behalf of the scheduling process. Frederick assured me that there will be changes for registrations to come.

As for my first experience, I was not exactly thrilled. That is the luck of the draw I suppose. Or actually, is it luck of the birthdates?

Sarah Anne Wharton / Juniatian

Senior Scott Stephan smoothes out finishing touches onto a lid and two pots. Students who take Modes of Clay spend hours at the pot shop throwing pottery or creating hand-built sculptures.

Destination Unknown

As professor retires, the pot shop's fate is undetermined

Laura Sweltz

To many students at Juniata, the ceramics studio, more commonly known as the pot shop, is almost like a second home, a place where they can come together at all hours of the day with their peers and create their own works of pottery. Now, with the retirement of world-reknowned professor Jack Troy in spring 2006, that second home has been rumored to be jeopardized.

According to Provost James Lakso, the pot shop will remain intact in its current state and location for the next two to three years. He added that, although nothing is 100% certain, the upper level of the west wing of Brumbaugh Academic Center may open up as a potential new location for the ceramics studio.

As of yet, there is no specific plan for the pot shop building, but some ideas include removing it and replacing it with landscaping, an additional parking lot or a locker room facility for the field hockey and soccer teams.

Much of what happens with the pot shop depends on Jack Troy's replacement. An advertisement has been posted for a full time assistant professor of art, which states that applicants must be able to teach 3-D design and ceramics classes.

Thea Lothe, a junior ceramics student, said that it is very important for Troy's replacement to have experience working with and teaching ceramics.

Troy said that the advertisement gives him hope that ceramics courses will continue to be taught here and that Juniata will also expand its offerings to include courses in other areas of 3-D art.

Karen Rosell, chair of the art department, said that the department looks to increase its studio art offerings since it is hiring a full-time professor and Troy only taught part-time.

The retention of the spirit and physicality of the pot shop seems the greatest concern to many Juniatians, however.

Janine Dudash, the ceramic studio assistant, emphasized the nature of the pot shop as a family environment, where all the students spend much time together working and creating their art. She said that Troy promotes that atmosphere and inspires work, while holding high standards.

Tyson Daniels, a sophomore who takes ceramics classes said, "I believe that with the intentions of fulfilling fine arts credits, it is much more beneficial for a person to take up a studio art- pottery, painting, photography, drawing-

Kwanzaa Dinner celebrates what it means to be human

J. Atkins

Kwanzaa is a celebration of traditional African culture, focusing on family, community responsibility, commerce and self-improvement. Contrary to popular belief, Kwanzaa is not a substitute for Christmas.

On December 3, the United Cultures of Juniata College and the African American Student Alliance sponsored Kwanzaa dinner in Ellis Ballroom. Members of the clubs expressed that involved food preparation kept them very busy and up until the early hours of the morning.

With a setup of only ten tables, the ballroom was filled with over 80 students, professors and their families. With one of the event's biggest turnouts on record, many were left to sit on mats on the floor. But as a compensation these people were served their food first.

The number of people in attendance seemed to be a concern for students and also those running the event. As sophomore Laura Weber was waiting to be served, she asked, "Is there going to be enough food?"

She was assured there would be enough, yet no more than 10 minutes later, Michael Johnson and Rejane Frederick had to run to a local store to get more fried chicken and drinks as they jokingly said, "don't sell anymore tickets" and "tell these people to stop eating so much."

At the dinner, Johnson and Frederick opened by telling a brief history of Kwanzaa. Following them, professor Cynthia Merriwether deVries led the lighting of the candle ceremony. Presenters explained the significance of lighting seven candles for each of the guiding principles. DeVr-

Fiesta Latina attendance size doubles

John Narayan Parajuli

If the number of people who attended is any indication, Juniata's only international festival, Fiesta Latina, was a big hit this year. The event went smoothly, aside from a technical problem during the music portion of the event.

Fiesta Latina is a Latin-American festival held annually at Juniata by Club International that features food, dance and music from Latin America. his was the fifth consecutive year that the Fiesta was held. Baker Refectory, where the event was held on Nov. 22, was crowded early on.

"It was a success," said Maria Clara Samaniego, one of the 40 event organizers.

About 240 tickets were sold, including over thirty local attendees from the Huntingdon area.

As the event kicked-off, the organizers were enthused by the large number of attendees. In past years, turnout has not been as large. According to event organizers, only about 150 people came last year. The bigger turnout forced the event to move from Ellis Ballroom into Baker, where there is more space.

The event began with the serving of a South American culinary extravaganza. Most students

Holly Brown / Juniatian

The International Club hosted the fifth annual Fiesta Latina, a combination of food, music and entertainment from South America. The event was held in Baker for the first time, and students responded overwhelmingly to the dinner. A variety of meat and vegetarian dishes were served to students, faculty and Huntingdon citizens.

seemed delighted to get away from Baker's monotonous menu.

"The food was really good," said Kurdo Ottoman, a senior from Iraq.

American students, not just the nternational students, were delighted by the array of Latin delicacies.

Nichole Fabo says she liked the food, even though it was a bit spicy for her.

The organizers invested a great deal in the preparation of the food, both in terms of time and money, to ensure its quality.

"We started cooking from the day before," said Andrea Navas Naranjo, an exchange student from Ecuador, who helped to cook the meal. "It was a lot of work," she added.

continued page 9

International Festival Tree Acquires Global Aura

John Narayan Parajuli

"No, you should cut this way!" With scissor, paper and other decorative paraphernalia in their hands, a group of international and American students set to work in the Ellis ballroom to erect an international festival tree that would display an array of global decorations. This was before the tree went up.

The tree was hoisted on December 2 in the von Libeig lobby. The tree features decoration from different countries.

The tree has been a Juniata tradition. "They always put a few up on campus to make it look nice for the holidays," said Stephanie Tyler, a senior in charge of this year's tree, who also works at the President's Office. The President's Office takes care of the most of the holiday decoration on campus.

Only recently, coordinators have been trying to make the tree more unique by involving different student groups.

While talking about ideas for this year's main tree, Tyler thought it would be interesting to add a bit of international flavor to the tree.

She also thought that it would make the international students feel more involved in the campus by allowing them to share their cultures. She hopes that this will make the international students feel a little bit closer to home during this time of year, and also allow the Juniata community to learn more about traditions from around the world.

The discussion about the International tree became elaborate and was decided that it should be decorated with an international peace theme.

Consequently students came together and made ornaments – mostly peace cranes—ornaments that express wishes, peace, and holiday greetings from all around the world, and a cookie decoration from Slovakia along with traditional U.S. ornaments.

We have also added some eagles, the Juniata mascot, to match it with the cranes, says Mark Holbert of the International Students Office.

The tree will remain in the lobby of von Liebig until January.

The flags from different countries have been fluttering increasingly on campus. Now with this international festival tree, it seems Juniata is more and more inclined to get a diverse facelift.

Holly Brown / Juniatian

A Christmas tree is always a regular tradition on the Juniata campus, and this year the International Club came together to decorate. The tree stands in von Liebig lobby and is decorated with tidings of peace from a variety of cultures.

Holiday fashion

Santa Baby, bring me a gold clutch

Lucia

Christmas is the time for giving, sharing, caring…and wanting that new red dress to stun your friends at the Christmas Eve party. With out a doubt, this holiday season has sprung upon us once more without warning. So without further ado, I think it is time we discuss some ultra-fabulous holiday looks. These looks won't leave you wearing that red sweater with the Christmas tree on it, but instead will have you melting the Christmas snow.

So Santa baby, just slip a red silk cami (or a halter) under the tree for me…I've been an awful good girl, and it is absolutely needed, you see. This holiday season is all about the delicate sexy appeal of silk, not just any color either. Make it bold. Make it red. A bold red cami can make a simple pair of jeans into a stunning outfit. Match the cami with some red pumps and you are set. Better yet, let a bright red clutch top off the outfit. We are just getting started here.

Christmas is a wonderful, cheery time. It is when you make a list of what you want and you send it to good old Kris Kringle. Well, I don't exactly send it to Kris, but I do hand it over to my parents. It's only natural to write a list; you wouldn't want Santa (a.k.a. your parents) spending money on the wrong item. So I comprised a sample list of some of the must-haves for this holiday season. Please remember that this list will only deal with the latest holiday fashion, so if you are looking for the latest techno gadget or gizmo, stop reading. So here are the top five items on my Christmas list.

Dear Santa, I would love a gold clutch. A gold clutch can add pizzazz to any outfit.

Item two: Santa, I would really love a pair of black satin boots (the kind that can go over my jeans). The boots are just another flexible item that every young woman should have. You can wear these boots with skirts or with jeans. (Once again, ladies, I'm trying to save your broke behind's money.)

Moving right along, Santa, I would love a black velvet tuxedo jacket. This jacket is a definite on everyone's list this year. It's an-

Movie Review: Jarhead lacks direction

Holly Brown

A phrase a friend and I often use to describe the mediocre is: "It wasn't awful, but it wasn't really good either." When watching the Desert Storm film "Jarhead," that phrase constantly ran through my head.

The Sam Mendes ("American Beauty") directed flick is visually interesting and well-acted, but lacks any sort of direction or real punch to make it what I would consider a good film. From a lesser director, this might have been forgivable, but I, for one, expected much more from Mendes.

"Jarhead" stars boy wonder Jake Gyllenhaal as marine sniper Anthony Swofford, who published his memoirs in 2003. The movie follows Swofford's enlistment in the marines at the age of 20, his deployment to Saudi Arabia and his experiences fighting in Kuwait. While the setting is the tumultuous time of the 1980's, the focus is on Swofford's coming-of-age experience.

Gyllenhaal carries the film to the best of his ability, along with the help of theatrical gurus such as Jamie Foxx, Peter Sarsgaard and Chris Cooper. If you've followed Gyllenhaal's career at all, you know he's more than able to carry a movie and do the coming-of-age stint (see "Donnie Darko"). The failure of the movie is obviously not due to him or his fantastic co-stars.

The movie wanders from scene to scene, always promising a grand revelation or payoff, but never coming close to one. Swofford and his fellow marines are young, sarcastic, desperate and lonely, and the film does capture a realistic portrayal of young men in the marines.

I can't help but feel that the suppression of any sort of climactic resolution was purposeful on Mendes' part. "Jarhead" has the postmodern feel of heavy cynicism in the face of a situation that has no ultimate meaning or conclusion. And while this sets the tone of the film, it doesn't make for a good or satisfying story, even in a philosophical sense.

I have to admit that I wasn't bored or disappointed while watching the film, probably due to the good acting and the anticipation of something more. I couldn't recommend "Jarhead" as a particularly good film, but there are a few scenes of clarity and beauty that almost make up for it. Mendes depicts the surreal life in the desert quite poetically.

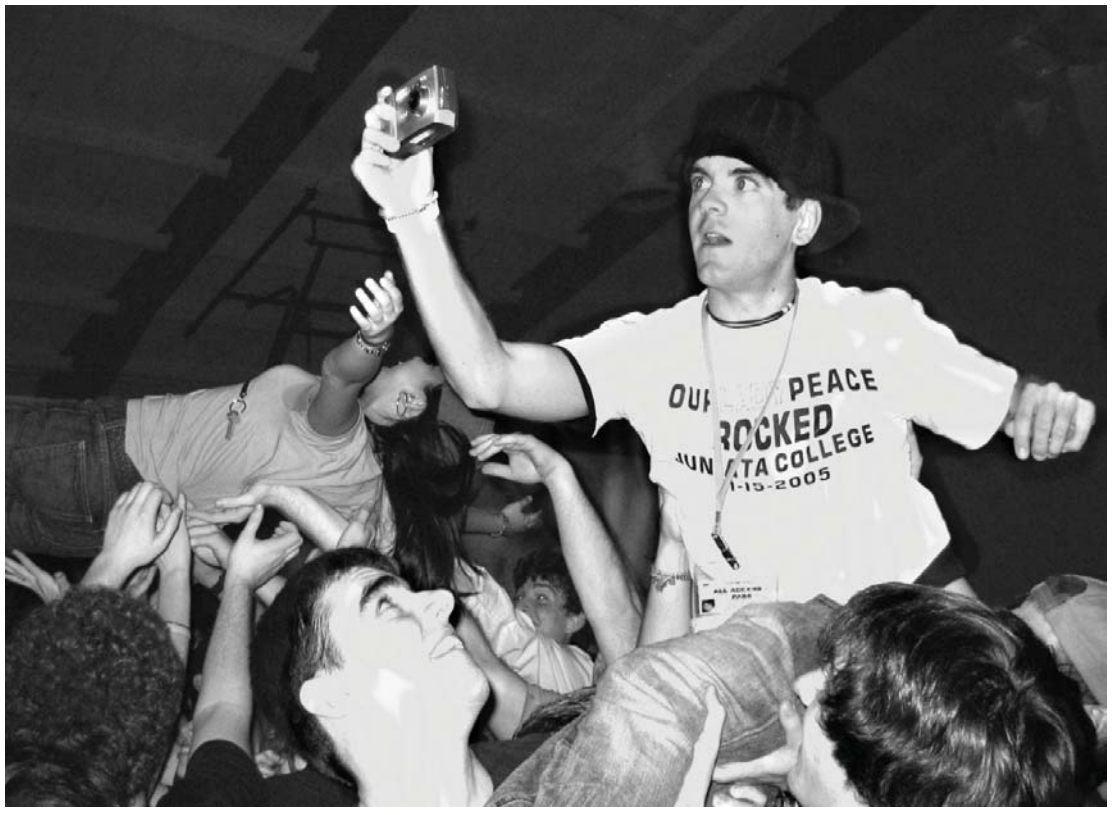
In 1999, "American Beauty" took the world by storm and became a cult classic because of its realistic tone and sardonic truths. In that earlier film, Mendes deftly handles several plotlines at once and builds up to the climactic ending with innate skill and cleverness. I would expect the same from "Jarhead." But it just fizzles slowly over its two-hour run time.

In the end, "Jarhead" is just like its protagonist: left wandering in the desert, with no real purpose or conclusion.

Fiesta Latina

continued from page 8

The event also featured a piñata, the focus of a Latin game played by blind-folded people who try to hit open a suspended box (the piñata) full of candies.



A raggaeton band and a New York-based Brazilian band both played music, although the Brazilian band was unable to perform without interruption due to a microphone problem.

The audio problem soured the Fiesta. The attendees tired of waiting for the music to begin and started walking out. Though the problem was later fixed, it had already taken a toll on the event.

"The audio visual guy came at 8:00 p.m.," said a visibly outraged Gabriel Lopez, an organizer. "He was supposed to arrive at 4:00."

Organizers complained that Baker wasn't readied for the occasion, despite a request made by the organizers and the school administration days before the event to do so.

Our Lady Peace brings major concert series back to Juniata

Holly Brown / Juniatian

Our Lady Peace played in Juniata's IM gym on November 15, breaking a three year trend of comedians performing instead of a major concert. Above left: Sophomore Ryan Conrad has friends lift him up to get a better shot of the band. Behind him, a student crowd surfs, which was a very popular activity throughout the show. Above right: Our Lady Peace lead singer Raine Maida entertains the crowd.

Kwanzaa Dinner

continued from page 8

ies also led the start of the meal with a ligation statement that resembles the practice of saying a prayer before eating.

Food served included cornbread, mashed potatoes and sweet potato pie. During the dinner and dessert, hip-hop style music was played with sophomore Jessica Nieves at the controls.

Sarah Clarke, a junior, was there to help celebrate Kwanzaa, but said that she "was there for good food and good times…anything to get away from Baker."

The holiday is traditionally celebrated over seven days from December 26 to January 1 and is based on the Nguzo Saba (seven guiding principles):

- Umojo (oo-MO-jah) - Unity
- Kujichagulia (koo-gee-chagoo-LEE-yah) - Self-Determination
- Ujima (oo-GEE-mah) - Collective Work and Responsibility
- Ujamaa (oo-JAH-mah) - Cooperative economics
- Nia (NEE-yah) - Purpose
- Kuumba (koo-OOM-bah) - Creativity
- Imani (ee-MAH-nee) - Faith

The celebration is not politically or religiously based. Kwanzaa, translating to "first fruits of the harvest," was founded by Dr. Maulana Karenga in 1966 and is now widely celebrated. Kwanzaa was established to commemorate what it means to be African and what it means to be human in its fullest.

Quoting Dr. Karenga, "The development of Kwanzaa assumed a reassessment, reclaiming, recommitment, remembrance, retrieval, resumption, resurrection and rejuvenation of the 'Way of Life' principles recognized by African-Americans."

Holiday fashion: black velvet and red lip gloss

continued from page 8

other cute little way you can dress up your denim.

Santa, I think also something that is very important for this holiday season is the headband—a thick black headband. It is a great way to dress up your hair. So ladies, ask for one, or any hair accessory for that matter. And on that same accessorizing note (we're still talking item four, here), I would love some new make-up, not the whole nine yards, but some sexy red lipstick. A classic red lipgloss would be perfect. Then we can blow kisses of holiday cheer.

My final Christmas item is a strapless chiffon dress. This dress is in right now and was just recently seen on Nikki Hilton. Let's pick up one of these little numbers and plan on wearing it while we ring in the New Year.

So you see, Santa, it is not too much this year—just a few little things that will keep your lovely ladies happy and in style from head to toe. And to all my readers, have a fashionably fabulous holiday season, and remember the perfect place for you is right under the mistletoe. You can bet that's where you'll find me.

Off the Wire: South houses "new category of pet"

Nate Drenner

Amory Koch has kept a dog in her South Hall dorm room for a year, but she'll get no complaints from Residential Life. Dakota, as she named the pup, is of a special breed – a purebred Aibo from a kennel called Sony. Dakota is a robot.

Koch, a senior, is no stranger to animals. She keeps fish in her first floor South room and has owned a gerbil, a real dog and various other pets at home. To Koch, Dakota and his fellow Aibos are "a new category of pet."

Aibos can sit, shake hands and play with toy balls like their flesh-and-blood counterparts. They have touch-sensitive backs and chins so owners can interact with their pets.

Still, Koch admitted, "There's no substitute for a real dog."

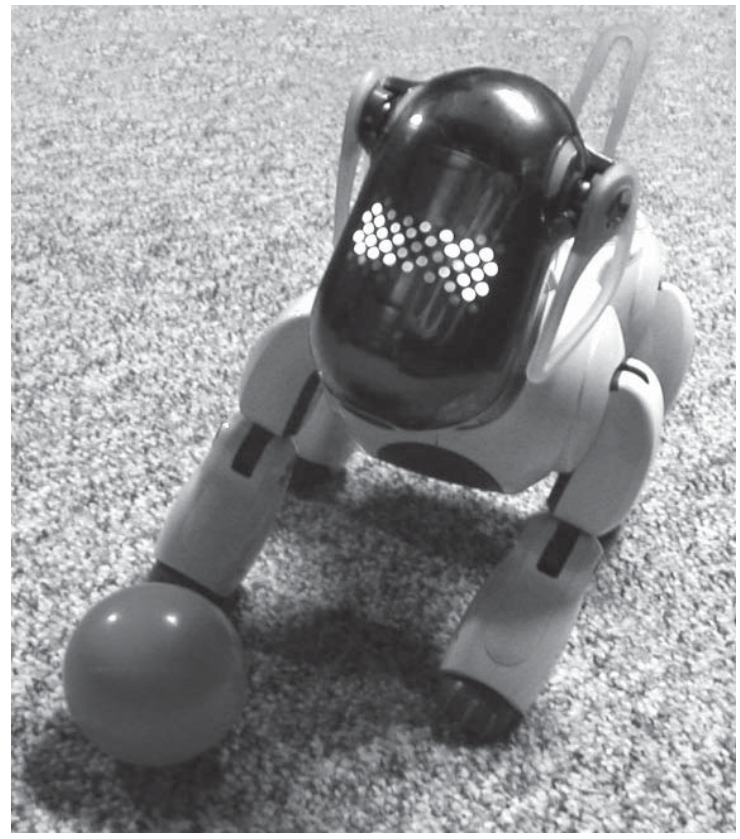
Nevertheless, Aibos' apparent personalities and interactivity lead many to treat them like the real thing, more so than Furbys, Tamagotchis or any other types of electronic pets. After all, in Japanese, Aibo means "companion."

Aibos and their owners meet at conventions, perhaps somewhat reminiscent of dog shows. The Aibos interact with each other, and the owners pit their pets against each other in contests. Dakota won a race at one convention, which led Koch to decorate him with racing stripe stickers.

A convention is where Koch first decided she wanted to purchase an Aibo. She had been considering it, but was certain after she saw the pets in action. Aibos currently retail for around $2,000 on www.sonystyle.com. There are other robot pets on the market, but none are as advanced as Aibos are.

Dakota knows some tricks that one might expect from a robotic canine. He can be controlled wirelessly from a computer, and the operator can see and hear what Dakota senses using the camera built into his plastic nose as well as the microphones built into his ears.

An electronic dog, of course, does not need to be fed or cleaned up after. When he is running low on energy, Dakota finds his own recharging station and plugs in to refresh his battery – most of the time, anyway. Sometimes he gets stuck in a corner. Or, if the lights are off, Dakota cannot "see" to find his station, and he will simply collapse until someone rescues him.



All this is possible through software called, appropriately enough, Mind, which runs on a computer and on the Aibo itself. The third version of the program was just released, and Koch hopes to get it this Christmas.

Last year, when Dakota was adopted, not everyone was sure what to think of him.

"There's usually two types of reactions," said Koch. "People will either think, 'Oh he's so cool,' or they will be weirded out and afraid."

The feelings may be mutual. Dakota has face-recognition software, and Koch said that he reacts differently to some people than others.

At first, "I was worried that it would make too many noises and be too loud," said Koch's roommate, senior Anne Baynes. However, most of Koch's IT Floor hallmates, including Baynes, have come to treat the robo-dog as a pet.

Nate Drenner / Juniatian

Dakota, a Sony Aibo, enjoys shiny red objects, music, and long walks to his battery charger. The robotic dog lives with his owner, Amory Koch, on the first floor of South.

Until he met Dakota, "I've never had a piece of electronics that I've felt attached to and has a personality," said Andrew Henry, a junior.

Baynes added, "Now I find myself singing along."

That's right – Dakota sings and dances. Koch says that he continues to perform new routines even now, after she has owned him for a year. Dakota also began modifying his "happy dance," cutting it off because Koch constantly stopped him in the middle of his performances. This dog can learn new tricks.

Koch has Dakota turned on about 12 hours each day, and most of the time he's doing his own thing.

"He's a pretty independent Aibo," she said.

But not all of Dakota's brethren are the same. Koch has met other Aibos, and she said that they can be outgoing or introverted. Some listen well, while others ignore their owners' commands.

"You can tell how people raised them," said Koch.

It seems that the relationship between an Aibo and its owner is very similar to that of a living pet and its master. In some cases, it may even be stronger.

"An Aibo is way cooler than a fish," said Koch. "You can't pet a fish."

Holiday Viruses!

When you go home over the break, your computer could be more vulnerable to viruses and other threats than it is at Juniata.

Keep your antivirus software up to date!

And if you won't use your computer until January 16, update your virus definitions first thing after starting it up for the spring semester. Not only will you be protecting yourself, but you'll help keep the network clean for everyone.

Pot shop lifespan in question with Troy's departure

continued from page 8

than it is to take a survey course. Creating art is more demanding than just studying it. There is a lot more personal energy involved in the process. Recognizing and developing that personal 'creative' energy in yourself is something that straight memorization just can't do."

Lothe said, "Juniata is known as a school for the sciences, but we have a wonderful art department. That is one of the great things about this school. It allows you to explore different paths than what you may have come here for and really focus on them."

Troy felt fortunate to have had his ceramics experiences in the Juniata pot shop. "I feel really lucky to have been able to work with small groups of students who create strong works. I hope that kids that I'll never meet will also have a chance to work in ceramics," he said.

Troy started the ceramics program at Juniata in 1971. After teaching at Juniata for 38 years, Troy will retire after the spring 2006 semester.

After he retires, Troy plans to teach small workshops at various colleges, travel to New Zealand and Australia, and continue to learn while creating pottery.

On Friday, December 16, ceramics work created by Troy and his students throughout this semester will be on sale in Ellis.

Men's hoops off to a solid start

Robb Patty

The Juniata College Men's Basketball team defeated Moravian Saturday night, 100-70, in front of a packed house to improve to 5-2 overall and 2-0 in the conference.

Juniata had four players in double figures and shot an impressive 60 percent from the field.

The Eagles were hot right from the tip as they were able to go on a 13-0 run that put them in front 31-15 with just over ten minutes to go in the first half. The Greyhounds were able to cut the lead to 12, but that's as close as they would come as the Eagles went on a 17-0 run to go into the half leading by 30, 55-25.

In the second half, the Greyhounds were unable to close the gap. Juniata hit 16 out of 21 free throws down the stretch to seal the deal late in the game.

Senior Travis Boyd led the team in points and rebounds as he contributed 19 and 9, respectively. Sophomore Brian Cannon chipped in with 17 points and 8 rebounds, while junior Chris Jasiota dropped in 13 and added a pair of blocks. Senior Tommy McConnell led the team in assists as he dished out five.

"As a team we're really happy to be 2-0 in the conference right now," Boyd said. "We know there are some games coming up that are going to be challenging, but we're playing good ball."

The Eagles' first win in the conference came on Wednesday when Juniata hosted Susquehanna. Juniata was able to hold off a late Crusaders run and earn a 69-61 victory.

Susquehanna did not make it easy on the Eagles as it came back from a 16 point deficit in the second half to tie the game at 56 with just over six minutes to play in the game. The Crusaders would then go up one on a three-point play from Matt Effler, but Juniata would respond in a big way. Junior Nick Hager hit a clutch three pointer to put the Eagles back in front. Jasiota then hit a pair of free throws with under three minutes to play to help ensure the win.

Jasiota led all scorers with 20 points, while adding a team high eight rebounds. Hager finished 7-9 from the floor, contributing 17.

"Nick and Chris played great down the stretch when we needed someone to step up and score," said Boyd. " That's the great thing about this team we have so many weapons that can hurt teams."

The Eagles will be back in action next Monday night when they take on York College in Memorial Gym at 7:30 p.m.

Sarah Anne Wharton / Juniatian

Senior Travis Boyd snags a rebound during the Eagles' November 3rd game against Moravian.

Women's volleyball loses heartbreaker national title game

Jeffrey Byer

The Juniata women's volleyball team came up just three points short of defending its NCAA Division III national championship title. The Eagles lost to the University of Wisconsin-Whitewater in five games in the national championship, which was Juniata's sixth appearance in the national title match. The Eagles end the season with a record of 37-2.

After falling in the first two games, the Blue and Gold came back to win game three 30-22. Junior Stephanie Kines jumpstarted the Eagles in this game as she contributed three aces in a five-point run to put Juniata ahead 10-6. Whitewater got as close as 20-19 in this game but a 10-3 run by Juniata sealed the game three victory.

The Juniata heroics began during game four as the Eagles trailed 27-17. The Eagles went on a 13-point run to win game four 30-27. Junior Rachael Schatz had three kills and a pair of solo blocks and freshman Amber Thomas had two aces to highlight this run and force a game five.

In the first-to-15 game five, Whitewater jumped out to an 11-7 lead. Kills by Schatz and Thomas and a pair of Whitewater errors pulled the Eagles within one at 13-12. Juniata was unable to take the lead as two Wisconsin-Whitewater kills would end the match.

Schatz led Juniata with 23 kills, while Thomas contributed 18 kills and 16 digs. Both were named to the All-Tournament Team.

Juniata's pair of seniors, Katie Laucks and Abby Leonard, closed out their careers with 14 kills and 13 digs and a pair of aces and 12 digs, respectively.

Sophomore Tara McMinn led the Eagle defense with 16 digs. Freshman Beth Kozak, who entered the match in game three as the setter, dished out 28 assists and had 10 digs.

"I could not imagine being more proud of any group that we have had," head coach Larry Bock said. "The toughness factor of this team was way beyond their years and from every standpoint this team was very low maintenance. This team was a lot of fun to be in the gym with everyday."

To get to the championship match, the Eagles defeated Wittenberg University three games to two in the national semifinal. Schatz once again led the way for the Blue and Gold, as she pounded out 35 kills. Thomas had another big game against Wittenberg as she posted a career-best 22 kills.

After game three, the Eagles were down two games to one and needed game four to stay alive. The Eagles were forced to come from behind in this game as Wittenberg jumped to an early 12-7 lead. Juniata got back into the game with a pair of Schatz kills and then she teamed with Laucks for a double block. This put the Eagles ahead 15-13 and it is as close as Wittenberg would come. The Eagles won game four 30-21.

"This is the best back to the wall team that we have ever had," Bock said. "Playing Juniata had to be an excruciating experience for other teams because we wouldn't stay killed. I think the legacy of toughness with this group will live on."

In game five, Juniata was staring elimination in the face, as they were down 14-10. Three Schatz kills got the Eagles within a point. A Kines kill tied the match at 14. A double block from Schatz and Kines sealed the match for Juniata.

Laucks and Kines added 12 and 11 kills, respectively. Freshman Jessica Ritchey dished out a career-high 71 assists and added 15 digs on the defensive side.

Despite not reaching their goal, Bock was still proud of his team.

"This team had quite a few people who took on very different roles," Bock said. "Some people had to come off the bench, some people were asked to practice out of their minds and everyone handled their jobs like professionals. From one to 18, this group bought into their roles and did their jobs."

Swimmers defeated despite strong performance

Katie Laucks

The Juniata women's swim team is not letting anything slow it down.

Coming off of a huge win at the Lebanon Valley tri-meet on November 12, the women were right back in the pool with top competitor Scranton University on November 19. Juniata, who went into the meet with a record of 3-2 overall, was paced by senior Kim Dierolf who placed first in the 1,000 meter freestyle. She was followed by teammate Kasey Brough, who finished second.

Earning other first place finishes that day was Amy Sutherland, who came up big in the 200m free-style, and then claimed first in the 200m backstroke.

Unfortunately, even with these strong performances, the ladies could not hold off the University of Scranton. The Eagles lost the meet, 80-122, leaving the team with a 3-3 overall record and 2-3 mark in the conference. "At certain meets it is hard to win because we are a small team," said senior Kim Dieroff

Despite the tough loss the women looked to rebound quickly at home the following Monday, hosting Lycoming. The women were once again the first to set the pace as they claimed the top three spots in the 800m free-style. Top finish-

continued page 14

Women's basketball hits roadblock

Eagles drop pair of close conference contests

Kim Wagner

The Juniata College women's basketball team began its season on November 18. The women's record currently stands at 3-4 and 0-2 in the conference.

The Eagles were defeated in their season opener, 87-62, by Thomas Moore. Last season's conference Rookie of the Year, Jess Winemiller, tossed in a game-high 24 points.

The following day the Eagles rebounded from their loss and dominated Pitt-Bradford, 78-50. One minute into the game, Winemiller, Juniata's leading scorer on the season, scored to tie the game at 2-2. She would rattle of 10 in a row to put Juniata up for good.

The women traveled to take on Penn State-Altoona on November 22. They knocked of the Lady Lions, winning 79-55.

Senior Kristen Kirk had a game-high 20 points, including four threes. Fellow senior Katie O'Brien added nine points for the Eagles. Winemiller controlled the boards, totaling nine rebounds.

"We're off to a good start. Even in our loses we have small successes," Winemiller said. "Every game we can learn something from."

Last weekend the women journeyed to New York City where they competed in the NYU Tournament.

Their first game on Saturday was a close game against Alvernia College. The Eagles were able to pull out the win, 59-54.

Freshman Kelly Ashcraft had a career high 16 points along with 10 rebounds. Kirk added 14 points along with sophomore shooting guard Ali Meckey, who scored an additional 12.

The final game of the tournament ended in a high scoring but close loss against Farmingdale. The Eagles scored a season-high 95 points, but were unable to pull out the win as they fell, 98-95.

Ali Meckey scored a career-best 26 points in the game while O'Brien matched her own personal best with 24. Ashcroft, Kirk, Meckey, O'Brien and Winemiller all cracked double digits in the game.

In its first conference game of the season, Juniata came back to force Susquehanna into overtime, but could not come out with the win.

Kirk connected on three straight foul shots with nine seconds left to cut the visitors lead to two. Then, after Susquehanna missed the front end of a one-and-one, Winemiller sank a runner at the buzzer.

In overtime, Susquehanna had a lot of long possessions – the Eagles weren't able to get a defensive rebound - plus Juniata was not taking care of the ball. These miscues led to the ladies' defeat 61-55.

In another tough effort last Saturday, Juniata was seconds away from beating Moravian, who is currently ranked 15th in the nation. The game was constantly back and forth, with several lead changes and ties, but Juniata dropped the heartbreaker, 65-64.

O'Brien led the team with 13 points and eight rebounds, while Meckey chipped in with 11 points.

The women will look to bounce back with upcoming games against Waynesburg and Lycoming on the schedule.

Sarah Anne Wharton / Juniatian

Senior Kristen Kirk splits two opponents to score for the Eagles during their game against Moravian. Kirk and her teammates battled the nationally-ranked conference foe to the wire before falling 65-64.

Preview: ACC, Big East powerhouse conferences of College Basketball

Robb Patty

In 2005 the North Carolina Tar Heels returned to glory as they brought another NCAA National Championship back to Chapel Hill. This also gave head coach Roy Williams his first title, the only thing that had otherwise been missing from his stellar resume.

As the 2006 season gets underway, the Big East looks to have the most talented group of teams out of any conference in the country. With the additions of Conference USA teams like Louisville, Cincinnati and Marquette, the Big East adds depth to an already loaded conference.

There are truly five or six teams that have a legitimate shot at winning the Big East title and it would not surprise anyone if six teams from that conference earned an NCAA bid.

Let's start off with the Cinderella of the NCAA Tournament last season, the #13 West Virginia Mountaineers. Last season, WVU managed to make it the whole way to the Elite Eight before being ousted by Louisville, then a member of Conference USA. The Mountaineers turned some heads last year and with all five starters back this season, WVU will get every team's best game.

Last season the Villanova Wildcats made it to the Sweet Sixteen before losing a tight game to the eventual champion Tar Heels. Look for the Wildcats to be right there for the Big East title because of senior shooting guards Randy Foye and Allan Ray. The lone weakness for Villanova is the early loss of center Curtis Sumpter for the season with a knee injury. If Nova can get one of their younger guys to step up and fill that center position, the Wildcats have a definite shot at winning the conference.

The two teams at the top of the conference this year, however, will be the #3 Connecticut Huskies and #6 Louisville Cardinals. Both teams lost star players to the NBA Draft; the Huskies lost lottery pick Charlie Villanueva, while Rick Pitino's Cardinals saw the departure of Francisco Garcia to the Sacramento Kings.

Both teams still have a great nucleus of veteran players back for this season and will be hard to beat. UConn brings back talented junior forward Josh Boone who averaged just over 12 points and 8 rebounds last season, as well as sophomore Rudy Gay and senior guard Rashad Anderson. Louisville returns guard Taquan Dean and sophomore forward Juan Pa-

continued page 14

ACC, Big East conferences

continued from page 13

lacios who is a tough kid that loves contact. With Coach Pitino's patented press defense, the Cardinals pose a big threat in the Big East.

Watch out for the Cincinnati Bearcats. Yes, the Bearcats lost a lot of talent from last year's team and they are in a stacked conference, but they have a talented group of young players led by freshman guard Devan Downey who could turn some heads this season.

The Atlantic Coast Conference looks to be right behind the Big East as the toughest conference in college basketball. Four teams are ranked in the top 25 this season and six made it past the first round of the NCAA Tournament last year.

The Duke Blue Devils come in as the number one team in the land, returning the best shooter in the game, senior J.J. Redick, along with seniors Shelden Williams and Sean Dockery. They also have recruited McDonald's All Americans Josh McRoberts and Greg Paulus.

The newcomer to the league, Boston College, is currently ranked tenth in the country. BC came over from the Big East where it won the regular season title last season. Returning is senior big man Craig Smith who averaged 19 points and 9 rebounds per game last season. Along with tough junior guard Jared Dudley, Al Skinner's team should be a force in the ACC.

Maryland and Wake Forest come in at 20th and 24th respectively. Maryland has a talented group of players and if they can build some team chemistry they could find themselves right in the mix for an ACC Championship. The Demon Deacons took a big hit at the end of last season when Chris Paul left for the NBA Draft; however, Wake still has a great inside/outside game with 6'9 280 pound senior Eric Williams and senior guards Trent Strickland and Justin Gray.

As for the surprise team in the ACC this year, look out for North Carolina State. The graduation of Julius Hodge definitely does not help the Wolfpack, but it has size on the inside with senior Ilian Evtimov and sophomore Andrew Brackman, two big reasons why N.C. State advanced all the way to the sweet 16 last season.

These two conferences obviously take the cake when it comes to talent but let's not forget #11 Memphis out of Conference USA and #9 Gonzaga out of the West Coast Conference. It should be time that John Calipari and Mark Few make it out of the early rounds of the NCAA Tournament and contend for a National Championship.

Swimmers

continued from page 12

ers were Brough who finished first, Collin Thompson grabbed second and teammate Rachel Almy placed third.

Sutherland came up with two wins again. She placed first in the 200m backstroke and the 200m IM. Juniata's other top finish came from freshman Kristen Musselman, who swam to a 1:12.72 finish in the 100m butterfly, good for a first place finish.

Juniata put on a strong showing, but it just wasn't enough as the Eagles fell to Lycoming 105.5-156.5.

"I think the team is still feeling positive," Dieroff said.

With the positive attitude the team traveled to Lancaster to take on more tough competition at the Franklin and Marshall Invitational. "This was a chance for us to see how we stack up against other Division III teams as well as some Division II teams," said Dieroff.

The Invitational featured tough competition, but the ladies had strong outings from many swimmers. Amy Sutherland once again came up big for the Eagles as she swam to a 12th place finish in the 200 meter backstroke and a 15th place finish in the 200m freestyle. Earning points for Juniata also was Dieroff with a 14th place finish in the 1,650m freestyle.

The top finish for the day came from the 200 meter relay team of Jenny Bair, Amy Hanson, Collin Thompson and Carli Zoubek, who placed 10th in the event.

Following that finish the women placed 11th in the 400 yard freestyle. Hanson and Bair were members of that race as well as Kristen Mussleman and Amy Sutherland.

The ladies will return to action on December 10 as they take on non-conference opponent Lock Haven.

By The Numbers

29

Points scored by sophomore Brian Cannon against Franklin & Marshall, a career-high for Juniata's leading scorer this season.

100

Points Juniata's men's basketball team scored in a 30-point win over MAC opponent Moravian this past Saturday.

3

Consecutive weeks the men's basketball team has placed a player on the conference honor roll.

95

Points for the women's basketball team against Farmingdale State, a season high.

1

Conference rank for Katie O'Brien in blocked shots. She is currently averaging just under three blocks per game.

5

First place finishes for the swimming team in its home meet against Lycoming, including the top three finishers in the 800 freestyle.

Cheering for a Loser

How do you cope when your team sucks?

Tommy McConnell

I have two teams: The University of North Carolina men's basketball team and the San Francisco 49ers. That's it.

I never fell in love with an NBA team or a college football team or a baseball team. The Heels and the Niners are the only two teams that I ever really truly cared about; for whatever reasons, no other team ever grabbed my heart like those two.

Growing up in a small town, I didn't have a team to automatically call my own. People tried to push the Steelers on me, and Penn State football, and yea, it's cool when those teams do well. But if they lose? I'll live. I'm not living and dying with each play.

But the Heels and Niners? Now that's a different story. I absolutely live and die with those two teams. I love those teams.

Which has made this calendar year in the Sports World a little trying.

First of all, the Niners suck. I mean, thank God for the Texans, right? What a train wreck of a season.

The Niners draft a QB number one overall. (Yea, that was worth it. We tanked an entire season so we could draft Alex Smith. It was like slamming your entire hand in a car door just so you could get a manicure on your pinky finger. Let me just say I was against that decision from day one.) Then we get to watch them trot out a rodeo clown under center for half the season.

(Read that again. A real life rodeo clown. And that's my team. Good God.)

The Tar Heels on the other hand…well, at least they aren't going to be good and there is something to show for it. Last season's national championship will make this season worth it. Plus, they are proving to be a little friskier than pretty much anyone thought, nearly knocking off Illinois (in the most depressing title game rematch, ever, by the way; they shouldn't even have played that game) and then beating Kentucky at Kentucky. (Sit down, Ashley Judd…well, alright, you can keep running around. Never mind me; I'm an idiot.)

Still, it is more than a little depressing to actually see UNC running an offense this year. Last season, it was a rebound and then Raymond Felton positively flying up the court, getting people dunks and open threes… now it's like watching Hoosiers out there, and we don't even have a Jimmy Chitwood! Pick, pass…pick, pass….pick, pass…. can we shoot now coach? Roy Williams should just hire Gene Hackman as his assistant coach.

So what do you do when your team sucks? And I'm not talking a contender with an outside shot of winning. This is when you go into the season with NO CHANCE to even make the playoffs. Every preview article you read has your team in last. Announcers are practically eulogizing them during games. How can you possibly enjoy that season?

It's the little things. You have to find the little things that are going right – or even could go right – and cling to them for dear life. The little things are going to get you through this season. And if your team is truly that bad, well, they are probably going to be getting you through a few other seasons, too.

Take the Heels, for example. We probably have the best freshman in the country in Tyler Hansbrough. So that's something to be excited about. (... even if ESPN does show his little brother cheering and dancing like an idiot every time he scores. Why does ESPN do this? Do they think people care about his brother? Are they trying to humiliate UNC? Are they intentionally trying to get under my skin? Someone needs to look into this.)

Plus, we apparently have the top recruiting class in the nation coming in next season. So we should be contenders again in a year or two. So there is light at the end of the tunnel. And when we march into Cameron and stun Duke, it will make the season.

The Niners on the other hand…well, the light at the end of that tunnel is a train. It's going pretty fast, too. They are god-awful and look to be god-awful for the rest of the conceivable future. The worst part is, the Texans are even worse, so we aren't going to win the Reggie Bush Sweepstakes.

What is going to happen? Matt Lienart will probably be available at the number two pick (The Texans can't take him, they have David Carr), but we already have Alex Smith, so we can't even take him. How frustrating is that? Did the Niners not see this possibility? I'll tell you what, Alex Smith better be the next Steve Young or the only Niners fan in Pennsylvania is going to snap.

So my "Little Things To Cling To" for this year's Niners? Alex Smith and a high draft pick that we can't use on anyone from USC. Not good times.

Now, if you'll excuse me, I have to go slam my hands in a car door.

THE RANDOM ELEVEN

Matt Russell

Smooth moves: Someone asked me if I wanted to head to a party in a friend's room. After pausing a moment to reflect, he added "Last time I was over there, he was macking on some girl... and then he vomited." What a playa'.

Facebook groups, part I: You know about Facebook, right? Apparently, I was the only one left in the world that hadn't joined, so pardon me while I act like it's something new. I recently stumbled across a group of Juniata students named "Someone stole my bike…" which I almost joined. However, I was kinda thinking I might like to make one even more specialized, titled "Someone stole my bike… and then sold in on the side of Route 22 to another Juniata student who didn't think $25 was a suspiciously low price for an aluminum 21-speed with shocks and parked it outside vonLiebig and denied the whole thing until I produced a serial number." Too much?

Cream of Tomato soup: I was enjoying a bowl in Muddy, and put my spoon down in it. However, it remained suspended in the soup rather than sinking and stayed standing straight up. They really weren't kidding about the creamy part; delicious.

So there's this broken bag of concrete, and it's been sitting by the side entrance to BAC for a few weeks. For the first week or so, I kept thinking to myself, "Gee, I bet that's not going to work well once it rains" every time I walked by there. Sure enough, it finally rained. Two days later (after it had dried again), I observed an officer of the Blue Army standing over it, scratching his head. It's still there, and I think it may be for a while now…

Facebook groups, part II: Oh there are some more good ones. There's the "Everybody Loves Donna" (the Sodexho employee) with about 350 members, the "I've Had Sex In a Study Lounge (or Other Random Juniata Place)" group (only 9 people have 'fessed up to that one), or, the very aptly named "von Liebig's Portrait Is Easily the Most Terrifying Spectacle On Campus" group with a respectable 93 members. As you can see, I'm fully utilizing my time academically.

Geology chalk boards: All right, will someone please give Geology a little TLC (and maybe a budget)? I ventured into the P-Wing of BAC the other day, and felt like I walked into the 50s. I walked into a classroom with a wall of chalkboards that were worn down and discolored. Do you have any idea how long it must take for a chalkboard (made of slate, I believe) to be worn down by a felt eraser? They must have been transferred out of Founder's Hall during the last renovation. In fact, they could be the original chalkboards from the first Juniata classroom. No lies.

Now I'm actually serious: Kids (and by this I mean freshmen particularly), take it easy this weekend on Madrigal night. By this, I mean limit yourself to a quantity of alcohol that won't put you in a coma. There were some (ok, a lot of) issues with alcohol poisoning last year, so let's try to avoid the big white wagon with pretty lights showing up on campus this year: stay safe and know your limit.

Pythagorean justice: A math professor was geeking it up the other day in class, and I'm a big fan. Apparently, a drug dealer was recently proven to be within a school zone when arrested because the court used the Pythagorean Theorem to show he was less than 1,000 yards away from a school as the crow flies. Pythagoras: keeping cocaine off the streets since 569 BCE.

This column brought to you by Amp, official energy drink of the Random 11 and sponsor of 60% of Matt's academic work. Yes, I know my heart may explode very shortly.

A play, by Matt Russell (based on true events)
Scene: *A couple sits next to Matt in the computer lab.*
Boy: "These are the most foul burps I have smelled in at least 10 years"
Girl: "It's making your eyes water!" (laughs)
Girl: "They don't even taste good if it makes you feel any better."
Girl: "What the **** are you writing about me, Matt Russell?"
Matt: (cowers and saves document)
[5 minutes of relative quiet elapse]
Girl: (burps again)
Boy: "Oh no!" (attempts to escape)
Girl: (restraining Boy) "No, you are going to suffer through this because I'm angry!"
End scene.

Trivial Revolutions

A Juniata Holiday Story

Genna R. Welsh

With the student outcry of stress at fast approaching deadlines and the onset of finals, only one conclusion can be made: It's beginning to look a lot like Christmas. However, our attitudes at this time of the year are never, well, jolly.

I decided to lighten the mood and tell the story of Juniata during holidays past and holidays present.

Now, the College, as you know, has many enchantingly festive holiday celebrations: the wonderful Kwanzaa dinner, Madrigal and the new International tree telling tales of holidays around the world.

Let's begin the Juniata holiday epic with a nice fictional metaphor.

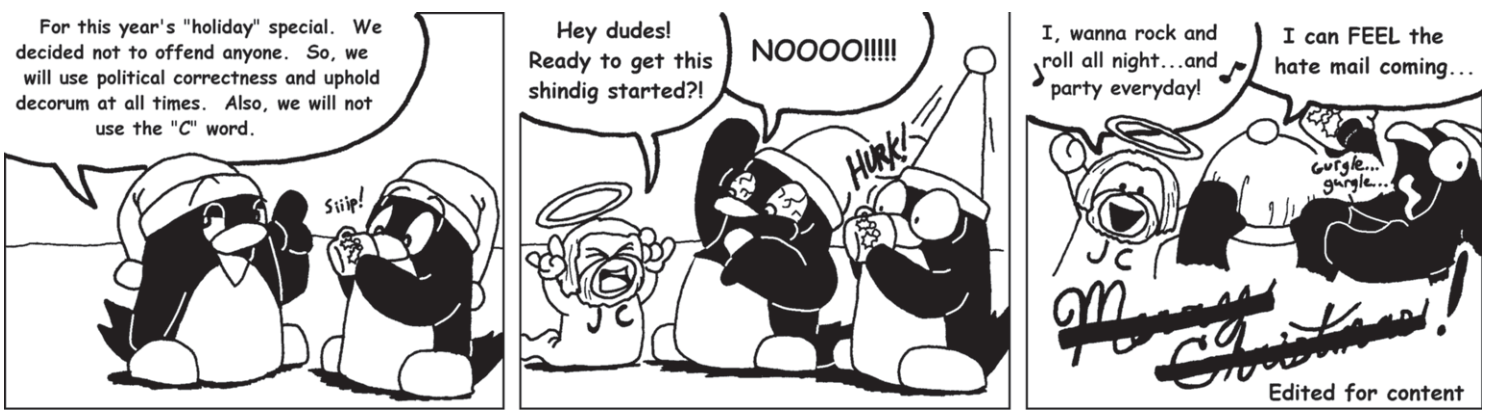
Once upon a time, Juniatians were famous for their activism and advocacy. (It's true; see People magazine for details.) They battled fiercely in the struggle to free reindeer and the elves from Santa's inhumane bondage and animal cruelty. Now, I wonder, are too many Juniatians worrying too much about taking their handheld cellular devices to Baker and not about the real issues of the world?

In holidays past, many Juniatians may have advocated that students leave celery, carrots and vegan cookies for Santa. However, this occurred what seems to be long ago, during an age when Juniatians asked only for Rastafarian hats and perhaps the slightly illegal plants specialties (that has now been found to treat depression—insert vegetarian snacks). But now, do we only have items from Abercrombie and Fitch, not to mention Hollister, dancing in our heads and onto our wish lists?

Blitzen and select upperclassmen vomit, pleading "Ho-Ho-Hold!" the possible snobbery of the incoming classes.

In other words, if the Juniata student body were in the "Rudolph the Red-Nosed Reindeer" story, we would once have been the misfit toys. But too soon, many fear, many Juniatians will represent the snobby reindeer who tease Rudolph before Santa needs his special power to guide the sleigh. Let's not forget Juniata; we will miss the misfit-ness. It is necessary.

However, I'm proud to report that the signs of a healthy Juniata holiday can still be found. Around the corner, little Sodexho elves are busy making Jesus breads while neglecting to make anything kosher, as is tradition. And there's still a little shop in downtown Huntingdon making festive crimson beverages.



But to celebrate the winter season, we should remember the underdog holiday of December (because please remember, Christmas is not the only one of them) - Boxing Day. Why should Juniatians celebrate Boxing Day? Because we have one of best, if not the best, little local bars ever (complete with hippies!). And we shall rename the holiday: Boxer's Day.

There are beautiful Christmas trees adorning von Liebig and the Beeghly Library. And we still have many professors seemingly willing to play Santa. Some traditions of Juniata festivities will never leave.

So let's make some more holiday cheer, Juniata. Keep your stockings hung by the chimney with care, in hopes that Paul Schettler soon will be there. And don't be too bummed out when what to your wondering eyes should appear but five gigantic numbers - the tuition bill is here!

A costly pre-season trip to the Virgin Islands

Men's volleyball team faces dire consequences after training turns sour

Jonathan Moody
Aly Pompeani

The men's volleyball team is currently under probationary status due to a breach of Juniata College travel conduct policy, specifically from alcohol consumption and safety issues. Because of these infringements, the team's two senior captains, Tim Cole and Nick Bernardo were dismissed for the year. Furthermore, head men's volleyball coach Ken Shibuya's contract will not be renewed at the end of the season.

The team traveled to the Virgin Islands over winter break for pre-season training. Following their return to campus, the players received what they deemed a perplexing e-mail. It stated that the volleyball season was suspended until further notice for the team's behavior in the Virgin Islands. With no formal accusations or details on the matter, the players were left in a state of disarray.

The e-mail referred to one evening's activities in the Virgin Islands. One team source said, "Coach Shibuya told us it was fine to go out." Shibuya also informed the team of the legal drinking age of 18 upon arrival in the Islands.

On this particular night, the team drank alcohol, allegedly beyond the bounds of safety. Players became ill from their alcohol consumption. Also, one player stayed out all night without contacting the coach.

The College's administration did not find acceptable Coach Shibuya's leniency or the players' decisions to drink heavily. Information surfaced that the team may have been in violation of Juniata College's travel conduct policy.

"The players should have been aware of the policies. They are clear, and the coaches know them," said Juniata College President Dr. Thomas Kepple.

Rule three under the travel conduct rules in the policy book clearly states that athletes are not to consume alcoholic beverages, even for those above the legal drinking age while on an official

Juniata PAX-O students concerned about Huntingdon's new Wal-Mart

Nick Carney

Following nearly seven years of legal battles, construction delays and community discord, the Smithfield Towne Center Wal-Mart finally opened Jan. 31. Amidst the pomp and circumstance of the grand opening, many Juniatians found relief in the idea that their long trips to State College and Lewistown are behind them.

Yet despite the acres of cheap socks, limitless supplies of bulk foods and 24-hour service, some students remain steadfast in their belief that the retail giant is bad for Huntingdon.

Sebastian Brown and J.P. Melle, both members of Juniata's PAX-O, are trying to convince Juniata students and Huntingdon area residents to resist Wal-Mart.

"It's a lot more than just [protesting] Wal-Mart," said Brown, a freshman. "It's about having Juniata become a part of the community. It's about telling students about all of the little shops in town and encouraging them to shop there, instead of Wal-Mart."

PAX-O has begun a program that would not oppose Wal-Mart, which is frequently accused of using illegal labor, providing inadequate healthcare and harming the environment. Instead, the campaign will emphasize folding Juniata College into the Huntingdon community by shopping in town before heading to Wal-Mart.

"People want [Wal-Mart] here because of low prices, easy accessibility," added Brown. "We're saying, 'Look at Wal-Mart's record for treating employees, taxing the welfare system, healthcare.' A lot of Huntingdon residents don't care about that. But for those 300 employees [at Wal-Mart], we're trying to say to them, 'We are advocates for you.'"

PAX-O has loosely aligned itself with the grassroots Wake-Up Wal-Mart Campaign, an organization

'08 Officers: All Class Night 'dying tradition'

Heather Lockwood

On Sunday, January 22 at 11:49 p.m., the sophomore class officers sent an e-mail to their peers. Due to last year's performance of All Class Night, they wrote, "We feel that it is in the best interest of our class to abstain from putting on a skit this year."

The e-mail continued, "It is our opinion that All Class Night is a dying tradition at Juniata that is only continued because of support of past alumni."

Nevertheless, All Class Night will take place on February 10 in the Halbritter Center for the Performing Arts.

Though the sophomore officers thought it best not to participate this year, a class meeting on January 24 determined that they would, with the hope of raising student interest in the event.

All Class Night is a Juniata tradition where each class presents a skit that satirizes the people and happenings of Juniata. The sophomore officers see it as slowly losing ground. Why do they sense that another Juniata tradition could be disappearing?

Sophomore class treasurer Shawn Rumery gave reasons to not participate.

"One, there was very little interest last year from students. Two, the actual writing of the skit fell on a few people," he said at a sophomore class meeting about All Class Night. "And three, while we followed the rules, others didn't."

See editorial on page 6

The object of All Class Night is to poke fun at all aspects of Juniata, but the line of what is appropriate and offensive is unclear.

During last year's All Class Night, the class of 2005's portrayal of Juniata's approach to increasing diversity on campus offended many, and the junior class also caused a stir with their mockery of Director of Student Activities Staci Weber.

Good Hall, better computers, best laid plans

Ryan Conrad

After two forums and numerous complaints from faculty, technology problems in Good Hall may no longer be an issue. Recent weeks also saw the appointment of a new Vice President and Chief Information Officer, the person who oversees all technology services on campus.

On January 31, President Kepple announced that Rob Yelnosky will temporarily replace Ray Chambers as the VP/CIO. Chambers is on a leave of absence for six months to work on his doctoral degree.

Over the holiday break, new computer towers, mice and keyboards were installed in the classrooms of Good Hall and the Humanities building.

Andrew Ashcraft, Solutions Center Technical Leader, loaded updated versions of previously existing programs on each Good Hall computer. Along with the new hardware, manuals were placed in the classrooms to help professors troubleshoot problems they encounter.

But two weeks after Good Hall received the technology face-lift, professors experienced more problems.

Professor Dennis Plane, who teaches classes and has his office

Open war, closed discussion

Juniata online forum sees conflict, confrontation

Sarah Anne Wharton

In the last weeks of the fall 2005 semester, a war broke out in the hi-tech world of Juniata's online forums.

What began as comical bickering back and forth between friends escalated into an organized onslaught of posted comments to overload the forum threads. In the end, seven students were temporarily banned from posting for the online blitz.

The banning started after the students posted more than a dozen threads in irritated response to having some initial comments moderated and deleted by TLT manager and Juniatian design editor Matt Russell.

According to senior Adam Moffa, one of the first to be banned, the original comments that started the problem were light ethnic jokes between himself and junior Dan Popernack.

"Dan was teasing me for being Italian," said Moffa. "I'm Sicilian and he's not."

Then he said Russell, whose job is to referee the forums, unjustly closed the thread.

"He slammed the hammer down, saying that 'we won't tolerate any racial comments,'" said Moffa.

Russell said that he was just cleaning up the threads, keeping them on topic and pertinent to their original subject. "There were 20 posts of just drivel," he said. "I split off the drivel into its own thread."

The students then opened up a new thread discussing free speech and restriction on the forums. When Russell locked the discussion so that they could no longer post, they retaliated with more and more new threads on censorship and forum control.

"We opened at least a dozen threads," said Moffa. "It was a concerted effort to see what we could do. We figured he couldn't shut them all down."

But again, Russell locked the discussions. When more posts inevitably started, he began banning the students who were overloading the bulletin boards with new threads.

Russell explained the banning as an organizational issue rather than a censorship issue.

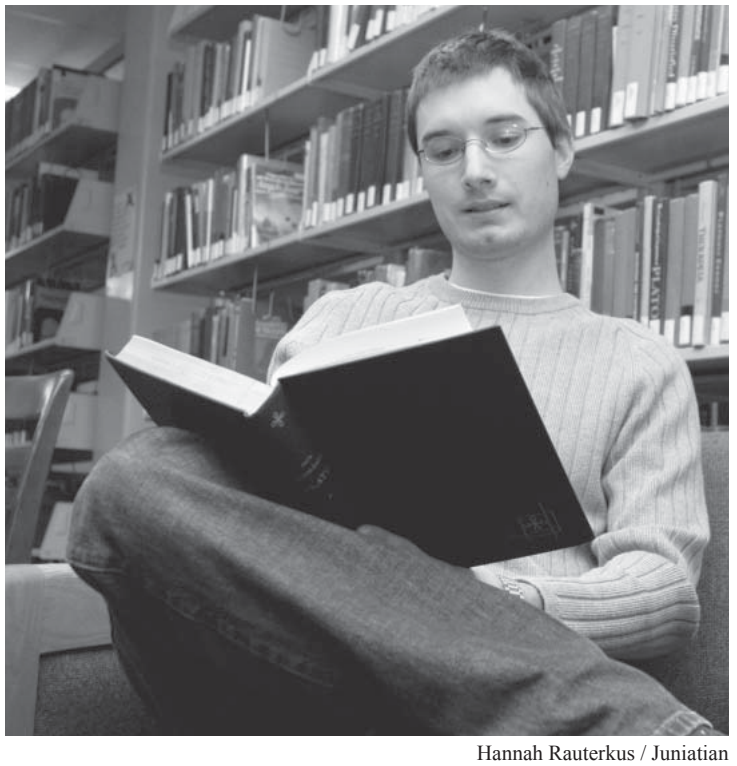
"It was a spam attack on the forums," said Russell. "You can't just drown out the boards in randomness or complaints about the moderation of the forums. It got out of control."

Other students started posting in defense of Moffa and the others who were outlawed.

"We began a civil, interesting discussion on why people were getting banned," said senior Scott Stephan. "Matt locked them all." Stephan was eventually banned as well.

Two students – juniors Jess Ocampo and Seth Robertson – even had their entire EagleNet accounts shut down during finals week. Robertson, among the first to be banned, sent Ocampo an e-mail to put on the thread. She posted the letter, signed "Seth," verbatim. When Campus Technology Services (CTS) managers read it, they mistakenly thought that Ocampo had let Robertson use her account to post, a violation of network policy, and they shut everything down from e-mail to network connection and U: drive.

"It was right at finals time," said Ocampo. "They never made any attempt to notify me."



The banned students e-mailed and visited the dean, complaining of Russell's unfair moderation and censorship of the forums.

"They saw it like I was stopping them from giving their opinions," said Russell. "They were under the impression of complete free speech. But JC owns the forums. There is a set of rules in place," he added.

Nathan Wagoner, instructional systems developer and trainer for the campus technology center,

Senior wins scholarship, bound for Cambridge

Hannah Rauterkus / Juniatian

Senior Steven Knepper is the sole winner in the U.S. of an academic scholarship which pays for two years of study in Cambridge, England.

Genna R Welsh

A standout in the college of uncommon outcomes, senior Steven Knepper has won the distinguished Davies-Jackson Scholarship to study at Cambridge University in Cambridge, England. He is the only winner in this most exceptionally uncommon contest.

"The award of the Scholarship to Steven Knepper is a remarkable tribute to his academic excellence," said A. Graham Down, the Chairman to the U.S. Selection Committee for the Davies-Jackson Scholarship.

Made possible by the Council for Independent Colleges, the scholarship pays full tuition for Knepper's two-year stay at St. John's College of Cambridge University,

Knepper, who will graduate in May with a B.A. in English, will seek a second Bachelor's of English degree at Cambridge. His coursework at the University will be solely in field of English.

Knepper's success with undergraduate research at Juniata definitively helped him in his attaining the scholarship. His work "Jesus, The Devil, and Hazel Motes' Oedipal Complex: Theological Revision of Freud in the Works of Flannery O'Connor" was published in the "The Sigma Tau Delta Review" in 2005. Also, Knepper presented at The Southern Writers Symposium a paper entitled, "'Shoot Quick, and Slow': Wilderness, Hunting Myth, and Southern Sporting Culture in Faulkner's 'Go Down, Moses.'" in February 2005.

It was the latter piece of research Knepper felt helped solidify his scholarship win.

Dr. Mark Hochberg, Knepper's advisor, expressed his impression on the research. "I would've been impressed if it would've come from a graduate student in a grad seminar."

Knepper credits Juniata for his success. "When I came to Juniata, I had no idea what was out there. I feel like I have grown so much here."

He also emphatically expresses graitutide to the faculty and staff of the College. "Everyone has helped me so much. I owe so much to Judy Katz, Mark Hochberg and James

continued page 5

Bathroom bacteria blues

Michael A. Vella

Have you ever cringed at the thought of showering barefoot or resting your bare skin against a dormitory bathroom toilet seat in the fear of contracting some exotic bacterial infection?

"The bathrooms are horrendous," said senior Meredith Troutman, a resident of Cloister Hall. She added, "I wouldn't touch anything in the bathroom without shoes on."

Other students are satisfied with dormitory bathrooms' conditions. Freshman Brandon Bogus of Sunderland Hall had few complaints other than a need for paper towels and an occasionally clogged shower drain. "The bathrooms smell like bleach, which I guess is a good thing," he said.

There is no question that dormitory bathrooms on campus receive heavy use daily, but should students worry about contracting an illness from using them? The answer to that question is no.

According to Tristan delGiudice, director of Juniata's facilities services, eight custodians wash all dormitory toilets, sinks and floors with germicidal cleaning agents daily. Showers are washed thoroughly biweekly, whereas mirrors are cleaned and dusting is performed as needed.

"In general, our custodial staff has done a good job cleaning residence hall bathrooms," said delGiudice. He added, "The custodial supervisor attends weekly RD meetings to discuss any custodial issues that come up, and there have only been a few issues raised during these meetings regarding cleanliness of bathrooms."

As delGiudice points out: "Not all bathrooms are in the same physical condition to begin with based on the age of the bathroom. Even after [South Hall] bathrooms are thoroughly cleaned, they do not look nearly as good as the bathrooms in Lesher because those bathrooms were just renovated."

Despite constant cleaning, it is inevitable that some dormitory bathrooms will look or smell bad on an occasional basis. The bulk of student concerns, however, seem to stem from a fear of germs - creatures we cannot see with the naked eye. Such fear has created a desire for more cleaning options in dormitory bathrooms. "I would like to see those Clorox

Can a dorm bathroom make us sick or are we just sick over bacteria?

antibacterial wipes available in the bathrooms," said Troutman.

In truth, bacteria are everywhere. While students do not have to sympathize with these *potentially* lethal organisms, they should recognize their importance. Among other things, bacteria aid in digestion, help produce food products and protect us from more harmful organisms.

A bacterial culture from a toilet seat in Sherwood would yield much of the same bacteria as one taken from a sink in Baker. In fact, recent evidence suggests that toilet seats are often more clean than kitchen sinks and countertops, which frequently come into contact with foodborne germs.

As professor of microbiology Michael Boyle explains, "With the resources we have [at Juniata], you wouldn't be able to distinguish yogurt from a bathroom."

"The cleanliness of the bathrooms doesn't matter as much if people wash their hands," added Boyle. "There is a public perception that bacteria are bad, leading people to use more antibacterial products." Washing hands with regular soap and water works just as well.

continued page 4

Scheduling conflicts, lack of vehicles challenge field trips

Jason Najarian

Last spring Juniata faculty members debated the College's field trip policies. Even though Juniata has since restructured its field trip procedures, some problems remain unsolved.

The majority of the changes dealt with safety and documentation, but two main points are still problematic. The first issue was student schedule conflicts, where a field trip is scheduled on the day of an exam or other class. The other was a faculty issue involving the College's transportation problems.

The primary concern was of students having to deal with schedule conflicts caused by a trip. According to professor of communication Lynn Cockett, a member of the Student Academic Development Committee who brought the original changes before the faculty, this is the issue that initiated changes in the field trip policy. Professors were concerned for students who found themselves in situations where neither of their conflicting professors would compromise on scheduling.

Cockett said, "The faculty agreed that the students should not be pressured by being in the middle of such a conflict."

This is a difficult debate because it involves tough questions, like whether or not a field trip is more important than another professor's lectures. Faculty debated if it is fair to say that one professor's class should trump another's in importance. It led to some tension among the faculty that the committee was hoping to shift away from the students.

To this end, a few solutions were discussed. One of the original changes considered was requiring that alternative assignments be available for field trips. Most trips are considered vital portions of classes though, and many faculty members felt that you cannot replace what a field trip teaches.

Cockett said, "Is there really an equivalent to a field trip? The faculty decided there is not."

What has come to pass is that now professors are required to have field trips scheduled on their syllabi during the drop/add period. This at least lets students drop courses as a last resort, but it does not seem to be an ideal solution.

The other issue, that of transportation, was brought up by faculty who frequently go on field trips. Ryan Mathur, professor of geology, takes field trips two or three times per month.

By far, his biggest issue was the College's lack of vehicles for trips. Juniata currently owns four vehicles but once they are reserved the faculty member has to seek outside transportation.

This process can take hours, and is expensive for the College. Sometimes Mathur's field trips end up in four or five vans. This means that he needs to find competent drivers and cell phones for each vehicle. Mathur feels that ideally Juniata should purchase more vehicles.

Professor of biology John Matter agreed with Mathur. He added that he feels some of our current vehicles are inadequate for the needs of the College. In particular, Juniata's two mini busses are seen as unsafe and awkward to drive.

Matter said, "They scrape the road during normal driving, such as hitting the small incline leading into a gas station."

Many times geology, ecology and other field trips end up in off road conditions. More serious problems occur, such as what happened one summer during the Remote Field Course program. Matter said that their mini bus got stuck turning around on the side of the road. They were caught in a tiny ditch that would not have impeded most standard vehicles.

Safety is also a concern in terms of communication. The new policies require professors to register field trips to ensure Juniata officials can easily locate off campus groups in case of emergency.

Field trip policies will remain under review by College officials.

Men's Volleyball: A costly trip to the Virgin Islands

continued from page 1

athletic trip.

Rule six under the same category involves students separating from the group. It states that the coach should be informed at all times with respect to where each student is going. One member of the team broke this policy when he did not return to his dorm from Saturday night until Sunday morning.

The men claim they were never made aware of these policies. The policies, they said, were only made clear to them after they returned to campus.

"In all honesty, if we knew we weren't supposed to [drink alcohol], we would have never put our coach, program and players in jeopardy," said one player. "But it is hard not to do something when your coach tells you it's okay."

Coach Shibuya is taking responsibility for the team's actions. "This involves the coaching staff, me down to the players. This is something, for me, I regret and take total responsibility for. Still, as players, they need to know right from wrong," Shibuya said.

"This was an issue of leadership," said Athletic Director Larry Bock. "There was poor judgment and poor leadership. The conduct of the team and leaders was very unbecoming of a Juniata athlete."

Most of the players disagree with the decision to remove the captains from the team. "It is ridiculous," said one teammate. "We went on an away trip; no one ever gave us set guidelines on what we could and could not do. It is the school's fault for not giving us the written policy before we left."

Again, Shibuya takes responsibility for this.

"This is all very unfortunate," says Bock. "We are losing a real good coach and human being."

The possibility of an anti-hazing policy violation was presented in a public announcement sent by the President's Office to all Juniata faculty, students and administration.

Despite the importance placed on hazing in the announcement, President Kepple said, "[The occurrence of hazing] is much more of a gray area. It is impossible to confirm whether it took place or didn't." Rumors have circulated, but nothing has been verified.

The players involved, however, admitted to horseplay. The victim of the alleged hazing also stated that no harm was meant by the incident and that he was not made to feel uncomfortable.

The Athletic Department handled this issue and has moved on.

At the end of the year, the team and its status will be reviewed once again. The possibility of further restrictions on the team should the players not follow College policies remains a possibility. For now, the men remain on thin ice.

"Everyone is going to have to do it right this year and next year," Shibuya said. "For everyone involved in athletics…we have to do it better. I hope that if anything good comes out of this, it's that."

Juniatian News Briefs

New online radio station

James Trent

Word is getting out about Juniata College's upcoming radio station WKVR. Sure, it's been around for a while, but now it has online streaming at http://clubs.juniata.edu/wkvr. Now listeners can tune in anywhere, anytime, just by going to WKVR's website. This is revolutionary for Juniata's only radio station, which has had a humble following since its inception in the late 1950's.

Next year WKVR will separate from the public radio shared by Penn State University and Juniata. This will expand the programming schedule from eight hours to a full 24 hours. The programming schedule as of now consists of four shows from 8 p.m. to 2 a.m.

The WKVR staff, numbering about 30, may increase significantly. WKVR's audience has the ability to reshape its radio station to an almost limitless extent. Listeners can help decide what CDs the station buys and when the new programming will be. Audience input will decide the most important aspects of WKVR

Megan White, WKVR's Music Director, explained, "It's all about the listeners."

WKVR is designed for a broad audience. "There's a lot out there for people to like, and listeners can recommend their favorite music," White said.

Up until now, WKVR has had the most success with the social circles surrounding radio programs such as the "Suave and Crabs Show."

The station is hoping to improve its audience by sponsoring a competition to choose the radio station's new name or to create a WKVR magazine. The magazine, an extension of the information on WKVR's web site, would include deejay bios, music articles and programming schedules.

Recycling on the rebound

James Trent

Last year Juniata College's recycling program was in rough shape. Recycling was mishandled as trash, causing many to lose confidence in the College's program. The mishap placed Juniata's sustainability initiative in extreme jeopardy.

"That will never happen again," said Rob Yelnosky, head of the Sustainability Steering Core, and acting vice-president/chief information officer. After personally working with the new recycling administration staff, Yelnosky assures the student body that the recycling incident has been solved.

At the heart of the matter, no administrative officials were devoted solely to Juniata's sustainability program. As a result of the same color garbage bags being used for recyclables and garbage, nobody was held accountable.

Juniata College's recycling program is taking a huge step torward sustainability with Chris McKim now employed as the recycling coordinator. McKim, along with other devoted staff members, is currently revamping the recycling process on campus. The recycling staff has issued different color bags for recyclables as a first step.

Recyclables will also be weighed with newly purchased scales. The recycling staff will confirm the weights of recyclables with recycling plant's numbers.

Juniata College's recycling community has proposed ambitious sustainability initiatives, including decreasing electricity consumption by 10% and taking part in Recyclemania. The funds saved from the electricity reduction will go to Student Government and purchasing wind power machines for future use.

Recyclemania is a nationwide competition with over 93 participating colleges. The goal is to recycle a proportionally larger amount of garbage than other colleges. Recyclables will be weighed beginning Feb. 8. Students can find more information online at http://services.juniata.edu/sustainability.

Good Hall technology: gains and woes

continued from page 1

in Good Hall, encountered problems with the new technology and the manuals that were placed in the classrooms even before the semester started.

"I had to really pursue the problems in order to get them fixed," he said.

Two days, three phone calls and two e-mails to the Solutions Center later, Plane was finally able to have the problem resolved in time for his first class. "I would want to see a phone number that would have a student on call to fix the problem," Plane said.

When faculty members have problems with technology, they are asked to contact the Help Desk located in the Solutions Center. From there, the Help Desk will relay the concern to its student workers who will assist in fixing the problem in a timely manner.

Both Ashcraft and Gary Feagley, who are in charge of classroom technology setups, explained that they are dealing with sound issues. "Currently, the sound from the VCRs and DVDs is causing problems with the new computers," said Feagley.

Chambers, then in charge of CTS, organized a faculty forum on December 7 to voice concerns about Good Hall's lacking technology. After the faculty forum, he e-mailed professors with a list of action items that needed to be addressed, including a preventative maintenance program, evaluating sound quality in classrooms and rewriting classroom technology instructions. Other complaints have targeted broken DVD players and sound equipment and wires being unplugged.

Instructor of Communication Sarah Worley is one faculty member whose class has been interrupted by technology difficulties in Good Hall. In order to show a video presentation, she took her students to four different Good Hall classrooms to find a working media player. Finally, Worley moved her class from Good Hall to the TLT located in Brumbaugh Academic Center.

"My biggest frustration is that I feel I am wasting students' time," Worley said.

Sophomore Cat DeCoursey said she experienced technical problems in Good Hall classes that pushed back the lessons.

"I feel that the classrooms' technology needs to be addressed so that professors and students are not held up because a computer won't work."

Junior Michael Chirdon explained that in one of his classes, the sound and video would never match up when a movie is played.

"After awhile, I believe the professor honestly stopped trying, and he suggested watching the movies at home," Chirdon said.

Feagley attributes the malfunctioning LCD projectors and unplugged wires to campus "video gamers" who play in Good after classes are not in session. A solution to the gaming problem is locking computer podiums each evening.

"I will say 90 percent of our calls come from Good Hall," Feagley said. "We respond as quickly and effectively as we can when called."

If the problems are still occurring this semester, sophomore Jason Hoover offered a solution: "Move the technology hallway to Good Hall."

Suspicions about Wal-Mart

continued from page 1

whose goals include encouraging people to shop elsewhere to reduce Wal-Mart profits.

Sarah Pierce, a Juniata senior who has not shopped at a Wal-Mart in about six years, is concerned about the potential environmental impact of the Smithfield Towne Center.

The facility cost over $20 million dollars to build, at least a quarter of which came from taxpayer money. Some of this money was used to build a large artificial hill, which provided more level ground for building and easier access to the Center from the highway. Ordinarily, this would not be problematic, except that this new land mass may impact the nearby wetland and damage its fragile ecosystem, according to Pierce, an Environmental Studies and Sciences POE.

"They didn't build it on the wetland," said Pierce, "but they built it close enough that it worries me."

While Pierce and Brown may be determined not to shop at Wal-Mart, most students seem to be embracing the retailer. On opening day, the store was the primary topic of conversation around campus. In what Brown dubbed as a "pro-Wal-Mart community," the grassroots campaign efforts of PAX-O and others may not be enough to convince anyone in Huntingdon that Wal-Mart is a potentially negative force.

"It's not all bad," admitted Pierce. "If it means people don't have to travel as far and use less gas, I guess that's a good thing."

THF Realty, the company behind the Huntingdon Wal-Mart, has plans to develop at least eight other businesses in the complex, apart from the adjoining strip mall that will feature a Fashion Bug, Holiday Hair, Wise Eyes and Grand China Buffet, among others.

Online forum conflict

continued from page 2

agreed with Russell. He thinks part of the forum trouble stemmed from misconceptions of free speech, which do not apply to this issue.

"The forums are an institutional service," said Wagoner. "What people need to understand is that forums work on the basis of a higher authority. All forums have rules... You have to determine a policy."

For instance, when some of the forums were locked, an administrator's message appeared on the thread saying "Certain posts in this thread were deleted due to users violating the Forums Rules... personally attacking someone will not be tolerated." Wagoner himself also posted a thread titled, "Forum Moderation and Policies" to detail the rules and show why the locking and banning was taking place.

But Moffa and others say that Russell and other moderators overreacted, and that the supposed personal attacks were only jokes.

"My personal opinion is that you should have a sense of humor," he said. "It wasn't malicious."

The students were also annoyed because they did not feel that Russell, as their peer, had the right to single-handedly control the forums.

"They seemed to perceive that I was a lone ranger on the forums," Russell said. In reality, he was completely backed by CTS.

Wagoner, one of Russell's superiors in Campus Technology Services, thinks that Russell's actions as a moderator were entirely appropriate. Russell even brought up the issue at a CTS staff meeting for an objective point of view.

"Matt came to the meeting to bring up this point while it was happening, report on his action and ask for guidance," said Wagoner. "He had the support of the entire full-time staff."

Even so, Moffa and others disagree with what happened.

Now, after winter break to cool things down, the forums are back to normal. It has been a nice, quiet semester so far, and everyone has full posting privileges. The veteran forum-posters have moved on to new threads.

But, it is interesting to note that the forum threads on censorship and moderation had more publicity and hits than any other subjects since the 2004-05 major concert controversy. And, according to Russell, no one was ever banned before last December's forum war.

Bacteria blues

continued from page 2

Society's paranoia with killing bacteria may actually be causing more harm than good. The overuse of antibacterial products (including soaps, cleaning agents and antibiotics) can create entire populations of bacteria that become resistant to those same agents. Bacteria have been around for millions of years, and, only recently have they had to "battle" with humans. This is a war bacteria are not going to lose any time soon. To keep them under control, abuse and misuse of antibacterial products is certainly not the answer.

Although students worry that they may encounter germs that are crawling around on toilet seats and shower floors, those same people carry around bacteria on their hands, most of which does not come from the bathroom in the first place.

When asked if students are likely to get sick from dormitory bathrooms, Boyle replied "no."

All Class Night under scrutiny

continued from page 1

"The junior and senior skits may have been interpreted as distasteful," said Max Stem, who participated in last year's junior class skit. "This year, we are trying to be more aware of where the line is, and try to not be giant assholes, but instead just medium-sized."

Weber said it was not the junior's skit that offended her. "It was the behavior on stage and the way the students acted in general," she explained. "The stuff that was directed toward me, I take it with a grain of salt."

This year, the advisors of the event will be more stringent in enforcing the rules. "Things are being done differently than last year," said Weber, one of the advisors to JAB. "We are going to be reviewing the scripts more closely, the students have to follow them during their performances and there will be a mandatory full dress rehearsal."

With the support of the sophomore class, Juniatians are going to keep the tradition alive… at least for another year.

The Juniatian's coverage of All Class Night continues with our editorial on page 6

Roving Reporter

How heavily should the All Class Night skits be reviewed before they are performed?

All Class Night Skits shouldn't be reviewed prior to the event. In the past they weren't and from what I understand just from looking at past yearbooks and speaking with alumni, the skits were far more derogatory and harsh than they are now. I really feel that people need to see this tradition for what it is, a chance to make fun of the institution. If you are easily offended, then don't go.

-Rachelle Luther, '06

To a degree. It can be a touchy subject, but there's also a lot of hyper-sensitivity, which doesn't fix the problem.

- Lisa Detweiler, '07

No, we are all adults. However, people need to realize on their own where to draw the line, where funny and entertaining becomes inconsiderate and inappropriate.

-Aimee Boore, '06

Senior wins scholarship

continued from page 2

Tuten."

Knepper hopes to use this experience to one day obtain his Ph.D. and teach English at the college level. For now, though, he is excited about the experience.

"I'm going into this with the intention of taking advantage of everything there is to offer, but also going in humble and scared. This will be my first trip out of the country."

Knepper continued, "I'm very excited about the academics because it's really going to be challenging."

He offered some advice for students looking for any graduate school opportunities. "Start early and apply to many programs. Take the shotgun approach. Apply to many different things."

Aside from articulating his excitement at being in a new culture, Knepper mentioned one concern, "I'm a little worried about the formalities. For formal occasions, they [English students] actually wear dress robes; it will kind of be like Harry Potter."

CIC's Down said, "Studying at Cambridge can be a life transforming experience and I wish him the best success."

Surely, Down is not the only one wishing such success.

Give All Class Night another chance

EDITORIAL

Sophomore class officers recently suggested that All Class Night is a dying tradition and encouraged the Class of 2008 not to participate. The class, though, wisely decided to attempt the event for another year and will stage a skit on Feb. 10 alongside the freshmen, juniors and seniors.

It is not yet time to close the door on All Class Night. The event, a mostly annual occurrence since 1938, deserves a chance to right itself after troubles in past years.

Traditions like All Class Night are important to making Juniata College what it is, but those traditions need to change over time to remain relevant and exciting. All Class Night 2006 could finally find a modern-day balance between responsibility and total debauchery.

It is easy to question the status of All Class Night, given its track record recently. In 2003, the event did not happen at all. Two years ago, only two classes participated. Nevertheless, skits like Conan O'Brien interviewing the von Liebig lobby portrait were memorable. Interest was down but growing.

Last year, All Class Night seemed to be back with a vengeance. A scene mocking marketing photo shoots was racially insensitive, albeit unintentionally. The judges found other skits to be in bad taste because of physical humor and innuendo. Still, ideal All Class Night elements showed up, like the Class of 2007's prospective student tour and the Class of 2005's double-entendre-laden poem – risqué but not hurtful.

All Class Night '06 could find a balance of responsibility and total debauchery.

Hopefully the negativity of last year's performances and the resulting, but necessary, tightening of rules and rehearsals will not squeeze the life out of a fun, wild, 68-year tradition.

All Class Night should not set out to hurt or harm anyone. We should think of it more like a celebrity roast than a trial by sarcasm. At the same time, there are differences in styles of humor from the judges to the participants. Remember, these skits come from students who, on the whole, rate shows like "Family Guy" and "South Park" among their favorites.

That may be the attitude of All Class Night for the early 21st century.

Many Juniata alumni won't hesitate to point out that almost every JC tradition has evolved since their time here. Consider the Madrigal celebration: Up until the 1970s, the event consisted only of a dinner – no dance – and there was no "tenting" for a spot at one of the coveted tables for the singing of "The Twelve Days of Christmas." Eventually the camping out for tickets began, but in a more rugged way than we now know. Students sat out on the curb in front of Ellis – sans tents, but maybe with an old couch – and waited.

The evolution of Storming of the Arch is a similar tale. Until the recent past, Storming was absolutely ruthless, and only men were allowed to take part. Upperclassmen would hang out of windows in Cloister's Arch, pelting eggs and pouring bodily fluids down on all those who tried to pass under. There was no wall of women's rugby players at the foot of the arch and no storming boundary delineated with caution tape.

We cannot deny that All Class Night is undergoing a similar progression. While it used to be an event characterized by drunken debauchery, present day student leaders are working to encourage a slightly more civil function. But we can't let that take the fun out of All Class Night. College is stressful enough that we deserve one night dedicated to poking fun at our professors, student body and campus quirks.

For better or for worse

Wives face stress at school and at war

Emily Eller

For many Americans, U.S. military involvement overseas has fallen off the radar, but not everyone has that luxury.

More than five years after the invasion of Afghanistan, "business as usual" for collegewomen whose boyfriends, now husbands, are overseas means dealing with more than just the stresses of class but also the stresses of marriage under the often unpredictable whims of the military.

"I don't have a whole lot of faith in the U.S. Army right now," said Marie Howe, a senior who married her husband John, a Korean linguist for the U.S. Army, over Christmas break. They had been planning to get married later, but last summer they found out that he was supposed to go to Afghanistan.

Howe said that the impending overseas deployment had much to do with their recent marriage.

"The military really attracts marriages; they give you a lot of benefits, although that's not why we did it. The military doesn't recognize girlfriends. It's so crazy. It can't just be love; people have to see the ring on your finger," said Howe.

Howe and her husband have been through deployment briefing twice, once for Iraq and once for Afghanistan, but in neither case was he deployed.

"I'm the luckiest military wife ever. I went through all the stress, but he's not going," she said.

Senior Cara Reynolds was not as lucky. She and her husband Jay were married in June 2005 during his two weeks leave while in a six month training for deployment to Iraq. A year before he was also scheduled to go to Afghanistan but never deployed.

"Two springs ago he pulled out of school to go to Afghanistan, and then they didn't go. He's three years ahead of me and hasn't graduated yet."

Reynolds was studying abroad in England when she found out that her husband was being deployed to Iraq. She came back a semester early to see him before he left on June 21 of last year.

Both Reynolds and Howe said that their military marriages have caused a lot of additional stresses.

Said Howe, "Both times [we prepared for deployment], it's been really stressful. I have really bad dreams and can't sleep at night." She said her husband also suffers from insomnia and bad dreams, but they joke about it to keep their spirits up.

Reynolds no longer watches the news because images and

Going international, baby

"I don't know how to put this, but I'm kind of a big deal."

Mary Gardiner

"…I'm very important. I have many leather-bound books, and my apartment smells of rich mahogany."

Back home, in the glorious Huntingdonian air, I'm sure you guys hear this a lot. But the truth is, it's not so common here, in Brno, capitol of Moravia, in the Czech Republic.

I've discovered the most curious little fact. They don't quote movies here in Central Europe. Guess what they do here. They quote commercials. Or, they tell jokes like the following:

"What's white and ruins your breakfast?"

"An avalanche."

Alli Engle, my fellow comrade in all that is Studying Abroad, didn't understand.

"They don't …quote movies here?" We both agreed that previously, we thought that "Nobody makes me bleed my own blood" and Napoleon Dynamite's "Gosh" were totally universal in humor.

We thought as we've been taught about math and music, that humor is a universal language – something everybody experiences and can relate with. We've had this idea shoved down our throats since preschool and kindergarten. This tolerant approach encourages us to accept people, to identify with them through universal languages like music and laughter.

It's this same attitude that led my mom to say, in response to my observations about the behavior of the Irish as compared to the Czechs: "Don't generalize!"

We've learned this love everybody sentiment since elementary school, and we continue to learn it even at Juniata with the Diversity Forums and other such programs.

I've discovered that the source of this indoctrination is our burden.

Our burden, more explicitly, is our history of racial discrimination and even slavery in the face of our pride in our multinational character. And thus, we have plenty of specials on Harriet Tubman and the aforementioned Diversity Forums to address the situation.

It's like nationalism in Germany. There's a burden of history that they bear, and so they have a negative response to nationalism.

But going back to my mom's point about not generalizing: this is the most interesting, spectacular little detail. The fact is, in Europe, there is heavily concentrated culture.

By culture, I mean lederhosen, alphorns, and tulips *culture*. People have a respect for what is Czech, or Polish, or German, or Spanish, or French, or whatever other entity they are part of. Nationhood, as a thing, as an essence, is concentrated in ways that Americans could never imagine.

Take, for example, a flight from Philly to San Fran. Wherever you go, you can find a cheap diner that serves a cheeseburger, fries and a Cherry Coke, with the same taste and the same kind of waitress. Of course, there will definitely be a Wal-Mart or K-Mart.

Here, however, if I were to go just two or three hundred miles in any direction, I could be speaking Slovak, German, Hungarian or Polish. I could be chowing down on pierogies, or munching

Letter to the Editor

Men's Volleyball issue handled unfairly

I am writing today in regard to the Juniata College Men's Volleyball team. The situations that occurred in the Virgin Islands were handled unfairly. Also, the team was not informed why their season was being suspended, just that the athletic department was looking into things.

I, like most of the Juniata College community, am still up in the air about why the team's two captains were kicked off the team for the remainder of the season. Let me say this: I have no problem with players being kicked out of any program if their removal is warranted. I understand removal of these players if hazing or crimes of any kind were committed. However, if they themselves were not related to the incident, they should not be removed. Instead, the players that were involved should be reprimanded.

Lastly, it was brought to my attention that alcohol was consumed and brought back by a number of the players on the team. I also am aware that the team's head coach told the players that it was okay to consume alcohol and did nothing to stop the consumption or transportation of alcohol from the Virgin Islands back to Huntingdon. If this statement is correct, I believe that the coach should have been the first one to be removed from the team and not the captains.

If no crime or hazing incident involved captains, they should not have been removed from the team. Who is to say that other members of the team did not do similar things? Plus, if the student athletes were told they were allowed to do certain things and in actuality were not, this falls squarely on the head coach.

I guess when it comes down to it, my point is two student athletes are done being just that--student athletes--while the head coach is sill getting paid to be head coach of a program of which he obviously has no control over.

Robb Patty
Class of 2007

Editor's Note: Patty is a staff member, however his opinions do not reflect the opinion of the entire Juniatian staff. See the front page for full coverage of the Virgin Islands story.

For better or worse: wives' stress

continued from page 6

numbers of dead soldiers makes her worry that it could be her husband.

"If you don't know what's going to happen, your imagination runs away and it can be more terrifying than what might actually be there," said Reynolds.

Avoiding the news does not mean being able to avoid the war debate, however. Being in College means living in a sometimes very vibrant political environment.

"People want to talk politics to me which I can't stand because I just want my husband back," said Reynolds.

She gets frustrated when people say that they support the troops but not the war. She says that support from home is crucial to the troops' moral abroad and that her husband worries about returning to an anti-war climate. But, despite this, she has mixed feelings about the reasons for the war in Iraq and is worried about the effects it will have on her husband. He will receive only a two week de-briefing when he gets back and no counseling while he is in Iraq.

"You can't ask for help over there," said Reynolds. "I wish they would do more. Sometimes Jay doesn't act like himself." She said that cheating is rampant among married couples separated by war, and she worries about the lives of other military families, too.

"People don't act like themselves. They lose sight of why they love their wives and their kids. They lose sight of their morals."

Howe, who describes herself as politically liberal, is not in favor of the war and worries that the troops are spread too thin. Bouncing between military bases and a college campus has exposed her to a large range of political views.

"If people are anti-war, I think that's awesome that they stand for something. People who are pro-war are harder for me to understand," said Howe.

Said Reynolds, "People should just say, 'Thanks; Thanks for not being a coward.' Jay loves more than anything people appreciating what he's doing."

Going international: Central Europe

continued from page 6

on some Hungarian chicken paprikash, wiener-schnitzel or, my favorite, Bavarian weisswurst.

I thought, once, that the very strength of America was contained in the fact that you could walk down the road in my hometown outside of D.C. and have each of those foods, all within a few blocks of each other.

But now I'm worried that this strength has been replaced by homogenization, and by fear of the other as a result of the events of the past few years. We swing either to one side, back to pre-civil war days, reverting to racism and chauvinism, or we soften up like the hippies of the 70s, just loving everybody! (Which, I fear, is one of the biggest issues that Democrats face today.) And on top of it, we have bastardized immigrant food like quesadillas into chihuahua-loved drive-thru greasies.

I guess I'm just worried that I'll return next year to a place that is not unique in its multiculturalism.

Instead I'll return to a country that is divided between two types of people; the first, who are so scared of "outsiders" that they lose their nation's greatest strength; the second, who are so indoctrinated with ideas of non-generalization that they can't even appreciate what Czechness, or what Germanness, or, heaven forbid, Americanness is.

Presidential Perspective

President Kepple wants to hear from you! His column will appear each issue this semester to answer any college-related question from the campus community. Simply e-mail questions to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

Juniatian Editorial, Letters Policies

Corrections

The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinions

Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. The editorial board consists of the editor in chief and all section editors and design editors.

Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor

Students, faculty, staff and alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity

Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

The editors also decide anonymity of sources in articles on an individual, case-by-case basis.

Sarah Anne Wharton/ Juniatian

Ceramics student Shannon Yoder sponges off a small wheel-thrown bowl in the pottery studio. The studio – called the "pot shop" by students – will move into Brumbaugh Academic Center next year after professor of art Jack Troy's retirement.

"Pot Shop" slated to move

Vacancy in BAC creates a new home for ceramics program

Jessica Perry

For years, ceramics students have been working in what Associate professor of art Jack Troy calls "substandard conditions."

Due to the lack of an efficient ventilation system, students are exposed on a daily basis to air filled with smoke and dust from the kilns and clay in the studio. But starting next fall, students can expect to take ceramics classes in a new facility located on the third floor of Brumbaugh Academic Center.

According to Provost Jim Lakso, money in this year's budget was initially allocated to refurbish the pot shop. However, plans have shifted toward using the money to relocate the facility.

Lakso explained that they decided to relocate when they discovered one of the gas kilns inside the pot shop might have a leak. He also said that the reason the relocation did not occur sooner was because there wasn't any other space available before this year.

To ensure the safety of the students, deconstruction of this kiln has already taken place and the new kiln went under construction January 30. With money fundraised by Troy, the kiln will be built so that it can be used for the duration of this semester and then moved to the new facility.

However, with new facilities comes change. Both Troy and Lakso suspect that the tradition of keeping the pot shop open 24 hours, seven days a week will not carry over to the new facility.

While both Troy and Lakso are confidant that the ceramics program will benefit from the relocation, some students are not so sure.

Senior Lauren Forster thought that while the pot shop deserves more attention from the school in terms of space and ventilation, "It's supposed to be messy."

Junior Reid Smith agrees, commenting that he "likes that it's a piece of crap," because it creates a comfortable atmosphere.

But other students like the idea of the relocation. For senior Claire Fultz, a student who just barely squeezed into the class, a big reward would be having a facility big enough to allow increased class size.

Senior Brittany Barbera, a student in an upper level ceramics course, feels the movement to a more central location will benefit the ceramics program.

"Where the pot shop is now, people don't get to see us at work, so moving it ... might facilitate more interest in the program or even an understanding of how the program works," she said.

There are no specific plans for the design of the new facility. However, Lakso was confidant that the new location would be able to accommodate the ventilation and storage needs and also include space for the kilns and clay making station.

Another effect of the relocation is that the anagama kiln will most likely go out of business. Not only will it be too far from the facilities, but there are also concerns that as it gets older it will create environmental issues.

Anagama kilns are unique because they are fueled by wood instead of electricity or gas.

The pot shop was originally acquired by the College as an old hardware store thirty-five years ago. Troy stated that aside from a few replaced light bulbs, "There has been no capital investment in the studio since 1971."

The pot shop's space is limited, and barely stores the 11 pottery wheels, five pallets of clay, 32 buckets of glaze, 25 students and each student's 20 projects.

While Troy enjoys the fact that the ceramics program has its own facility, he writes in his syllabus: "It is my hope that the facility will be improved upon in our lifetimes."

After years of waiting, it seems that Troy's hope will soon become a reality.

Brokeback Mountain

A good film with too much hype

Holly Brown

"Brokeback Mountain," starring Jake Gyllenhaal and Heath Ledger, is being pegged as the Oscar shoe-in of the year. But while the movie is well acted, well directed and hits all the right notes, the acclaim seems to be directed more toward the subject matter than the movie itself.

The film is based on a short story by E. Annie Proulx, and is currently nominated for eight Oscars.

"Brokeback Mountain" is beautifully shot, with mountain ranges and farm scenes spanning the screen. But it's the emotion and the evolution of the two main characters, Ennis Del Mar (Ledger) and Jack Twist (Gyllenhaal) over the course of their lives that makes this film so touching. The movie sneaks up and captures you just like an unfolding novel.

In case you've been living in a hole for the past six months, "Brokeback Mountain" is the story of two poor, young cowboys who begin an affair in the 1960s that they continue throughout their lives. This is one of the first major motion pictures, distributed by Focus Features, to display a serious gay relationship as its main focus.

The film is poignant and haunting, not necessarily because of its ground-breaking gay relationship on screen but because of the incredibly relatable character of Ennis and his fear of his own emotions. Jack is the starry-eyed idealist to Ennis's awkward, cynically realistic character.

Both Ennis and Jack marry, have children, and live normal, but restrained lives. They only meet once or twice a year, always in the wilderness away from society, as

A new brand of coffeehouse: BYOB

Kevin "Par" Fasick

Saturday, February 11, 2006 might seem like any other Saturday in East. There will be dancing mixed with lagers, ales and even cheap lights - the reliable standby of poor college students everywhere. Fond memories - some less blurry than others - will be created. But contrary to the similarity to an infamous East party, this party won't take place at a dorm or bar.

A new type of coffeehouse, urging students to BYOB (bring your own beverage), will be held in the Ellis Hall Ballroom, and will be open to the entire campus. The event will feature live music, and all proceeds raised will be donated to Florida Zoo relief. What's more, it is one of the many examples of Juniata students' ingenuity and community service.

Sophomore Chris Murray has been doing volunteer work for the past three years at the Everglades Outpost Wildlife Rescue Center in Florida.

According to Murray, "It is a zoo that takes in injured or confiscated wildlife that can no longer survive in the wild. We give them a home."

The well-being of those animals was jeopardized this past fall by hurricanes. Murray wanted to help, but was unsure how he could do so while at school. He soon created a solution - the BYOB coffeehouse.

A percussionist in a student band, he worked with fellow band member Tim Cole and JAB to coordinate the event. Leslie Christman and Kelsey Brewer of JAB decided that this event could best serve the zoo by featuring Juniata talent.

"We wanted all of the money to go to charity," explained Christman. To make that happen, the event will feature eight bands, all composed of Juniata students, faculty and staff. Each will play for about twenty minutes.

Murray's band, the newly formed Squirrelly Nan and the Bad News Band, will perform, featuring senior Nancy Hayes, its new lead singer.

Other featured bands include the Daddario Quintet, Two Hours and the yet-to-be named group comprised of Juniata staff members Dan Cook-Huffman, Hal McLaughlin, Jeremy Santos and Phil Dunwoody. Lisa Detweiler and Brittany Barbera will perform acoustically.

Director of Student Activities Staci Weber, said, "JAB has an amazing group of student leaders involved right now…and where they are…they can do that [hold a BYOB event]." Weber points out that there will be a limit of "one six-pack per person. That's it, no hard stuff, no wine."

Admission to the event is two dollars. Identification will be checked at the door.

Hannah Raterkus / Juniatian

On Jan. 28 the Gravity Project premiered Nine Gates, the drama combining contemporary poetry and eclectic music performed by nine actors. One of these, Andrew, uses a plain white puppet to help his powerful and dramatic oratory.

Theater Review: Nine Gates

Inventive show raises curtain for The Gravity Project

Nate Drenner

Poetry, movement and art took center stage in the Rosenberger Auditorium of the newly completed Halbritter Center on January 28. Juniata's Artist Series premiered "Nine Gates," the first Gravity Project show.

The Gravity Project is a collaboration of many actors, directors, writers and other theater artists, including Juniata's professor of theater Andrew Belser. The company works with Juniata theatre students, teaching classes and mentoring in what Belser calls a "theater lab."

"Nine Gates" itself began in 2003 "with Juniata students as performers and artists from The Gravity Project in residence," according to the show's program.

The professional Gravity Project artists, though, performed the finished show.

The theatrical "Nine Gates" drew its inspiration from Nine Gates: Entering the Mind of Poetry, a collection of works by modern poet Jane Hirshfield. "Nine Gates," though, is not a poetry reading. Many of its segments take the form of stories.

No, not stories. Story*telling*. The actors embody different characters or narrators in nearly each scene and tell their tales through movement and words. Indeed, the show begins with narration combined with hand movements.

These stories, movement and the show's stark lighting lend an almost mythical feel to the experience.

There was an almost mythical feel to the experience

Nevertheless, the show does not take itself too seriously. Depending on the scene, the performance can be moving or comical. Audience reactions ranged from total silence to uniform laughter.

In one of the more moving scenes, an actor writhed on the floor, in a fetal position. The intensity was so great that his character's loneliness was palpable.

Whatever the scene, it was accompanied by masterful, precise lighting. Actors and props would fade into nothingness or suddenly appear in what seemed like the space of a few inches. Bold colors complemented the action on stage and the mood of each scene.

The show also included a musical element that likewise complemented each scene.

Not all Gravity Project presentations will necessarily be as avant-garde as "Nine Gates." Juniata theatre students will perform Shakespeare's "A Midsummer Night's Dream" this spring as the debut piece for the Suzanne von Liebig Theatre. Belser said that this staging of the play could end up as a Gravity Project project.

And some variety may be good for the program. "Nine Gates" is not the type of show that an average audience would find entertaining for every theater outing. Nevertheless, it was an inventive and provoking start with a triple collaboration between Juniata Theater, The Gravity Project, and the Halbritter Center.

The Naked Truth: Sex etiquette for the dorm

Rebecca

Welcome to "The Naked Truth" - where I'll address everything that happens behind closed doors and sometimes in front of open windows. Plenty of other college newspapers have sex columns that lay it out for everyone, so why not take a look at the sexcapades of Juniata?

I am not trying to turn Juniata into a rabbit farm; however, if so many of us are having sex, I don't see any reasonable argument for not discussing the issue. We, as humans, are wired to like sex, but culture and upbringing change our views. Sex can't be all that bad if it feels so good, right?

We're in college. We're horny. And we have access to each other at all times of the day. If so many of us are going to have sex - which we definitely are - we'd better be doing it with decency in the dorms.

With that said, here are some crucial rules that should stick with you throughout your college years to avoid being the butt of every joke on campus.

Thou shalt not be painstakingly transparent.

Throwing shower curtains or wrapping a blanket around your bunk will not work (unless your roommate is drunk and passed out). You will look like an idiot for thinking no one will notice.

Thou shalt not keep count. Some students are more sexually charged than others. And some of the lesser-charged people keep running tally sheets on dorm doors labeled "Whore Board" or "Oooo La La & Stuff" to track their roommate's (and many others') adventures. This is not appropriate and encourages people to ridicule others. Here's a tip: if you are keeping track of how much sex your roommate is having, you seriously need to get some yourself.

Thou shalt not announce orgasms to thy hall. Um... if your neighbor can hear your partner say, "Wow, you're really good at this!" your situation is not okay. Supersonic screaming included - verbal expression is GOOD in a relationship. It's healthy. But you've got to understand that next door, your neighbors probably don't care. Do everyone a favor and turn on the TV or iTunes.

Thou shalt lock thy door under correct circumstances. It may not seem polite to lock your roommate out of the room so you can get busy. However, it is NOT appropriate to keep the door unlocked for the naive and unsuspecting.

A friend of mine from another college thought she'd stop at her boyfriend's room on the way back from class one day. The door was ajar, so she figured he and his

continued page 10

Fashion: How to wear your (huge) boot

Lucia

Winter is here, obviously, and you are thinking, "Big deal." It is a big deal though. Because something happened over break. An obsession grew inside many women around this campus - a fashion obsession.

When I returned from break, the first thing I noticed was not the new computers in the Cyber Café (it's about time). And it wasn't that the new Wal-Mart was almost finally completed. Instead, I noticed a student's rather large furry white boots. Then, as the first day continued, I saw more than one pair. The first pair were very white, furry at the top and had, what looked to me, like an edgy duplicate of an Indian moccasin. You are thinking, "Why is Lucia talking about this?"

Truthfully, I'm a little bothered by the way these boots are being worn. Now remember this is just an opinion, a personal opinion. So before I dive intothe proper ways to wear these cute booties, I'm going to tell you what not to do. I feel it's better to hear the bad before the good.

What not to do: Do not proceed to roll your jeans up only to the ankle just to show off the boot you are wearing. Recently I came across a few lovely ladies with their jeans rolled just enough to see the tag that read "Uggs." I know these boots are amazing, but giving yourself high waters for the day just so the Juniata community knows you have a pair is not necessary. They are fabulously comfy, but it's just not the craze anymore.

This leads me to another don't. Do not wear a skirt with any type of Eskimo boot. I think it is long overdue to put to rest that idea. Ladies, it's 20 degrees out here in Huntingdon. You cannot tell me that you are not cold. I would let you go - a little - if I saw you in California, where the temperature is a little hotter, but not here.

Now, the do: the proper and most stylish way to wear these wintry boots is as follows. Ladies, if you are wearing a boot with jeans, it is all right to have the jean slightly tucked into the boot or completely tucked in is hip as well. The best jean for this style is the straight leg or boot cut jean. But, if you really want to roll your jeans with your boots you can. You just need make sure that you have them rolled to the very top of the boot—and that you don't look like you just returned from walking in water.

Must-do number two: I know it has been frowned upon by some style critiques, but I find it adorable to wear the slouchy big boots with black spandex pants. A little information about the spandex pant, it should come to about your calf maybe a little higher but not above the knee. If you are planning on wearing a full spandex pant, a flat shoe is a better choice. Let's stick to boots for now because thanks to the groundhog we are going to see six more weeks of winter.

Alright women, you've had your run down of the wear and tear of the big boot. Now, just like we apply the knowledge we learn in our many thrilling classes, let's apply what we have learned here. If the likes of the young talented actor Sienna Miller can pull off wearing huge boots in this these styles, so can we.

Brokeback Mountain was good, but with too much hype

continued from page 8

an escape from their outward lives. The dynamic of location makes it clear that their few days together are the days of their real lives, while the events that go on with their families become merely idle conversation.

It's true that the restrictions of the time during which the film takes place prevent Ennis and Jack from publicly living out their relationship. No matter how you feel about homosexuality or the relationship of the characters, it is ultimately a film about restrained love and emotions.

Ledger plays Ennis perfectly. He mumbles like he's afraid of the words spilling out of his mouth. His pent-up emotions affect more than just his relationship with Jack. They spread to his marriage and his relationship to his daughters, who desperately try to get under his closed exterior.

The character of Jack Twist is meant to be the idealistic, the naïve counterpoint to Ennis's character, but he wasn't nearly as likable and human to me. I love Jake Gyllenhaal and have full faith in his acting abilities. But he seemed to have trouble playing a character out of our current twenty-first century. There were very few moments when I was pulled in enough to see him as Jack Twist and not Jake Gyllenhaal.

My only problem with the film had nothing to do with the film itself but all the hype the media has built up around it. The subject matter has caused such controversy and press lately that I went to the theatre expecting a fantastic, life-changing event. The movie is good – directed well, acted well, and beautifully filmed. But don't go in expecting too much more than that.

Naked Truth: Sex etiquette

continued from page 9

roommate were "decent." Oh, how wrong she was. His roommate was sitting at his desk (facing away from her) taking care of some unfinished business. Before she had a chance to turn around and leave the situation as least awkwardly as possible, the roommate noticed her entrance and started up a conversation with her as he finished his...activity. Awkward.

Thou shalt send up the flag. Seriously, there is no reason why you and your roommate should not have signals or know prior to a partner coming over that you're planning on getting physical. Have a KNOWN signal. For example, throw a book on the floor or have a catch phrase. Don't expect that when you wink your roommate will automatically understand that you didn't just get something in your eye. But remember to use the flag reasonably. Don't expect your roomie just to pack it up when he or she has books and papers spread out all over the desk, or to vanish everyday at 7:30 p.m.

Thou shalt honor the flag. Come on, we all need a little privacy. Rooming together is all about the idea of give and take. Being sexiled is not banishment. Next time you have someone over, your roomie will honor your flag.

But if you don't have a flag…

Thou shalt knock. Or something. Lock and unlock the door a few times - if you have even the slightest suspicion that your roommate is getting busy, make your presence known. I'm sure we all know someone who has unsuspectingly come back from a hard night studying at VLB and burst into his or her room only to be blinded by the very, very bare behind of a roommate. *Blue moon, I'm so glad we're alone.*

Thou shalt keep house. Take out the trash, and if necessary, wash your sheets. Don't leave wrappers, used Trojans, bottles of KY jelly and/or sex toys out in the open to surprise your roommate. Ew.

Thou shalt confirm with thy roommate. I'm stressing communication, especially if your roommate is not sexually active and/or disapproves of your habits. You want to please your partner, but if the roommate isn't content, there's an issue. At the beginning of the year, we were supposed to sign that little roommate agreement. I think we should all write "I promise I will not flip out on my roomie and start shouting Hail Marys in the case that I should not notice the giant X on the door and fail to knock when I come back from being cooped up in von Liebig (wired on excessive amounts of caffeine) and see my roommate's partner in the buff."

Thou shalt honor thy roommate's personal space. Have limits. Do not have sex on your roommate's bed, chair, desk, etc. Yes, risk is exciting. But remember the golden rule. How would you feel if it was your keyboard?

Fail to follow these rules, and you're submitting yourself to awkward situations, ridicule and possibly being the only person shizzling *your* nizzle for the rest of your college years.

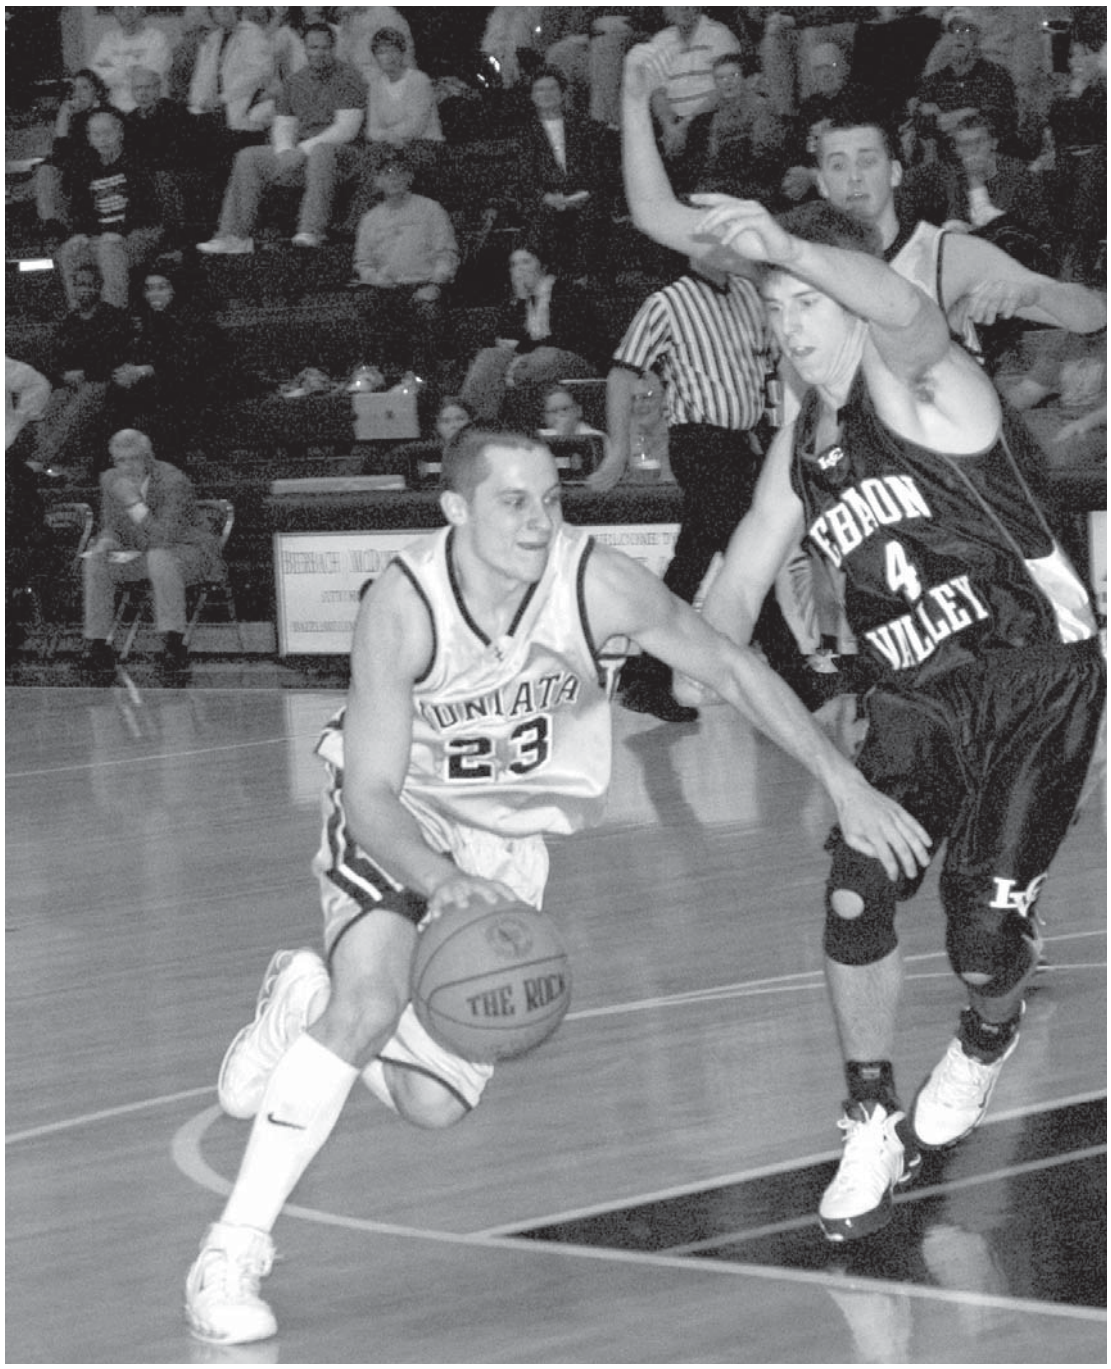
2006 Chinese New Year Celebration: the Year of the Dog

Hannah Raterkus Juniatian

The Chinese New Year Celebration, always a fun and popular tradition, took place on Jan. 28 in the Ellis Ballroom. This year's decorations were devoted to the "year of the dog" and the decorations did not disappoint. The servers, all volunteers, piled plates high with spring rolls, rice, stir fry and other delicacies.

Above: Professor of history Doug Stiffler always dresses to impress at such events. This year his young son followed suit. Like father, like son.

Top left: Enjoying the cuisine and the night out the President and Mrs. Kepple debate on whether or not to try the spicy sauce.



Left: It's always a good time when you're with friends, at least that's what seniors Rebecca Vonada, Cait McKee, Julia Gwin, Aimee Boore and Christine Reier would tell you.

Vagina Monologues

Athletic conference change

Hannah Rauterkus / Juniatian

Senior point guard, Tommy McConnell (23) creates off the dribble in a home contest against Lebanon Valley.

Men's hoops keeps playoff hopes alive

Robb Patty

With a 55-52 win against Messiah last Tuesday night, the Eagles hopes of a conference playoff berth is still a reality.

"When you look at the standings it's a real big win," said junior guard Nick Hager. "Sweeping the number one team in the conference should give us a lot of confidence going into the second half of the season."

Hager shot 6-9 from the field, including 4-6 from distance to lead all scorers with 16 points. With the win Juniata improves to 10-10 overall and 5-4 in the Commonwealth Conference. Messiah fell to 13-7 overall and 6-3 in conference play with the loss.

Defense was the theme of this game as the Eagles were able to force 17 Falcon turnovers and held the opposition to just 35% shooting from the field. Just two Falcons were in double figures as the Eagles were able to hold Messiah to its lowest offensive output of the season.

"Our game plan was to pressure the guards up the court. Try to get guys who aren't used to handling the ball to make plays," Hager said.

Juniata was held in check on the offensive end of the floor as they were held to just 55 points, their lowest point total of the season. After leading by just one, 23-22, at the half, the Eagles got hot in the second half shooting 43% from the field. They also sealed the deal at the free throw line, where they had trouble against Lebanon Valley. Juniata was 10-15 from the line with both senior Tommy McConnell and junior Aaron Chamberlain hit a pair of foul shots late in the game to seal the victory.

"Tommy and Aaron made four big foul shots down the stretch to put the pressure on them," said junior center Chris Jasiota.

The Eagles lost a tough conference game Saturday, January 28 when they traveled to Moravian to face the Greyhounds. Despite three Eagles in double figures it was not enough to get the victory as they fell 72-81 at Johnston Hall.

McConnell led the Eagles with 20 points, while senior guard Travis Boyd and sophomore Nick Cannon added 17 and 16, respectively. A big story in the game was the fact that Moravian reached the foul line 25 more times then the Eagles. Moravian was able to capitalize as they went 31-46 from the line, while the Eagles were just 16-21 from the charity stripe.

The Eagles will be back in action on Saturday when they travel to Lebanon Valley. The last time these two teams squared off the Eagles were beaten on their home court, 88-84, in double overtime.

Indoor Track and Field has a strong start

Several strong performances pace Juniata Eagles early in the season

Corinne Barabas

The indoor track and field season has begun and it looks to be a successful one. Many individuals have shown strong performances both on the track and in the field events. A group of talented freshmen and transfers look to compliment the successful returning upperclassmen.

On Friday, January 27, the Eagles headed to the Franklin and Marshall Invitational. For the women, freshman Kelsey Buffenmeyer earned a pair of first place finishes in the high jump and the long jump. Another strong show in the field came from Debbie Delaney, who won third in the weight throw.

On the track, the distance runners ran an exceptional 3000 meter race, as Katey Glunt and Nancy Hayes took second and fourth places, respectively. Meredith Troutman won the 200 meter race.

On the men's side, senior Adam Loser edged out the competition to win the high jump. Sophomore Matthew Booth took gold in the long jump followed by Gary Ondecko who finished second. Booth was victorious in the triple jump as well.

Senior Justin Fritzius said, "The men's team is looking strong. Distance, as far as points are concerned, should be a lot better. And the team has four decathaletes with a lot of potential. We haven't had those in about three years. It should be a positive addition to the list of events in which we compete. Jumpers and sprinters are strong and there are already a number of men qualified for the Indoor MAC Championship."

"We're looking strong in just about every event."
-Adam Loser, senior

Dusty Sier and Ondecko both ran the 55 meter dash in times fast enough for second and third place finishes.

Distance runner Fritzius and sophomore Mark Modak were two more individual top scorers for the Eagles, who took second places in the mile and 55 meter hurdles respectively.

A week earlier, the team got its first glimpse of many of the conference rivals at the Susquehanna Orange and Maroon Classic on January 21.

The men posted several good performances. Loser claimed second place in the high jump and Randy Anderson captured third in the 55 meter dash. Junior Mike Chrirdon's efforts in the 5000 meters earned him eighth place.

The distance medley relay team, comprised of seniors Jeremy Lampert and Fritzius, sophomore Shawn Rumery and freshman Tripp Rudolph is off to a good start, taking home a second place finish at the event.

Senior jumper Adam Loser said, "I think we're looking strong in just about every event. Coach Cu-

continued page 14

Eagles claw Widener

Women's basketball scores huge home victory

Hannah Rauterkus / Juniatian

Sophomore Jess Winemiller (40) dishes to a teammate under the outstretched arm of a Leb Valley defender in a home victory.

Jeffrey R. Byer

The Juniata women's basketball team's season has been filled with streaks. The Eagles have a pair of three-game winning streaks, but have also had dropped three in a row on two occasions. The Blue and Gold are currently 10-11 overall and 3-7 in the Commonwealth Conference.

The three conference victories are the most for Juniata since the 2002-2003 campaign. The Eagles are still in contention for a Commonwealth Conference playoff spot with three games remaining. However, the team does not control its own destiny. Juniata must win out and hope for some key losses by other conference opponents to win a playoff berth.

"The playoffs are a possibility," head coach Danny Young said. "But I'm more concerned with ending the season on a positive note. Last year we weren't even thinking about playoffs and now it's a possibility and I think that we can end 7-7 [in conference], which is a huge step from last year."

Sophomore standout Jess Winemiller said, "I think that we need to just worry about leaving everything out there on the court for these last games and hope that everything works itself out. We need to mentally and physically leave it all out on the floor."

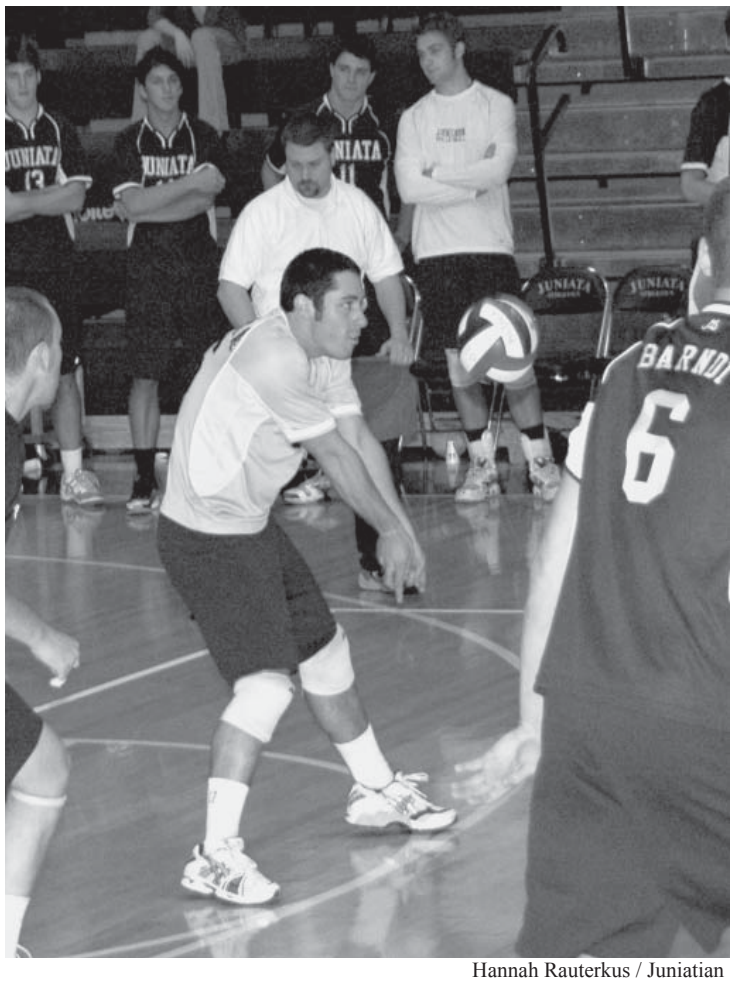
The Eagles hosted Widener on February 4 and helped their playoff chances by scoring a 68-50 victory. The Eagles were deadly from beyond the arc, as they matched a season high with 10 three pointers. Sophomore Ali Meckey and senior Kristen Kirk were responsible for all 10 three's and each finished with a game-high 18 points. Meckey had six triples, which tied her career high, while Kirk drained four threes. Senior Katie O'Brien scored eight points and grabbed ten rebounds in the winning effort.

Despite the long-range success for the Eagles, it was their defensive effort that allowed them to seal the victory. Juniata led 51-45 with 12:09 to play in the second half and closed the game on a 17-5 to run to push the lead out to the buzzer.

Two big keys for the Eagles were limiting the visitors to no three point field goals and also going a perfect 10-10 from the foul line. Six of the foul shots came in the final four minutes to help secure the win.

"Our team really pulled together for this victory," Meckey said. "I think now that we've finally put a complete game together, we have no where to go but up. We have some big games coming up, but if we can keep the pieces together like we did against Widener, we'll definitely come out successful."

Before knocking off Widener, the Eagles took on Moravian. Juniata got off to a hot start as it scored eight straight points to start the game with Kristen Kirk responsible for six of the tallies. The Eagles could only muster 15 points for the rest of the half though, as they trailed, 36-23, at the break.



The Eagles fought back in the second half but could not cut the lead under 12. The Eagles outscored the Greyhounds, 33-32, in the second half, but it wasn't enough as the Eagles fell, 67-55. Kirk led the Eagles with 17 points, while Winemiller dropped 13. O'Brien pulled down a team-high seven boards and sophomore Mindy Werner dished out five assists.

The Eagles' next home contest is on February 18 at 2:00 p.m.

Hannah Rauterkus / Juniatian

Taking advantage of an open lane on the baseline, senior Kristen Kirk torched her defender for a tough reverse lay-up.

Hannah Rauterkus / Juniatian

Dispite Virgin Islands, men's volleyball prepares for season

The Juniata men's volleyball team is off to a solid start for its 2006 campaign. The Eagles are currently 3-3 with all three of their losses coming at the hands of Division I opponents. After starting the season with a loss at the hands of IPFW, Juniata fell from the top spot in the CSTV/AVCA Division III coaches' poll for the first time in 24 weeks. Over the next week, the Blue and Gold rattled off three consecutive wins to get back on track and make a case to reclaim the number one spot atop the rankings.

The biggest win in the streak came at the hands of then third-ranked New York University. Juniata knocked off the perennial Division III power, 3-1. Matt Fritz recorded a career-high 20 kills in the match. Fritz was later named the EIVA Division III Player of the Week.

Juniata has dropped its last two matches, losing close contests to Penn State and IPFW. The Eagles will look to get above .500 this Friday when they play host to Stevens Tech. Above, junior Steve Yeager (16) sets it up as juniors Jeremy Barndt (6) and Glenn DeHaven (5) move to the net.

Juniata swimming sends nearly entire roster to MACs

Kim Wagner

The regular season has come to an end for Juniata's swim team, which posted a record of 6-6 overall and 4-4 in the conference. The Eagles have high hopes heading into the postseason, with ten of the team's 11 swimmers qualifying for the MAC Championships to be held February 10-12.

"I think we will do really well. We hope to have a lot of girls place," junior Rachel Almy said.

The past two years the Eagles have taken home third place at the meet and according to head coach Brian McGrath, they expect to do just as well, if not better, than last year.

The MAC Championships are only open to athletes who qualify with specific times. Each team can take up to 18 swimmers. Championships unfold over a three day span to provide breaks for the sprinters and for the distance swimmers. The top sixteen swimmers are taken from the preliminaries that are held in the morning and sent to the finals at night. Points are earned for the top sixteen swimmers placing in each final event. The meet crowns champions in individual as well as team events.

The women are entering the postseason on a roll, having ended the season with three consecutive wins, defeating Susquehanna, Elizabethtown and Kings.

On January 18, the Eagles beat Susquehanna, 119-79, putting an end to a losing streak and beginning that three-game roll. The women earned seven first-place finishes all together, with junior Amy Sutherland and freshman Kristen Musselman each earning two of the top finishes.

Ten swimmers qualify for MAC Championships

The meet against Elizabethtown finished with a score of 106-90, the second straight conference win for the Eagles. Sophomore Kasey Brough swam her lifetime best in the 100 butterfly, one of her two first-place finishes on the day. Again, Sutherland earned two top finishes in the 400 IM and the 500 freestyle. Juniata also won the 200 freestyle relay with a team consisting of Brough, juniors Collin Thompson and Almy and senior Kim Deirolf.

Last Saturday the women won their third consecutive dual meet versus Kings, 47-26. The score was unusually low because King's team is made up of only two swimmers. Top swimmers in this meet were Deirolf, who took home first place in the 800 freestyle, sophomore Carlie Zoubek who swam a career best in the 100 backstroke receiving first place, and sophomore Jenny Bair took first in the 100 breakstroke.

McGrath took a different approach with training this year. McGrath said, "In the beginning we spent more time conditioning to get into shape so we could later spend more time in the pool."

Almy explained another strategy that prepared the team. "In season we look for teams outside of the conference for more competition such as Division II schools."

The team has been working on consistency, technique and basic foundations to prepare all season for the MAC Championships.

Performances pace indoor track and field

continued from page 12

tright has very high expectations of us for the outdoor MAC meet. The most challenging thing will be to make sure that everybody is ready and performing at their highest potential the day of the MAC meet."

For the women, Buffenmeyer won the high jump, earning points with a 5'4" jump. Sophomore Adrienne Beckman took sixth in the weight throw.

Junior Kate Moreau said, "There is a lot of new talent from both the freshmen and some girls who run cross country, coming off a strong season, who didn't run track last year. And there should be good performances from the returning athletes. Coach seemed satisfied with our showing at Susquehanna and we are progressing nicely and in good position."

A handful of jumpers and sprinters attended two meets prior to winter break and did well for such early season competition. Anderson claimed a first place in the 55 meter dash at the Dickinson Invitational, the first unofficial meet of the season, where his time was fast enough to qualify him provisionally for the NCAA Division III Indoor Track and Field Championship.

The team looks to be jumping, running and throwing strong and continues to train for the remaining indoor season, before they begin the outdoor season.

By The Numbers

5

Overtime periods played in the last six games by the men's basketball team.

75.7

Points per game for the Juniata men's basketball team, first in the conference.

42

Point shy of 1,000 for women's basketball player Kristen Kirk

12,13,16

Conference rank in points per game for Juniata's women's top three scorers.

20

Career-best kills for Matt Fritz in a win over NYU. Fritz was named the EIVA Player of the Week.

2

First place finishes for Matt Booth at the F&M Invitational. Booth won both the triple jump and the long jump.

A little glimpse of heaven

Kobe playing in the MAC? Look out...

Tommy McConnell

ESPN recently came out with a new product called ESPN Mobile. Basically, it's a cell phone that allows you to watch highlights, get up-to-the-minute scores, check stats, etc. Sounds sweet, but at $300 bucks for the phone alone, it will be joining the re-released KB8's as a couple of the things I would love to have, but my wallet won't let me.

Anyway, their tagline for the new phone is "Welcome to Sports Heaven." The commercial has a guy walking through a city as all these athletes run around him, stealing bases and shooting lay-ups. Looks cool, but if that's Sports Heaven, I'll pass. Why would I want Stephon Marbury dribbling behind me as I walk to class? Go work on your mid-range jumper, Steph, and maybe the U.S. Olympic squad would have a gold medal around its neck.

The real Sports Heaven would be something a little more useful and a lot more fun than watching Jim Edmonds wait for a bus. In Sports Heaven, all the sports debates – from the classic to the ridiculous – would be settled, live, right in front of your eyes. Now we're talking.

Who's the greatest running back of all-time? Well, watch as Sweetness, Jim Brown and Barry Sanders all play identical careers. Could Bill Russell stop Shaq? Who knows, but in Sports Heaven, they're playing one-on-one right now. Yea, the '72 Dolphins went undefeated, but are they the greatest team of all time? Turns out, they're the one seed in the Who's the Greatest Football Team of All-Time Tournament, kicking off…well, whenever you want.

Now, there is a debate that has been raging among me and my friends for quite some time. Years, in fact. And with Sports Heaven finally becoming a reality, we're finally going to know the answer: How many points would Kobe Bryant score if he played a full season in the MAC, the conference Juniata currently (but not for long) plays in?

The magical number in the debate is 60. Would he get 60 a game, playing 25 games as a member of any team – pick one, it doesn't really matter – in the MAC, a very, very good Division III conference?

Sports Heaven would be a lot more fun than Jim Edmonds waiting for a bus.

Personally, I say he would, without question. But there are some solid reasons to doubt my opinion (Okay, they aren't solid, but they are at least reasons). Luckily, I was able to grab a few minutes of time from a higher-up at Sports Heaven HQ, and he was able to shed some light onto the topic. Here's what he had to say:

TM: David, it was nice of you to spare a few minutes to talk with me…I am a little surprised you run both Sports Heaven and the NBA, though.

David Stern (chuckling and shaking head): Tommy, Tommy, Tommy…It's basketball isn't it? Anywhere basketball is involved, so am I. You think Sports Heaven doesn't have a union that needs crushed from time to time?

TM: Oh…you get that dress code passed in Sports Heaven, then?

DS (Stares straight ahead): Crickets chirping…

TM: Didn't think so…anyways, about Kobe. Clearly, no one can guard him one-on-one, but some would say if he played in the MAC, he would be double- and triple-teamed, forcing him to pass. Any truth to that?

DS: In a word, no. Have you seen Kobe play, even here on Earth? Fade aways with two guys on him, pull up three's from basically half court…I mean, he shoots left-handed when he hurts his right hand – and he makes them! He has redefined what a "good" shot is. He torches NBA double teams, I am quite confident he can handle them in the MAC. Plus…did you say "pass" and "Kobe" in the same sentence earlier?

TM: Well, what about the length of the game? NBA games are 48 minutes, college only 40 minutes. Some say he won't have enough time.

DS: Nice try. He scored 61 in three quarters against Dallas. By my calculations, that's 36 minutes, which would leave him four minutes to sit on the end of the bench, drape towels over himself and not talk to anyone. The game he scored 81, he scored 55 in just the second half. You do the math there, but clearly, time is not an issue.

TM: Alright, how about this. With Kobe, every game would be a blowout. By the time he scored 40, the game would be over. He wouldn't be in long enough to score 60.

DS: A fair point, but I'll take you back to his second half against Toronto. He needed 16 minutes to score 55 points, so I think with a full 20 – just the first half of a college game – 60 doesn't seem outlandish, now does it? Plus, a lot of those 55 were scored after the game had clearly been decided. The Mamba (he prefers to be called that here in Sports Heaven) has no qualms beating a team after its already dead.

TM: OK, then…if it's so easy for Kobe to get 60, wouldn't he get bored?

DS: Perhaps, but with Kobe scoring so much, his team is undefeated. Winning is what has gotten boring to him. The "Chase for 60" is what has got his attention now, its almost like he's playing golf, trying to "shoot" a better score each time he goes out. Frankly, it's a little terrifying.

TM: Well, that's all I got…you are running Basketball Operations in Sports Heaven, so I'll take your word for it. I am assuming you have watched Kobe's season in the MAC? What did he average?

DS: Very interesting season. Kobe was placed on Lebanon Valley, and he led them to an undefeated season, averaging 65.5 points per game.

TM: I knew it…

DS: Yes, it looked rather easy for him, too…the thing was, Kobe's team lost in the MAC Championship. Juniata was able to hold him to just 45 points. You see, even in Sports Heaven, Kobe can't win anything without Shaq.

THE (ACCIDENTAL) RANDOM ELEVEN

Matt Russell, Duke of the 16th Page

Poor planning got me here: This page is a great big example of how my life works. I'm not going to lie: it's about 5 am as I'm writing this, and the newspaper is due at the publisher at 8 am this morning. All the other editors have long since gone to bed; it's just me and the newspaper. Some last-minute changes reduced how much content was available, so I've been manipulating articles and pictures to make sure all the pages are full. Everything was going according to plan.

Of course, that was before I remembered the back page. What a time to recall that Genna isn't writing her column this semester. Huh. Look at that big hole. Well, I'm not one to pass up a challenge. This will be my ultimate accidental Random Eleven… at least in size, if not quality. Let's see how the wee hours of the morning and a fresh addition to the Amp can tower affect a college student's mind.

God usually calls shotgun: A student government member drove a guest speaker to campus. He decided to park in the staff lot next to BAC so the speaker wouldn't have to walk far to his destination. When he returned to his vehicle, an officer of the JCPD was in the process of ticketing him. The student explained the situation and the officer relented, but warned him: "I don't care if you bring God himself here. Next time, you'll get a ticket." Really? What if God validates?

AIM addiction, part 1: If you ask your friends why their away message doesn't change more frequently, you may want to consider developing a hobby. One that doesn't include right-clicking.

Anyone got a fiver? I sat down to play a game of poker with some friends. After deciding on a five dollar buy-in, all eight of us opened our wallets and each pulled out a ten. A brief stunned silence followed as we considered the improbability of no one having a five to make change. We soon realized our common denominator, though: a recent trip to the Ellis ATM.

Sober quote of the month: One female student to another in the TLT: "I accidentally used my roommate's dog's shampoo this morning… but it smells good!"

AIM addiction, part 2: Girl: "Well, sometimes it's easier to IM a boy than to do it in person." Female professor: "Instant message? We used to go *make out* with cute boys instead."

Madrigal madness: I'm told that Christian-themed carols were removed from the playlist at the Christmas dinner this year (that's what Madrigal is, right?) but that a dreidel song was added, and a menorah was placed on the stage. I'm all in favor of multiculturalism (I'm going to be a social studies teacher), and generally consider myself secularly-minded, but I'm having trouble with this one. How can you remove the Christian trappings of Madrigal and replace them with Jewish ones? Shall we sing First Noel at the Eid dinner this year? Perhaps a Wiccan ceremony at the Kwanzaa dinner. I say "happy holidays" to people to be considerate of everyone's religions, but I think if you're going to Madrigal, you shouldn't be surprised when the piano strikes up a Christmas carol.

Well, that was the whole list: I think Madrigal was actually the last tradition someone hadn't screwed with in the past three years. Mission success.

Every RA's favorite game: It's called Hallway Dodgeball. Begin by finding six raquetballs and moving any foreign objects out of your dorm hall (including trashcans). Next, divide into two teams and pick a middle boundary. The last team with a person standing wins. Courtesy demands that you clear it with anyone who has their door open on the hall and pause for pedestrians. I also recommend eye protection. Now that's how you build community!

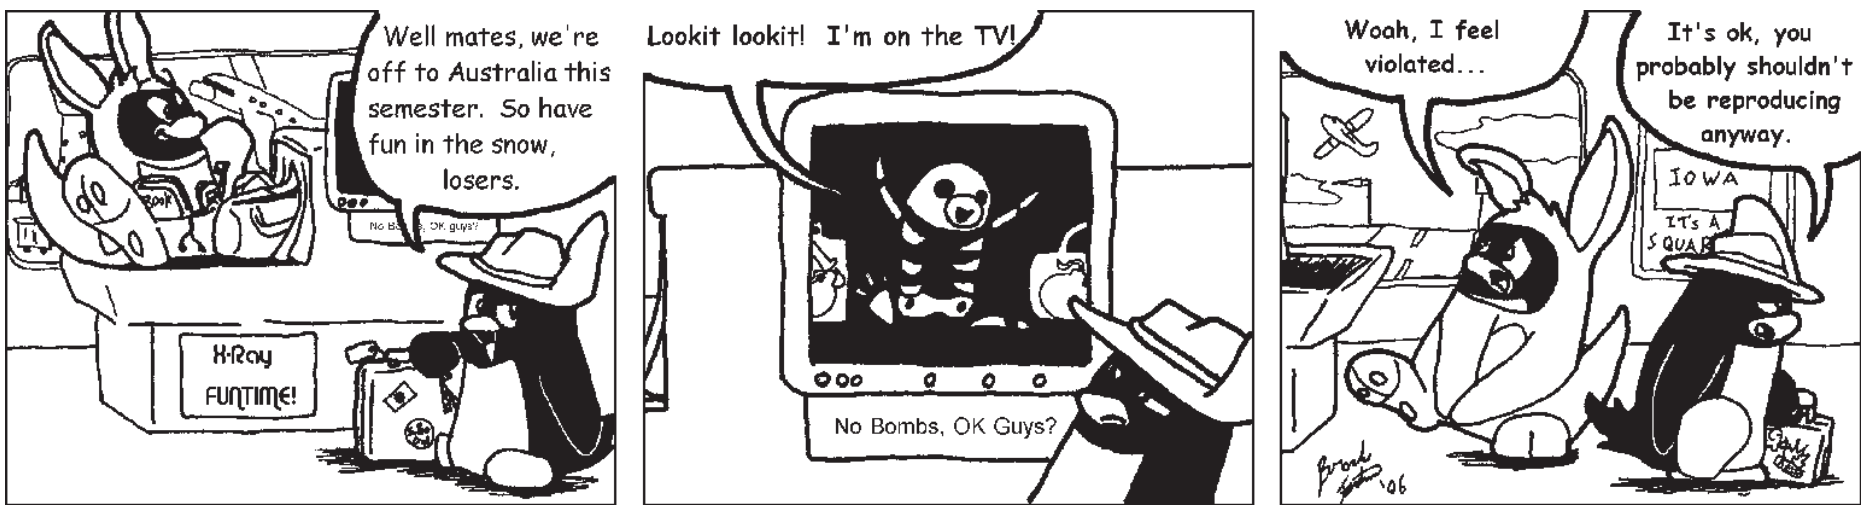
Speed kills: Have you seen those signs around town asking people to obey the 25 mph speed limit to "save the children"? Apparently they think that faster speeds are more likely to result in a fatality. Have you also noticed they seem to speed up when they pass the college?

PA's loose liquor laws? A friend recently returned from a semester abroad during which she had turned 21. I was leaving Boxer's with her and my girlfriend and we got into my car. As I began driving, she started talking about liquor laws. "You know what I love about being back?" she asks. "We don't have those strict laws like not being able to take drinks out of a restaurant." I turn around, and, to my great horror, she is holding an open Smirnoff Ice in her hand.

"You mean like *open-containers-in-cars laws*?" I replied with my ever-so-subtle sarcasm. "You mean in *strictest-liquor-laws-in-the-union Pennsylvania*? I think there might be something on the books about that." We had a very careful ride back.

AIM addiction, part 3: How do I first know when Internet service has been interrupted? Actually, the campus has coordinated notification system so that students will spread the word quickly: "Heeeey! AIM stopped working! Is it working for you?"

Sarah Anne Wharton / Juniatian



This lovely shot is from Sherwood Hall's second-floor women's bathroom. It was originally supposed to accompany our bathroom coverage on page 2, but I decided it was a little nastier than necessary to get the point across. Amazing what a few hours and a big blank page can do, no? Another editor claimed this same clog has been there for a month.

The Vengeful Fish: A friend was driving home for the semester break and had to take her fish with her. She loaded the tank into her back seat and went on her way. Upon braking suddenly, the tank spilled. She pulled off the to the side of the road and began a panicked attempt to find the fish and save it. Several minutes passed with no success. Her brother, out of pure coincidence, drives by, sees her, and stops to aid in the search. Still no fish.

She tries to restart the car, and nothing happens. Eventually, a tow truck is arranged and her brother drives her home. Some days later, her father comes home with news from the garage. It seems the fish got into the electrical box under the passenger seat and short-circuited it, which fried the fish to a black crisp. It seemed it had taken its revenge upon the car. With a sad and stricken look on her face, my friend asked, "Is it still alive?"

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

FEBRUARY 23, 2006 | JUNIATA COLLEGE | VOLUME 87, ISSUE 8

Juniata sweats it out: heating in overdrive

Buildings across campus are getting warmer despite energy costs being top concern

Dormitories biggest drain on energy

Nick Carney

Marie Gehman, a freshman living in Lesher Hall, never imagined that one of her primary concerns as a new college student would be the uncomfortable heat in her dorm room. Gehman envisioned long, difficult biology labs and all-night study sessions but did not expect to worry about propping open the windows of her room to reduce the temperature.

"It's ridiculous, really," said Gehman. "We're on a campus that touts that it is trying to be sustainable, and yet the heat has been on full blast since [Facilities] turned it on."

Students and faculty from virtually every building have reported that the heat of campus buildings is uncomfortably high.

According to Tristan delGiudice, Facilities Director, the target temperature for Juniata buildings is between 68 and 72 degrees. However, the recorded temperature in one dormitory, South Hall, on Feb. 4 reached 85 degrees - a full twelve degrees over target.

Last semester, rising energy costs were cited as one of the primary reasons for Juniata's tuition hike.

According to the Sustainability Core, the College spends four percent of its total revenue on energy each year. The annual revenue for Juniata is about 38 million dollars, according to publicly available records on file at the accounting office. This means that energy bills near 1.5 million dollars each year.

To help reduce the College's energy bills and potentially lower tuition, the Sustainability Core has proposed converting to a cogeneration system, a combined heating and power (CHP) system.

The CHP system would permit Juniata to maintain its current steam heating system but would at the same time produce electricity. This could reduce the energy bill by nearly $750,000, about two percent of the College's total revenue, according to a report from the Sustainability Core.

NEWS ANALYSIS

As sophomore Devin Couillard dumped out a bag of condoms on stage during a "sex talk" scene at All Class Night, someone from the audience shouted, "Your parents should have used one!"

Many students were shouting from the audience throughout the night, but this insult came from Chad Herzog, Juniata alumnus and director of performing arts at the College.

Couillard is one of two openly transgendered students on campus. Many of the comments during xer scene were insulting that fact.

When asked about his comment, Herzog admitted to yelling it but said that it was meant as a joke toward the sophomore class in general, not as a personal attack on Couillard. He also claimed that after the show he wrote xer an e-mail apologizing for any misinterpretation of the comment.

However, Couillard did not receive an e-mail from Herzog until Feb. 21, the morning after he was interviewed by the Juniatian

Athletic teams are leaving the MAC

President Kepple helps new conference take shape quickly

Michael A. Vella

Juniata's athletic teams currently compete in the Middle Atlantic Conference (MAC), but not for long. Because Juniata's football team will move from the MAC to the Centennial Conference, all other Juniata collegiate-level sports teams must also leave the Conference after the spring 2006 season, according to MAC regulation.

Since last November, when Juniata was informed that it could no longer compete in the MAC, President Thomas Kepple and the presidents of seven other institutions have nearly completed the formation of a new conference. All Juniata athletic teams, with the exception of football, are slated to begin competition in the new conference in the fall of 2007.

The general consensus among the College's administration and coaches is that such a change is ultimately in the best interest of Juniata and its student-athletes.

Last October, Juniata's football program decided to switch from the MAC to the Centennial Conference for the 2007 season. This conference includes Dickinson, Franklin and Marshall and Swarthmore colleges. According to Athletics Director Larry Bock, the move was intended to group Juniata's football program with teams from schools more academically similar. Such an action, however, put the rest of Juniata's sports teams' conference standing in jeopardy.

According to a current MAC bylaw, a school cannot switch conferences in one sport and remain eligible to compete in any other sports in the MAC, which is made up of two divisions—the Freedom Conference and the Commonwealth Conference. To have this bylaw waived and remain in the MAC, Juniata needed the support of two-thirds of the schools in each division. The Freedom Conference did not support Juniata's petition, forcing Kepple and members of the athletics department to examine alternatives.

It was never an option to send all athletic programs to the Centennial Conference, according to Kepple. "The Centennial [Conference] didn't need us in other sports" besides football, he said. Because Swarthmore recently dropped its football program, the Centennial Conference was in

Hannah Rauterkus / Juniatian

From left: Josh Scacco, Donna Weimer, Magda Sarnowska, Lisa Detweiler and President Kepple pose for many cameras after their respective wins. Lisa walked away with third place and $300, Josh walked away with 2nd place and $500 and Magda took home the trophy and an extra $1000.

2006 Bailey: Voices loud and clear

Jonathan Moody

After seven finalists' emphatic speeches, junior Magda Sarnowska took first place, junior Josh Scacco took second place, and junior Lisa Detweiler took third place in Juniata's 16th-annual Bailey Oratorical Speech Contest.

"This wouldn't have been possible without Professor Andrew Murray, Professor Donna Weimer, Jarmila Polte and Pete Patitsas. I practically owe them this trophy," Sarnowska said after being named the winner.

For this year's competition, participants were asked to choose a man, woman, group of people or idea that, for better or worse, most influenced the events of 2005. Sarnowska nominated Pope John Paul II, Scacco nominated the American government and Detweiler nominated Orhan Pamuk, a Turkish author who wrote about the Armenian genocide.

The first-, second- and third-place winners were awarded monetary prizes of $1,000, $500 and $300, respectively. Additionally, they will have their names engraved on a trophy cup displayed in Ellis Hall. These prizes are earned, noted sophomore finalist Adam Stanley, because of the amount of time and work

TAKE BACK ACN: page 6

Erin Dodson 2006 Children's Miracle Network rep

Aly Pompeani

The Children's Miracle Network (CMN) recently chose Juniata student Erin Dodson, 19, has as one of its official representatives.

Last year, at the beginning of her freshman year, Dodson was diagnosed with brain cancer. She had a primitive neuroectodermal tumor. The cancer grew so fast that, within two weeks of having migraines, Dodson was in the hospital. Before the doctors had a chance to operate the tumor hemorrhaged. Her education and volleyball career were forced to a halt. Today, she is back in class and back in the gym.

This year, Geisinger Hospital is celebrating its "21 Years of Miracles." The hospital will hold a fundraiser in order to buy new equipment for the Janet Weis Children's Hospital. In January, Dodson received a phone call from her doctor, Michal Miller, asking her to represent CMN for its fundraiser. Dodson may be doing commercials and will be speaking on behalf of the network.

Hannah Rauterkus / Juniatian

Freshman Erin Dodson, who was diagnosed with cancer last fall, will represent the Children's Miracle Network in an upcoming fundraiser.

"I am glad to be representing a good cause to which I can relate," she said. "Some kids aren't as fortunate as me. They aren't as strong and it is such a hard thing to go through."

Along with the possibility of commercials, the CMN will make a short video documenting a day in the life of Erin Dodson.

"Many kids take illness a lot harder than others," Dodson said. "There is such a negative vibe from shock. I want to show them that good things can come from this."

While Dodson was in the hospital, her mother, Michelle Dodson, signed forms permitting Erin's participation in representing the hospital and network. Erin was nominated by Miller and a nurse, Becky Sneindman. Both are members of the Geisinger Health System. Her nomination was submitted and reviewed by the Patient Selection Committee, composed of CMN staff members, doctors, nurses and other caregivers.

After she was chosen, Dodson was interviewed on her struggle through cancer. Jennifer Young, the Public Relations Coordinator of the Children's Miracle Network sat with Dodson and her mother for three hours while they discussed Dodson's story.

Dodson just meets the age cut-off for the Network. "Essentially [the program] is for anyone who goes through Children's," said Young. "Since Erin was treated when she was a teenager she fits into that category."

On February 21, Dodson will attend a dinner where she will meet the other Miracle Kids along with the Miracle Network Team. Pictures will be taken that night for many of the fundraising and publicity events.

The actual fundraiser, a telethon, will be held on June 3 and 4.

Mrs. Dodson said, "They [the Network] like to say 'look…she got through this and so can you.'"

"I am excited to represent the Network," said Dodson. "I made it and they can too…anyone can with a positive outlook."

Juniata's international house broadens cultural horizons

Sarah Anne Wharton

At 1610 Moore Street, you can walk in the door, take a seat, and – depending on who you talk to – speak in any of at least five different languages. The white house on Moore is the JC "Intercultural House," also known as the International House, and things there can't get much more diverse.

This academic year has been the house's first. It functions like any other Juniata-sponsored off-campus house, such as Mission or the Alcohol-Free House. The only difference is the type of student living there.

This semester, eight students from different cultural or international backgrounds live there together. Three Americans, two Ecuadorians and one student each from Somalia/England, Burkina Faso and France cohabitate, co-cook and cooperate there as a household.

"It's been a great way to build understanding amongst ourselves," said senior Ryan Richards. He is from the U.S. but has traveled abroad and speaks fluent Spanish. He thinks that living in a setting like this forces students to think about minute cultural differences that they may not have recognized before – even funny ones.

"There was a conflict of temperature," said Richards. "If half the people in a house live near the equator and half don't, where do you put the temp when it starts getting cold outside?" Living in the International House helped him find out, he said.

The JC community is not new to internationally-centered living – there is Tussey-Terrace's "international floor" and the College has many cultural events – but the Intercultural House aims to go beyond those things.

According to the International House website (http://departments.juniata.edu/ international/students/intercultural_house.htm), part of its purpose is to "provide an opportunity for a more in-depth cultural interaction between international and domestic students," both inside and outside the house, This means hosting activities, dinners and events that embrace the many different cultures and nationalities present in the house and on campus.

For example, the housemates will host an "International House of Pancakes" breakfast on Friday, February 24 at 11 p.m. where students from campus can go mingle and eat on a Saturday or Sunday morning.

"It's meant to be a hang-out place," said Mark Holbert, Juniata's International Services Coordinator and Resident Director of Tussey-Terrace. "Basically, they want it to be a focal point where student leaders invite others for cultural events, movies, Superbowl parties [and more]," he said.

And it has been. This year, members of the house were on the organizing teams for Fiesta Latina, Chinese New Year and the Eid dinner. Next year, its new members will also participate in existing cultural campus activities and perhaps create some new ones, which Holbert thinks is great for Juniata.

"A lot of other colleges and universities have international houses," said Holbert, who lived in one while he was in college. "It's an experiment in intercultural living that has the potential to help people grow in their relationships," he said.

Junior Demetri Patitsas, who has applied to live in the International House next year, agrees with Holbert.

Obviously, he said, bringing in students from different countries will influence the culture of Juniata. But Patitsas thinks that living within a group of geographically different people and sharing experiences is important on a much more specific level.

"The nice thing is that internationals bring with them an intangible, intercultural element to learn from," he said. "What they bring with them gives a raised dimension or dynamic," one that is easier to perceive when you live in a house with a bunch of mixing cultures.

John Narayan Parajuli, from Nepal, who also applied to live in next year's house believes that it's easier in a house or apartment to become close with your roommates. "You tend to get more open when you do stuff like cook in a kitchen and have to clean it together. You talk more," he said.

The Intercultural House will be another outlet for Juniata to broaden its international horizons as well as give students more opportunities to learn about different ways of life. In JC's quest for diversity, the house and other similar creations are new legs on the journey.

To apply to live in the Intercultural House for the 2006-2007 school year, the application is online at http://departments.juniata.edu/international/students/intercultural_house_application.pdf.

Sarah Anne Wharton / Juniatian

This semester's International House crew members – (standing) junior Sarah Svigals, senior Ryan Richards, senior Albert Bado, (sitting) Sabah Hussein Shide, senior Ariane Parde, junior Gabriel Lopez Escalante, senior Maria Samaniego and senior Jay Trovato (missing from photo) – hail from all over the world: North and South America, France, Burkina Faso, Somalia/England and Ecuador.

Juniata heating in overdrive

continued from page 1

In order to determine the temperatures maintained in Juniata buildings, the Juniatian conducted an unscientific survey, measuring the temperatures of seven campus buildings. Three of these buildings were residence halls and four were classroom buildings.

The average temperature for all buildings on campus was 72 degrees, putting it at the highest end of the Facilities' target range. Residence halls, however, ran hot. Dormitory temperatures averaged 75 degrees.

The Juniatian randomly placed seven thermometers across campus, hiding them in various out-of-the-way places. The temperatures were recorded over a seven-day period, ending on Feb. 14. Each observation was made at the same time of day to ensure consistent results.

By far the hottest building in the study was South Hall, which had a temperature averaging around 76 degrees.

"It's funny, I never notice any [heat] problems in my classes," added Gehman. "They always seem to be set at just the right temperature."

In von Liebig, the building where Gehman spends most of her time, the temperature averages around 68 degrees, an ideal Juniata temperature. Not all classroom buildings are so lucky.

David Fusco, director of technology operations, frequently lectures in one of the warmest rooms on campus, Room C102 of Brumbaugh Academic Center.

"It's terrible," said Fusco. "You can't do anything there when the heat is on. It must be at least in the mid-80s in that room. About an hour or so into class, I notice students nodding off. I feel bad for them really; you just can't work in there."

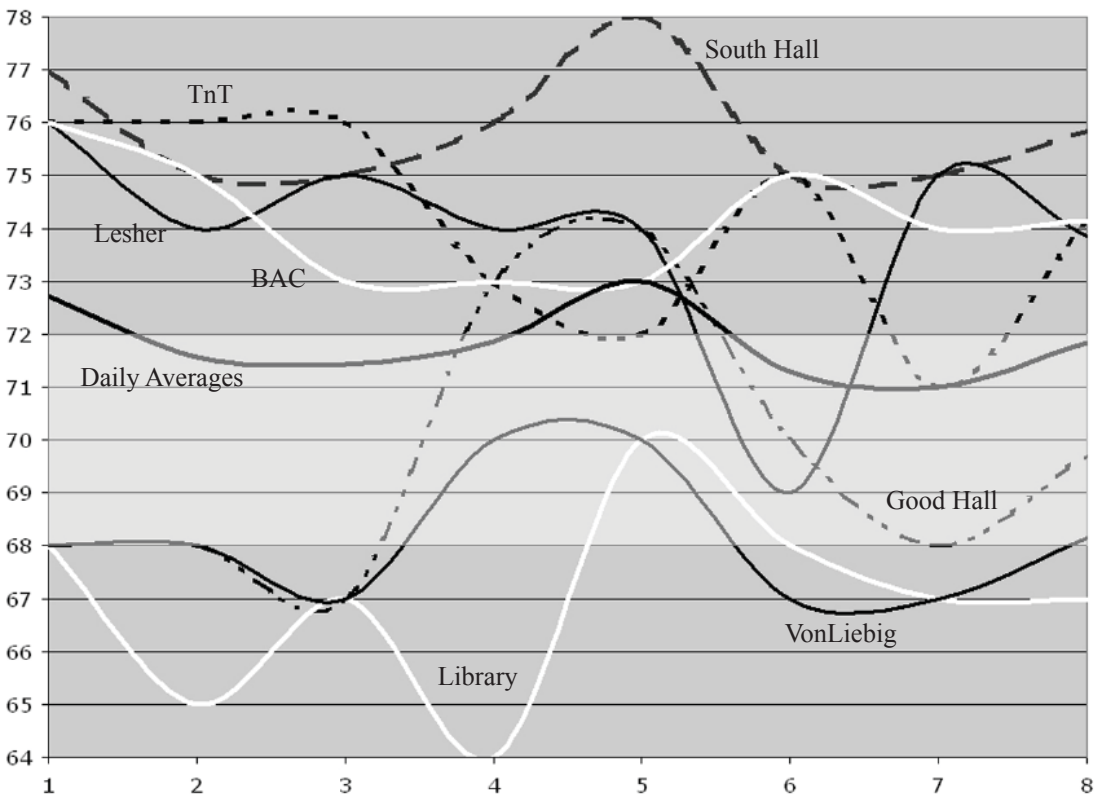
Room C102's issues are currently being addressed by Facilities, according to delGuidice.

"[Facilities is] always telling us that it's [hot] because there are about 36 computers in there," said Fusco. "But [Room] P107 has about the same number of machines and it's about the same size, and it never gets that hot. So that doesn't make any sense."

According to Fusco, the latest reason given by Facilities for why Room C102 is so hot has to do with the unusual nature of the room's airflow. Facilities explained that heat is effectively delivered to the room, but not effectively removed.

Brumbaugh's average temperature during the Juniatian's study was 74 degrees, at one point reaching 76 degrees. By a wide margin, it was the hottest classroom building surveyed.

Although delGiudice did not meet the Juniatian for a face-to-face interview, he offered an e-mail statement, in which he wrote: "Facilities Services makes sure to follow all regulations and requirements pertaining to fuels that are combusted, as well as air emissions. Facilities Services is active on the Sustainability Committee, and we are always open-minded regarding new practices and procedures that are environmentally friendly."



As explained by delGiudice, the campus's heat source is Juniata's Central Heating Plant, located on 17th Street. There, natural gas is burned to heat water in three massive boilers. The heat is then distributed to each building as steam through a network of underground pipes. Each building has its own in-house heating distribution system, but most distribute the heat using radiators.

According to delGiudice, the Central Heating Plant is also capable of burning heating oil as a fuel source, though Facilities rarely uses it, preferring the cleaner natural gas.

To potentially solve the excess-heat problem, Gehman, along with fellow Lesher resident Elizabeth Cushman, would like to see adjustable thermostats in each room, much like the thermostats found in some of the newer buildings like Tussey-Terrace.

"It would be wonderful to adjust the heat in our room," said Cushman. "I wouldn't have to have fans going in the middle of February."

Temperatures in Juniata buildings over 7 days

Shuster Hall's green streak

Juniata's Raystown Field Station facility, known as Shuster Hall, has a different heating and energy story from that of the main campus. The Field Station is LEED Certified, meaning that the building meets specific energy and consumption limits set forward by the United States Green Building Council.

Specifically, the building uses several innovative methods for heating and cooling, according to the Field Station's web site, http://services.juniata.edu/station/. These methods include:

- Huge north-facing window panes, which allow natural light and heat to enter from the outside, but prevent its escape
- Low eaves on the southern face of the building that shield the building from scorching heat in the summer
- 8" thick Styrofoam insulation to prevent heat loss

In addition to these things, the facility also uses an ultra-efficient heating method: a "pulse-boiler," which explodes ethylene glycol to heat the building. The ethylene glycol is environmentally friendly; in fact, this innovative heating system is 97 percent efficient, compared to the 40 to 60 percent efficiency of traditional boilers, like those used for on-campus heating.

The building also has a fireplace that can generate natural heat.

The temperature and energy efficiency of the building are both under constant monitoring and adjustment, and the current numbers on Shuster Hall's energy consumption can be accessed via the Internet at http://services.juniata.edu/station/green.

"Moo-ve" over, Blackboard

New classroom management system may be on the horizon for Juniata

Jason Najarian

Many professors at Juniata use the online course management system (CMS) Blackboard, but there will be major changes in the future. The College will likely switch to a new CMS called Moodle.

Systems like Blackboard and Moodle are used to organize and post class information online. A variety of other functions exist, such as quizzing and discussion boards. In classes like Information Access, the testing done for the course is completely hosted and graded on Blackboard. Professors enter their quiz questions, and the CMS automatically grades them. Discussions can range from commentary on assigned readings to discussion of lab results.

The main complaint about Blackboard is its price. Juniata originally purchased the Blackboard program for a reasonable price, but as more professors began using it, the program slowed down to a crawl. Pages were taking over fifteen minutes to load. The solution offered by Blackboard was to upgrade, raising the subscription price by several thousand dollars.

"Money went into Blackboard, and then costs shot up," said Neil Pelkey, professor of environmental science and information technology.

Juniata implemented Blackboard in recent years, but the College is actively seeking a replacement. Juniata has gone through three such systems in the last few years: Angel, Segue and now Blackboard. The main reason for switching is Blackboard's price, but other issues exist including compatibility with the College's network. The College cannot configure Blackboard to use the password system used for EagleNet. When Moodle was introduced, it immediately became an alternative to Blackboard. Moodle has similar fuctions to Blackboard and is quickly gaining popularity among educators.

Juniata's main attraction to Moodle is that it is a free program and also maintains the features required of Blackboard. Pelkey has been using Moodle as part of his classes for several years and is positive about what it can offer the rest of Juniata.

"Moodle is the best of the bunch. It's easy to use, quick to learn," said Pelkey.

Moodle is also preferred because it was designed by educators. Kathleen Jones, a professor of education, has piloted the system since last semester. She said, "The other programs we used were designed by engineers. They don't have a teacher's perspective."

Jones is known by some students as the "Queen of Moodle." She is thrilled with the new system and believes that course management systems like Moodle are a crucial advantage for today's educators.

"I believe it's a powerful tool for education. It enhances the classroom but doesn't replace it," said Jones. She explained that one of the most useful aspects is that her education students use these programs to go on to design their own courses. In this way they get very practical education for when they go on to teach.

Another advantage of Moodle is that the program is open source, meaning that it is freely available for modification and study. This allows customization and enhancement, whereas Blackboard's code is locked in place unless the school would pay a premium price.

According to Joel Pheasant, Director of Academic & Business

continued page 5

Students under fire: ACN

continued from page 1

staff and a full 11 days after the event. There was no timestamp on the copy of the e-mail that Herzog forwarded to the Juniatian.

While apologies have been made and understandings have come about, the fact remains that a College administrator publicly insulted a student at All Class Night.

ACN is a night where students, who are not in positions of power around campus, can critique and mockingly criticize the administration, faculty and staff who *do* hold the power. When Herzog and other influential JC employees, such as Director of Alumni Relations Bub Parker, took it upon themselves to disparage students during ACN, the dynamics of the show – and, more importantly, the general community structure – were undermined.

This is not right, especially from a student perspective. It was not fair for Herzog and others to openly degrade the show's participants without being reprimanded, while the students themselves were heavily censored and even punished.

The official statement OSA sent to ACN participants states, "performances that deviate from final script or that become vulgar or damaging to any person will result in termination of that classes' [sic] performance and disqualification of the class." With such vague terms as "vulgar" and "damaging," students performers were left to guess what OSA would pull the curtain on.

Many examples exist of students being censored and undermined throughout the process. One freshman performer got into a heated argument with Director of Student Activities Staci Weber over a change to a skit involving male and female rugby players.

He was asked to leave Halbritter immediately and denied further participation in the freshman class skit. Later, he was sent to the Dean of Students Office and told that if there were any disturbances during the show while he was there, he would be blamed and punished. Such a response might not be unwarranted, but students should expect that faculty and staff are held to similar standards.

Another example of extreme censorship is the removal of the word "mutant" from a senior class skit involving students who grew extra limbs. The reviewers feared that the word would be offensive to those with handicaps on campus.

Couillard was disappointed in the "sex scene" skit as well, saying, "I felt like mine was too tame. Much of mine was cut in the censorship process and much of the comedy was lost." Many student performers felt the same way.

A first year student is reprimanded for arguing with a College employee over student traditions. Yet another College employee publicly insults a student and receives no censure or rebuke.

These disparate examples highlight the discrepancy between how students and faculty are treated on this campus. The heavy restriction of students during ACN – which is the ultimate forum for students to voice their opinions – is an outright affront to the student body.

If students are unable to voice their thoughts and concerns even in jest, it seems unlikely that they will come forward to challenge the administration over serious issues that call for change.

Taking back All Class Night might be the first step in reclaiming student power on campus.

Leaving MAC

continued from page 1

need of another football team. Adding all Juniata athletic programs to the Centennial Conference, however, would create an unwanted surplus in other sports. With nowhere to go and no way to stay in the MAC, Kepple thought about the possibility of starting a new conference and contacted other institution's presidents.

The idea materialized, and along with Juniata, the new conference will include Stevens Institute of Technology (Hoboken, NJ), Drew University (Madison, NJ), Susquehanna University (Susquehanna, PA), Goucher College (Baltimore, MD), Moravian College (Bethlehem, PA), the U.S. Merchant Marine Academy (Kings Point, NY) and Catholic University in Washington, DC. Due to a lack of football programs in this new grouping of schools, Juniata's football team will still join the Centennial Conference.

"All of the schools in this new conference are facing the same problem as Juniata," said Kepple. He also added that such a conference brings together teams that are academically similar.

"We [are currently] in a conference where we feel out of place academically," he said. "The new conference is made up of schools of similar academic quality, which is the best for competition."

Whereas Juniata's average SAT scores of 1070-1260 place the school second in the MAC behind Drew, it falls in the middle when compared to schools in the new conference. At Juniata, 43% of students come from the top 10% of their high school classes. This figure places Juniata on top of the MAC but second in the new conference behind Stevens Institute of Technology.

Juniata will no longer be the smallest school in its conference, as it was in the MAC. Goucher and the U.S. Merchant Marine Academy have enrollments of 1,350 and 963, respectively, compared to Juniata's 1,400. Bock and Kepple agree that the similar sizes and admission standards of these schools will make competition fairer, but not so much that it suffers.

Some coaches and athletes are sentimental about leaving the MAC, including Coach Bock. "We would have liked the opportunity to stay in the MAC," he said. "It is one of the best, if not the best, Division III conferences in the country. But, it is important for all of us to be opportunity-minded, not problem-minded."

"Change is always hard to take," said Head Men's Basketball Coach and Assistant Atheltic Director Greg Curley. "But the goal is always to compete in the NCAA tournament. This [conference change] is just a different route to the same end."

When asked how the conference change will affect student-athletes Kepple said, "The basis of this is what's going to be best for Juniata students in the long run...This is a terrific thing for Juniata and its students."

Goucher, Catholic and the U.S. Merchant Marine Academy are all located in or very close to large cities. Their locations provide excellent media outlets to attract recruits to Juniata and will give athletic teams the opportunity to play in different venues and experience metropolitan areas.

In addition, the school presidents have discussed ways to associate both on the playing field and in the classroom. "There's already talk of a research conference," said Kepple.

Although student-athletes may see slight increases in travel distances, Juniata coaches have begun to work with other schools to schedule competitions efficiently. "We have kept the coaches involved from the very beginning," said Kepple. For instance, the basketball team might play Stevens Tech on a Friday night then travel the short distance to play the U.S. Merchant Marine Academy the following day. This eliminates the need for two separate, long trips.

As the new conference takes shape, one thing is certainly missing - its name. The presidents of the eight schools are asking for suggestions.

Stalker-net goes national: Facebook can be more than meets the eye

Kim Wagner

Facebook.com has become a daily addiction among college students. But are students as far as it goes?

Facebook is an online directory that connects people through social networks at schools. In other words, it is a nation-wide stalker net.

The major problem is that Facebook is not available to fellow college students alone. What one might think only their Facebook friends can see, the campus police and even employers can view as well.

Juniata junior Joy Galuschik recently had an interview in which the interviewers asked if she had a personal blog. Galuschik is not one of the 1,165 current users of Facebook at Juniata College and therefore her interviewers were unable to access her personal information that way.

Gaining access to others' personal information however, simply requires an e-mail address ending with .edu. Alumni accounts, which many employers will have from various alma maters, give them tools to access a job candidate's account. The likelihood for the applicant getting as job is decreased if the employer happens to see a picture of him at a party, drink in hand or dressed in inappropriate clothing.

When asked about the potential for public consumption of personal photos, sophomore Travis Paul said, "It's your option to put [pictures] up and you can un-tag them...You have to be accountable for your own actions," said sophomore Travis Paul.

Currently over 8.5 million users on 800 college campuses nationally have accounts on Facebook. Around 65% of these students log in at least once a day and about 80% log in at least once a week. According to Facebook information, the website ranks in the top 10 visited sites, right below google.com, making it a staple bordering on fixation with students.

Some cite the addictive nature of Facebook as another negative associated with the site.

"You can't even make eye contact with a neighbor when you need to borrow even just a pencil because their eyes are glued to the computer while on Facebook," said a sophomore at West Chester University in reference as to why she is not a member.

Other drawbacks exist as well. Reports have been filed from several universities stating that campus police have used Facebook to shut down parties and monitor underage drinking. At the University of North Carolina, an R.A. used party pictures from Facebook in a disciplinary action against underage residents. There have also been reports of students being penalized for breaking their school's code of conduct.

Last January at George Washington University students posted party invitations providing information that there would be "booze" at a specific location. When the police showed up, the students were doing "cake stands" and drinking juice that had "booze" written on their cups.

Students use Facebook for many reasons. Birthday reminders, seeing the newest couples and sending party invitations and keeping in touch with old friends are simply a few of the site's many uses. There have even been instances when sports teams have taunted rival schools through Facebook.

Each person with an account on Facebook is exposed to public scrutiny as a result of the posted information. Providing such personal information also increases the potential for identity theft and creates a 'no-consequences' invitation to stalkers. There is a section on the website that allows the user to choose privacy options so that only friends or friends of friends can see information. However, loopholes exist and personal information has the potential to be warped into dangerous ammunition online.

Roving Reporter

by Sarah Anne Wharton

Does the fact that potential employers or authorities can view Facebook change what pictures or information you post on it?

"No, because people get drunk in college and most employers know that. I'm going to hopefully work for someone who isn't concerned about it."

- Ben Waxman, junior

"I would not worry about the pictures I post and the comments I make now, but when I'm a senior and looking for a job, I would."

- Ashley Appleman, junior

"Right now, no. It does bother me that it may have an effect, though, because who I am with my friends is not who I am at work. I don't want to get screwed over with a job because of how I am with my friends."

- Mike Link, freshman

2006 Bailey

continued from page 1

devoted by the winners.

"Finding an effective person, group or idea was a little overwhelming, and once you find that topic, it becomes your life for the next week. It was all worth it though," said Stanley.

In addition to the three final winners, this year's finalists included junior Jennifer Jones, senior Emily O'Donnell, sophomore Paul Rallis, and Stanley. Their speech topics ranged from Mother Nature to Google.

"The speeches were amazing, and I have heard a lot of positive things about them as well," said Detweiler.

The competition gives students a platform to speak about a subject that is dear to them.

"I entered the contest because it was very important for me, as a person of Polish descent, to get people to think about who the Pope was," said Sarnowska before the final round. "I feel very honored that I got into the finals because it will give me an opportunity to speak about this subject to a much greater audience."

Each year different judges are chosen in order to help ensure a fair selection of winners. The judges for this year's competition included three Juniata alumni, Paul Vranesic '04, Stephanie Claar Krug '03 and Robert McDowell '67.

"It is excellent that I get to witness judges who marvel at the seriousness and work that goes into the speeches," said English, Communications and Theater Arts Department Chair Donna Weimer.

Thomas A. Bailey created this formal speech competition in 1915 in honor of his father, Jon Bailey. Both men served as president judges of Huntingdon County. Since its establishment, the Bailey Oratorical has grown into one of Juniata's most known and unique traditions.

"What I enjoy the most each year is the diversity of approach. Thirty-two speeches, thirty-two ways to look at one topic. For me, it's all about being Juniata proud," said Weimer.

Blackboard, Moodle

continued from page 3

Systems Technologies, "At the end of this semester Blackboard could be shut down. That is when it is up for renewal." This means that professors may have to transfer all their course material by the start of next semester.

David Reingold, professor of chemistry, has many of his important class documents on Blackboard. He brought up the issue that many teachers don't know how to transfer data between the new systems. There were compatibility issues with the original switch to Blackboard, and he hopes to avoid those problems with Moodle.

"My first concern is a complete transfer to the new system. I've had problems getting data transferred from old systems," said Reingold.

"There will be professors disappointed with the move," said Pheasant, but he was confident that there would be a smooth transition.

ACN: In the name of humor and tradition

EDITORIAL

In the past several years, there have been many issues taken with the different Juniata traditions. But on the issue of All Class Night, there can be no politeness; there can be no middle ground. It is not full of a rich history and a quaint story that tour guides can relate to prospective parents as they wander the grounds. It's anathema - All Class Night is a pure and simple mockery of the institution we attend. It's as clear cut as that.

In the Juniatian's last editorial, it was noted that the traditions can and do change, but is it ever really possible to "clean up" ACN, to make it inoffensive and civil? The event itself is based on the guidelines of humor and even meanness. But, Juniata's Director of Web Technologies Joel Pheasant writes on the forums, it is worth pursuing that elusive fine line we keep hearing so much about. Why? All Class Night's very idea is not about finding the line, but about crossing it, and pushing buttons on the other side.

Everywhere we turn, we are met with restrictions. This is not necessarily a bad thing, as it is a true reflection of the "real world" where we are constantly forced to consider others and the companies, names and even social sets we represent.

But ACN represents something different, something magical. It is that one night out of the year where we can voice our opinions in a loud chorus, using our talents and personalities on stage, and not face that constant heavy hand of our superiors who are accustomed to assigning us work, giving us deadlines and attempting to curb us into something manageable. In fact, we're supposed to deride and caricature those superiors and the Juniata College they represent.

A big issue that students across campus seem to be taking with ACN is the mixed and often negative examples our superiors are setting for us. With the stringent restrictions set by JAB this year, we are being taught that avoiding conflict is the ultimate goal, instead of being asked to examine our opinions and deciding whether they're worth fighting for. It is the censorship of something usually uninhibited in the name of being nice. Even the Brethrens would argue that their stance of non-violence is something they stand for, even if it's not widely accepted.

This year, every minute aspect of the skit scripts was edited in prior reviews. Participants, if they deviated from the raging G-rated scripts, would be met with the curtain and pulled off stage. Then they would have JAB and Staci Weber to answer to. Meanwhile, practice for the event itself started two hours earlier than the actual show, no doubt to deter any participants from drinking or plotting something spontaneous.

The comments and restrictions placed upon the skits were often reaching beyond the boundaries of common sense. An example of this occurred in the senior "commercial" skits. The students in the skit were showcasing a harmful lawncare product said to cause "instant diversity" on campus. The diversity came from extra limbs grown after being exposed to the product. The word "mutant" was used to describe the limbs. In re-

Students plan for summer in Gambia

Emily Eller

This summer 17 Juniata students will participate for three weeks in a course titled "Politics and Culture in West Africa." The course will be held in Gambia, a small English-speaking country in West Africa. Seventeen students is an increase from four students last year, the first year the course was offered.

Participating students cannot hide their excitement. That is not surprising, considering how little attention is paid to the entire continent of Africa in a typical U.S. education, even at the college level. This geographical neglect has fueled mystery and confusion about the realities of Africa. This course is more than just a summer trip. Students will take courses at the University of the Gambia where they will meet Gambian students and learn about West Africa.

"I think it'll make me feel differently about being an American and the current U.S. situation and how I fit in it," said Reid Smith a junior who recently returned from his fall semester in Ecuador.

Around half of the participating students have studied abroad before; two students, including student coordinator Denise Bearer, participated in the same program last year.

"I was planning on traveling after I graduate, so it worked out perfectly," said senior Jonathan Moody. "I felt drawn to it."

Moody is one of three students not taking the course for credit. Participating students read books, take quizzes and attend a weekly lecture given by Juniata faculty sponsor Emil Nagengast on the history, politics and geography of the region to prepare for the trip.

"It attracts students that want something adventurous, the students who get excited and not scared [at the idea of going to Africa]," said Nagengast.

Not all interested students will have the chance to go. Many students encountered resistance from concerned parents. And with the price tag at $3,000, parental support is crucial.

"My parents did not react well. After the plan started, my mom took the stance that all of Africa is dangerous," said senior Sarah Wharton.

In the end Wharton compromised with her family and decided that she would stay only for the three-week, school-sponsored trip. She had originally planned to

continued page 7

Study abroad India

Last summer also marked the first year for two new programs in India. Environmental Science professor Neil Pelkey added two summer India courses, one focused on gender issues and the other on sustainable agriculture, to the Juniata curriculum.

Pelkey first started the courses as part of the marine science semester taught in India. The gender course drew so much student interest that Pelkey decided to offer both the gender course and a sustainable agriculture course as summer courses to be distinct from the semester program. Last year the summer programs had two students. This year the programs have drawn fifteen students: ten for the sustainable agriculture program and five for the gender program.

The programs have drawn students from a wide range of disciplines including biology, environmental science and peace and conflict studies.

The popularity of international summer programs has grown dramatically in recent years. As Juniata grows in size, diversity and income, there is likely to be more student interest and pressure for the development of international summer programs that give Juniatians access to unique learning opportunities.

Dangers of Facebook

EDITORIAL

America is no longer the land of the free. Every medium of self-expression, except the Internet (until recently), has been characterized by a slow movement toward censorship. With this advent of even our most personal thoughts and images being used against us, where can we go from here?

The powers that be invaded the final frontier of ethics and personal space, and now your online interactions can be used against you. A new trend has been rearing its head in the business and judicial worlds as many prospective employers and police departments are taking your membership to online communities, such as Facebook, MySpace or LiveJournal, as a means of fishing for incriminating evidence. Employers and figures of authority have crossed last barrier to our personal lives. One must wonder how long until direct links are attached to our brains and our thoughts are policed?

To most young college students, visiting these online communities has become a way of life. They can be a way to communicate with friends or a means of procrastination. It may seem innocent, but allowing access to oneself through the Internet can be a dangerous game. Although it may appear funny to find pictures online of yourself drunk, most students do not realize the long-term consequences of membership in such online communities.

Many companies now have access to the information and images on these sites. Even before they consider an interview, they can Google your name and discover parts of your personality that are irrelevant to dutifully completing a job. They can look at a drunken photo and say, "We do not want him or her at our company."

Online, you are an open book, one that anyone, even the police, can read. Recently, at a job interview, a University of Dayton student had some of her Facebook posts read back to her and was then not offered the position.

Numerous news affiliates have reported stories on authorities taking advantage of such online information in apprehending students who performed minor acts of trespassing, vandalism and underage drinking. When Penn State defeated Ohio State in an October rivalry football game, some students illegally rushed the field, and were later arrested for trespassing on University property. They were caught as a result of their membership in a Facebook group entitled, "I Rushed the Field After the OSU Game (And Lived!)."

In the age of Internet communities, nothing is sacred, least of all reputation. Making yourself susceptible to the whims of others in such a serious way can be detrimental to your image. Something you have worked so hard to build up can be torn down by an angry post, from friend or foe, or an unknowingly placed incriminating photo. People who see or read about you online must take everything at face value (no pun intended), and can save their acceptance for another day. What's to stop parents from finding your website and perusing through what were once thought to be your innermost secrets or weekend debaucheries? On Facebook in particular, pictures can be "tagged" by others without one knowing that they were at a party with eyes glazed over and a beer in hand and for a time this posted picture could damage one's reputation.

The authorities involved are taking away the students' right to live a college lifestyle. College is supposed to be a time to experiment and express oneself before being forced out into a worldfraught with rules.

Is it ethical for police, employers, parents, or other classmates to make judgments based on this online information? It's not ethical, but these forces now have access to everything except your synapses. So beware. Be sure to keep personal information personal and ensure the right to a guilt-free and opportunity-filled future.

Letter to the Editor

In the Good Hall technology article (Feb. 9), the two main examples of technology support "failures" really burned me.

The first noted a professor who it took "two days, three phone calls, and two e-mails" to get a problem fixed. The problem was fixed in 48 hours and before the start of classes, right? Isn't that a success, especially at the Solutions Center's busiest time of the year?

The second noted a professor who went to four classrooms to find a "working media player." All the media players worked. The problem was that the student burned the disc on a format we don't support on campus. We have a player capable of playing almost all formats available in the TLT. Instead of getting credit for having that resource available, the Solutions Center got slammed that it was "the only one."

The article goes on to mention "sound problems," but fails to note that it's faulty hardware sent in the new computers. We're currently working with the vendor to resolve this and are just as frustrated about it as the faculty. A student says playing video "never worked" in his class, but was it ever reported? I know from experience that one person's problem often becomes five people's problem because no one reports it.

I also know that for every one person with a gripe, there are five who think the Solutions Center is doing great work with the available resources. I feel that article only told the story of the one. I love working with faculty and staff as TLT manger and go out of my way to help them - I've sprinted to more than one problem because I realize the precarious position they are in when something fails. I think I have great relations with many of them, including most quoted in the article. I don't deny there are unresolved issues in Good Hall and elsewhere, but I think the key here is to continue improving communication between the Center and faculty, and that's hard to do when the full story isn't told.

Matt Russell
Class of 2006
TLT Manager

Editor's Note: Matt Russell is the Juniatian's design editor as well as the TLT manager.

New Experience: Svatý Valentýn in Czech Republic

Mary Gardiner

Frankly, this Valentine's Day was quite different than any other that I've had. No roses, no fancy dinners, not even a romantic kiss was involved in this year's celebration.

Despite these things, this year was better. My Finnish roommate told me that in Finland, they have adapted Valentine's Day to be a "Friend's Day." I experienced the Day of Love in this light, and loved every second of it. In fact, the only "screw Valentine's Day" comment I heard this year was from a friend on AIM back in the U.S.

For my February 14, I spent the day with a best friend, who I can trust enough even to take me into her home for half a week. We read Plato's Symposium, an account of a drunken discussion on Love from the Hellenic times. Openly and honestly, we talked about philosophical love, from an intercultural perspective.

We made a lunch of salad and pasta, the salad with balsamic vinegar and oil instead of salad dressing, as always (they don't use "dressing" here!). When I left my room to have lunch, I found that a friend of mine had made a huge heart on my door out of pink toilet paper.

Then we went to see a performance of Swan Lake, the story about how an evil knight turns ladies into swans. And afterwards, for a snack, we had smažený sýr (fried cheese) at an Asian Bistro. Here the Vietnamese, who came to the Czech Republic in the 60s and 70s in large numbers, serve greasy fast food, which has come to replace shmurgers for me.

We finished the night at a favorite bar and club with Czechs, Germans, Americans, Austrians and even a Welshman.

For the first time, even though my day was full of platonic - not romantic - encounters, I went home alone entirely satisfied on Valentine's Day. I didn't feel the anxiety of a single girl on the day of love and all of that blah-blah-blah.

Here I come to my point: Whether it is because of the situation I am in, or because of the nature of most Europeans, I have better friends here than I've had at home. Of course, the fact that we are here to experience beautiful, life-changing things do affect friendships for the better. I won't deny it.

However, there's something different about Central Europeans that I have learned: While it's harder to make friends with them, they can be easier to keep. An example: Americans, upon seeing someone they know, will ask, "Hi, how are you?" In other countries, a person just says hi and only asks how someone how she is doing if he is truly interested.

It's similar to how my friend explained it after I asked if she wanted some water. When she said no, I asked if she was positive. She told me that if she wanted some water, she would have said yes the first time, and I didn't have to pretend to be so nice, in this superficial way, to please her. (Mind you, this discussion was held as she was taking me in for Christmas! That's friendship.)

Maybe I'm wrong altogether - it's happened before. Maybe I'm not giving enough credit to my people, as it were. Maybe it's not that people aren't nice in the U.S., it's just that they're nice in different ways.

But I am sure of this: whether there is truly a big difference, or if I'm just noticing it more than I ought to, the study abroad experience really shows who your friends are. Because when you're 5,000 miles away from home, small talk doesn't cut it. (I just received a package with some prized M&Ms in it from fellow Juniatian, Emilee Spokus, thanking me for letting her visit.)

This is what made my Valentine's so unique: having real friends on a real friends' day.

JC in Gambia

continued from page 6

join four other students who will remain in the country after the program to travel and volunteer at local humanitarian organizations.

"Going on this trip has really exposed some of the racism in my family," said junior J.P. Melle, one of the students staying in Gambia after the official trip ends. "Their fears and stereotypes are not what I would have expected at all."

Many students expressed surprise at the reaction from their friends and families but hope that their own experiences in Africa will help them to break through the mysteries and misinformation. Despite parental worries, the only fears expressed by students were about heat and vaccinations; each student will need an impressive eight vaccinations including those for rabies, typhoid and yellow fever.

"[I want students] to see that Africa is not at all the place that we think it is," said Nagengast. The associate professor of politics began teaching a course on Africa and leading the summer trips last year after running into a Nigerian friend from graduate school, Buba Misawa. Misawa, who now teaches at Washington & Jefferson College, has been taking students on short trip to Gambia for many years.

Nagengast hopes that students will eventually have the opportunity to study a full semester in Gambia. He thinks that opportunity could present itself as soon Spring 2007, but participating students would have to have gone on the summer program to enroll in the semester-long program.

Presidential Perspective

President Kepple wants to hear from you! His column will appear each issue this semester to answer any college-related question from the campus community. Simply e-mail questions to juniatian@juniata.edu. Editors will compile questions and forward them anonymously to Dr. Kepple.

"Sodexho takes in an annual net profit of nearly $200,000,000. Why doesn't Juniata leverage its negotiating power with Sodexho to get a higher wage for Baker employees?"

The College negotiates a price each year with Sodexho based on the quality of service to be provided and hours of operation. We attempt to balance the quality with the need to keep the cost reasonable for our students. Sodexho in turn sets wages to attract the number and quality of employees needed to provide the service. Juniata is a very small account in Sodexho's worldwide corporate business.

"My club has been using Rockwell all year to meet, and Conference and Events said that it made an exception to policy for us to use it and will not allow us to us it this spring. Why are rooms like Rockwell off limits to campus clubs at night? I am well aware that they are used for meetings for trustee events and other staff and faculty meetings during the day, but I don't believe any of those are still going on at 9:30 at night. Von Liebig is central and convenient, and none of the other rooms are off limits. We like the round table aspect of the room."

Rockwell was built to provide flexibility for many spontaneous meetings throughout the year rather than assigned to regularly scheduled classes or meetings. Along with the Sill Board room it is one of the only places on campus with this scheduling flexibility.

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Vagina Monologues share the spotlight with artwork

Kevin "Par" Fasick

February 12 marked the opening of the third annual Vagina Monologues at Juniata College. Monologue performances are hosted in over 80 countries and in more than 1,100 venues to heighten awareness of sexual violence and abuse against women and girls. While each year's performances have featured student artwork, this year's production sharpened the focus on the power of art.

According to senior Holly Brown, president of the Art Alliance, submitted pieces were quite diverse.

"There were paintings, collages, some poems and written works, ceramics and sculpture, photographs and mixed-media," Brown said.

More than 80 works of art lined the walls of the Ellis Hall Ballroom for the event.

The emotional range of the artwork spanned from mild to shocking, joyful to sorrowful, and inspirational to disturbing. Some paintings - such as those submitted by junior Katie Kopco - were reminiscent of the mildly erotic paintings of Georgia O'Keeffe. Other works served as powerful reminders of the sexual violence in our midst. Like the monologues read on stage, the artworks encompassed everything from the comic to the tragic.

Sophomore Sharlene "ClearBear" Daugherty created several such pieces for the show. Of a ceramic piece entitled "My vagina was my village," she said, "It is a scary, scary [work of art]." The work depicts "a vulva with torn, ripped pieces, with an army knife going through it." ClearBear continued, "It gives you a sense of the terror" that the presenter, a victim of rape and torture during the Kosovo war, experienced.

"Some of the pieces are controversial," acknowledged ClearBear, who also served as an Art Committee Chair for the show. She is quick to point out, however, that while some may be taken aback by the depictions, "the real abuse [these women] have experienced is offensive to humanity." The artwork "allows the viewer to [understand] that…violation," said ClearBear.

College Counselor Beth Williams, who along with the Women's Group first brought the Vagina Monologues to Juniata College in 2004, agreed. "It comes from the very depths of the souls of the people who created it," Williams said.

Kerry Fagan, the organizer of this year's event partnered with the Art Alliance to intensify the impact of art with this peformance. "It's not just about the words," said Fagan, "there is also a visual component to connect us to [the spoken monologues]."

According to Williams, the performance is "one of the most empowering things I've ever seen happen to a group of young women." She also points out the profound impact this event has on campus. "It touches more lives than we are aware of," she said. "That's why we wanted to bring this [show] to campus."

Proceeds from the show, totalling approximately $2300, will be donated to Huntingdon House, the local domestic violence and sexual assault shelter. Over the past three years more than $6,000 has been raised by Juniata's production of the Vagina Monologues for this organization.

Hannah Rauterkus/ Juniatian

ClearBear, a Juniata sophomore and one of the many participants in this year's Vagina Monologues, offered unique, emotive artwork to be displayed throughout the three nights of performances.

Black History Month interest drops

Jessica Perry

With a total of nine events scheduled for the month of February, there are increased opportunities for students, faculty and staff to take part in Juniata's Black History Month celebrations. However, this year's organizers have noticed a discouraging decrease in event attendance.

Junior Rejane Frederick, a member of the African American Student Alliance, remarked that in comparison to event attendance for the past two years, this year's has been "stagnant."

With less participation from students, faculty and staff, concerns are emerging about the effectiveness of the programming and its advertising.

"Events are effective at engaging the selective group of individuals who attend all events but fail to entice others," said Frederick. As for the advertising, she said, "it's adequate; its effectiveness is another issue."

In response to the attendance decrease, Rosalie Rodriguez, the Assistant to the President of Diversity and Inclusion, has been trying to organize events that appeal to more people. Examples are the new additions to this year's programming: the Black History Month Film Series, Brian Johnson's lecture "The Psychology of Color" and the African American Soul Food Dinner and a Movie.

As for advertising, Rodriguez explained that the Office of Diversity and Inclusion is "doing the best with what resources they have." In the fall, she said, her office distributed to faculty and staff a booklet listing the events planned for the entire year. And, in addition to placing the events on the Arch, in the announcements and on fliers, Rodriguez personally contacts those to whom the event is most pertinent to encourage their involvement in verbally advertising for the event.

In an informal poll taken last week, only two out of ten students knew of the all the events associated with Black History Month. These two students were involved in organizing some of the programs. And while most students knew of least two Black History Month events, there were some that could not recall a single event by name.

So while students recognize that the new programming and advertising strategies are a start at trying to improve participation at Black History Month events, many feel more needs to be done.

A common student recommendation for increasing event attendance was more support and involvement from the faculty. Junior Amanda Harris suggested that professors allow students to make announcements about events in class.

Regarding faculty support, Frederick said, "for a campus like Juniata, [I] would love to see [attendance] be required" by faculty.

Senior Muhammad Jami disagrees. "The only incentive for the event should be the event itself," said Jami. Instead, he suggests that more faculty attend the events, especially if they recommend that their students attend. Jami added, "When a professor tells his students to attend these events but don't show up himself, he makes students question the importance of their attendance because the

All Ways of Loving sponsors Drag Show

Students, faculty to strut their stuff on the catwalk

Holly B. Brown

In the past several years, AWOL has been an active club on campus, sponsoring important and popular events such as discussions on transgender issues and the sex talk with junior Devin Couillard. On February 25, the club will sponsor another event – a drag show featuring the costuming and talents of students and faculty.

The idea for the show began last semester, according to co-president Michelle Schoonmaker. Several students from the club attended a show at another college and decided to host their own.

Senior Claire Fultz, one of the committee leaders, said she hopes the event will be fun and entertaining for all.

"Who doesn't smile when you see your classmates and professors on stage in drag?" she asked. "It gives performers a chance to be silly as well as show off a particular talent if they choose to do so."

A committee was formed to organize the event this semester. So far, eight people have volunteered to strut their stuff in Rosenberger auditorium.

Juniors Devin Couillard and Megan Minerick have all signed up to perform, as well as senior Muhammad Jami, freshman Wiley Earnhart and sophomore Jesse Parsons. Juniatian advisor Kevin Ott is the only faculty participant.

Bobby Pennington and Paul Fleischer will emcee the event.

While the event will be a time of fun and flamboyant costumes, AWOL and OSA have worked to make sure it is not a mockery.

Director of Student Activities Staci Weber, attended the first planning meeting to take stock of the situation.

"Drag Queens get up there and they love what they do," she said, adding: "I think the people who are volunteering will enjoy the event and really get into it, not mock it."

The show will begin at 10 p.m. in the IM gym this Saturday.

Eid Celebration hosts dinner, dancing in Baker

James Trent

Juniata College's 10th annual Eid celebration was the biggest and most successful one to date. Fittingly, this year's theme aimed at making Eid a community event on the largest scale possible. Tables had to be brought in as over 300 people crowded Baker Refectory to participate in the festivities.

The surge in participants added to the energy of the festival. Crowds of people in the back stood on chairs to catch a glimpse of the highlight of the night: the Debka dance. This year it featured 18 dancers instead of 12 and was met with a standing ovation.

Eid featured many captivating musical acts. Musician Hasan Koc traveled from State College to play traditional Turkish music on the Baglama, a sort of acoustic guitar. Senior Saba Mottaghinia also played a Turkish composition on the piano.

At the very end of the celebration, half of the crowd exploded into dance, rushing the stage to the beat of Arabic pop music turning the dinner into an impromptu rave.

"This year the food is a lot better than it was last year," said sophomore Taurik Elgabrowny, who helped serve food last year. "Last year the wait was much longer too."

This year two lines served food.

Despite all of the improvements over last year, organizers didencounter some potentially disastrous problems before the actual celebration began. Earlier that week, several e-mails were delivered concerning the handling of food. "Of about thirty pounds of shrimp, ten of it went bad," explained Rosalie Rodriguez, Special Assistant to the President for Diversity and Inclusion. "The festival faced hundreds of dollars worth of losses," she added.

In addition, there were some difficulties collecting donations at the Eid dinner itself. Recipe books that were designed to be sold after the dinner were mistakenly distributed for free out before the celebration.

"That was not supposed to happen," explained Rodriguez. "The proceeds were supposed to aid people [injured and displaced] from the recent earthquakes in Pakistan."

Even in the face of these problems, Eid was still a fantastic success. The purpose of Eid was to bring the community together, and many felt that the festival accomplished this goal. Eid's success this year is attributed to the United Cultures of Juniata College, Club International and the Muslim Student Association who coordinated the event.

Over 50 students and staff helped out with the event.

Islam has two Eid celebrations. One, Eid ul-Fitr, occurs at the end of Ramadan and celebrates the perseverance through the previous month of fasting. The other, Eid ul-Adha, celebrates the willingness of Abraham, a prophet of the Old Testament, to sacrifice his son to God.

"Eid is both a time to give thanks to God, and also a time to give alms," said senior Javaid Zeerak, an organizer of the event. He explained that, in Afghanistan during Eid ul-Adha, those rich enough would traditionally sacrifice an animal and share it with others, usually the poor. The custom across the broader Middle-East is similar.

Both celebrations have already passed for the rest of the Muslim community. Eid ul-Fitr occurred early last November, and just last month for Eid ul-Adha. Juniata College's Eid takes the role of a tradition rather than an actual religious celebration.

The slideshow presentation during the celebration emphasized that Eid is a time to come together with friends, and even enemies, to eat a meal as family and enjoy each other's company. Despite the varying traditions associated with Eid throughout the Muslim world, its main purpose remains the same; it is a celebration of community.

Hannah Rauterkus/ Juniatian

Music and dancing are always a huge part of the Eid dinner. This year a large crowd in Baker witnessed the Debka, a high-energy dance, performed by 18 dancers instead of the usual 12.

"Something New" going beyond the "chick flick"

Movie debates issues of class and race

Holly Brown

Chances are, you haven't heard of "Something New" starring Sanaa Lathan and Simon Baker. Even watching the trailers, it's obviously not geared toward a central audience. But movie lovers, we are in luck! Even though it took two or three weeks for "Brokeback Mountain" to come within a sixty mile radius of us, "Something New" has arrived on opening day, likely due to Valentine 's Day's ability to grasp audiences.

"Something New" is a chick flick that wades in beyond the normal fluff and takes on the topics of modern class divisions and interracial relationships.

I have to admit that I haven't been to an immense number of movies in the past few months. But the ones I have seen seem to follow a trend. They all appear to be geared toward a very liberal, educated audience. Now, I love crazy shoot-'em-ups as much as the next person, but we can all admit that most movies are created for the lowest common denominator.

For something smart or edgy, I have to sit on my hands and wait for a limited release indie flick or, very rarely, be pleasantly surprised by a smart blockbuster.

One of these surprises was "The Family Stone" which was released over Christmas break. Not a blockbuster, sure, but a good film whose production crew assumed that I didn't mind my characters being educated, successful, possessing full vocabularies, expressing acceptance of homosexuals and dis-

continued page 10

The Naked Truth: Straddling the Stirrups

Rebecca

You're straddling something all right, but it's not a guy. Once a girl does it, she never really wants to get back in the saddle… I mean stirrups.

It's supposed to be a quick, "sit back and relax" type of deal, but it's a little hard when foreign objects resembling kitchen utensils (take tongs, for example) are being inserted into your body.

Regardless of my feet being propped up and the doctor telling me to loosen up, I am NOT sitting there with a Diet Coke in hand. I'm not wearing my less-than-sexy paper dress on a cold table with a SMILE on my face when I shimmy my torso down the table toward the bright light and doctor who are anticipating the deliverance of my vagina.

My roommate calls hers "the cookie monster." I think mine looks like a child molester. I'm talking about gynecologists, not vaginas. Some ladies have found that they a type of doctor who lives and breathes for people with vaginas. Other women have gynecologists who look at them as a vagina, not as a person. But one thing is for sure, the cookie monster has seen it all: chocolate chips, sprinkles, gingerbread, sandwiches, and sugar - and ready or not, the cookie jar will be raided. Now, I realize that every once in a while guys are required to cough while having their ho-hos palmed, but here is what you MALES probably don't relate to:

It's crucial that we go. Women are actually twice as likely to be infected with HIV by a man than a man is likely to be infected by a woman (and this is totally true for other in STDs - women are simply more susceptible). Your penis is pretty visible to you, and therefore so are many signs of infections. As women, we're intuitive as to when we need chocolate to combat PMS, but we can't magically know a genital wart is hidden within our body cavity. By the way, thank your female partners because by going through this annual checkup, a woman is protecting not only herself, but YOU from unwanted diseases and infections. So we do it for ourselves, and for you, but…

It's not a BYOB event. Even for women who are totally cool with sex, going to see the OBGYN is not a trip to Disney World (although waiting to see the doctor is like waiting an hour to get to Space Mountain). It's uncomfortable, especially if a girl has never had sex. It takes trust to let someone you know take a sneak peak down there, let alone have a doctor go spelunking. Our vaginas are like gems; we treasure them and don't like putting them on exhibit. After the show is all over…

It isn't always a clean trip. Lubrication is used in order to limit the discomfort caused by the procedures. In the end, a girl is left alone in the room with a box of baby wipes. There's an overwhelming feeling of relief and vulnerability when the cute little babies on the box are giggling at you in your paper dress and cute little Christmas socks. Guys, how would you feel if a doctor poured a bottle of KY motion lotion down your pants, then handed you some paper towels and reminded you to take your vitamins?

After wiping up…If we're good patients we get prizes. If you see the dentist, you normally get a new toothbrush and some floss. Or lollipops and stickers from the doctor for kids when they get shots. Like them, we don't have to leave the OBGYN office empty-handed. There are loads of super FREE prizes being given away: condoms, free samples of birth control, lubrication, and a superfluous amount of reading material. Boys I know this sounds like a great deal, but let me be the first to explain that once a girl is done with the baby wipes and has happily trashed her paper garment, she is not going to be consoled by a pamphlet about gonorrhea. However, there was ONE time that I hit the jackpot. I went to the OBGYN and came back with a brown paper lunch bag hiding thirty condoms. Good condoms. But, it still wasn't a good enough trade for having my cookie jar rattled.

Okay, so maybe you guys are a little grossed out. But trust me, at least you aren't the one in a paper outfit being told to spread your legs and relax while a total stranger takes a peek at your Magic Kingdom.

What male gynos have said to JC women

(and our clever replies):

"How was your study abroad trip?"
Better than your current trip down South.

"Lots of things can cause rips and tears down there….vibrators, large penises, cucumbers."
What do you think this is? The Naked Chef?

"It's okay, I have two daughters."
Ewww.

"It looks beautiful; I mean, the ovaries are looking gorgeous today"
Yeah, all the hormones give them a nice glow.

"I warmed up my hands for you"
WHERE did you warm them?

Fashion: Make the first impression that you leave a stylish one

Lucia

It seems that my greatest thoughts come to me before I go to sleep. It is in that in-between stage where I am not completely asleep but still in some sort of deep thought. The other night when I was in the in-between stage I realized that many of my senior friends are going to be partaking in the interview process soon. So I have decided to devote this entire time to helping you make that stylish first impression.

First impressions come quite often in life. There is the first interview, the first date, the first day of classes (from elementary school through college). And there is always a certain appropriate way to dress. I want to look at making that appropriate dress a stylish one and to creating memorable impressions for those who you have graced with your presence.

You shouldn't be caught wearing your favorite ripped jeans and baseball t-shirt with sneakers to an interview. You shouldn't pull out of your closet your favorite red mini dress. And you wouldn't wear a shirt that shows your fabulous…assets. Those ideas equal bad first impressions. But you're thinking, that basically leaves you with wearing a turtleneck. I'm here to tell you there are plenty of other options.

Take the normal dress pant suit, very stylish. Ladies, all of you can pull this off. Think that's boring? Take that boring pant suit and spice it up. Instead of a plain white blouse underneath, add some bright color (just make sure the color coordinates with the color of the pant suit). Also silk blouses are very chic too and add pizzazz as well. Also some fabulous jewelry would go perfectly too. Just do not get too gaudy—this is an interview not a dance club.

Moving along to another crucial first impression--the first date. The first date could be the last date if you aren't careful, so I say WOW the man or woman. Now wear something that you feel comfortable in, even if it may be your ripped jeans and baseball t-shirt. What they see is what they get. But if you wanted to put some style to your baseball T add some huge chandelier earrings. Accessories add style to any plain old T-shirt and jeans.

However it is completely fine on the first date wear a skirt, or a stylish dress. Go ahead and feel sexy in what you are wearing. Your date will be totally flattered that you did a little more than just the jeans for this first outing.

Ladies, I am not even going to tell you what to wear and what not to wear the first day of classes. On a campus like this it's wonderful to see people all feel fashionable in different ways. Because you see, you may have the Pamela Anderson style or the Sarah Jessica Parker style. Like Pamela, some women prefer to wear an outfit that bares almost all, and others like Sarah like to be classier. Either way we all we leave some sort of stylish first impression whether it be good or bad. Just make sure it is a lasting one.

Movie Review: Something New

continued from page 9

liking Bush, among other things. It was refreshing. For once, I felt like our nation's big issues were no longer issues constantly debated, but something normal and accepted that I didn't have to think about.

It's the same with "Something New." While race, and even class, are issues debated throughout the film, Kenya McQueen (Lathan) struggles to find herself and to find love mainly because she is successful and from a family with high expectations.

Kenya is a smart, if somewhat standoffish, black woman living in modern-day L.A. She works day and night at a financial office where she's being considered for partner. But in her very sparse free time, she meets up with her three good friends, successful like her, who are still looking for the men of their dreams.

Her love interest, Brian (Baker) is a California surfer boy whose passion for his business is inspiring to Kenya. He's a bit of a free spirit, the perfect counterpart to her work-focused life. Baker does an admirable job of attempting to bring life to what is usually a two-dimensional love interest role.

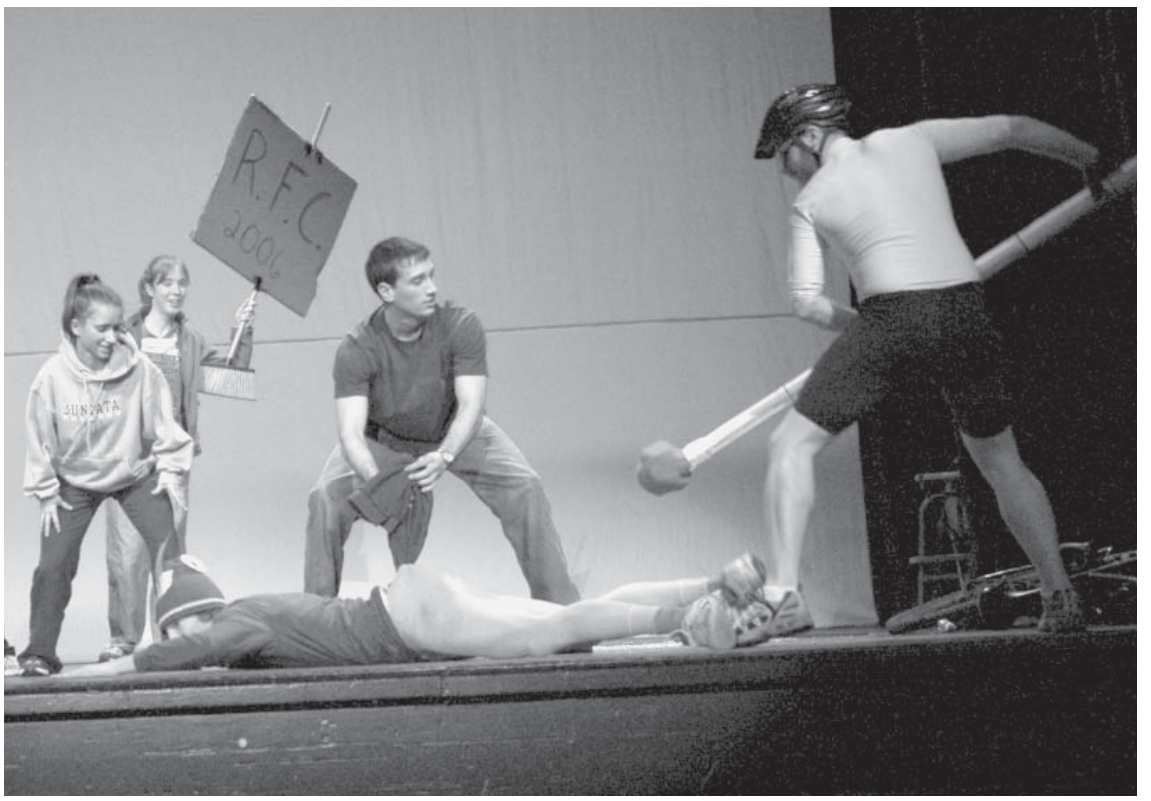
All the right themes and moments of a chick flick are there, and they're done with tact and respect for the audience. The big issues aren't skirted around, and in the end everything isn't solved in a nice little package. But the fact that new director Sanaa Hamri is starting a dialogue with her audience, as well as making a good, enjoyable movie, is impressive.
Another way Hamri attempts to break the norm is by hiring an innovative cinematographer. The soft colors and interesting shots and angles were quirky and enjoyable, and definitely told me that this was not an everyday, mindless sort of film.

A chick flick done well is no longer a chick flick, it's a good movie. "Something New" is definitely one to catch in theaters.

Black History month interest drops

continued from page 8

professor seems unwilling to sacrifice his time to go."



Students also recommended more effective advertising. Many students feel organizers need to take a more active role in promoting their events since most students ignore fliers and the daily announcements.

Student suggestions ranged from the distribution of a calendar that lists all of the Black History Month events to using TVs in Ellis to display such a calendar.

According to Cynthia Merriweather deVries, assistant professor of sociology, the success of Black History Month events does not solely rely on the programming. Ultimately, the success lies in the students. As a member of the Diversity Committee who helps to plan the events, deVries said that, as event organizers, "It is our job to provide the opportunity…once we've done that, we've done about all we can do."

On February 6, the 17th Annual African American Read-In and Bill Carrigan's lecture entitled "Why Ordinary People Lynched" kicked off this year's Black History Month celebrations. Additional events included the Black History Month Film Series, the Beyond Tolerance Lecture: The Psychology of Color by Brian Johnson, the African American Soul Food Dinner and a Movie and Lift Ev'ry Voice. Students, faculty and staff can find event locations and times for these events on the ARCH.

According to Professor Judy Katz, organizer of not only the Read-In but also Lift Ev'ry Voice, the events of Black History Month are an opportunity of cultural reflection. Katz said that attendees are able to "look at the cultural identity of Americans and how their culture has been built on shared history, literature, philosophy, etc. so that they know this is not a white society; it's a society that has been shaped by African Americans."

Two of the few shining moments of ACN

All Class Night, performed on Feb. 10, and a tradition carried on from year to year, fell prey to censorship and regulations to become the least-funny performance in staff and senior memory. The tradition, although severely watered-down, carried on and gave way to a few memorable moments. (Below): President Kepple (not pictured, and not really Kepple) takes on a Juniata tech geek in a life-sized battle involving some tinfoil-clad robots. Both were annihilated. (Left): Almost made it in! The seniors came close to the line during the RFC skit which caused the lights to go out. Luckily no frogs were injured by the large thermometer. The seniors, the only class willing to bend the rules a bit, were proclaimed the victors despite having the shortest stage time.

Hannah Rauterkus/ Juniatian

Most athletes to MAC's in program history

Corinne Barabas

On Saturday, February 11, the men and women's track teams produced several outstanding efforts in both the track and field events. Running, jumping and throwing at the Valentine's Invitational at Dickinson College, many of the athletes enjoyed top-eight performances.

The men took an overall second-place finish out of a field of twelve contenders and the women captured sixth.

In the long jump, Randy Anderson and Gary Ondecko placed third and fourth, respectively. Senior Adam Loser narrowly missed a top finish, earning second place in the high jump.

Shawn Miller took fifth in the pole vault event and sophomore Kyle Mazur threw the shot put long enough to earn another top-eight finish.

On the track, freshman Tripp Rudolph took fifth in the 800 meters and senior Justin Fritzius ran to a third-place finish in the 5,000 meters.

The mid-distance and distance men had several strong showings as well. They were led by sophomore Shawn Rumery, who captured second in the 1,000 meters. Efforts in the mile and 1,000 meters earned senior runner Chris Sheaffer second- and third-place finishes.

On the women's side, runners produced the best results for Juniata. Senior Nancy Hayes won the 5,000 meters and trailing not far behind was fellow senior Katey Glunt, who took second in the same event.

Senior Meredith Troutman scored points in the 200 meter dash with a fourth place finish. Kelsey

continued page 15

Men's basketball finishes season

Fall short of playoffs

Ryan Conrad

The Juniata men's basketball team is used to making late-game rallies. However, with four games left in its season, they were unable to make one final rally into the playoffs. With four consecutive defeats against Albright, Susquehanna, Elizabethtown and Lebanon Valley, the team's playoff dreams came to an end. Before the losing streak, the Eagles were in position for a playoff berth.

The Eagles finished the season 10-15 overall and 5-9 in the conference.

"This was the first time we were in meaningful games in February," said head coach Greg Curley.

The Eagle's senior leaders, Jeff Byer, Travis Boyd and MAC All-Conference Team member, Tommy McConnell, played the last game of their collegiate career against Albright this past Saturday.

"It has been a great honor to play with those three and they will without a doubt be missed greatly," said junior Aaron Chamberlin.

With the three seniors starting on Saturday afternoon, Albright handed the Eagles their final defeat, winning the overtime thriller in Memorial Gym, 82-77.

Boyd finished with a team high 16 points. McConnell scored 14 and provided six assists, giving him 321 for his career, which is third on the all time list at Juniata.

Aaron Chamberlain and Nick Hager hit key shots down the stretch to help send the Eagles into overtime. Boyd knocked down two free throws to tie the game with less than one minute to play. The Eagles defense held the visitors scoreless on the final play of regulation, sending the game to overtime.

Albright proved to be too much in the extra frame. Albright hit a three pointer to start the period, which opened up a lead that Juniata could not close in the final minutes.

"We really wanted to send our seniors out on a good note, because of everything they have done for the program," said sophomore Kyle Opitz. "Unfortunately, we came up a little short, but we gave ourselves a chance to win."

Before their loss to Albright, the Eagles were on the road against Susquehanna when their playoff hopes faded.

Susquehanna came out on top, 72-60, but no matter the outcome

continued page 13

Travis Boyd's sharp shooting ranks near the top of several MAC categories. Hannah Rauterkus / Juniatian

Men's volleyball steadily improving

Katie Laucks

After a controversial preseason, the men's volleyball team has had to brush aside off-court distraction in order to focus on its on-court goals. Despite the controversy, those goals are as lofty as ever.

"We expect to repeat a [Molten] championship and we want to be in the [Division I] Final Four," junior libero Stephen Yeager said.

The Eagles were 3-3 going into their match with Stevens Institute of Technology on Feb. 10. The men dropped the first game, 30-15, but came out strong in the second game.

Thanks to a tough service game, Juniata took an early lead, 13-8, en route to a 30-18 win. From there the men breezed to a 3-1 victory.

Sophomore Matt Fritz had a big game for the Eagles as he came up with 19 kills with a .516 hitting percentage. Juniors Jeremy Barndt and Glenn DeHaven were also in double figure kills. Barndt had 13 and DeHaven added 11.

The next day the team took on long-time opponent Princeton University.

A win was in the near future as the Eagles took charge in game one and cruised to a 30-22 win. But, the Tigers were not going to go down easily. Princeton came out stronger in game two, taking it 30-27. Despite valiant efforts by the Eagles and another big performance for Fritz, the Eagles couldn't pull out the win, evntually falling to the Tigers in the fifth game's rally scoring, 15-11.

Fritz ended with a career-high 25 kills, while DeHaven added 10. Freshman Matt Werle dished out 53 assists and led the team in blocks with eight. Yeager was tops in digs with 18. Even though the Princeton loss is a set back, the team is looking to use it as a learning tool. "We need to crisp up the little things," said Yeager.

DeHaven agreed, saying, "We are well-rounded, but with lots of room for improvement."

That improvement showed when the team took on Springfield College on Feb. 17. Juniata took its game up a notch, sweeping Springfield, 3-0.

Senior Cordt Withum came up with a complete all-around game. He posted a team-best five blocks and a .462 hitting percentage. DeHaven and Fritz ended with nine kills, while junior Ryan McGinley finished with eight. Werle passed out 33 assists for the match.

Juniata faces George Mason at home tomorrow at 7:00 pm.

Eagles pound Albright on Senior Day

Kirk reaches 1,000-point milestone

J.R. Byer

Senior Kristen Kirk made her final game at Memorial Gym a truly memorable one. Kirk sank a free throw with 5:45 left in the second half to hit the 1,000-point milestone. Kirk ended her career with 1,008 points, which puts her in ninth place on Juniata's all-time scoring list.

"When I scored the 1,000th point, it felt like so much weight was lifted from my shoulders because of all the pressure I put on myself to achieve that," Kirk said. "I have had to battle through a painful knee injury my last two years, so I feel like I was able to overcome the obstacles that I was faced with and of course I couldn't have done this without my teammates."

The Eagles sent their three seniors - Lesley Snoby, Katie O'Brien, and Kirk - out on a high note with a 72-57 win. They finished the season 13-12 overall and 6-8 in the Commonwealth Conference. The Blue and Gold missed out on the final playoff spot because of Susquehanna defeating Lebanon Valley, thereby giving Susquehanna the tie breaker over Juniata.

The Eagles got out to a blazing start against Albright as they were up 24-5 with 9:16 left in the first half. Juniata combined some tenacious defense, nine points from Kirk and threes from sophomore Ali Meckey and senior Lesley Snoby to jump out to the big lead. Albright battled back near the end of the first half, but the Eagles went into the locker room with a 17-point lead.

The Blue and Gold pushed the lead to 23 early in the second half behind a three from Meckey. Albright began to chip away and eventually cut the lead to nine with 4:26 remaining in the game. This was as close as the Lions would come as five Kristen Kirk points pushed the lead back out of reach.

"What I'm going to miss the most about this team is the feeling of when we are all working our hardest and competing at the highest level and everything just clicks and we are winning, kind of like Saturday," Kirk said.

The three seniors all played well in their final game. Kirk finished with a game-high 21, including four three-pointers. O'Brien dropped 18, pulled down a team-high 10 boards and grabbed three steals. This was O'Brien's third straight double-double. Snoby scored 5 points and grabbed four boards in her final contest.

Meckey contributed 13 points, including four three-pointers, giving her 56 threes for the season, which ties her for the single-season record at Juniata. Sophomore Jess Winemiller added 10 points for the Eagles.

"It was amazing to send [the three seniors] out with such a great win, Katie played so tough underneath, Kristen scored her 1000th point, and Lesley hit that three to start the game and set the tempo," said Winemiller. "I was so happy for all of them that we could end their careers on a high note."

On Valentine's Day, it was a heart-breaker for the Eagles, suffering a 54-48 setback to conference foe Susquehanna.

The Blue and Gold held the lead for most of the first half and led 25-23 at the break, but couldn't push the lead past four in the second half. The Crusaders took the lead for good with 10:20 left in the second half.

The home team would extend the lead to eight with 3:34 left in the game before Juniata made a late game push. A three from Kirk and a free throw from O'Brien cut the lead to four. After a Susquehanna lay-up, O'Brien and Winemiller each contributed lay-ups to cut the lead to two with 35 seconds left. This was as close as Juniata would come, as Susquehanna iced the game with free throws to set the final at 54-48.

O'Brien led the with 19 points, 11 boards and four blocks. Kirk tallied 15 points to round out the Eagles double-figure scorers.

After four years, O'Brien believes that her senior class left the women's basketball program better off than they found it four years ago.

"That is something that Kristen, Lesley, and I have talked about and we consider it to be a big accomplishment," said O'Brien. "We are excited for our teammates and coaches because the future of our program looks bright. Since we did not make it to the playoffs at all during our four years, leaving the program with a better record than we had our freshman year is the biggest visible accomplishment that we have to show for our efforts."

Hannah Rauterkus / Juniatian

Senior Kristin Kirk (13) drove strong to the hoop against Albright. But it was a foul shot that finally netted the guard her 1000th career point.

Men's hoops season ends

continued from page 12

the Eagle's playoff hopes had ended because of wins from conference foes Albright and Elizabethtown the same night.

Byer, making his first start of the season at Susquehanna, had a season-high 15 points and grabbed nine rebounds. Fellow senior Boyd scored 16 points and added eight boards while Hager added 10 points.

Going into the locker room at the half, the Eagles led the Crusaders by four. In the second half, Susquehanna was able to overcome the deficit and stretch its lead to double figures to run away with the game.

Juniata suffered an 84-76 loss to Lebanon Valley on Feb. 11.

The sharpshooters from Juniata were able to knock down 10 shots from behind the three-point arc while also out rebounding LVC 41-33. McConnell netted 24 points while Chris Jasiota and Boyd combined for 25 points. McConnell led a late game charge that would eventfully fall short for the Eagles.

Lebanon Valley's high-powered offense was too much for the Eagles. The Flying Dutchmen shot 53 percent from the field while making 29-of-41 from the free throw line.

Feb. 8 saw Juniata fall short at home against Elizabethtown, 77-66. Boyd and McConnell dropped in 20 and 17 points, respectively, but the Eagles turned the ball over 17 times in the first half, which was a deciding factor.

Byer believed this season was a stepping stone for the program.

"The returning guys really have something special brewing in that locker room and I'm glad that I could be there to help set the stage," Byer said.

"This season was the best basketball playing since I have been here," Curley said. "There is a feeling of regret because we had a chance to make the playoffs."

Despite his senior season ending earlier than hoped, Byer doesn't regret his four seasons at Juniata.

"I couldn't have asked for better teammates and coaches to experience this season with," he said, "and I am just proud to be a part of it."

Swimmers take third at MAC championship

Robb Patty

For the third time in as many years, the Juniata College women's swim team finished third at the MAC Championships.

During the three-day competition, the women racked up a total of 446 points, 17 in front of MAC foe Lycoming College.

Albright won the overall competition with 723 total points.

It was a memorable meet for two Juniata College seniors, as both Amy Hanson and Kim Dierolf were a big reason for the Eagles' third-place finish.

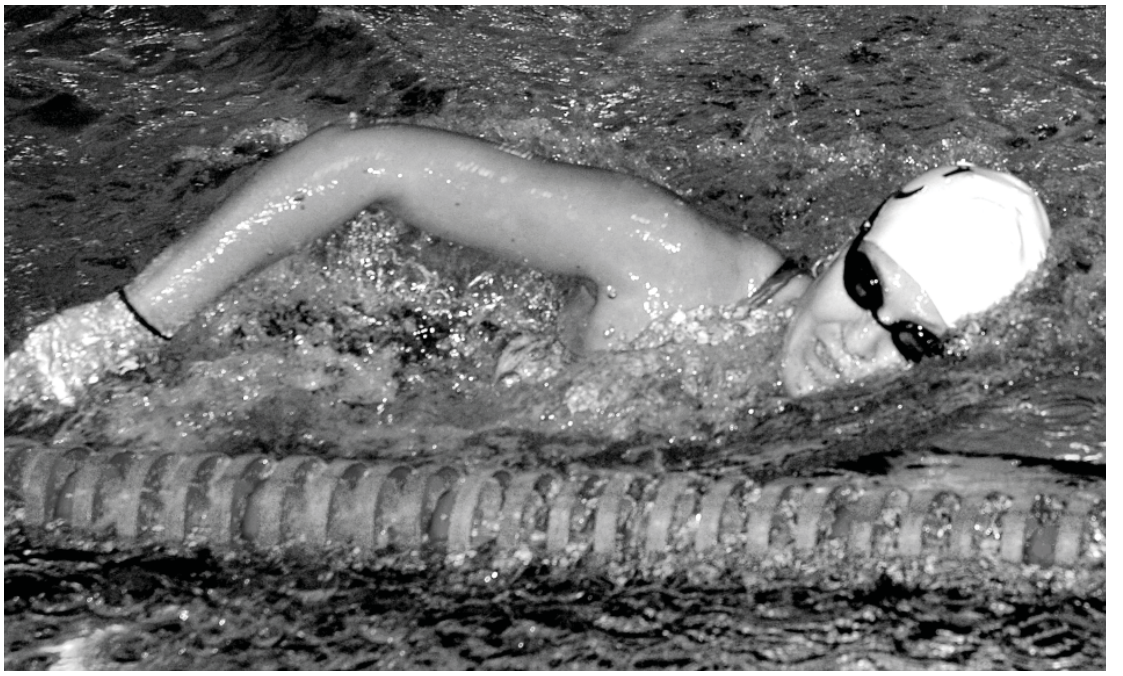
Hanson contributed a team-high 68.5 points during the meet. Dierolf placed the highest of any Juniata swimmer, taking second in the 1,650 freestyle. Her time of 18:26.73 also established a new Juniata College record, breaking the old record by a full three seconds.

"Although we had a really small group of girls this year, everyone contributed positively to the success of the team," Hanson said. "This year was different from last year in that we had a harder preseason workout. Our training in Florida was also the hardest training that I have been through in my four years here."

Another reason for the women's success was the fact that they tapered strictly for the MAC Championships where as other schools tapered for other meets at early times during the season.

"We had an advantage over Lycoming and Widener because we didn't rest at all during the season and they had previously rested when we were practicing twice a day," Hanson said.

During the first two days of the meet the women found themselves bouncing around the field from third to fifth place. On the final day they entered the meet trailing Lycoming by 13 points. The women, however, racked up 164 points on the day to capture the third spot.



Contributing to the team's success, along with Dierolf's second in the 1,650 freestyle, was sophomore Kasey Brough, who finished third, and junior Collin Thompson, who took seventh.

"It's really amazing to break that record on the last day of my final meet, as a senior," said Dierolf. "I've been swimming for fifteen years now and for our team to swim how we did is something I'll never forget."

Four Juniata swimmers also qualified for the ECAC meet that is held in Pittsburgh, PA. Swimmers from Division I, II, and III schools compete at this meet. The women, however, have decided not to attend the meet this season.

The four swimmers that would have been eligible to swim at the competition were Hanson, Thompson, freshman Kristin Musselman and junior Amy Sutherland.

Next season Juniata will return eleven swimmers to a squad which will be looking for bigger and better things as it tries to continue to move up the MAC ranks.

Hannah Rauterkus / Juniatian

Senior swimmer Amy Hanson posted a few individual best times and 68.5 points for her team at the MAC Championships this year.

Hannah Rauterkus / Juniatian

Juniata swimmers dove head first into MAC competition, posting several personal bests and Juniata records while placing 3rd at the event.

By The Numbers

30

Minutes of overtime this season for the men's basketball team in conference play.

6

Categories in which Travis Boyd is ranked in the top 15: scoring, rebounding, blocks, field goal percentage, three-pointers made and three-point field goal percentage.

5:45

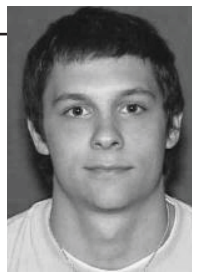
Time left in the final game of her career when Kristen Kirk scored her 1,000 point.

18:26:73

Time Kim Dierolf swam the 1650 meters in, setting a new school record.

4

Swimmers who qualified for the ECAC Championships, but decided not to attend the meet.



1

Times Matt Fritz has been named the National DIII Player of the Week. The sophomore picked up the award for the first time last week.

I just don't get the Winter Olympics

But I have a plan to win a gold medal

Tommy McConnell

The Winter Olympics are stupid.

Well, there are a few exceptions – hockey, the ski-jump, drug busts – but for the most part, I honestly don't get them (and neither does most of America, either, judging from the TV ratings. $600 million well spent, NBC. Since you apparently don't care where you spend your money, why don't you throw some my way? I'll wear an NBC t-shirt around campus for two weeks, hand to God).

Here's the thing: I think every single event boils down to the same thing. Don't slip and fall over. If you can keep your balance, no matter what event you are participating in, you're getting a medal. And if you can do a spin and not fall over, well, hello gold. There should be a sport where a hundred people stand on ice, wearing dress shoes, and try to push each other over. Last one standing wins. You're telling me no one would watch that?

There's only one event that doesn't involve falling over: curling. If you fall down during a curling match (Match? Game? Does anyone care? No? OK, just checking), hand over your car keys, avoid escalators at all costs, put down your piñata stick and steer clear of anything involving even the slightest amount of coordination, like, say, checkers.

Curling's status as an Olympic sport, however, raises a very important, very serious question: Can anyone be in the Olympics? And the answer to that question is, of course, yes.

Honestly, how hard could it be to get good at curling? First of all, it isn't like there's a huge amount of competition. Have you ever met someone who said, "Hey, I gotta run – curling practice!" No, of course not. Know why? Because no one curls.

It's the exact same motion every single time. Identical. Nothing changes, ever. You slide a little weight thingy (anyone know the name? Anyone care? Alright, I'm gonna stop asking) the exact same distance every time. Imagine practicing that over and over from the time you were a youngster. In a few years, you would dominate! And even if you mess up, you have those little scrubber guys fixing your every mistake. It's like bowling, except you have help!

(By the way, why don't bowlers get a strike every time? They don't even have to worry about slipping on ice, for God's sake. It's the same thing every time! Imagine if all basketball consisted of was shooting a free throw or football was only kicking a field goal - in a dome - from 35 yards away every time. You would lose your mind if someone ever missed, but bowlers are allowed to miss? What is a bowler's excuse after missing? "Geez, Charlie, I thought I was going to drill my 47th strike in a row, but that flippin' nine pin came outta nowhere." Why don't we just put the bumpers back in the gutters like we're at a second grader's birthday party? Cake and ice cream for everyone!)

If curling is getting into the Olympics, I don't see why other pseudo-sports don't get in as well. I mean, what exactly are the criteria? Certainly "movement" and "coordination" aren't very high on the list. With that in mind, here's a few new Olympic events that I think give me the best shot at winning an Olympic medal:

Shuffleboard: It's curling, minus the ice. This is a shoe-in.

Slip-n-slide: It's curling, minus the ice, and substitutes a body for the weight thingy. Kind of like luge, except for the summer Olympics.

Trash-can basketball: I think this is my best shot. Do you know how good I am at throwing crumpled pieces of paper into the trash can in my bedroom? Probably better than I should be. Straight shots, banks, off two walls…you name it. I have quite a repertoire.

Napping: Never mind, this is my best shot. I would be on the cover of Sports Illustrated's Olympic preview if napping was in the Olympics. I would be a multiple-medal threat, because, of course, there would be multiple events: Longest Nap. Who Can Fall Asleep the Fastest? (Put me in a car, and this event isn't even close. We're talking seconds here) How Much Noise Can You Sleep Through? What is the Most Uncomfortable Position You Can Fall Asleep In? Can You Nap in Class Without the Professor Catching You? The possibilities are endless.

That's my list, but by no means is it complete. One way or another, I'm getting into the Olympics. Now if you'll excuse me, I am going to go watch some curling. Just because it shouldn't be in the Olympics doesn't mean it isn't my favorite event to watch.

Track and field: most to MAC's

continued from page 12

Buffenmyer took first and fifth in the long jump and 55-meter hurdles.

On Friday night, February 17, the team headed to Susquehanna to get one last chance at improving and scoping out the challengers they will face at the MAC meet.

The men had many strong performances, including a pair of top-six appearances by Randy Anderson and Dusty Sier, who claimed second and third place, respectively in their events. Later, Anderson boasted a third place victory in the 200-meter dash and also a strong enough effort in the triple jump to earn him third place.

Junior Mike Chirdon took sixth in the 3,000 meters. The distance medley relay team comprised of seniors Justin Fritzius and Chris Sheaffer and sophomores Shawn Rumery and Eric Hoover secured the gold with a time of 10:52.

This victorious showing is only a preview to what the distance relays have in store for the competition in the upcoming Championship meet, according to Shaeffer.

"Our plan is to stack the relays and hopefully other teams will run their solid runners in mostly individual events. We can gain points by winning relays," he said.

For the women, freshman jumper Kelsey Buffenmyer earned some quality points in teh field for the Eagles, taking home a pair of second place finishes in the long jump and high jump competitions.

On the track, Troutman, in the 200 meters, and Hayes, in the mile rounded out the top eight finishes for the Eagles.

Thirty-four members of the Juniata team have qualified to compete in the MAC Championships. Many of them will be contenders of multiple individual and relay events on the track and in the field.

Sheaffer said, "There is a slim chance we could win MACs if it is strategized just right and everyone has a strong day. No one is ruling out our chances to place fairly high as a team."

This Saturday, February 25, the Eagles will battle conference foes at the Indoor Championship meet at Susquehanna University in Selingsgrove, PA.

Booth proves he can fly without wings

Sophomore Matt Booth has been soaring to victory so far during this short five week indoor track season.

This second-year jumper hopes to take the indoor experience and turn it into success throughout the outdoor season.

At Dickinson, he had the breakout performance of the day for Juniata. He took home gold in the long jump and third place in the triple jump. He scored the most individual points at the meet, and for his efforts, he was awarded and recognized as Juniata's field athlete of the meet.

The following week, he produced another top-eight finish, with a second place finish in the long jump and fifth in the triple jump.

Measuring an all-time best jump in the long jump at 22 feet and two and a half inches, Booth is looking to top that distance at the MAC Championship meet and bring home personal bests along with a few gold medals.

Not only does he jump, but the sophomore has had success running this season as well.

Booth is often asked to sprint the 55-meter dash or the 200-meter dash. At MACs, Booth said that "[the sprinters] will be more focused on the individual events rather than the relays."

Juniata will be taking full advantage of its versatile sophomore at the upcoming MAC Championships, held Feb. 25.

THE RANDOM ELEVEN

Matt Russell

Juniata hosts the Spanish Inquisition: The OSA edited your All Class Night scripts into a stupor. Somehow, "facilitating" this grand tradition has morphed into "controlling" it over the past two years. It's time to take it back. I've reserved Halbritter for **Thursday, April 6th** and have pledged myself to arrange funding even if it has to come out of my pocket. Let's get it organized **Sunday at 9pm in BAC C232**. We need leaders, writers, and actors. **If you can't make it, e-mail me** (russeml2).

I call bull: …if you just said you don't have time. Don't be silenced so easily.

Dysfunctional dorm: Two students were bouncing a ball between then in the first floor of South Hall. The RD walks by and they say hello, but he ignores them (as he does to everyone in the building). Five minutes later, the third floor RA comes down. She says the RD just called her to have her come down and ask them to stop bouncing the ball. I swear if he ever references the "community of South" in another e-mail, I'll lead the riot.

Leak? What leak? A sink was left to leak in one of South's bathroom for three weeks before Facilities responded. I did a quick measurement and estimate it was leaking a cup of water every 13 seconds. Basically, it wasted about 1,200 gallons of water. Nice, huh?

JCEL stands for Juniata College Center for Entrepreneurial Leadership. "Uh, shouldn't it be JCCEL?" "Quiet! We already ordered the letterhead!"

Bed sheet castes: I've found there are three categories of student when it comes to bedding. First, there's the "sheets optional" group who are happy if they can even find a blanket. Second, there are the meticulous bedmakers who ensure that all sheets are tucked properly. Lastly, there's the "I tuck in my sheets the first week of school and see what happens from there" group. They don't sleep, they nest.

What's all the hoopla, part 1: A friend was walking through Ellis and noticed a large crowd had gathered by the television. His first thought, obviously, was that it was CNN and Cheney had gone and shot someone again. But no, it was something much more engrossing: NBC's Olympic coverage was focused on curling.

Curling? It's shuffleboard on ice with a broom, yet I find I can watch entire matches without blinking.

What's all the hoopla, part 2: A student was in the government office on the top floor of Ellis when he heard a moaning. It quickly began to grow into a very sexual crescendo. Obviously, he started to track the sound down the hall… when he realized it was the Vagina Monologues in the Ballroom. What an (anti-)climax, eh?

3pm Friday e-mail: "Power will be out in Ellis between 4 and 5pm to fix a power line." **4:15pm Friday e-mail:** "omg, the comedian will perform tonight even if power is out FOREVER!!!11" Please, read your own e-mail before sending another to share your panic attack, no matter how amusing it is.

R11 Perspective: "Because Juniata is such small potatoes we can't make Sodexho do anything" and "because students would mess up our new grownup-only rooms" are the short answers to the questions on page 7. Just trying to be helpful...

Once more with feeling: Say it with me now, **Sunday at 9pm in BAC C232.** For the chance to tell the OSA where to stick censorship, I expect that room to be packed.

SUNDAY 9PM
IN C232

The Juniatian regrets the following errors in the February 9 issue:

"New online radio station," page 3 – WKVR's programming schedule starts at 6 p.m., not 8 p.m. as reported.

"Nine Gates," page 9 – The photo caption incorrectly reported the number of actors. Six performers appeared in the show.

All Class Night Editorial

continued from page 6

sponse to this, the reviewing board commented that "mutant" should be excluded so as not to offend handicapped students.

The ridiculousness of a third limb being compared to a physically challenged student should be obvious to all. The fact that OSA transformed this joke into a cruel jab at JC's handicapped students revealed just how overly sensitive the review process was.

Why all the restriction? How afraid are the administrative masses of our mocking comments? Why do our voices have to be silenced when those who have come before us were allowed to share theirs?

The sad part is that after silencing us with all this year's new restrictions and editing, people cried that All Class Night was a boring and even rampantly politically correct affair. Some audience members, including the alumni present, were the only ones to cross the line.

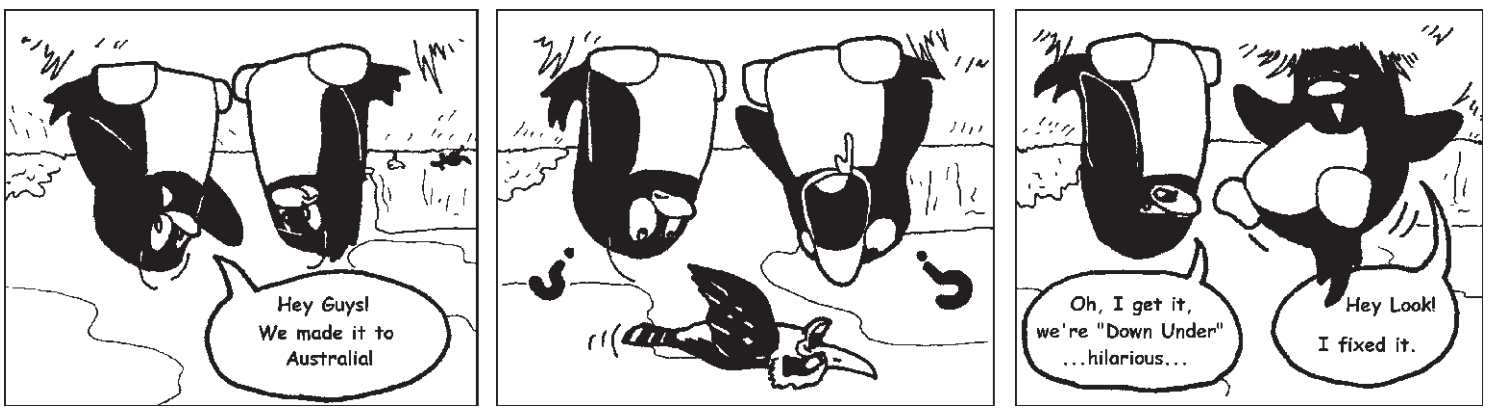
Alums had their say at the end of the event as well. Everyone was privy to the lecture given by Director of Alumni Relations Bub Parker. Parker expressed his great disappointment in all of the classes for not even toeing the "line" of propriety and not taking chances. But it's clear that Parker came from an age where ACN was a true roasting event, instead of this year, where every line was meticulously picked over. Director of Student Activities Staci Weber was present at all rehearsals with a red pen, and numerous threats were made for the curtain to be pulled if the script were deviated from at all.

The push to include alumni at this event revealed to us a different world of those used to fewer restrictions and less of a militant politically correct environment. Perhaps this ability of alums to exist outside of the restrictions of JAB and OSA was what caused overtly demeaning and mean-spirited comments to come from several alums and staff members during the night.

We, as students, see the true nature of Juniata as an institution. We live it, 24/7. Who better to pick out the problems and mock the various issues on campus? The administration has something to learn from us. But when speaking our minds comes at such a high cost, no one is going to be willing to risk a reprimand on her record or a visit to the Dean's office for one night of acting.

That is why we, as fellow Juniata students, feel that for ACN to survive, it must be completely student run, and not be subject to censorship or review by any staff or faculty member. If we are so confused and prejudiced as to cause real emotional damage to our fellow students, faculty and staff by our own thoughts and actions, then it is best that these personally held ideas are placed into the light and discussed, instead of left to stew under heavy rules and restrictions.

Several students on the Juniata forums are proposing that student officers and other leaders show us the way in preserving our tradition, and maybe even making it better. If there's one thing we can all believe in it is the power of Juniata students to take control and plan our own rocky paths. It's what we were recruited for, isn't it? Let's see some real go-getters step up to the plate and preserve our traditions, instead of complaining about what outsiders are doing to them.



As students, we could and should hopefully be able to argue that those who would truly go out for blood – those wanting to offend, put down, and ruin the self-esteem of fellow students, faculty and staff -- are in the minority.

The students who care enough to give of their time and energy to create a script, practice for hours, and act it out in front of their peers are generally those who are leaders in other areas of college life, and are accustomed to thinking of others and taking different viewpoints into account. We mock at ACN – hopefully not to destroy, but instead to say "this is different, this is funny, this isn't working, this is something we all have noticed and wish to discuss or share with you."

Juniata, let's stand up and take back the tradition that should have belonged to us all along.

MARCH 23, 2006 | JUNIATA COLLEGE | VOLUME 87, ISSUE 9

Off campus housing restrictions catch some off guard

Res. Life encouraging "residential campus"

Aly Pompeani

Due to the large number of rising seniors who applied to live off campus, only students from the senior class – and no rising juniors – were approved to live off campus for the 2006-2007 academic year.

"Nothing has changed regarding the procedure [of approving students for off-campus housing]," said Tim Launtz, director of residential life. "The last couple of years we did not have the number of seniors apply as we did this year."

For next year, 169 rising seniors applied and were approved to live off campus. Last year, only 132 seniors applied and were approved, allowing space for non-seniors to move off campus as well. In Juniata's room draw procedures, seniors have always been shown preference over the other classes. So their first opportunity at alternative housing is no different from those who choose to stay on campus.

Juniata's Office of Residential Life uses an equation of assumptions to calculate how many students should be allowed to live off campus while ensuring the on campus dorms are at capacity (see sidebar). The equation indicated that 146 students could be permitted to live off campus next year. This would've meant not even all of the seniors who applied would have been granted off campus permission. By approving each of the 169 seniors who applied, the Office of Residential Life exceeded their estimate. "We took [the number of students] up even higher to try to accommodate the seniors" Launtz said.

Under the "Living Off Campus" portion of Juniata's room draw information sheet, it reads: "Juniata College is a residential campus and, with a limited number of exceptions, all students are expected to live in college-owned facilities."

continued page 4

Assumptions Res. Life uses to calculate how many students should be allowed off campus:

- 100% of exchange students will be in housing.
- Resident percentages will be average of last five years.
- Commuter students will continue as commuters.
- 70% of students on Leave of Absence will return.
- Freshmen and transfer projections are as outlined in the Enrollment Management Plan.

Student leadership gender imbalance

Numbers: women significantly more likely to be in charge

Holly B. Brown

Student leaders, selected by their peers, gathered on February 19 to be inducted into Omicron Delta Kappa (ODK), a national leadership society. They all made speeches and signed membership books, but one thing in particular stood out. Nearly all of the inductees were women. Thirty-four out of 40, to be exact.

According to co-president J.C. Hayden, the society makes the selections blindly in regards to gender. It would appear that in rewarding excellence in GPA, involvement and leadership, women on campus lead the way, at least as far as ODK is concerned.

The male-female imbalances cannot be attributed to Juniata's enrollment, which is split fairly evenly gender-wise, with women leading at a slight 53 percent.

But does this one society reflect an overall trend on campus? It could, as far as clubs are concerned. According to the Office of Student Activities' yearly records, women hold almost twice as many offices in science, humanities, cultural and religious or volunteer clubs as men. It is only in the realm of sports that men dominate the charts.

According to Belinda Zauzig, the athletic department assistant, the male-female participation in fall, spring and winter sports isn't too disparate. Approximately 153 women and 187 men participate in sports on campus.

In the realm of employment, the numbers are more staggering – about 453 women are employed on campus versus only 259 men.

Of the more active clubs on campus, such as Juniata Activities Board (JAB), All Ways of Loving (AWOL), Big Brothers Big Sisters and United Cultures of Juniata, females have predominant leadership.

Senior Megan Allison is one of the very-involved women on campus. She's a chairperson for JAB, a Student Alumni Association executive member, a member of Big Brothers Big Sisters, a Juniata Instructors of the Future member and every year she works to run the Mr. Juniata event with Circle K. In all the clubs she's involved with, she admits to seeing a gender imbalance.

"I'd say it's mostly female [leaders] in the things I'm involved in. In JAB, we struggle with getting guys to go to meetings and be chairpersons… We would have to sponsor a 'bring a guy to a JAB meeting' to try to get

continued page 5

All Class Night: Uncensored

Sarah Wharton

Lookout, Juniata - All Class Night is back for you.

On April 6, there will be another ACN. It will be held in the Rosenberger Auditorium just like the last one and will mock the JC community like the last one, but this time, there will be no censorship.

In light of February's All Class Night, a group of students came together to remake the comedy show into something that it is traditionally supposed to be – a funny, free and uninhibited bash of Juniata. Senior Matt Russell, manager of TLT and design editor for the Juniatian, is organizing the spectacle.

Russell first came up with the idea for a second ACN shortly after the first one ended in boos. The usually uproarious show was thought extremely dull, and many students blamed the restrictive script-editing done by a committee of JAB, OSA and student members.

Initially, Russell wanted to cooperate with Student Government

Freshmen withdraw to avoid campus judicial action

Caught with pot, students have limited options in 'case-by-case' system

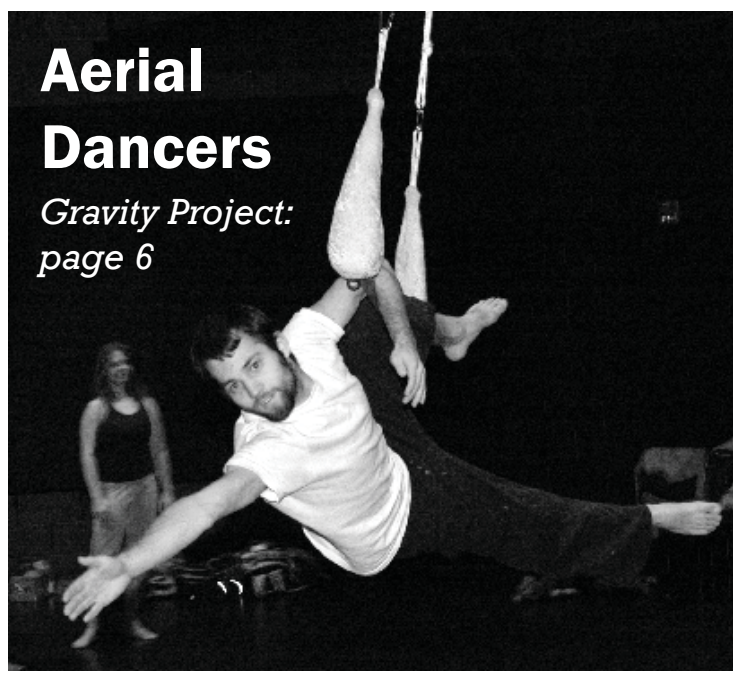
Michael A. Vella

The recent withdrawal of two freshmen who admitted to using marijuana in their dorm room has raised concerns regarding the fairness and consistency of Juniata's case-by-case handling of conduct violations.

When asked about disciplinary action being consistent for social misconduct, Dean of Students Kris Clarkson replied, "I've always said - you punch, you pinch, you steal, you deal, you're gone."

"I think we were treated unfairly," said one of the students involved, who asked to remain anonymous. "It was our first offense, and the amount of [marijuana] on us was less than a gram."

"What we did was wrong," said the other roommate, "but at most I thought we should have gotten kicked out of Residential Life."



According to Rocco Panosetti, director of Juniata's police department, officers were dispatched to the basement of Sherwood Hall on Feb. 12 after the first floor RA smelled marijuana coming from the students' room. Officers were allowed into the room, where the roommates admitted to using marijuana and turned over a pipe and a small quantity of the drug.

Following standard procedure, Juniata's police department investigated the incident and sent a report to the Dean's Office.

"We follow the same process for all reports," said Panosetti. "If you deal with us, there is no inconsistency."

But Juniata's police department plays less of a role with respect

continued page 2

Hannah Rauterkus / Juniatian

Technology changing how the College interacts

Jason Najarian

Every day, hundreds of e-mails are sent back and forth across Juniata College. Campus Network Services does not maintain statistics about internal mail traffic, but does report that Juniata processes an average of 77,000 e-mails from outside sources in one day.

This is evidence that students and faculty often find themselves relying on e-mail rather than other means of communication. Every e-mail sent at Juniata contributes to the estimated 600 to 1,000 billion messages sent per year around the world.

Juniata has placed great importance on e-mail, even going so far to make it a designated type of communication. According to EagleNet policies, "E-mail is now an established medium for official and important communications," meaning that it has the same importance as phone calls or regular mail. E-mail is generally seen as a benefit to colleges, but there are issues that accompany use of the newer medium.

As Carol Peters, English professor and Director of the Writing Center, said, "E-mail is becoming the primary mode of business communication. We should think of it less like instant messages."

The major concern many professors cite is that students sometimes forget that writing an e-mail is essentially no different than regular mail. All the same courtesies and respects should be maintained.

Peters tries to devote one lecture in her classes each semester to e-mail etiquette. A large problem, she explained, is that sometimes people do not remember that e-mail lacks the gestures and cues involved in conversation. E-mails can be interpreted wrongly this way, sometimes to a very harmful extent. She believes that taking time to reflect on e-mails can vastly improve responses.

"Students can fall into a trap," said Peters. "They forget who they are talking to."

When asked about how e-mail impacts their communication with professors, students had many things to say. Many students use e-mail more often than visiting offices.

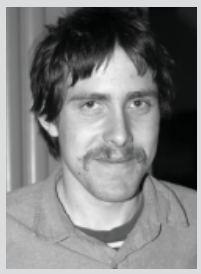
Senior Neil Eicher said, "I use e-mail more than going to see professors, but I still talk to them in person."

The majority agreed that e-mail is the easiest way to contact your professor. In this fashion, e-mail can serve as a means to broach difficult topics. Some students use it as an icebreaker when seeking help.

"If you feel awkward about an issue, it's easier to e-mail a professor," said freshman Charles Allison.

While he appreciates how e-mail facilitates communication, Professor of Politics Emil Nagengast is bothered by the frivolous messages he receives from his students.

"If they had to physically come to my office, students wouldn't ask some of the stupid questions they e-mail me," he said.



Nagengast finds that students are usually courteous but believes that e-mail can take meaning out of student-professor exchanges. When he went to college, going to see a professor was a formal event. Professors deserve a degree of respect, and e-mail can disrupt this, he said.

Because e-mail is so commonly used on campus, there is an unspoken expectation that students and faculty keep up with their messages and send quick replies,

continued back page

Roving Reporter

How does e-mail affect communication on campus?

"I think it's an important tool of communication on campus. It's the way I contact professors, more so than telephone or instant messaging."
– Ammon Bartram, freshman

"I feel that we're much more connected through the internet. The students know what their professors want. And, it's easy to relay information, though it does limit face to face communication." – Emily O'Donnell, senior

"It makes it easier to know what's happening. Professors send you e-mails about assignments all the time and the announcements come every day. It's very effective."
– Matt Werrbach, freshman

"It's a big part of communication. Anytime there's an event, it goes out on e-mail first. E-mail's very important and very important when it goes down."
– Tyson Daniels, sophomore

Photos by Sarah Anne Wharton

Freshmen withdraw to avoid campus judicial action

continued from page 1

to assigning disciplinary action. "Sometimes we don't even know what transpires after we file our report," said Panosetti.

Both the Dean's Office and police department are run under Student Services, but Dean Clarkson makes final punishment decisions after hearing recommendations from the Judiciary Board (J-Board), a group of students, staff and faculty.

The students were presented with two options: either withdraw from the College with the opportunity to return next semester or present their case to the J-Board. In either case, all Juniata College records, including transcripts, would be cleared of the misconduct upon graduation from the College.

No borough police records were involved, as the incident happened on campus.

"It wasn't worth the risk of taking it to the J-Board," said one of the students involved. "If we lost there, we would be suspended, lose all of our tuition and make it impossible for us to transfer. We really didn't have a choice."

Both students voluntarily withdrew from the College, and neither plans to return.

"I would be personally troubled if the Judiciary Board failed to recognize [marijuana use] as anything less than suspension level," said Clarkson, who explained that most students elect to withdraw rather than face the J-Board.

"Consistency is always raised as a question," said Clarkson, "But it is not a high goal. Consistency can be machine-like, automatic."

He admitted that prior records, acceptance into graduate and professional school, stress and other variables are taken into consideration when deciding how to punish conduct violations. Situations are handled on a case-by-case basis, and Clarkson said "people may see this as inconsistent."

"I have seen all kinds of things that I think are much worse than two kids smoking pot in their room," said one student involved in the recent marijuana incident, alluding to a Juniata student who was put on social probation after crashing a car into the porch of a local residence.

Clarkson confirmed this story, but said that the Huntingdon County court system handled the majority of the case. The student was arrested, cited for DUI and did repair the damaged property.

The same student involved in the marijuana incident is also unhappy that he and his roommate faced the same punishment options.

"It wasn't even my marijuana or my pipe," he said. "It was all my roommate's, but they treated us exactly the same."

"In the past eleven years, [marijuana] use, much more often that not, equals time off," said Clarkson. He added, "We have a low tolerance for drug use, and people need to be held accountable."

Clarkson said that marijuana use is different from alcohol violations and other misconduct in that it is a misdemeanor. If Juniata is not strict on such offenses, local law enforcement is likely to get involved.

As for the two students, both believe they were treated unfairly. "There should be some kind of middle ground for this stuff," said one. "When your only options are to leave college or go before a group of people, that's not a good system."

Clarkson says he believes in Juniata's judicial process and handling each case individually allows for a more compassionate system.

Similar process exists for cases of academic dishonesty

Like conduct violations, situations involving academic dishonesty are dealt with on a case-by-case basis.

"Academic Support Services takes cheating very seriously," said Director Sarah May Clarkson. "And we feel [we have] good support from the faculty."

A professor wishing to formally charge a student with academic dishonesty must fill out an allegation form detailing the summary of the offense as well as an assigned punishment.

The student then has three options: either admit guilt and accept the penalty, admit guilt and request an appeal of the penalty or deny the allegation and request an appeal. The last two options are presented to a Judiciary Board - one that is separate from the Dean's Judiciary Board and assembled differently based on each individual case.

Clarkson said she recognizes that stress at home and in school may cause some students to cheat, especially during finals week. Such circumstances are taken into consideration when penalizing academic dishonesty and are one reason why the academic J-Board treats each case as unique.

Also, inconsistencies may arise because professors assign penalties based on their individual beliefs, not on a universal standard outlined by the College.

Clarkson believes that handling cases individually makes the system more compassionate. "It is important for students to feel they have been treated fairly, and fairness is an output of compassion."

Understanding the cartoon controversy

Panel discussion sheds some light on the conflict

Hannah Rauterkus

Earlier this year, people around the world turned on their television sets and witnessed the Muslim world in rage. Embassy burning, riots, even death all started over… a cartoon? The first thing many Americans asked was "why?"

In response to this question the Muslim Student Association (MSA) held a panel discussion to shed some light on the situation. On February 27, six international students from Afghanistan, Syria, Niger and Morocco ran the discussion to help Juniata students better understand the controversy.

The 12 cartoons first appeared in the Danish newspaper Jyllands-Posten on September 30, 2005, five months before the reaction. Sonia Eqbal, from Afghanistan, feels this delayed reaction was largely political in order to get the peoples' attention off the government's failures. Javaid Zeerak, also from Afghanistan, agrees with Eqbal's analysis, noting that the Pakistani government, which usually suppresses protests, allowed the people to express their frustrations.

Abdoul-Azize Seydou, from Niger, pointed out that 40 artists were asked to illustrate these cartoons, but only 12 participated. In fact, one of the cartoonists drew himself drawing the Prophet Muhammad while looking nervously over his shoulder, aware his actions would cause controversy.

Souzan Kurdli, from Syria, explained that the protests were carried out by people with little access to education, and their reaction was exploited and magnified by elites in government who use Islam to propagate an agenda. Fouad Touzani, from Morocco, also felt that the cartoons were not the only cause of the riots, but that they ignited the flame. A major cause of the ongoing frustration is the U.S. support of Israel in the Palestinian-Israeli conflict.

But what about freedom of speech? Kurdo Othman, from Kurdistan (Iraq), put it into perspective. "You may not have [had] this reaction if Jesus was depicted this way but, as my one friend pointed out, if you had a caricature of a black person depicted like a monkey, you'd see a lot of riots in America." Even the U.S. has some restrictions on freedom of speech.

The students at the panel wanted people to understand the controversy from a Muslim's standpoint. As Othman explained, "For [Muslims] it's a condition of our faith that you have to love the prophet more than yourself, your parents, your country, your nation, your everything."

Zeerak continued, "Suppose I'm not a religious person; why should I care? For me it's not only religion; it's in my name, it's in my family history, it's in how I grew up … it's a very prominent part of our culture and how I was raised."

While most of the panel condemned the response as violent and reactionary, a few understood it and were not surprised. One member felt it was justified. The depiction of the Prophet Muhammad is forbidden, and the word "forbidden" is highly stressed. This law is not specific to Muhammad but to all of the prophets: Jesus, Moses and Abraham included. There is the fear that if you make an image of these men, they will become worshiped like divinity. One is supposed to worship God only. It was an even harsher offence because Muhammad is the prophet of Islam.

Eqbal was saddened by the reaction because she saw a great opportunity to show the world that Muhammad's teachings were about peace. Eqbal also shared one of the many stories highlighting the Prophet Muhammad's peaceful life: Muhammad's daily walk to the market led him past a woman who despised him. Every day she would throw her garbage on him and yell as he passed. One day she did not come out to harass him and the Prophet became concerned. He went to her door to make sure that she was fine and had not fallen ill. She was touched and later converted to Islam.

A few on the panel felt this could have been a great chance to prove to the world that the stereotypes associated with Muslims are grossly inaccurate. Said Touzani, "[Westerners] think all Muslims are radical. There is no way these [riots] are justifiable. They're not practicing Islam the way it is supposed to be."

Many feel Western media propagates these stereotypes. Efforts on both sides have been made to temper the conflict, and religious and political leaders have met in Denmark to achieve reconciliation. Those students interviewed worry that the lack of media coverage only serves to worsen the perception of Islam and Muslims in the U.S.

This negative image is continually being fought with events like Juniata's panel discussion and other MSA events like the Eid dinner and campus showings of "The Message," a film about the formation of Islam and the Prophet Muhammad. MSA's goal is to bring more awareness to the campus about the foundations of Islam and a better understanding of the big question "why?"

Students use break for Hurricane Katrina aid

James Trent

Over spring break, an ambitious group of Juniata College students, faculty and staff took part in an aid effort for areas affected by Hurricane Katrina.

Some students focused on rebuilding damaged houses in Biloxi, Mississippi. This included structural repairs to salvageable roofs.

Adam Stanley, a sophomore who helped reconstruct roofs, said "In some places all that's left are foundations."

Others ventured into the most severely affected areas, such as the St. Bernard Parish of New Orleans. Due to its proximity to the coast, Hurricane Katrina demolished this region. National Public Radio recently stated that only ten percent of St. Bernard residents have returned since the disaster.

"Everything was gone," said Elisabeth Rattenborg, a sophomore who went with the New Orleans group. "There were literally houses that had been washed away into the middle of the street."

For many interested students, the trip was a daunting challenge. "You have to realize that this is a huge thing emotionally," said Lisa Baer, the Juniata College Catholic Campus Minister. After a preliminary presentation about what to expect, some students decided it was not for them.

Baer's sentiment was not lost on the students once the trip began. One group encountered a man who, upon returning home, burst into tears.

"When people thanked us for coming, I didn't know what to say," said Stanley. "I mean, of course we are here, it's everyone's problem."

Senior Anna Elias and eight other crew members spent their time gutting two homes. They tore down walls, removed appliances and bath fixtures and carried any recognizable contents of the home to giant piles outside. Most of the things they carried were beyond recognition due to heavy coatings of mud and mold.

She admitted to having negative feelings initially because students were told that most of the homes were beyond salvation and would most likely be demolished completely. Elias didn't know if the group's efforts would make a difference at all. But after meeting the homeowners, she changed her view.

According to Elias' own blog about the trip, one homeowner, named Mitzy, told the group "Don't feel bad for me. I got my family, and that's all I need." Mitzy did not ask the group to recover anything from her home. She had begun her life again and was positive about being able to go on without material possessions from the past.

Rebecca Vonada / Juniatian

Johannah Kraft, a visiting language instructor from Germany, helps rebuild the Gulf Coast during Spring Break.

The second set of homeowners, Sarah and Jimmy Keith, differed from Mitzi in that they requested that the workers bring them anything at all that might look like it had meaning to them. During their efforts, students discovered Jimmy's service medals in the rubble. Elias wrote, "It was sad to see Jimmy look so long at his Marine medals that he earned that were [unsalvageable] and eventually decide to pitch them in the big garbage pile that was pretty much the size of his house." Although the medals could not be saved, the group did manage to recover a set of vases that brought tears and smiles to both of the Keiths.

In the end Elias said that the "group felt good that by gutting their house, we could find and save some stuff that may have been destroyed if they have to bulldoze it."

Sarah Keith felt that the group's efforts mattered as well. In her response to Elias' blog, she wrote, "No matter what happens to that house in Arabi, it had to be gutted (even if it is torn down) and we needed to salvage what we could. Also - we needed the closure. We needed to see that the house was done. You guys made an extraordinarily difficult time bearable. Even hopeful. Knowing that you gave up your vacation time to come down and lend your hands makes me see the world as a better place."

Throughout the experience Elias found positive outlooks and hope that changed her feelings about the group's utility. She also believes the volunteer effort must continue. She said, "It's not over just because the news stopped

continued page 4

Off-campus housing restrictions

continued from page 1

As such, the Office of Residential Life strives to fill 100 percent of the 1,178 beds on campus. This past fall, however, only 96 percent were filled.

The Office of Residential Life doesn't want this to happen again, said Launtz. "We have the capacity to fill all beds on campus; that's why we have these buildings," he said. "If students don't live here, that's income we're not receiving."

Some students expected approval to live off campus to be automatic. Sophomore Tamara Wolfgang signed into an apartment lease with a Huntingdon renter before receiving approval from Residential Life. But because that approvval never came, her lease must now be voided. Other rising juniors are in the same situation.

"We figured [Residential Life] was just trying to discourage people [from applying]," said Wolfgang when asked why she didn't wait for approval.

Huntingdon rental agencies are hurt by the restrictions as well. Rodney Weller, owner of RNW rental services in Huntingdon, was forced to rework his leasing arrangements for next year because of such unexpected non-approvals.

"It affected me," said Weller. "I did rent to juniors who were not allowed to get off campus housing. I had to let them out of their leases." Now, Weller is struggling to fill these vacancies.

Launtz isn't sympathetic. "Students shouldn't be signing leases before approval from the College," he said. "We are going to be more active next year with notifying landlords, also. Hopefully that will help rather than harm."

But for Wolfgang, living off campus was crucial. Her parents suffer from disabilities that make it very hard to move in and out of campus each year. Signing onto a rental agreement now would have allowed her a guaranteed place in Huntingdon to keep her belongings over the summer.

"I tried to talk to Tim Launtz about it," she said, "but he didn't seem to care. He didn't give me any options."

Launtz could not comment on this situation, citing confidentiality rules.

Wolfgang also went to financial planning for assistance but received no help there either. Because of these things, she will transfer to another institution in the fall.

Other current sophomores said they did not apply for off campus housing because they were told by Residential Life officials not to bother. Current sophomore Ali Meckey said that before approvals were announced, Launtz told her that the application she had submitted was a waste of time.

"I had friends that will be seniors who asked me to live with them," Meckey said. "They needed one more person to live with them next year. It's not like it would have been a big hassle for me to move into a house that they already had."

Launtz did not recall that exchange. However he did say, "People ask us all the time what we predict. I didn't want to leave anyone in false pretenses. I feel like I was probably doing people a favor, not harming them. We wanted to stop people from getting into a lease or getting their hopes up... There [is] no being mean or malicious. [Our responses are] to help the students, not to hurt them...When they ask us our opinion, you know, I don't lie to students. I don't lie to anyone."

Sophomore Michael Conte is still frustrated by the off-campus housing limits.

"For the amount of money we pay to attend Juniata College, we should have a preference on where we would like to live," he said.

While in the past they have been quite varied, Launtz hopes that approval rates for off-campus housing will become more steady and predictable in the future.

"There will be stabilization over the next few years. We have a good idea of freshman classes and with that, we will be better able to predict the target we want," he said.

Registrations Tips from the Registrar

1. Take a cue from your advisors and follow their advice for whether or not to schedule online prior to seeing your advisor

2.Check registrar's web page to find out when you can schedule and what forms to have ready for your advisor

3.Take the prep form from the registrar's office to organize your classes with alternatives ahead of time

4.Look at the class schedules for offered classes

5.Check and double-check the synonym number

6.Follow all the directions and use the shopping cart mode online

7.Make sure to hit submit online

8.Check your schedule at least once after submitting

Hurricane Katrina

continued from page 3

talking about it."

Other students agreed that more must be done. "FEMA pulled up a trailer for one woman right as we arrived," recalled Stanley. "It's what, five months after the hurricane?" And with the 2006 hurricane season rapidly approaching, many New Orleans residents still need aid.

The Campus Ministry and Office of Community Service supplemented funds for the trip, but students still had to pay for accommodations. The Presbyterian Church directed the New Orleans group and the Church of the Brethren led the Mississippi group.

The alternative spring break trip is presented annually as a chance for self-motivated students to volunteer. "Campus Ministry and Service Learning simply provide the opportunity," explained Baer.

Twenty-seven Juniatians volunteered this year, and six were faculty or advisors. This is comparable to last year's group, which did similar work in Orlando, Florida.

Students and advisors will be able to share their experiences during a special presentation on channel seventeen later this semester.

In April, Biloxi will hold a recognition ceremony to commemorate the volunteers' efforts.

All Class Night: Uncensored in the works

continued from page 1

for funding and backing, but that did not happen.

"From what I gathered, there was a lot of student dissatisfaction," said Russell. "The level of censorship that occurred was much higher than it should have been."

He continued, "It's supposed to be a student tradition to lampoon faculty and staff, so why would you have faculty and staff censor the lampooning?"

About a dozen students turned up at the first planning session for the new All Class Night, and Russell and others expect more. Each Sunday from now until showtime, they will meet to prepare and write scripts in Brumbaugh Academic Center's C232.

So far, the group had decided that instead of four competing class skits, there will only be one collaborative performance.

"It's more to show some solidarity," said Russell. "It's not much of a competition really."

The show will be completely run by the students, and will not be overseen or edited by JAB or OSA. At the Senate meeting to present the idea, the majority of members did not support the motion to back the independently run show.

Javaid Zeerak, president of the Student Government executive board, said that the Senate, composed of class officers and representatives from student organizations on campus, did not largely support the re-run ACN.

"Some of us supported it," he said. "It is a student activity and we want to keep the students involved and enthusiastic."

But, the majority of Student Government Senate members did not like the idea of a second ACN. According to Zeerak, the reasons for this varied. Some members said that ACN is a once a year event with four skits and should not deviate from that setup. Also, many members are the class officers who organized the first show and do not have the time, energy or resources to help with another.

The agreement of the Senate is needed before the executive board and entire Student Government can back a new proposal, ACN included. The Senate members needed to forward it the action of support.

"I think that support coming from them would have given it more weight," Zeerak said.

Regardless of the lack of backing from Student Government, Russell hopes the show will be a success.

"Especially after the Senate vote, I felt I didn't have as much support as I thought I had," he said.

"I have a cautious optimism," he added.

Despite all, the new ACN show will go on – for the students and by the students.

Gender imbalance in leadership

continued from page 1

them to join," she said.

Allison, like Hayden, is at a loss as to why her clubs have such trouble getting male students involved.

"I don't think guys aren't capable of doing this," she said. "There are some guys I know who are very involved on campus. I don't know if they see it as another thing they'd have to do, or if they just don't want to put the time into it. Maybe being a class officer is the kind of leadership they like."

It is in Student Government that the numbers equal out slightly. While the senior class officers are comprised solely of women, the Executive Board of Student Government, the Freshman Steering Committee and the sophomore class each have more men in leadership positions or boast an equal gender distribution.

Senior Michael Best is one of the male leaders who break the mold. He's the Student Government treasurer, chief of the Quick Response Service 8 (QRS8) organization and a member of the Society of Physics Students. He cites his future career and the desire to improve things on campus as the reasons for his involvement.

"I want to be a doctor, and QRS8 is a good experience. I did Student Government because in my involvement with different organizations, pretty much everyone complained about the allocations process. I thought I'd give it a try and see if I could come up with a better system," he said.

But the fact remains that outside of sports, women take the lead on campus in club offices and employment. It would seem that very few male students subscribe to Best's philosophy of leadership: "It's to be involved in your campus and community to give back what you get. People should work to make wherever they are better."

JIF presents Project Iraq Classrooom

Genna Welsh / Juniatian

Students from Juniata Instructors of the Future display supplies for their recently completed fundraiser, "Project Iraqi Classroom." JIF, with help from the Women's Rugby Team, prepared 10 classroom kits, each one filled with supplies ranging from pencils to rulers, folders to scissors. The kits will equip approximately half of a classroom. While they will predominantly be distributed to Iraqi schoolchildren, the project also donates such kits to students who were victims of Hurricane Katrina in New Orleans. Money from fundraisers and donations to JIF was used to purchase items in the kits, and the club compiled and mailed supplies.

Gender, academics and the future

EDITORIAL

In this issue's article "Gender and Leadership" (see page X), the Juniatian reports that, by and large, women on campus are taking on more leadership roles than men. But the gender gap is also found in another area: academics.

When it comes to academic success, the majority of men are dropping the ball. As a result, the balance of success by gender could dramatically shift: women could outnumber men in achievements in future academic, employment and leadership roles. While women should be proud of their advances, their accelerated progress is not moving us toward gender equality, and it's not helping to free us from gender stereotyping. In the end, it will just reverse the gender achievement imbalance of the past.

Instead of encouraging women to take this opportunity to surpass men, we should encourage men to meet the bar that women have raised. Perhaps then we can be closer to a gender-equal society.

A January 2006 issue of Newsweek thrust the nationwide academic regression of males into the limelight with an article headlined, "The Boy Crisis: At Every Level of Education They're Falling Behind."

Unfortunately, our college is no exception to the national trend.

The stats pile up in evidence: Women made up 63 percent of the fall 2005 Dean's list, while men accounted for only 37 percent. In the 2005 graduating class, 35 females graduated with honors, while only 20 men did the same. In the class of 2000, the same ratio was 21 women to 11 men. This year, Juniata's attendance at the National Conference of Undergraduate Research – a conference which allows students to present undergrad research to a national audience – was dominated by women: 16 females participated while only five males did.

These examples are from the college-age generation. However, the faculty of Juniata College, largely composed of an older generation, is situated quite differently.

The faculty male-to-female ratio at Juniata is 69 to 40. The faculty of five academic departments – Politics, Physics, Music, Geology and Religion – is composed of only males. Additionally, the Biology and Chemistry departments are predominantly male: two out of the eight chemistry faculty and two out of the eleven biology faculty are female (though a woman chairs the Biology Department). In short, Juniata's science departments appear to be dominated by men.

But in the humanities and social science disciplines, such as art, education and social work, much of Juniata's female faculty can be found.

It's a well-known fact that in our parents' generation, men generally controlled the maths and sciences and women took on jobs as teachers and administrative assistants. But while Juniata's science faculty is predominantly male, more Juniata female students are studying these academic disciplines than are men. For example, in 2000, 30 women graduated with a POE that held Biology in its title. The amount of men in this category total only 12. In the class of 2006, 33 women will graduate with a POE in Biology but only 18 men will earn the same degree.

These generational differences show the shift from men's academic success to women's.

So why aren't men of college age pulling their weight? Currently, men are thought to obtain jobs more easily than women because of gender bias. Are men not putting forth effort because of that perceived advantage? Are they stepping back because women have stepped up? Are they simply lazy?

Whatever the reasoning for this phenomenon, men must rise to overcome this gender disparity. Men need to realize that nationally, their gender is falling behind to women's academic and extracurricular successes. We can only predict what will happen if men continue to fall behind. Perhaps employers may note the change and hire accordingly. Women may seize positions that are now widely held by men.

Of course, not all men fit the recent academic trend. It is a generalization, and many college-age men have been very successful in research and academics.

Additionally, though men do not have a huge population ad-

continued page 7

Juniata Gender Specific Statistics

The Fall 2005 Dean's List was 63% women and 37% men.

30 women versus 12 men graduated with a Bio POE in 2000. However, the Science department instructs are mostly male.

Politics, Physics, Music, Geology, and Religion departments are composed on only male instructors and professors.

Disneyworld is not a place in Orlando

Mary Gardiner

Recently, I've been planning a trip to Egypt. In doing so, I may have found an illuminating fact: to Americans and other Westerners, Disneyworld is not a place in Orlando. It is an attitude of tourism that spans the entire globe.

It's precisely this Disneyworld mentality that causes Westerners to be so unhappy compared with the rest of the world. We're too busy touring, taking pictures and seeing exhibits, to *see* the world itself.

Kat, a Canadian friend, told me about the Nepalese she saw who had nothing but were the happiest kids she'd ever seen. I recalled that Dr. Nagengast once complained that the Ethiopians he'd seen on his research trip were even happier than his own kids were. These stories aren't rare; in fact, they are fairly common.

Instead of conversing with others and discovering new perspectives, we find ourselves boasting about where we've been. We have a Disneyworld mentality. I've seen it while preparing my Egypt plans, and I've seen it in the new American students here at my university. They've been here for a month, and already they've been to the Olympics in Turin, Rome, Munich and London. So many of these places have a built-in system for tourists with guides and tour packages, t-shirts, and souvenir avenues, that now the cultural and social capitals of Europe have become giant theme parks for rich American and European tourists. What's worse is that there isn't any cultural learning or interest integrated in it.

When I asked another student if she wanted to go to Egypt, instead of showing genuine interest, she just slapped down her card and said, "Let's F-in' go!" This is the same girl who skipped seeing the Vatican in Rome to get a tattoo.

Another new student tells us all the time about how he's excited to go home and nonchalantly say to his friends, "Yeah. I've been to Rome and Vienna. What?"

Let me note, at this point, that I myself am not exempt from this phenomenon. I'm just as guilty as anyone else. I'm the one going to Egypt. We are so stuck on the ostentatious life that we miss the reality behind it. We even cling to the glass screen that stands between us and reality because we are afraid of it.

Reality, however, is the most beautiful, sublime thing. The rest of the world sees it. Studying abroad helps me see it.

Feeling the realness of another person's life is a lot better than riding rides at an amusement park. I suggest it to anyone who is willing to try.

Aerial dance project: JC students swing into a new kind of education

Emily Eller

In the open darkness of the black box theater, students swish, sway, swing and slide while suspended from three trapezes temporarily fixed to the rafters. Bare feet scuffle on the dusty floor while suspended bodies float and their instructor softly tells them:

"I want you to explore the idea that you are a moving wholeness."

This is all part of a class called a "professional training intensive," which packs 50 total hours of aerial dance training and two theater credits into less than two weeks' time. Five students are participating, and it is part of the new theater POE and the Gravity Project. It is just one of the many gravity projects in the new maze-like Halbritter Center.

This is exactly the kind of project that will change Juniata into a more dynamic and diverse educational place. This is the kind of opportunity that once earned Juniata a slot in the book "Colleges that Change Lives." It is evidence that we are on the verge of a cutting-edge theater program that will give Juniata the academic diversity that it desperately needs.

Nathan Dryden is a visiting professor from Tuscon, Arizona and part of the Gravity Project. He is here for two weeks to teach the course.

"The Gravity Project is made up of visiting lecturers," explained Dryden. He hopes to become a more permanent fixture here at Juniata and make aerial dance and other opportunities like it available more regularly to more students.

"I'm a trapeze pusher," said Dryden. "I think that everyone should get on the trapeze. I think people should have them in their houses and swing on them everyday."

The students seemed to agree. When asked about the course, they responded with a cascade of poetic descriptions of the feeling of their bodies in space.

They also talked about the soothing and relaxing elements of the course which, although physically intense, primarily focuses on examining the ways that people use their bodies and that teaches students to have more freedom in their motion.

Theater students place a heavy emphasis on a technique known as the "Skinner Releasing Technique," which is designed to help people explore different ways of moving their bodies.

"Skinner Releasing is taught as a foundation for everything we do," said sophomore theater POE Mandi Yeager.

When I visited their class, they were practicing this technique, which they do for the first hour and a half of each ses-

Letter to the Editor

"Students under fire" was quite unfair

Honestly, I think that the Juniatian report ["Students under fire," Feb. 23] was quite unfair – All Class Night should be something to make us laugh and not taken offensively. Chad made a joke, and honestly it was funny not because of who it was said to, but because it was a funny joke when you take it as just that. This world, in my opinion, has become over-politically-corrected. People don't want to be discriminated against, which I completely understand. But does that mean that we also cannot poke jokes at them as we would to anyone else? Basically - everyone needs to lighten up and laugh every now and then.

Thank you, Chad, for caring enough to send out an e-mail to everyone. As one of my best friends always says, "s--- happens." He made a mistake - haven't we all?

Stephanie Tyler
Class of 2006

Editors' Note: *While we appreciated Chad Herzog's e-mail response to the article in question, the Juniatian staff stands by its reporting. The news analysis article was thoroughly researched, accurately written, and appropriate to publish. More important, the point should not be lost: all members of the campus community need to be held to the same standards of personal responsibility.*

Aerial dance project: JC students swing into a new kind of education

continued from page 6

sion. They were doing graceful and intensive partner exercises where one partner put his hands on the other's waist while the first partner leans, sits and walks around the room "suspended."

The partner let go and Dryden instructed them to move while feeling "invisible hands suspending your torso."

Students learn to relax muscles they are not using, which makes the work on the trapeze less physically exhausting. The freedom of movement is also meant to help them become better actors and performers by allowing them to use their bodies more freely as a form of expression.

"I think it's such a basic movement technique that anyone could benefit from it," said Dryden. "I think that athletes could really benefit from it. That's something I'd really like to get into."

The Gravity Project is just getting under way, but Dryden is convinced that it will grow as soon as students and others become more aware of it. It is a gem with the potential to radically change the way outsiders look at Juniata and the way that Juniata thinks about itself.

Hannah Rauterkus/ Juniatian

J.P. Melle gets a helpful push as he performs his upside-down monk pose on the trapeze.

Presidential Perspective

President Kepple wants to hear from you! His column will appear each issue this semester to answer any college-related question from the campus community. Simply e-mail questions to juniatian@juniata.edu. Editors will compile questions and forward them anonymously to Dr. Kepple.

"With the somewhat recent tuition hike to $35,000 per academic year, one of the reasons floated around was that parents see quality associated with the price tag, and nobody actually pays the sticker price. Since this is the case, would it be safe to assume that there will be an increase in scholarships to make up the difference in the tuition hike?"

In general terms, the answer to the question is yes. The overall level of scholarship and grant aid will increase by about $500,000 or more from the aid awarded in 2005-06. However, this has more to do with the dynamics associated with moving from one year to the next. I believe the real question is, "Will there be more aid offered to continuing students as a result of the cost increase?"

Juniata's long-standing policy has been to offer a certain level of scholarship and grant assistance during the student's first year and maintain the same overall value during the succeeding years of the student's attendance. While this provides reassurance that students will not see a declining level of assistance over their enrollment at Juniata (insulating families from a practice that is sometimes termed "bait and switch"), it also means that students don't see incremental increases to their Juniata grants and scholarships as costs increase.

Does this mean the student absorbs the full cost of the increase in the year in which it's experienced? Not necessarily, for the following reasons. First, many students find their Stafford Student Loan ratchets up as they move from one class year to the next. The new lending limit usually absorbs much of the cost increase. While we are always concerned about our students' levels of educational indebtedness, our most recent graduating class averaged a debt of a little over $21,000 for those who borrowed - very reasonable in comparison to many of our peer institutions.

Second, it is my understanding from conversations with representatives of the Office of Student Financial Planning, that they have encouraged families to consider the Monthly Payment Plan. Families that have used this program in a strategic way have often placed themselves in a position where the Plan, in concert with other programs, moderated the impact of cost increases.

Finally, we do understand that some families face changes in their financial or family circumstances from year to year. We have always encouraged families to seek the guidance of Office of Student Financial Planning representatives when they have encountered difficulties, especially when those challenges have been sudden and unexpected. While we can't always resolve every problem, the staff has provided options, strategies, and yes, additional aid when necessary, that has made the difference for many Juniata students in the past.

"Why isn't Muddy Run open for lunch on Sundays? I've been sitting at a computer in the Cyber Café for five minutes, and I've already seen five people walk over to the doors and complain about it being closed. Obviously there is some demand for it."

From Hal McLaughlin, Sodexho General Manager: Our average count in Baker for Sunday lunch is 300 (and that is with Jitters, Muddy Run, and Café a la Cart closed). It is difficult to absorb that kind of extra labor when the counts are so low. Saturday dinner followed by Sunday lunch, in that order, are our two lowest counts of the entire week. If the students preferred, I would not be against closing Baker and opening Muddy Run to try something different.

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Gender Editorial

continued from page 6

vantage over women in sports, they do lead women significantly in achieving All-American status.

This should remind men of their capability to respond successfully and vigorously to academic challenges.

It seems men only must devote themselves toward that end to get back to achieving their potential.

Men should prioritize scholastic success because it may provide the ultimate solution: leveling the gender imbalances and therefore freeing ourselves from gender stereotyping. Though this possibility may seem unreachable and idealistic, there is nothing to lose by each gender answering the challenges of curricular and extracurricular success.

Men and women must work to eliminate the rifts created by gender. In doing so, liberation can come to us all, who will finally be judged for our individual successes.

Works of beauty on exhibit in Carnegie Hall

Jonathan Moody

Students in the Fine Arts program spend countless hours creating impressive artwork in a number of different media. Every spring, they have the opportunity to display their masterpieces. The annual student art exhibit will be displayed in Carnegie Hall from March 17 to April 7. Selected works include paintings, ceramics, photography, sculpture and etchings. Approximately forty pieces were chosen from classes taught by professors Bruce Erikson, Sandy McBride and Jack Troy.

The room itself is painted in a sublime green, chosen to accent the colors in the various artworks. For those nostalgic upperclassmen, a ninja turtle piece is mounted directly to the left of the entrance. Senior Josh Owens created it in Erikson's 2-D design class.

"It uses nine squares to show gradual transitions in color and shape," said Erikson.

"I teach foundation level concepts in my classes, such as the building of visual literacy and unity. We cover a broad range of disciplines, not just one," he added.

Junior Laura Gearhart created a black and white oil painting in Erikson's painting class.

"I was able to choose my own subject matter, and I like painting people so I chose a group of my friends to paint," said Gearhart,

"I spent around 50 hours on the painting of Brenton [Mitchell] and Brandon [Long], and over 100 hours on the group picture," she said.

The more technologically savvy works, created in McBride's digital photography and computer art classes, hang in groups throughout the room.

"If I have a computer, then I am going to be able to do something different than if I just have a paintbrush and canvas," said McBride.

"Whatever the art course is, the nature of what's being taught is the same, but the tools may be different," he added.

Senior Adam Bergstein is one of McBride's students whose artwork was selected. "In computer art we were asked to create a collage and we were told to use Photoshop and Illustrator to do so. For my work I used some real life images in a collage," said Bergstein. "I am not much of an artist, but I just tried to create something that was symmetric and visually appealing."

Renowned potter Jack Troy had a few of his students' ceramics on display as well. Included is national ceramics award winner Shannon Yoder's piece.

The exhibit will be on display until April 7. The Carnegie Museum is open from 10-4 p.m. Monday through Friday and 12-4 p.m. on Saturday. Entrance to the exhibit is free.

Sarah Anne Wharton/ Juniatian

Junior Charlie Foster and senior Lauren Forster examine a melting house sculpture at the Juniata College Art Museum's new show. The student exhibition that opened March 17 will last until April 7.

C@ffeine, a perk for downtown?

Kevin "Par" Fasick

There's a new coffee shop in town, and its owners want you - to be a customer, of course. The Internet café, C@ffeine, is located in downtown Huntingdon at 516 Washington Street. It is co-owned and operated by Adam Clampet and his wife, Nichole Focht-Clampet, a Huntingdon native.

Adam Clampet is a 2003 Juniata graduate and a National Guardsman who completed his studies while serving in Kosovo.

Student response to this café has been somewhat varied, but the discussion revolves around three primary facets: location, coffee shop experience and entertainment.

While C@ffeine's location may be perfect for students who live downtown, the twenty to thirty minute walk from campus may discourage some students from going.

"That's a heck of a walk, I think. You'd sober up by the time you got there...If you head over there drunk…you'd be fit to drive back again," junior Steve Kendall said jokingly.

Senior Scott Stephan agrees that C@ffeine is "too far to be convenient, especially with Sheetz having [the] Espresso Bar now."

Yet Ben Bragdon, a senior and regular C@ffeine customer, does not mind its distance from campus. "I like the place," he said. "Parking is easy." He added, "It is a good place to meet and hang out with friends."

Hannah Rauterkus/ Juniatian

Adam Clampet, owner of C@ffeine, the newest addition to Huntingdon's businesses, chats with customers on a lazy afternoon.

Another facet of C@ffeine that students discuss is its ability, or lack thereof, to provide what they feel is a genuine coffee shop experience. Stephan said, "I like that little bit of mystique when you go to a coffee shop. They do their thing and you don't get to see what they're doing, but five minutes later you have your drink." Stephan feels this experience is missing at C@ffeine. He also felt the design of the building and accents, such as tables and the home-like look of the kitchen, detracted from the look of a "coffeehouse."

However, the Clampets are confident about the coffee shop

Fight Apathy Tour at JC

Ryan Conrad

A unique tour featuring music and poetry aimed at AIDS awareness will be stopping at Juniata. Thanks to event organizers Chelsie Hoover and Paul Fleischer, both seniors, the Fight Apathy Tour will take place on March 24 in Baker at 8 p.m. The event is free, but students will be able to donate money that will go towards advocating AIDS awareness.

Staci Weber, director of student activities, commented on the importance of the tour, saying, "The way the tour is set up, it is like a Friday Night Live event and a coffeehouse to help raise AIDS awareness."

The tour targets small schools, and Hoover thought it would be a perfect fit for Juniata.

"No one really talks about AIDS here. I thought it would be a good ice breaker," said Hoover.

Five performers will lead an evening of acoustic guitar playing and poetry reading. The event will conclude with a workshop focusing on AIDS awareness. Workshop topics to be covered include treatment, prevention and living with HIV and AIDS.

Fight Apathy's Web site says, "the engaging and highly interactive session empowers students with the knowledge and resources to activate and lead change on an individual, community and global level."

Fleischer said, "I think the Fight Apathy Tour will be a very interesting way to confront some people's ignorance dealing with the topic."

According to Hoover, clubs such as AWOL, Circle K and HOSA all donated funds, just to name a few. Student Government also helped fund the tour, along with the Office of Student Activities. OSA agreed to match the funds raised to hit the $4,000 mark.

Sodexho will donate soda and wings for the event. "The wings and soda that Hal [McLaughlin] is donating will be free for guests during the workshop part of the performance, however, we'll have collection cans for donations," Hoover said.

"I have worked with Chelsie in the past and I told her I would love to help again," said McLaughlin.

This isn't the first time Hoover and Fleischer have organized a charitable event. Last year, they hosted a battle of the bands to raise money for a charity. This year, Weber helped Hoover bring the tour to Juniata.

A portion of the fee for the tour will be donated to a variety of organizations to help promote AIDS awareness. Hoover realized the importance of raising the money and hosting the tour.

She also found that people generally gave good responses after she put out the word.

Fleischer said, "I just think the AIDS epidemic is a problem that a lot of people underestimate and know very little about."

The Apathy Tour's goal is to change that by promoting education about the disease and its truths.

Independent study brings music to JC students' ears

Barbera takes initiative to produce own record and benefit concert for community to enjoy

Jessica Perry

Brittany Barbera, Lisa Detwiler, Brandon Long and Brenton Mitchell often perform at coffeehouses on campus. But for the first time, the four will perform together at their very own benefit concert in the Halbritter Center.

Fashioned after the artist series, the 90-minute show will debut at 8 p.m. on Sunday March 26. It will feature original music created by members of the group as well as their favorites from the rock, oldies, pop and country genres.

Unlike their coffeehouse performances, the concert is the result of Barbera's independent study in Arts Management & Performance. Barbera, a communication POE, is producing her own record and benefit concert as well as completing research, promoting the event and selling the recordings.

As an aspiring singer who has always wanted to perform in a larger venue, Barbera said the idea came when she realized the resources that are available at Juniata.

"[The independent study] allows me to take advantage of programs we have here and available equipment in order to do something I really want to do," Barbera said.

She explained that the funding for some of the project will be coming from the Artist's Series budget, courtesy of her independent study advisor Chad Herzog, Juniata's Director of Performing Arts.

The recording aspect is possible because of the space available in the Halbritter Center for Performing Arts and the equipment provided by the Music Department. Advertising will be carried out thanks to efforts from senior Holly Brown and Print Publications.

Sarah Anne Wharton/ Juniatian

Senior Brittany Barbera sings with full force on stage in Halbritter. The vocal practice session is for the independent study benefit music concert that she and juniors Lisa Detweiler, Brandon Long and Brenton Mitchell will stage on March 26.

Even with all the material resources available, Barbera said that one of the most important aspects of the independent study is that she has support from people who know about the music industry.

Herzog, also coordinator of the Artist Series, volunteered to be Barbera's independent study advisor and meets weekly with the senior to walk her through the process of marketing, promoting and researching.

Herzog emphasized the value of Barbera's experience. "She's doing what any small artist would be doing right now" because "[the independent study] isn't just about having a concert; it's about learning how you go about having one and doing all the behind-the-scenes work."

Both Herzog and Barbera agree that Barbera's personality and the "beauty of the POE" are what have enabled this independent study to occur.

Even though Barbera encountered roadblocks along the way, she attributes her success to her persistence, improvisation and motivation. She explained "a lot of things don't go exactly as I plan it out, but that doesn't mean that I can't do it. Instead I take any opportunity that comes. If I don't have one, I make one."

Herzog pointed out that Barbera's independent study was possible because it incorporated the communication, studio art, and performing art aspects of her POE. He continued by saying her work "is a reminder to students of the value of a Juniata education that [they] can come and not get stuck in a track."

Admission to the show will be $3, but the group encourages people to bring along some extra cash for the recordings they will be selling at the concert.

All proceeds from ticket and compact disc sales will benefit Huntingdon PRIDE, a local organization that assists residents of Huntingdon County that have special needs.

Joel Pheasant, Director of Academic & Business Systems Technologies and member of the Huntingdon PRIDE board of directors, said that while the people in the community are willing to give a lot to support to the organization, "I would like to get that kind of involvement from campus and have the College support [PRIDE]."

Barbera explained that the group chose Huntingdon PRIDE as the beneficiary because "while we all love music and want to encourage young artists, we thought donating to a humanitarian orga-

Movie Review: "The Libertine" starring Johnny Depp

"Shakespeare in Love's" evil, disfigured twin appears just in time for a fresh spring movie season

Holly Brown

The weather in Huntingdon may still warrant coats and scarves, but there can be no doubt about it – spring is in the air. For those of us engaged in the movie world, spring was heralded by the Oscars.

But in Huntingdon, spring means more sun, warmer weather and crocuses hiding between tree roots. For the movie lovers, the new season brings a whole slew of movies too boring or awful to warrant a holiday or summer release.

Fortunately, a few titles seem to hold at least a bit of promise, such as "V for Vendetta," "Find Me Guilty" and "Thank You for Smoking" – the last of which I am greatly anticipating.

This week, surrounded by blockbusters such as "Ultraviolet" and "Failure to Launch," I let my literary side do the talking and viewed "The Libertine."

Okay, Johnny Depp might have had something to do with it as well.

This gritty period piece was directed by newcomer Laurence Dunmore with a masterful screenplay written by Stephen Jeffreys, also the author of the play on which the movie is based.

Depp, who is undoubtedly one of the great actors of our time (don't be fooled by those lovely cheekbones), stars as John Wilmot, the Earl of Rochester, a poet in the 17th century who was more devoted to wine, women and debauchery than his art. "The Libertine" follows Wilmot through the later years of his life, once his hedonistic tendencies have started to take their toll.

The cast is small but entirely fantastic. The fabulous Samantha Morton ("In America") is intense and scathing as Elizabeth Barry, an actress Wilmot takes under his wing and eventually falls in love with. Rosamund Pike ("Pride and Prejudice") is equally as moving as Wilmot's wife, Elizabeth Malet, who both hates and loves her husband at the same time. These two women are the only people able to uncover any humanity or vulnerability in the rebellious Earl.

Rounding out the cast is John Malkovich as King Charles II. Malkovich played Wilmot on the stage, but in this film adaptation he takes charge of the character of the King, making him powerful, vulnerable and understanding all at once.

I was absolutely enthralled by this film. Owing to its origins on the stage, the language is sharp and multifaceted. The camera work is new and creative, and the entire film is bathed in wonderful, filthy charcoal tones. And the characters – ah!

Wilmot is egotistical, cowardly and self-destructing, but when what little humanity he has emerges, his downward spiral becomes even more painful. He tells Barry that he cannot feel any more in his life. It is only on the stage that his emotions and better nature can be inspired. Throughout the film there is an amazing interplay between reality and the theater, just as any story featuring Shakespearean plays should.

Depp is amazing as always, but I was especially impressed by Morton and Pike. Elizabeth Barry's only goal is to foster the genius actress she has within her, and she refuses to allow the loving demonstrations of Wilmot to stop her.

The character of Elizabeth Malet could have easily been a flat, useless one, but Pike transforms Malet into a woman of strength and sadness, desperately trying to rescue her husband from his self-destructive ways.

"The Libertine" is the evil, disfigured twin to "Shakespeare in Love." The latter created a charming world of wit and genius amidst the dirty streets of London, filled with prostitutes, thieves and money collectors. "The Libertine" takes this world and douses it with soot and cynicism.

A warning: this movie is not for the squeamish. The sex scenes are not terribly explicit, but the language is absolutely atrocious. I must say, those 17th century Brits were certainly quite creative in their slang.

I fear that as an offensive and cynical period piece, "The Libertine" is doomed at the box office. But, I would urge you all to go and experience it anyway. Films such as these do not come around often.

A Celebration of Curves

Holly Brown/ Juniatian

Juniata students strutted their stuff on the catwalk for a fashion show sponsored by Health and Wellness. The show, titled "A Celebration of Curves," was held during the National Eating Disorders Week. Showcased was Fashion Bug's spring line, and donations for the Humane Society and Déjà Vu were collected.

The Naked Truth: Carnal Complications

Rebecca

We can all probably think of at least one thing that sexually stimulates us (whether you all want to admit to it or not) - the scantily clad, hairy or bare (and I meant chest hair, perverts--okay, not really). And of course everyone has their own little fantasies that they'd like to live out. With that said, I've noticed that people are much less willing to talk about situations that would get three "thumbs" up than about what goes wrong in the bedroom.

Everyone is a different when it comes to sexual preferences, but there are a few turnoffs that we all would do well to avoid (especially when some leave physical or emotional marks).

We have two categories of "no-no's," beginning with regular ol' intercourse. Accessories get lost, adjectives are wrongly used, and the top bunk can be dangerous: please see Sexual Snafus.

Sexual Snafus

Unwanted Nicknames. Some people are fond of nicknames, but some would rather not have "little buddy" and "the bearded clam" be part of the sexual communication. Choose your terms of affection wisely.

Pushing positions. Something like the "kneeling pretzel" position may sound tantalizing, but if neither partner is somewhat athletic, you could end up down at the Wellness Center explaining to Nurse Connie the third degree brush burns and the fixation of your left leg behind your butt.

The dead fish trick. Sex is not step by step process. It should flow, and both partners should be active - communicate! This is not a game of Simon Says. And if Simon was here, he'd tell you to put your you know what you know where.

Pretending that trying to swing in the back door was an accident. It wasn't an accident. There are several doors for a reason. We all know perfectly well which does what. If you want in the back door, get a master key.

Losing a condom. Please do not peer into body cavities coaxing, "Come out, come out wherever you are!" Okay, this isn't comical. Now you run chances of STDs and pregnancy.

Talking to unexpected guests. When you mess up and forget to lock the door, don't try to persuade your parents, friends or roommates that you're practicing gynecology.

Falling off the bed. If you tumble from the top bunk during sex….don't get back up. Seriously, the guy won't be able to anyway.

Broadcasting. We love to publish our lives online. Think Webshots, Facebook and MySpace. But don't do it. You know, if the cops can see it, (not to mention professors), Mom and Dad probably can as well - they aren't always as stupid as we think they are. They can double click to zoom in - just to double check and verify your identification by a specific birthmark.

Okay, so Juniata students aren't *only* having vaginal intercourse. There's other stuff to do…hurray for variety! I separate these issues into their own category because they specifically deal with the mouth working overtime. We use our mouths all day long (to discuss important worldly events and give speeches - of course). Still, inexperience, insensitivity as well as, oh I don't know…inebriation, can cause some jaw dropping and jaw clamping incidents that I think we'd best avoid.

Oral Offenses

For pleasuring the ladies:

• *Blowing air.* Don't treat her like a blow up doll. There are a few (I stress few) known cases where women have actually died because of air embolism. Now, there's a story to tell in Heaven.

• *Fencing.* Vicious jabbing

continued page 11

Stupid sex laws are everywhere!

An ordinance in Newcastle, Wyoming, specifically bans couples from having sex while standing inside a store's walk-in meat freezer.

Sodomy laws have been repealed - or are ignored - in most states, but not Georgia, where a man was sentenced to five years in prison for engaging in oral sex. With his wife. With her consent. In their home.

In Minnesota it is illegal for a man to have intercourse with a live fish.

A Florida sex law: If you're a single, divorced or widowed woman, you can't parachute on Sunday afternoons.

In Tremonton, Utah, a heterosexual couple can't have sex while riding in an ambulance. If caught, the woman can be charged with a sexual misdemeanor and "her name is to be published in the local newspaper." However, the man get no repurcussions!

In one California town it is illegal for a woman to have sex with a cow, but she and a parter can have a threesome with a cow.

It is illegal for any member of the Nevada legislature to conduct official business wearing a penis costume while the legislature is in session.

Question: Who gets to enforce these laws?

Laws found on : http://www.turoks.net/Cabana/StupidSexLaws.htm
http://www.dribbleglass.com/subpages/strange/sexlaws.htm

C@ffeine

continued from page 8

experience they have to offer. While Adam Clampet acknowledged that some Sheetz drinks may be slightly less expensive than those at C@ffeine, he feels that C@ffiene does provides the true coffeehouse experience. "We have comfortable seating, a friendly atmosphere, and you don't have to listen to that annoying beep while waiting for your drink," said Clampet.

The Clampets also point out that C@ffeine offers something not to be found at their local competition: live entertainment. They plan on regularly featuring Juniata student bands to entertain their customers. Two student bands - The Chris Murray Band and Two Hours - played at C@ffeine for the first time in mid-February. Approximately thirty people, mostly Juniata students, attended. Kendall, rhythm guitarist and vocalist for Two Hours, enjoyed the entertainment and the atmosphere. He said that "It was a blast… it looked like a happening place to be," referring to the size of the crowd.

While students had some mixed feelings regarding C@ffeine's coffeehouse feel, the response to entertainment was a resounding sense of enjoyment. "Everyone loved it," said Clampet of the two bands playing. He went on to stress, "One of the biggest purposes of having the bands from the College is [that] we want to integrate community with college."

Not only will C@ffeine soon provide more interior seating, but it will also boast a new rear patio for live performances. In addition to coffee and occasional live entertainment, C@ffeine also offers free wireless Internet access, two laptops to rent for roughly six dollars per hour and tech support.

Nichole Focht-Clampet encourages customers who are surfing the web to "drink as much coffee, soda, tea and hot chocolate as possible."

Adam Clampet picked up on his wife's joking comment and ran with it. "What we say is that we have technology and caffeine. Either way, we will get you wired."

continued from page 9

nization would be the way to go since they are trying to meet people's basic and immediate needs."

According to its Web site, Huntingdon PRIDE is a local organization that provides "programs which enable people who are developmentally and/or physically disabled to function at their optimal level of performance" primarily through fundraising. The biggest fundraising event, the Huntingdon PRIDE telethon, will be held March 22-25. Broadcasted on channels 12 and 17, the telethon consists of a silent auction on the first three days and a talent night on the last.

One hundred percent of the contributions made to the organization stays in the county to help local residents with special needs. PRIDE provides services such as speech therapy, medical equipment loans, educational presentations, home modification consultation and more.

In addition to the telethon, upcoming fundraisers include PRIDE cookbook sales, PRIDE wristband sales, clutch-a-buck ticket sales and PRIDE Olympix.

Pheasant encourages students to participate because supporting PRIDE is "an opportunity to help people locally."

More details about the organization and how to help can be found at www.huntingdonpride.org.

Naked Truth: Carnal Complications

continued from page 10

with the tongue. It can be painful. This is not a sword fight. The girl let you go there, so basically you won. Play fairly.
• *Slobbering*...EVERYWHERE. Last time I checked, there was no waterbed option in Juniata College dorms. Don't try to create one.
For pleasuring the men:
• *TEETH*. One guy I know was asked, "Does it feel good when I rub my teeth over it?" Well, I'm going to assume he answered no, in between screaming.
• *Too fast/too slow*. It's sort of like ice cream. If it's too slow... all is going to melt. If it's too fast, you'll both feel a little numb (with the possibility of a headache).
• *Vacuuming*. I think you know what I mean. Seriously, think about the things you've lost - sucked up in a vacuum. Have you ever seen that thing again?
• *Watch the boys*. The twins have feelings, too. They are the most sensitive men you'll ever meet, so don't be too rough.

I'm a huge advocate for second chances. Let's say the dead fish will get the hook out of its mouth and speak. Maybe you'll eventually earn your right to enter the back door with caution. And, chances are, the men will forgive you for accidental abuse. There's only one way to right the wrongs. "The only remedy for sex is sex." Don't forget to read up the side effects and complications. You can never be too careful. And when you figure out the right remedy... I prescribe an overdose.

Fashion: *Look Your Best in Your Personal Color Best*

Lucia

This is a true story. Recently, while hauling my spring break booty to the top of my apartment stairs, I squealed (yes - a five year old squeal). Why? What I saw was none other than a robin red breast.

Ladies, do you know what that means? Spring is right around the corner! And you think spring fashion, right? Well, eventually. In this week's column I want to talk about something that has been brought to my attention: skin tone. A little robin told me that she never knows what colors to wear to go with her skin.

First off, I'm not talking about how bad your acne is, or the fact that you might have a tiny mustache. Guys - that is ok; you are allowed. Women - do I even have to say anything? I'm talking about the tone color of your skin; I just wanted to get that straight. So, what colors are good for your skin type and what colors should you avoid?

Let's begin. You have rather pale skin, and we are now coming into spring. So, the winter wardrobe is over. Thus, let's pull out some fabulous spring colors that will look great even with your snow white complexion.

Spring is known for warm tones, but people with pale skin usually luck out in the winter colors. Colors such as the sharp black, rich navy, and bright pastels. So we need to make the favorite pale threads work in the spring.

My best advice is finding pastel colors in a light spring material and rocking it. Pastels can be fabulous year round.

Also, avoid colors that are faded and beiges. They will do nothing for you but drown you out.

Just to add this in for those ladies of pale skin, there is always a tanning bed. The selections in this town vary from Desert Garden Day Spa and Ilene's Tone & Tan to Sun & Soul. Just be careful, it is addicting--I personally know.

Before we get to the dark skinned beauties, I'm going to drop a few notes about the women who fall in the middle. Now, ladies with medium tones, you are lucky, because you rarely get burnt in the summer and you do not fade to a ghost in the winter. So here are the tips for you.

You can get away with the peachy colors of spring. Another fabulous idea would be golden colors of brown and gold. These colors are great for this spring fashion season since a lot of designers have been leaning toward the rich gold and bronze colors. Just make sure you avoid dull colors. These colors are usually dark. They will do absolutely nothing for you except flush you out.

Now, for those who are graced with skin of a darker tone, pick up your pen and paper now. Ladies, you should wear colors of a warmer tone. A warm orange, spicy browns and gold are perfect for you this spring. Try to avoid blues; they tend to give your skin tone a more pale appearance. And you do not want to flush out your rich, bronze skin tone.

So, I hope this information has helped. Personally, I know every women is beautiful in her own skin but a little color coordination never hurt. Now go out and take spring by storm!

Juniata baseball undefeated in conference

J.R. Byer

Over the past four seasons, the Juniata baseball team has steadily increased its number of wins. This year looks to be no different.

The Eagles return 21 players from a team that went 25-17 a year ago. Of the 21 returnees, 19 started at least one game in the field or on the hill. The ten seniors bring with them a wealth of experience, including a 2004 Commonwealth Conference championship.

Last year's loss in the conference playoffs has served as motivation for this experienced squad.

"I think it has motivated the team a lot in the off-season," head coach George Zanic said. "Knowing what it feels like to win the conference tournament, it really has given us some extra incentive to win this year."

Senior Walt Goedkoop agreed with Zanic's sentiments.

"We really felt like we should have won another conference championship, and not doing that left a bad taste in our mouths," Goedkoop said. "I think everyone's number one goal this year is to win it, and win it convincingly."

The Eagles started their conference schedule off strong. They are 6-0 in the Commonwealth Conference, after recently sweeping the season series with Susquehanna.

In the Blue and Gold's home opener they defeated the Crusaders, 11-3.

Juniata was led offensively by sophomore Dan Kauffman, who belted two homeruns and drove in four runs. Senior Dave Saintz had a two-run homerun in support of sophomore Jason Enoch who picked up the complete game victory. Enoch struck out nine to improve his record to 3-0.

Senior Cody Zong and sophomore Andrew Snyder picked up pitching victories for Juniata in its final two games with Susquehanna. The Eagles swept the double header by scores of 4-0 and 8-2.

The three-game sweep moved the Eagles overall record to 11-4.

"You always have things you can work on, and we do," senior Jesse Leonard said. "We just need to stay focused and keep doing what we have been and take everything in stride. We play in a very competitive conference and each series is going to be a challenge from here on out."

The Eagles opened their season by dropping their first three contests in a tournament in Atlanta. The Eagles then went 8-

Track eager to defeat competiton

Corinne Barabas

April showers and May flowers are right around the corner, but the outdoor track season is not backing down to the blustery winds and snow flurries.

The season is here and looks to be a successful one. Bundled up and still training hard, the athletes are prepping for big performances in three months at outdoor championships.

Katey Glunt, a senior distance runner, is excited for the upcoming 2006 outdoor track season.

"Everyone is looking forward to the outdoor season," she said "We have a good momentum from a lot of solid indoor performances."

Over thirty athletes competed at the Indoor MAC Championship this year, running, throwing and jumping their ways to many top finishes and demonstrating marked improvement from the beginning of the season.

Susquehanna University, where MACs were held, along with the remaining opposing teams faced tough competition from the Eagles.

The men earned a fifth place finish as a team, with the help of the distance medley relay team. The team was composed of senior Chris, sophomores Shawn Rumery and Eric Hoover and freshman Tripp Rudolph, claimed a gold with a time of 10:44.

Randy Anderson was runner up in a tight 55-meter dash, just hundredths of a second behind the winner.

The women also claimed a fifth-place finish overall, led by senior distance runner Nancy Hayes, who won the 5,000-meter race in 18:46.

Also claiming a win was freshman Kelsey Buffenmyer, who took gold in the high jump, with a 5'2" clearance of the bar. She was chosen for the MAC Rookie of the Year award, recognizing her top performances and achievements during the indoor season.

There were many top finishes from both the men and the women.

"Everyone did well at MACs and we are all optimistic and pumped for the outdoor season," senior distance runner Justin Fritzius said.

Despite a handful of last year's athletes choosing not to participate this season, many returning athletes, as well as the new ones have proven their talent, competitive attitude and dedication throughout the indoor season.

Head coach Jon Cutright commented that there "are many newcomers for most events who should be strong additions to the team."

One such newcomer will be freshman jumper, runner, hurdler and thrower Michael Hucke, who will be taking on the decathlon. The decathlon is comprised of several challenging events, including the 100- and 400-meter dashes, the long and high jumps, the shot put, the 110-meter high hurdles, pole vault, javelin, discus and the 1500-meter run.

The event is a grueling one, and by day two of the event, Hucke expects to be exhausted. Right now, Hucke feels that his strongest event is probably the high jump. But as the season progresses and he gets more training in all the events, he has a decent chance at a top finish at the outdoor championship.

Sophomore Ryan Conrad said, "as long as everyone stays healthy and dedicated, there will be much success coming from the Juniata track team."

The Eagles will compete in their first outdoor meet at the Susquehanna Invitational on March 25.

"We have a good momentum from a lot of solid indoor performances."

- Katie Glunt, senior

Veteran pitching to carry Juniata softball

Eagles split doubleheader at Susquehanna

Robb Patty

From 2002-2004, the Juniata College women's softball team posted back-to-back winning seasons, posting 19 and 20 wins, respectively. In 2005 the Eagles managed just 15 victories, a drop off from the previous two seasons.

This season the Eagles will count on senior leadership and pitching to carry them back to the top of the Commonwealth Conference. Three of those pitchers are Renae Hobbs, Lizzie Bartosik and Jessica Darrow. Head coach John Houck believes that these pitchers, along with sophomore Kim Stoia, will be a big determinant for the team's early success. The foursome combined to win 14 out of the team's 15 games in 2005. Last season, Stoia led the team in earned run average, posting a 1.41 ERA, as well as limiting opponents to a mere .215 batting average.

The team started conference play last Saturday, splitting a double-header on the road against Susquehanna.

The Eagles had their best offensive game of the season in game one as they held on to beat the Crusaders, 9-8.

In game two, the Eagles were unable to mount any type of offense, dropping the game by a score of 10-2.

Both games saw temperatures in the 30s and gusty winds that made it difficult on the outfielders.

"It was freezing. It was already really cold, but with the wind it was difficult to play in," freshman Heather Lockwood said. "The wind really carried the ball in all directions, so for the outfielders it was difficult to track down fly balls."

In the first game, both offenses took off in the fifth inning as Juniata would score five runs in its half of the frame. The big hit came when freshman Liz Schmitt hit a three-run homer, the first of her career. Senior Abby Sener and freshman Kaylee Kachik also added RBIs in the inning. Susquehanna would answer in its half as the Crusaders exploded for six runs on seven hits to tie the game at seven.

The Eagles would get the deciding runs in the sixth. Freshman Tara Carl hit an RBI triple and then scored on senior Leann Leymeister's sacrifice fly. The Crusaders would get one back, but Bartosik came on in the seventh to close the door and se-

JC Sports: Facilities imbalance

Some say scales tipped in favor of gender and prestige

COMMENTARY

Heather Lockwood

Should the achievements of a team, the gender of a team or the size of a team matter in regards to who has priority over gym facilities?

Juniata is known for its excellence in men's and women's volleyball. Both teams have held national titles, but just because teams do well and are more recognizable should not mean they be given preferential treatment in their use of fitness facilities over other campus athletic teams.

"Other sports teams, especially female teams, get pushed aside because the only teams that are valued here are men's and women's volleyball," softball player Danielle Buzin said. "But the men are favored a little more because they are guys."

Winning is not the sole criteria for preferential treatment. Visibility is also a factor. Sports that are more identifiable are receiving more attention than others, especially when it comes to space in the weight room.

The football team is a main example. While teams usually must rotate in and out for facilities and gym space for their particular seasons, the football team always enjoys preferential treatment. With a perfect record of zero wins and ten losses, the football team's treatment cannot be attributed to on-field dominance. Yet it still took to the weight room with domination when its fall season ended.

As the largest team on campus, it is no wonder that the football team needs more room to stay in shape. However, some athletes have noticed that as they are trying to prepare for their upcoming seasons, the football team takes over others' workout times and spaces in its off-season.

Juniata's softball team went to the gym everyday at the same time during its off-season. The women had scheduled workouts since the beginning of the year. But when the football team began its off-season workouts, the softball team was given the boot on several occasions, despite that it was entering its season while football was no where near its own.

To accommodate the football team, softball found other means of working out. The women even conditioned with the men's soccer team.

"They took over the entire weight room, making us have to change our entire routine. If [a team] isn't in season, you don't get priority. [Football gets] it whether they are in season or not," Buzin said.

In-season versus out-of-season is a no-brainer. Those teams that are in-season or are entering their seasons should have priority, no matter what. Previous accomplishments or size of a team should not matter in deciding who needs gym facilities more.

Softball is not the only team feeling cheated. The women's soccer team and field hockey team also experienced repercussions of the weight room inequalities.

"It's hard to find spots to work out. We have a designated workout and with the football team in there it's hard to find space," sophomore soccer player Stephanie Mury said.

Many athletic teams have set schedules and workouts with Juniata's strength coaches. However, teams like field hockey, who do not have designated times with the strength coaches, condition on their own time, but find it difficult to do so.

Lifting weights as a team on Tuesdays and Thursdays, the field hockey team has found its space restricted.

Sophomore field hockey player Lindsay LaPrad said, "[The fitness center] is generally crowded. But because we go in small groups, we get our workouts done. If we want to go into the mat room, it's really difficult because the football team is usually in there."

Men's volleyball head coach Ken Shibuya has an active role in scheduling the gym facilities.

"The football team is dealing with so many athletes that have different schedules and they try to manage them as much as possible," he said.

Director of Athletics Larry Bock said that the current scheduling conflicts are "pretty normal" for this time of year.

Though space in the weight room is not proportional to the number of Juniatians that use the facilities, everyone must try to work around each other. But there's only so much we can do. Space is undeniably limited in the weight room and gym facilities.

Fairness is sometimes difficult to obtain in anything. But if Juniata had more fitness spaces and equipment, there would not be constant battles over scheduling and rights for use. Athletes do not just want to use the gym and weight room facilities, it is required by their specific sports programs.

Regardless if athletes are in or out of season, if they are a large team or if they're a well-known team, equality among all Juniata's athletes must be given. Juniata is an equal-opportunity campus, yet all campus teams are not treated the same.

It has been said that without the weight room, there would not be the best. If our best has been controlling the weight room, then perhaps Juniata really *is* just an "academic" school.

Fresh start for men's tennis

Hannah Rauterkus / Juniatian

The Juniata men's tennis team has started its season on a tear, posting an undefeated record through five matches. The Eagles have taken advantage of familiar surroundings, winning each of those contests on their home courts. Competing against primarily non-conference opponents the Eagles have hardly been tested early, winning a blistering 32 of their first 37 matches.

Youth has been served on JC's 2006 squad. Freshman Jonathan Skoner captured Commonwealth Conference Men's Tennis Player of the Week for his outstanding play in which he went a perfect 6-0 (in singles and doubles matches with partner Jack Walfish) en route to helping Juniata to three wins in the season's opening week alone. At press time four Eagles boasted perfect records in singles matches.

The team travels to Penn State Altoona this afternoon and returns to College Hill on March 27 to face conference opponent, Albright at 3 p.m.

Juniata College hosts young aspiring female athletes

"Women in Sports Day" introduces young girls to new sports

Kim Wagner

Women in Sports Day is a national event held on college campuses across the country.

Juniata's campus held the event on Friday March 17, giving girls in grades one though six in the Huntingdon area a chance to attend to program.

"Now with Title IX, there are more opportunities in competitive sports for girls when they are older. So Women in Sports Day gave them the opportunity...to see what is available to them in the future," said Lisa Russo, a member of the women's soccer team.

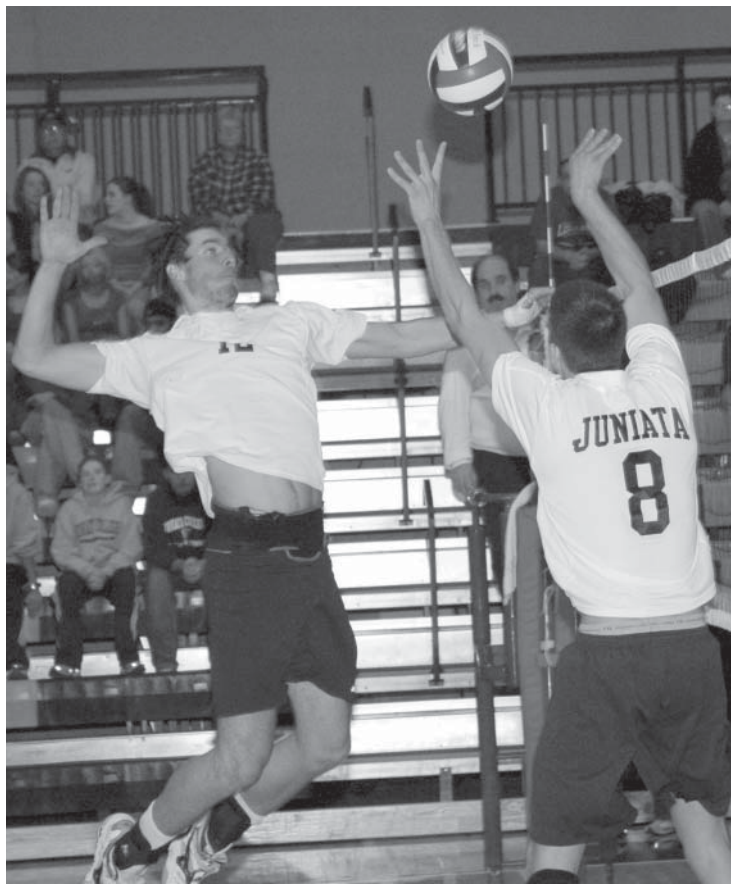
This year the event was directed by two student athletes, junior Sarah Bender and freshman Erin Smith, both members of the varsity field hockey team.

The directors of the program decided to change the layout of the event this year. In the past, the event included all sports that are available to women at Juniata College, but the directors felt this might have been too much for the girls to handle. This year, the day offered just four sports: basketball, field hockey, soccer and volleyball.

This year, about 25 girls registered for the event. "Most girls come alone or with a friend. This gives them a chance to meet other girls with the same interests," Caroline Gillich, the head of the event and head field hockey coach, said.

In the past, the attending girls were allowed to choose which sports they wanted to try, but the directors realized that the girls were always choosing the sports to which they were most exposed. The participants this year tried all four sports so they could enjoy a diverse experience.

"I really liked it. It was fun. I got to try sports like volleyball. I usually don't get to play sports like that," 11-year-old Nicole Houck said.



Participants were split up into groups according to their age. They were given thirty minutes at each sport to see an introduction to the game and then some time to have fun with small competitions.

When asked about the college students' role, Gillich said, "[The student athletes] should have fun with the kids. If the younger kids have fun, they are more likely to do it again."

> **"It was fun. I got to try sports like volleyball. I usually don't get to play sports like that."**
> ***- Nicole Houck, 11***

The girls are informed about the event thorugh the elementary and middle schools in the area about one or two weeks before the event. The day would not have been possible without the help of the current student-teachers who help in delivering the flyers to their schools.

The event this year was not as well attended as in the past. According to Bender, this could possibly be due to the timing of the flyers and the event lying so close to spring break.

Hannah Rauterkus / Juniatian

Freshman Matt Werle (8) sets up senior Cordt Withum for the kill.

A new lineup, a new outlook

Katie Laucks

The men's volleyball team has been busy the last several weeks, taking on some of the toughest competition it will see all year.

The men traveled to the Ohio State University on March 3,.

The Eagles had the home team scared as they took the first two games. However, the Buckeyes wouldn't be defeated on their home court as they went on to win the match, 3-2.

Nate Ocasio turned in a strong performance as he finished with a season-high 18 kills. Glen DeHaven and Matt Fritz chipped in 14 and 12 kills, respectively.

Stephen Yeager led the defensive effort with 15 digs and Cordt Withum and Dan Powers each had two blocks apiece.

The team has been experimenting with a new lineup and is coming off a streak of matches with top Division I opponents. But instead of sinking into a rut from tough losses and an inconsistent lineup, players feel they are building for a strong finish.

"We are finally working with our new lineup that works," Ocasio said. "We are looking forward to having a strong second half of the season and winning the rest out."

The team traveled to Princeton, New Jersey where it took on the Princeton Tigers. Despite valiant efforts, they could not pull out the nail-biter.

> **"We are looking foward to having a strong second half of the season and winning the rest out."**
> ***- Nate Ocasio, senior***

The match went the full five games with a controversial call at the end of the final set going in Princeton's favor. The call ended the game and handed Juniata a tough loss.

Leading the pack was again Ocasio who produced a double-double and led all attackers with 22 kills and produced a game-high 12 digs. Juniata had four other players in double figures as Jeremy Barndt and Matt Fritz each posted 12 kills and Cordt Withum and Glenn DeHaven added 11 apiece.

After the loss the men traveled to NYU on Sunday to take on its TAIT rival.

The Eagles were able to put the tough Princeton loss behind them, shutting out NYU, 3-0.

Ocasio once again led all players with 15 kills and hit .455.

"We played well the whole way through today," libero Yeager said. "We are now getting back into competition mode, and we still have a chance to make playoffs and that is something we all want to do."

The Eagles return to the court with the playoffs in their sight on Friday as they travel to Springfield. The Eagles return to action at home on March 29, at 7 p.m.

Juniata baseball swings into spring season:

Goedkoop, Enoch, Beaver earn conference honors

continued from page 12

1 on their annual spring break trip to Phoenix, boosting their overall record to 8-4.

The Blue and Gold opened their conference schedule by sweeping rival Moravian in a three-game series in Phoenix.

In game one, the Eagles lit the scoreboard up for 12 runs and received an outstanding pitching performance from Zong. Zong, who picked up the win, struck out seven while only allowing one run in six innings.

Senior Zach Sternberg led the way offensively with two homeruns and four RBIs. Goedkoop also homered and was one of three Eagles with two RBIs. Senior Troy Beaver and sophomore Josh Lingenfelter had two RBIs apiece.

The Eagles won game two, 12-2. The middle of the lineup once again supplied all the runs they would need. Goedkoop homered again and drove in two runs. Kauffman, Juniata's clean-up hitter, homered and drove in four runs.

The Eagles got another stellar pitching performance, this time from sophomore Paul Dunklebarger. Dunklebarger struck out six and allowed one earned run on only three hits while picking up his first win of the season.

Zanic was not surprised by the offensive output of his veteran-laden lineup.

"I think with our offense, we have guys on our team one through nine that can hit the ball out of the ballpark," Zanic said. "I expect that we will have more offensive production than we have ever had in the history of this program, but to keep the pace up that we had in Arizona would be pretty amazing. I don't think we are going to keep that pace up but I think we will hit all year."

Sophomore Jason Enoch scattered three hits and fanned seven to pick up his first win of the season in game three. The Eagles defeated the Greyhounds 8-1. Lingenfelter homered for the first time in his career and also tripled. Beaver and Leonard each drove in two runs for the Blue and Gold.

"Offensively, guys like Troy Beaver and Jesse Leonard have always been starters but they have never been consistently .400 hitters," Zanic said. "Now everybody is hitting the ball and the old saying is that hitting is contagious. Troy and Jesse have really stepped up to lead the team."

During the Arizona trip, three Eagles gained recognition. Beaver was named the National Collegiate Baseball Writers Association Division III National Player of the Week. He is the first player from Juniata to win this award. Beaver and Goedkoop were also named Commonwealth Conference Player of the Week in consecutive weeks. Enoch was named Commonwealth Conference Pitcher of the Week during the Arizona trip as well.

Hannah Rauterkus / Juniatian

Juniata senior, Dave Saintz (5), and his teammates have brought hot bats to the plate early this season, lighting up opposing pitchers and scoreboards in three different states.

Upcoming athletic events on campus

3/24 3:00 p.m. Baseball vs Widener

3/24 7:00 p.m. Men's Volleyball vs Springfield

3/25 10:00 a.m. Men's Track and Field vs Susquehanna Invitational

3/25 10:00 a.m. Women's Track and Field vs Susquehanna Invitational

3/25 12:00 p.m. Baseball vs Widener

3/27 3:00 p.m. Men's Tennis vs Albright

3/28 3:00 p.m. Baseball vs. Alvernia

3/29 7:00 p.m. Men's Volleyball vs St. Francis

By The Numbers

7

Times Troy Beaver reached base, in seven plate appearances, in one game. Beaver was named the National Collegiate Baseball Writers Association Division III National Player of the Week during the baseball team's trip to Arizona.

22

Homeruns, through 15 games, hit by the Juniata baseball team. The Eagles hit 22 all of last year. Eight of the homeruns this season have come off the bat of sophomore Dan Kaufman.

8

The minimum number of runs Juniata scored in every game during its trip to Arizona. During the stretch, the Eagles had games of 17, 18 and 18 runs.

10:44.08

Time of Juniata's winning distance medal relay team at the MAC Championships. The time was more than six seconds better than the second-place team. The team was comprised of Shawn Rumery, Tripp Rudolph, Eric Hoover and Chris Sheaffer.

6

Consecutive games Nate Ocasio has reached double-figures in kills and led the team in that category.

11

Strikeouts for senior pitcher Lizzie Bartosik in the softball team's win over Gordon.

Conference tournaments need to go

On second thought, they can stay...but they need to be changed. Now.

Tommy McConnell

Two students have a bet: for one semester, who can attain the highest GPA? Simple enough, but the stakes are high – loser pays the other's way to Spring Break next semester.

The first student, we'll call him Randy, took care of business all semester. From day one, he diligently took notes in class, studied every night, wrote all his papers – on time, too – and aced all of his tests. Sure, he may have messed up a quiz or two or slept in a couple of Mondays, but for the most part, he was a model student.

The second student, let's call him Gerry, was not as studious. He bought his books just in time for midterms, slept through classes like it was his job and took notes on the back of his eyelids. He got his papers done – handed in a little late, but hey, they were done – and took all his tests in crayon (Gerry's motto: "Cs and Ds get degrees!"). Basically, he skated by, and was in serious danger of failing.

Now, with just finals left, Gerry pays a visit to his professors. "How about a little extra credit?" he asks each one. "I know I was a screw off for most of the year, but I swear I have my act together now."

And one by one, each professor gives him the extra credit. Not just a little, either, to get his head above water. They all boost his grades by entire letters. He's now on an even footing with Randy.

Seem fair? Of course not; it's ridiculous. If you were Randy, you'd feel like gouging Gerry's eyes out, Carl Krauser-style. And you'd be well within your rights.

Here'sthething: college basketball's conference tournaments are the hoops equivalent to that type of extra credit.

Here's the problem: the winner of the conference tournament is awarded its conference's automatic bid to the NCAA Tournament. In doing so, teams that underachieved all season (or just weren't very good) are given an undeserved chance at redemption and a second shot at college hoop's Holy Grail. In the process, they screw over deserving teams and send teams to The Dance that have no business being there.

Big schools and small schools alike get screwed.

Now, I love the Big East and ACC Tournaments. Without them – and other tourneys – March would lose a little of its luster. You can't get rid of them. So what's the answer? Simple: continue holding the conference tournaments, but give the automatic bid to the regular season champ instead.

Why? Several reasons, but here's the most important: The best teams dance. A conferece tournament does not decide who the best team is; the regular season does. A grueling, long, drawn-out season reveals the best, most consistent teams. A four-day tourney favors a team getting hot or lucky and pulling off an upset. By giving the regular season champ the berth, The Tournament is guaranteed to include the very best teams.

Plus, on more than one occasion, a team from a BCS conference has mailed in the conference tournament (read: UConn this season). This allows crappy teams to make ridiculous runs (read: Syracuse this year) that guarantee them a spot in the NCAA Tourney. And when the NCAA Tourney is forced to include undeserving teams, deserving teams – usually from smaller conferences – get screwed. Seems fair to me.

The best teams dance. A conference tornament does not deicde who the best team is.

The regular season counts, too. Under the current format, the regular season means nothing, at least to the one-bid conferences. Automatic bids for tournament winners cheapen the regular season while hyping the playoffs. It's a cheap reward for casual fans that just want to see upsets and have the attention span of a first grader with ADD.

What's the reward for playing a tough non-conference schedule? A high RPI? Meaningless. What's the reward for an undefeated run through your conference? Top seed in the conference tourney? A small pittance.

There is no incentive to play well during the regular season. It would be like a golfer gearing himself up for the Bay Hill Invitational. You play to win the Majors; nothing else matters.

Consider this: of the one-bid conferences this year, seven of them sent a team that didn't win the regular season title. That means seven better teams are sitting at home right now. Hey, at least they got to go on spring break.

Undeserving teams stay home: Along the same lines, I say to teams that don't deserve to be in the tournament: don't go. If you have a losing record, but win your conference tourney, you think you deserve a seat at The Dance? Of course not. If the undeserving didn't take the bids, upsets would go through the roof.

For those fans that live for upsets (and, let's be honest, that's everyone except Billy Packer, and he decided against being coherent about six years ago), all it takes is a little patience. Wait until The Dance for them, not the conference tournaments.

No more 14-15 MEAC winners getting trounced by 72 by the fifth place team from the ACC.

Listen, the NCAA Tournament is great, no one is debating that. The first four days should be declared a national holiday ($3.8 billion – billion! – lost in productivity. Doesn't look like anyone is going to work, anyways). But with my simple change, it would be even better, as impossible as that may seem.

(Oh, and while we're here: lose the play-in game, NCAA. That's atrocious – and everyone knows it. Well, except Billy Packer).

Softball begins season with opener at Susquehanna

continued from page 12

cure game one for the Eagles.

In game two the Eagles committed six errors, which led to nine unearned runs for the Crusaders. This would be all the home team needed as it cruised to the win. Bartosik was charged with the loss as she went 2 2/3 innings and allowed eight unearned runs.

The Eagles now sit at 1-1 in conference play and are 4-10 overall on the season.

Prior to the conference opener, the Eagles spent their spring break down south as they played nine games in Virginia Beach and Myrtle Beach. Despite finishing with an overall record of 3-9, the team gained an ample amount of experience

The younger players also had an opportunity to play against real competition, which enabled them to get a feel for the college game.

"It's extremely beneficial playing these teams," Houck said "[The competition has] already had six or seven games in, so their hitting is more effective. It's really on-the-job training for us. Our first day on a field was on game day."

"We have a lot of talented younger players. Four of those are freshmen that are playing key positions," Houck said. "If we are able to limit our mistakes and errors, and are able to stay disciplined, other teams will make mistakes for us."

In the 14 games that Juniata has played thus far, it has averaged just fewer than three runs per game. The Eagles will hope to improve on this in upcoming action.

Juniata hosts Gettysburg in a home contest this afternoon. The double-header times are slated for 3 and 5 p.m.

Heather Lockwood / Juniatian

During spring break, Juniata's softball team traveled to Virginia and Myrtle Beach. Coach John Houck meets the infield for a conference during the team's game against Gordon University.

THE RANDOM ELEVEN

Matt Russell

Staffing or tastiness? Next issue we're going to be featuring an article about professor turnover on campus. I haven't decided if that refers to how fast we go through faculty, or it means that Hal's adding a new pastry dessert in Baker.

Stiff wind? That blows: I opened the door to walk outside, and two students were walking toward me backwards. As they got closer, I saw pieces of lettuce flying away from them. I don't think I'm going to explain this one any further.

Girl-next-to-me-in-computer-lab's soliloquy, first excerpt: "I found the perfect ring tone! ...after three days of searching."

Girl-next-to-me's soliloquy, second excerpt: "I'm an accomplished home wrecker. But I'm not proud of it!"

Girl-next-to-me's soliloquy commented on by guy: "This is more entertaining than television, I think." Girl's response: "Everyone says that!"

Easiest gig ever: At the end of "Goodnight And Good Luck," a recent black-and-white film about the reporting of Ed Murrow during the McCarthy era, the credits included the Technicolor logo. Bang up job on the two-tone?

Hardest gig ever: Making my boss laugh with this column. I pointed out that last bit to him, and he promptly called it ignorant because the film was, of course, shot in color and later translated to black and white. However, if you closely analyze most of the stuff I write about, they lose their humor. For instance…

It's time for a R11 confessional: Some issues ago, I lampooned Facilities for two bags of concrete outside BAC that had been left there long enough for them to be rained upon and become stuck fast to the ground. Uh, so, how to phrase this? I may have had something to do with them getting out there in the first place because they were left in the wrong storage area. I may have neglected to mention it to Facilities because I assumed they'd remove them the next day with the trash… but instead they turned into, well, R11 fodder. Sooo… my bad?

Friend: There is a cox cable going in there, right? **Me:** You mean coax? **Friend:** I say cox!

Computer search adds to Beeghly reference resources

Originally published September 29, 1983
Written by Sandy Beard

An apparent lack of reference materials in Beeghly Library often draws criticism from students, but a tour of the library reveals a noteworthy, and perhaps underutilized asset – the Computer Search Service.

Introduced to Juniata approximately four years ago by Dr. David Eyman, the system allows students to reference and obtain research materials otherwise unaccessible to Beeghly. Several hundred specific subject headings are categorized in the computer memory, which may in turn be combined in any number of ways in order to narrow the search.

For example, if a search were run on the subject "AUTOMOBILE INDUSTRY," one would receive a printout of thousands of articles. However, combining the aforementioned with "GOVERNMENT REGULATION" would result in a more precise listing.

The central terminal, located in Palo Alto, CA, compiles information from 200 data bases – e.g. BIOLOGICAL ABSTRACTS – reducing normally cumbersome, many-volumed stacks of periodical listings to a space-saving terminal. Moreover, the process of thumbing through indexes is eliminated as Lockheed – the system's founder – categorizes and standardizes the material despite references given by the original data base.

Obviously, the search process is expensive. The librarian must telephone California where Juniata's terminal is connected with the central computer. Depending on the type of material being searched, the time-sharing costs range from $35-$100/hour, the average being $75/hour.

The only requirements for requesting a search are a Juniata library card and a scheduled appointment with the reference librarian. The average search lasts fifteen minutes. Materials which are not available at Juniata are requested through application forms at the main desk. Students are encouraged to take advantage of this informative and free service. Note well, most larger institutions charge a base fee of $25 plus computer time-sharing fees for similar services.

Party policies unchanged

Originally published October 9, 1980
Written by Kathy Novak

Social functions at Juniata will be basically under the same regulations concerning the use of alcoholic beverages as last year. The emphasis this year seems to be placed on the utilization of the lounge areas provided by each dorm for social activities rather than halls, dorm rooms or stairways.

In order to encourage use of the recreation rooms for parties the capacity which the lounges can accommodate has been raised in several dorms across campus including South, Tussey-Terrace, Sherwood and East Houses. The number of half kegs available for consumption has also been increased in a few of the dorms.

The typical "Tower" parties are now nonexistent. The assemblage of students in the halls and stairwells constitutes a fire hazard and is in violation of the alcohol policies. This applies not only to East Houses but also to similar affairs anywhere on campus.

Non-alcoholic beverages must also be present at every party in a ratio of 15:1; that is, for every half a keg of beer, one gallon of non-alcoholic drinks must be supplied. A certain percentage of money must also go toward the purchase of food. Additional policies and guidelines were distributed to all students at the beginning of the term.

E-mail @ JC

continued from page 2

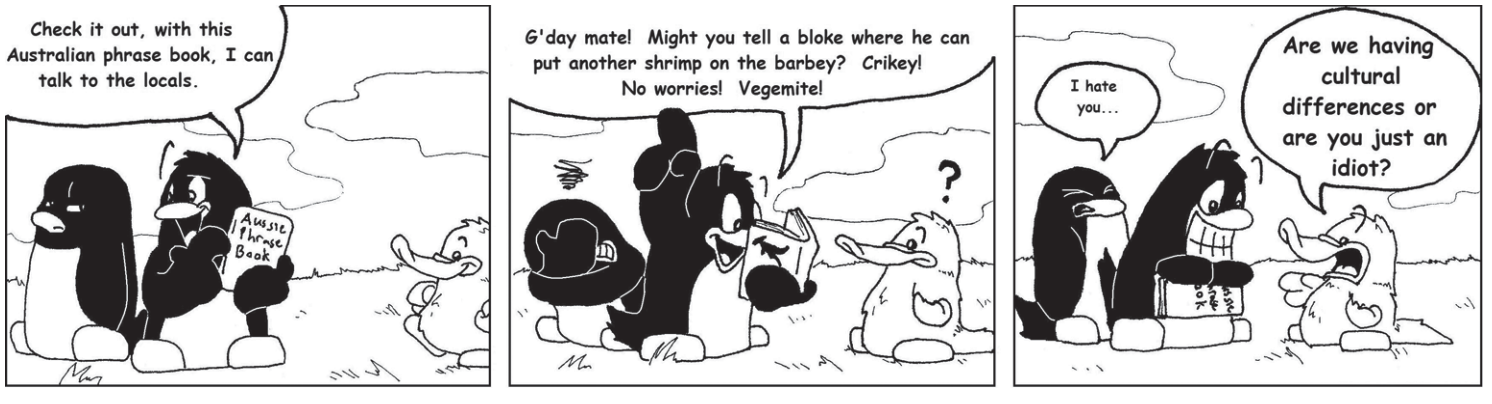
said senior John Boyer.

"I end up checking my e-mails frequently because I've missed a few important things in the past," he said.

This can amount to multiple hours spent checking and responding to e-mail.

"When I come into the library, I see at least ten people checking their e-mail. I sometimes check mine up to seven times a day," said sophomore Kelly Hollibaugh.

With all these e-mails, some students and faculty wish they were provided with a larger mailbox size. Whether it is from large attachment files or the sheer number of messages, student mailboxes – which have a 10 megabyte size limit – can fill up quickly. If a mailbox is over the size limit, that person can no longer send or receive e-mail, according to Campus Technology Services.



Joel Pheasant, director of academic and business systems technologies, feels that the mail system at Juniata is sufficient for campus needs. He understands the size issues with the current system, but believes there are ways to adapt.

"The mail system is adequate if it is used properly. There are management tools available to help with space," said Pheasant. "I store e-mails in offline folders so they don't fill my inbox."

Or perhaps Peters has the answer: Don't use e-mail more than necessary. "E-mail is not the ultimate tool," said Peters. "It is not good for everything."

Staff less accountable than faculty to students

"It's a pipeline process," not a systematic review

Sarah Anne Wharton

Juniata students have a great deal of say in how their professors are evaluated. The faculty evaluation forms that cram student inboxes every semester constitute between 50-70% of a professor's entire faculty evaluation for tenure and promotion.

On the other hand, students have no direct say in evaluating the Juniata staff members who affect student life. Where most of the faculty evaluation ingredients come directly from students, the pinch of weight that is placed on student opinions of staff is not measured. The influential people in student service groups – such as the Office of Student Activities, Residential Life, the Registrar, Campus Ministry, the Athletic Department or Campus Technology Services – do not have student evaluation forms.

Because of this, the question has arisen about the inconsistency in the way that faculty and staff are assessed on campus – should Juniatians be evaluating their staff and faculty in the same way?

Faculty evaluation forms are a major part of reviewing professors. For professors nearing tenure review, every class is evaluated by students. After receiving tenure, professors can designate which of their courses students will evaluate. For part-time and fixed-term faculty, department chairs decide which courses are evaluated.

"It's an awful lot of data," said Loren Rhodes, chair of the Personnel Evaluation Committee (PEC) that chews over and analyzes all of the information in the surveys every semester. "We read everything."

When Rhodes and others on the committee receive and read the completed surveys, they look for patterns – both positive and negative – in how students react to certain professors.

"If we're seeing patterns in what students are responding to, we're going to pay attention," he said. According to Rhodes, in cases where there is negative feedback, it is often balanced by positive comments, and vice versa.

Evaluations, which judge "teaching effectiveness," constitute the first section in a four-piece pie that makes up the College's

Getting lost *in the shuffle*

Kevin "Par" Fasick / Juniatian

Kevin "Par" Fasick

Where only first names appear, names have been changed to protect the identity of the sources.

It's nine o'clock on a Tuesday, and the regular crowd has shuffled in. Two freshmen walk through the door carrying four brand-new decks of cards. A Texas Hold'em tournament is about to begin a block away from campus.

A dozen people—mostly Juniata students—are gathered six to a table, as two separate games get underway. The buy-in is ten dollars.

By 11 p.m., four players have lost and left. The remaining eight gather at one table and continue. The bets are getting bigger, and by 1 a.m., there are four players left. A freshman, just having lost, is off to do an accounting project due at 9 a.m.

Senior George Patitsas, one of those still playing, has by far the smallest stack of chips. The cards haven't been coming his way all night. He successfully bluffs his way back into the game, finally catches a few cards, and decides to go all-in.

"It's all about being decisive," he says.

Soon, only Patitsas and one other player remain. After several more close hands, Patitsas's opponent finally catches the hand he has been waiting for and clinches the tournament. It is after 2 a.m. when this poker night ends.

Patitsas has been playing Texas Hold'em for more than four years. While he lost early on, he said, "After about six months of playing with just my friends, I decided I wanted to play more." He now participates in online Texas Hold'em tournaments, as well as in tournaments outside of Huntingdon.

Of the online tournaments Patitsas said, "That's how I make some money. I make between four and six hundred [dollars] a week sometimes." In the past two years, he said he's played well enough to "really make a kind of part-time living" out of it.

Though Patitsas has won dozens of higher stakes tournaments—both away from school and online—he much prefers the

"There is a huge poker ring of guys around this campus"

Professor turnover at Juniata

Community, workload reasons for leaving

Nick Carney

Juniata College is renowned for many things: its well-manicured lawns, fiercely academic students, magnificent programs in the sciences and, increasingly, the inability to retain professors. Due to a string of retirements, lack of satisfaction with teaching and other reasons, new Juniata professors are leaving the College in significant numbers.

According to numbers provided by the Provost's Office, Juniata College hired 45 new full-time professors between 1998 and last year. Of those 45, 37 will remain by the beginning of next year.

Though a loss of eight seems like a small number, this means that during those years, the College turned over nearly 18 percent of its new professors.

In addition to full-time professors, there is also notable turnover with the teaching faculty in general.

Faculty, as defined by the Col-

"Balance Mind, Body and Soul" focuses on student health

Michael A. Vella

Junior Katie Lengel recently checked her cholesterol levels and was surprised by the results.

"My [test] results showed I have a cholesterol level of 213, and 200 is considered normal for a girl my age," she said.

Although high cholesterol is usually associated with older adults, this and other diet-related health problems do not just affect older age groups. Currently, college students frequently rely on cheap foods like Easy Mac and Ramen Noodles, which contain high amounts of fat and cholesterol.

"I don't eat as well as I should, but I think most college students would say the same," said Lengel. To provide Juniata's students with the right foods and resources to lead more healthy lives, Sodexo is running a "Balance Mind, Body and Soul" campaign. The campaign's home base is located at http://www.balancemindbodysoul.com, where visitors can learn about eating and living healthily.

On the site, visitors can refer questions to a registered dietician, get the latest tips on exercise and nutrition and look up nutritious recipes. A nutrition calculator allows students and anyone else who eats at Baker Refectory to look up nutrition information for everything served by Sodexo.

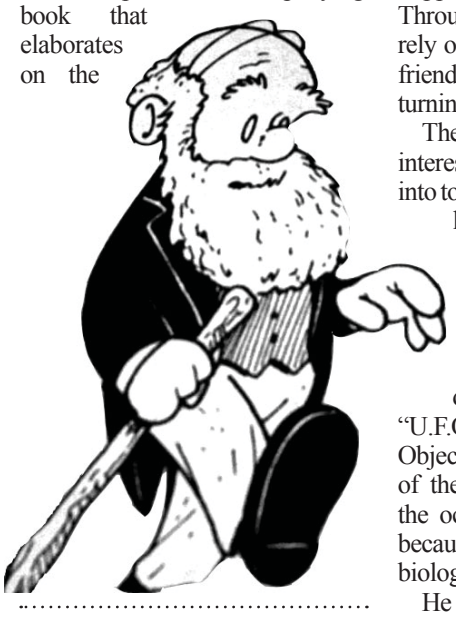
Professor's comic books make science fun



Dr. Hosler's latest work, "Zoo Break," introduces animal intelligence to young readers

Jason Najarian

After publishing two science-related comic books, Dr. Jay Hosler, a Juniata biology professor, is taking his combination of comic books and science to the next level.

While balancing teaching, writing another book and spending time with his family, Hosler is working on two new comics and a grant request to develop a comic-based college textbook.

The two comics represent a new approach to teaching students, grades three through eight, about science. Published in the Lynx Science Collection of Steck Vaugn, a company devoted to alternative learning strategies, each series in the Collection includes a comic book introducing a scientific concept and an accompanying book that elaborates on the concept.

Hosler's rendition of Charles Darwin in "The Sandwalk Adventures," a comic about the theory of Natural Selection.

"The hope is that the science embedded in the comics will encourage the reader to pick up the other book, which is a miniature textbook about the subject," said Hosler. "The plan is to write something that a kid wants to read but construct it around something scientific."

Even if readers do not go on to the textbooks, Hosler thinks there is plenty available to learn from the comic alone.

The Lynx Science Collection topics range from radiation to natural disasters, but Hosler chose to do his first comic for the Lynx Science Collection, named "Zoo Break," on animal intelligence.

Just released last month, "Zoo Break" is a story about two chimps that escape from a zoo only to be trapped again by a zookeeper. Throughout the story, the chimps rely on their wits and their animal friends for help to try to avoid returning to captivity.

The comic, meant to catch the interest of young readers, delves into topics like instinct versus intelligence, tool-making abilities and other animal behaviors. These are further developed in the accompanying book called "Animal Smarts."

The other story Hosler developed for Lynx is called "U.F.O." (Unidentified Floating Object). This book explores some of the unique creatures found in the oceans. He chose this topic because of his interest in marine biology.

He added with a laugh, "It's also a chance to draw lots of cool underwater critters."

It is too early to gauge the success of the books, but Hosler hopes they help foster interest in science.

Hannah Rauterkus / Juniatian

Jay Hosler, assistant professor of biology, poses in his office/studio in the von Liebig Center for Science, where he's working on another comic book to accompany his already successful publications.

His previous comic books, "Clan Apis" (2000) and "The Sandwalk Adventures" (2003), were what originally attracted the attention of Steck Vaughn, the publisher. Rick Watson, an editor for Steck Vaughn, contacted Hosler last spring about including his work in the Lynx Collection.

"The idea [of the Lynx Science Collection] was to generate interest in science through stories laid out in comics," said Hosler. "I had written my books with a similar desire."

This shared goal cemented Hosler's involvement with the Collection.

Now, Hosler is taking the concept to the college level. He recently submitted a grant request to the National Science Foundation (NSF) to create a college textbook in comic form. This project would be geared towards non-science majors who have trouble grasping scientific concepts.

Hosler's plan is to create a chapter of a non-science-majors biology text in comic book format that is visual, humorous and context rich. If Hosler receives the NSF grant, he will use it to develop a chapter for his Sensory Biology class.

Free printing at issue on campus

Heather Lockwood

With a $35,000 tuition sticker price, students at Juniata take all the perks they can get. Unlike many schools, Juniata does not require its students to pay for printing on public campus machines. However charging for printing may become a possibility. The change may result from the fact that it seems students are taking the term "free" very liberally.

The Solutions Center has kept a close eye on paper consumption, and it seems that students may be the cause of paper disappearing. The week before spring break, the Solutions Center cut back immensely on paper distribution. It stocked 20,000 sheets of paper in the public computer labs and found only 7,200 pages were actually printed. All of the paper was gone.

As of March 30, the Solutions Center took a step toward resolving the missing paper issue by placing signs on all networked printers on campus. The Center has said if the paper theft continues, printers will be removed from the network in all labs except TLT and Main computer lab located on the second floor of Brumbaugh Academic Center.

According to Librarian Julie Woodling, in the span of one month, the library's duplex printers use a total of about 75 to 85 thousand printed pages.

Though the library has its own system of printing, excessive paper and print consumption seems to be on par with other campus facilities.

This past February, the Solutions Center logged about 187,000 pages printed from networked printers that are available for students' use. The week of March 19 to the 25, an overall estimate of 56,000 sheets were printed on campus.

Matt Russell, TLT manager and Juniatian design editor said, "The Solution Center pays for the paper being stocked in the public computer labs, TLT and the Cyber Café. Daily runs and checks are made to the printers to make sure they have enough paper."

On a campus that is concerned with sustainability and preserving the environment, printing seems to be forgotten.

Vice President and CIO of Campus Technology Services Rob Yelnosky, said, "I think we should print what you need and need what you print. Juniata is a group of responsible adults, and I would like to think people are printing for legitimate reasons."

With so many pages being printed a month, are students really printing as responsibly as they should be? There are no restrictions for printing on campus; however, printing is a privilege.

"There aren't any restrictions to printing in the library, but we do ask people to be conscious of the environment. If people are really using what they are printing, then great. If not, then that is just an issue of responsibility," said Woodling.

The lack of conscientiousness may prompt Juniata to hop on the bandwagon with other schools. Charging for printing is standard on most college campuses.

Yelnosky said that charging for printing is being discussed, as are many other issues involving printing on campus like paper being taken from the printers.

Russell said, "I'd say at least in public areas, printing is not out of control. There are times when it does get out of control, but it's not the printing that is being abused, it is the "free" paper. I do not see

continued page 6

JCEL starter kits focus on all POEs

Holly B. Brown

Juniata students always "expect the uncommon," and the newest round of funds offered by the Juniata College Center for Entrepreneurial Leaderships (JCEL) is bringing out some "uncommon" ideas. JCEL's opportunities are encouraging students' creativity and ingenuity through entrepreneurship, no matter what their POEs are.

JCEL, headed by Dr. Mike Lehman, recently received approximately 20 applications for start-up packages to assist with new business ideas. Up to five "Starter Kits" and five "Next Step" packages will be distributed to chosen winners.

The Starter Kit provides $1,500 credit for space in the JCEL's Sill Business Incubator building, $500 for business fees and support time with the JCEL staff and their connections. The Next Step is geared toward students with an actual business in the works and provides the same space, support and capital along with up to a $2,000 stipend.

Junior Celina Isenberg applied for a Next Step kit to begin manufacturing and selling biodiesel, a cleaner-burning diesel fuel that can be created from vegetable oil, methanol and a small amount of catalyst. Through Conservation Club, she discovered that the owner of Boxer's restaurant in town has the equipment for converting the fuel and is willing to loan it to the College.

"You can use biodiesel in a diesel engine, up to 20 percent, without engine modifications. You can also mix biodeisel with heating oil to heat a house with very minor adjustments," Isenberg said.

Isenberg hopes that with the help of JCEL and her advisor, Dr. Neil Pelkey, she can begin small steps in converting local house heating to a greener approach.

"JCEL will be instrumental in getting this off the ground and expanding interest beyond a few customers I happen to know personally," she said.

Sophomores Greg Woodard and Lucas Ferster are also developing a business plan around green attitudes. They applied for a Starter Kit to help plan and launch their new invention: an mp3 player remote control that connects to a bicycle handle.

"As gas prices go up, people ride bicycles more … We want to take the amenities regularly available in auto transportation and apply them to bicycles," said Woodard.

Junior Julia Williams, who has entrepreneurship in her POE and was an intern for the Keystone Innovation Zone (KIZ), recently applied for a Next Step kit for a business with senior Brandon Long. Their idea, University Jerky, was born out of Long's small jerky business, and was developed through the New Venture classes.

"We couldn't really do this without JCEL," she said. "Without them, this would all be a conceptual experience. Knowing that JCEL is there and there's the possibility to receive their Next Step funding is what makes it possible."

According to Lehman, the decision to offer these two new packages in addition to the standard loan and equity investments came after a summer of conferencing with students and Juniata faculty. The new kits are helpful for students who simply have business ideas, not necessarily a plan, or who only want to do their businesses on the side.

"What we found is that in order for those students to apply for the loan they have to be pretty far along with their business plan. But JCEL's goal is to reach out to all POEs," he said.

In addition to the new kits, JCEL is encouraging students to consider adding entrepreneurship to their POEs. The minor can be added with the EB107-307 New Venture classes, plus an upper level Entrepreneurship class and internships in venture creation.

Students raise funds for local, international causes in many ways

Aly Pompeani

Recently, organizations have decided to focus on causes with the College and its community in mind. This semester, students are raising funds for charity through some traditional campus events – and a few new ones.

Each year the Group Communication class divides into two groups and completes separate service projects. The groups have a wide array of charities from which to choose.

Senior group member Jeff Byer understands that Juniata College and Huntingdon need to collaborate as one community. Many students and organizations share Byer's opinion.

One group decided to operate on a smaller scale by holding a golf tournament to benefit Huntingdon County PRIDE on April 9 at the Huntingdon Country Club. PRIDE is an organization geared toward helping individuals with disabilities caused by birth defects, injury and disease as well as learning and developmental disorders.

"Lately, the College has been trying to do a lot to get a more positive outlook from the community," said Byer. "We will be interacting together and showing that we are an integral part of the community."

The golf tournament will raise money for PRIDE through a tournament entrance fee. Also, tournament sponsors and a silent auction will raise money. Local businesses or sponsors donated all of the money used to hold the tournament. Byer hopes the projects will help bring the community and the College closer together.

As reported in the March 23 Juniatian, a musical group, BBB&L, held a benefit concert to support Huntingdon County PRIDE. The members are Brenton Mitchell, Brittany Barbera, Brandon Long and Lisa Detweiler. PRIDE also holds a telethon to raise money each year. It is their most successful fundraiser, and BBB&L took advantage of the time by making their own contribution.

"We picked the cause because the timing of our concert coincided with the timing of the PRIDE telethon which is their biggest fundraiser to raise money for individuals with disabilities," said Mitchell.

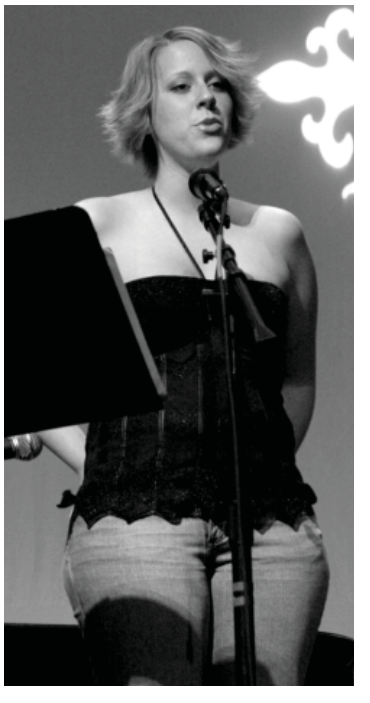
The second Group Communications team will hold a three-on-three basketball tournament to benefit cancer research by donating the proceeds to the Jimmy Valvano Foundation. Valvano, the former NC State basketball coach and ESPN broadcaster, died of cancer and his coaches, friends and family banded together to form the V Foundation.

"A lot of people raise money for cancer," said junior group member Robb Patty. Ours relates to athletics and it brings people in the athletic world together."

Freshman group member Pam Campanaro said, "It's a good way to bring the students together. Local businesses seem excited because it's such a good cause."

The Group Communication and other projects, such as Meal for Crop and the Vagina Monologues are well-established, but students are taking steps to introduce more charitable ventures on campus.

Asian Sensations United organized the "Global Threads" fashion show held April 1. Co-president of the new club, Nuara Siddique, wanted to raise money for a good cause and increase student awareness and involvement in unfamiliar cultures. All proceeds will go to the Pakistan Red Crescent Society. The PRCS is a non-governmental humanitarian organization that strives to provide aid without discrimination to all who need it. Recently, the PRCS extended its aid to survivors of an earthquake in Asia. Although the money from the show benefits the PRCS, Siddique hopes to raise awareness of Asia's plight and suffering.



"A lot of people may not even know about this, and we want to remind them of it and let them know they can help out," said Siddique.

This semester, the JAB Coffeehouse series hosted a band who decided to raise awareness for a different kind of natural disaster. They raised money for Everglades Outpost, a zoo in Florida that suffered damages from Hurricane Wilma. Sophomore Chris Murray and his band played to raise money to help the zoo maintain animal enclosures and repair damages. Murray works at the zoo in the summer and during winter break.

"It gave students a chance to have fun, listen to peer music, and help a worthy cause," said Murray.

B.B.B.&L. posters littered the walls of campus and promised to bring out a faithful following of campus-grown fans. The benefit concert, performed by (R to L): Brenton Mitchell, Brandon Long, Lisa Detweiler and Brittany Barbera, was designed by Barbera through an independent study. The group started the night as a quartet, then broke off into their familiar duos, each singing classic and fresh tunes. The concert proceeds went to the Huntingdon House.

Hannah Rauterkus / Juniatian

Rate of professor turnover at Juniata

continued from page 1

lege, includes more than full professors. Faculty also include "instructors" who do not have terminal degrees in their fields.

Using publicly available personnel documents, the Juniatian found that of the 234 faculty and professors employed at Juniata over the previous five academic years, 22 of them have left the College.

This means that Juniata College's turnover rate is more than double that of the optimum four percent turnover reported by a University of Wisconsin study.

Nine percent turnover, however, is actually a conservative estimate for faculty turnover rate at Juniata. The Juniatian study only included those faculty who were considered to be employed at least half-time; therefore, actual turnover rates are slightly higher.

The Juniatian study also made no distinction between those faculty who left due to illness, retirement or personal choice. The study did, however, exclude all faculty who were considered to be visiting professors or sabbatical replacements.

Most departments experienced turnover at relatively similar rates, though the departments of English, Communications and Theater Arts; World Languages and Business were slightly higher.

The departments of Biology, Geology, Environmental Sciences, Sociology, Peace and Conflict Studies and Physics showed no loss of half-time or greater faculty.

Juniata College can find comfort in the fact that comparable colleges have experienced, or are currently experiencing, the same levels of turnover.

In a report filed by the president of Elizabethtown College in 1998, that college hired nearly 150 new faculty members in a short, two-year span. Elizabethtown's president, Theodore Long, called this a "striking turnover rate."

Similarly, a 2005 report in Dickinson College's student newspaper found that a high turnover rate in the history department had limited that college's course offerings.

Juniata students have also been affected by high turnover rates when they find that their favorite professors have left the College, and their courses are no longer available.

Such was the problem several years ago when Kathleen Parvin, an English professor, left the College just before the Fall 2004 semester began, too soon to search for a replacement.

Her departure left many classes without a professor and left the administration scrambling to fix the problem. The College hired adjunct instructors the following year, and David Hutto was only recently named as Parvin's permanent replacement.

"I think that turnover is not really a problem [at Juniata College]," said one anonymous professor. "At least, not more of a problem than it is at any other small, liberal-arts college. I just think that one of the reasons we lose so many new faculty is because the College doesn't really give [them] any chance to do research. If [they're] coming out of six, six and a half, years of grad school, and you're trained to do research, it's hard to make the transition to teaching."

The professor went on to explain that many new professors have an "oh, crap" moment when they realize that they may not be able to conduct research again in their professional careers.

Additionally, because professors are less likely to publish research, they are less likely to be able to move to another institution with higher pay or more prestige if they stay at Juniata for several years. Most universities screen incoming professors, weeding out those who have not been published, or have been published less frequently.

"When you come to Juniata, you're stuck here," said the professor.

According to last year's faculty survey, compared to other institutions, Juniata professors teach more courses. Juniata faculty most commonly teach between three and four classes each semester, when most professors at institutions like Juniata teach less than two.

Many have an "oh, crap" moment when they realize they may not be able to conduct research again.

The survey also reported that professors here are much more likely to engage in "unhealthy habits."

These habits included poor nutrition, lack of sleep and lack of exercise.

This leads to the conclusion that Juniata faculty are not only limited in their research capabilities but are overworked to the point of exhaustion in other areas.

According to Provost James Lakso, the turnover rate for faculty over the past few years has been "unusual," though not atypical of small, liberal-arts colleges like Juniata. Lakso attributes this to a wide variety of factors: low or non-competitive wages, displeasure with Huntingdon and surrounding communities and spousal concerns.

In fact, in a June 1998 report to the Middle States Association, Juniata cited faculty salary as one area the College needed to address. This year, the mean salary for faculty was $46,100 annually, about $2,000 lower when compared to the mean for other colleges Juniata's size.

Juniata often paid nearly $5,000 less than either peer or aspirant institutions. In some cases, according to one anonymous faculty member, Juniata pays salaries of up to $25,000 dollars less.

The term "aspirant colleges" refers to those colleges that Juniata administrators want the College to imitate or be more like in the future. "Peer colleges" are colleges that share many similarities with Juniata. Both of these groups are used for comparison purposes in the College's in-house research.

Competitively, Juniata ranked in the low to mid 90th percentiles for faculty salaries.

Following this realization, Juniata suggested instituting a more aggressive compensation policy, raising faculty salaries each year by the most aggressive percentage compared to any other college measured. Each year a professor stayed, his/her salary would increase by roughly ten percent.

However, this policy of ten percent annual increases was only a suggestion made by the report to make Juniata competitive. According to Lakso, Juniata professors and faculty do receive annual raises, though they are granted on an individual basis.

Also cited by Lakso as a potentially faculty-turning factor, is the dissatisfaction with the greater Huntingdon area.

Lakso referenced one person in particular, Amy Woodson-Boulton, one of Juniata's former history professors.

Woodson-Boulton was raised on the west coast and frequently reminded those around her of how much she enjoyed it there. She also missed her family on the west coast.

In fact, if Juniata professors want access to any sort of cultural event not sponsored by the College, they must travel in excess of 30 miles to State College, or several hours to Pittsburgh or Philadelphia.

The Huntingdon area is also economically depressed, offering little in the way of shopping or services for a new professor.

"[Huntingdon] is a huge factor," said the anonymous professor. "When you first come here, especially if you're single or don't have any children, it's very hard to adjust [to Huntingdon]. It's in the middle of nowhere. For most new professors, Huntingdon is pretty far from home—a couple hundred miles, usually. I just wish I could move Juniata to a suburb of Boston or New York or Philadelphia."

According to Lakso, many people come to Juniata believing they will enjoy the quaint and quiet nature of the small, rural community, but many find that they simply do not enjoy it here.

The third, and most frequently cited, reason for leaving Juniata College is difficulty with spousal employment. As explained by Lakso, the College is often in the position of needing to recruit two faculty members instead of one.

Often when the College hires a particularly young professor, that professor is married to another career-oriented person. If the College cannot offer the spouse a position, employment options in the community are severely limited.

Turnover problems have been heavily documented at many colleges nationwide for nearly a decade.

Beginning in the 1950s, American colleges began to experience a boom in admissions. As a direct result of this, colleges and universities nationwide began to fill the demand for more classes by hiring additional professors.

These professors eventually became tenured, and the rates of turnover decreased for several decades.

But beginning in the early 1990s and continuing to the present day, these professors began to retire in massive numbers. Colleges across the nation began to report turnover rates of up to seven, eight, even ten percent each year.

"You have turnover everywhere [at every college or organization]," the anonymous professor said. "It's not a problem that's unique to Juniata."

"Balance Mind, Body and Soul" focuses on student health

continued from page 1

In addition, foods are labeled as vegetarian, vegan, carbohydrate-friendly and well-balanced when applicable.

Professor of Biology Deb Kirchhof-Glazier, who team-teaches Juniata's nutrition class, was unaware of Sodexo's Web site when interviewed.

"I was pleasantly surprised to find out that Sodexo has a Web site that focuses on nutrition from a holistic perspective," she said after having the opportunity to navigate the site. "It is worth checking out."

"One of the reasons we started [the nutrition] class was to get students thinking consciously about what they are eating," she said. "The habits you form now are carried on to adulthood."

Sodexo General Manager Hal McLaughlin wants to make eating healthy easier.

"I can help by putting tools like this in your hands," he said, referring to Sodexo's "Balance Mind, Body and Soul" campaign Web site. In addition, nutrition information signs are now also posted at each food station in Baker.

Lengel said that, although she finds Sodexo's nutrition information helpful, she would like to see other changes. "Little things, like serving potatoes dry, would be a big improvement," she said. "The potatoes served are often saturated in butter."

According to McLaughlin, Sodexo is actively trying to reduce fats and cholesterol in the food served by using fat-free cooking sprays, skim milk in cream sauces and light dressings for marinades.

Although Baker now offers an organic line full of fresh organic fruits, vegetables and grains, McLaughlin said students are not taking advantage of it. "The line was put in use because of student requests and national trends," he said.

As to why the line isn't being used, he said, "I think the location might be a factor, or the fact that it's primarily a raw veggie bar," he said.

Still, McLaughlin is pleased by the progress being made. "We have come light years," he said. "In the old days, there were no choices. We now have nine stations and 31 beverage choices."

He said students should have no problem putting together healthy meals in Baker, especially now that nutrition information is readily available.

Last semester, Men's Fitness magazine surveyed 10,000 college students in an attempt to find the nation's "fittest" school. The magazine looked at weight gained during college as well as healthy habits promoted by each school. The top colleges and universities provided healthy meal programs and easy access to fitness education, both available on Sodexo's Web site. Many of the "fittest" schools required that students complete gym classes, something Juniata does not do.

The "Balance Mind, Body and Soul" campaign has been around since the beginning of the fall semester, but McLaughlin said much of the Juniata campus is unaware such resources are available. He hopes to have a computer set up in Baker in the near future to allow students to access nutrition information as they eat, and to bring more awareness to the campaign.

Roving Reporter

How do the eating habits of JC students affect their health?

"The diet in baker is sometimes extremely starchy and that can affect your health. The new nutrition facts help, but the cholesterol and starches can definitely make you gain weight."
– Jaime Dull, senior

"I think that at this stage of life everyone is so worried about their physical image that it affects what they eat. We also deal with a lot stress, which can affect what we eat and how we eat." – Joe McDermott, junior

"Eating poorly and sporadically makes people more susceptible to illness and generally makes people feel run down and lethargic, which can definitely give negative effects on study habits."
– Max Stem, senior

"At night, you get snacks that aren't good for you, and you get stuff from the few places in Huntingdon that are open late. This limited diet is not balanced and doesn't give the nutrients that your body needs."
– Lori Martin, senior

Internationally acclaimed peace trainer comes to Juniata

Brittany Moyer

Juniata students participated in a nonviolent action workshop led by an internationally acclaimed peace trainer, George Lakey, on March 25-26.

The workshop focused on nonviolent action campaign components, such as the importance of mobilizing support, generating creative ideas, working cooperatively and not losing faith or focus.

Lakey, is the executive director of Training for Change, a nonprofit organization that teaches tactics for achieving justice and peace.

A group of 30 Juniata students attended the workshop. Students from Professor Celia Cook-Huffman's "Nonviolence: Theory and Practice" class and the club PAX-O made up the group's majority.

Lakey conducted several simulations to emulate the way nonviolent actions apply to everyday life. In one exercise, students demonstrated nonviolent action methods to prevent their partners from harassing an imaginary dog.

Jen Irving, a student in Cook-Huffman's "Nonviolence" class, attended the workshop and was inspired by Lakey's message.

"It opened my eyes to a whole new side of nonviolent action and its applications," she said.

Irving was particularly moved by a video from the 2000 student-run movement in Serbia that used nonviolent action to overthrow the former Yugoslavian president, Slobodan Milosevic.

"It was amazing how people our age could make such a difference," she said. "It was inspiring."

The Serbian movement for democracy depended on peaceful protests, a broad coalition of political parties, nongovernmental organizations and the media. Many workshop attendees said they hope to use these same concepts in their future campaigns.

This was Lakey's third workshop at Juniata. Again, he was pleased with the student interest and pragmatism.

"I've experienced Juniata students as being very practical," he said after the workshop. "What I was seeing in people's eyes was interest in incorporating these nonviolent action methods, politically and personally, into daily life."

In his career, Lakey has facilitated over 1,500 workshops on five continents. According to Lakey and the Training for Change Web site, he has worked with coal miners, the homeless, prisoners, Russian lesbians and gays, Sri Lankan monks, Burmese guerrilla soldiers, striking steel workers, South African activists and others.

Getting lost in the shuffle

continued from page 1

low stakes games found around campus.

"We all get together and have a good time," he said. "It's very social, and we're all talking and cracking jokes on each other."

While exact figures on the presence of gambling at Juniata aren't known, Paul Fleisher, a senior who plays poker, said, "There is a huge poker ring of guys around this campus."

Patitsas does not consider poker to be gambling. "It is [a] game of strategy," he said. "People might think I am crazy, but if anyone really has any knowledge of the game…they would agree with me that it's not [gambling]."

"I think there is something to that," agreed Jack Barlow, professor of politics, though he added, "Obviously, chance plays a role." Barlow, who recommends poker to his pre-law advisees, said that card games in general are "good forms of mental training."

Barlow recommends the game "not for the sake of the gambling… but for the sake of the mental discipline [required to play]."

Dean of Students Kris Clarkson said that gambling at Juniata is "not a problem that would make my top fifty."

But he added, "Online [gambling] is a little different." You may develop an "addiction to it… [that] can ruin your life," he said.

Clarkson is also concerned about student athletes who participated in March Madness polls. He stated that the NCAA has a "pretty rigid standard."

"My guess is there's a fair number of [violations]," he said.

The NCAA strictly forbids intercollegiate athletes from gambling - in any way - on amateur and professional sporting events.

Ricky, a sophomore business POE and Juniata athlete, plays online poker tournaments instead of the live games on campus. "You can't find live games with high [enough] stakes," he said.

In addition to playing online poker, Ricky is also betting on individual basketball games during the NCAA tournament. He also bet on football games during the fall. "It's a lot harder to make money," Ricky said of the football games. "It [takes] a lot more luck than playing poker."

Ricky also reported that he recently had a "pretty good run" playing online poker. He played for six hours a day for nearly three weeks, walking away with over $3,000.

"I put $2,000 in my bank and took $600 to bet on March Madness games. So even if I lose," he continued, "it's not really like I lost."

Ricky said that his parents are aware of his online gambling.

"They saw the money going into my bank account," he said. "At first they were kind of worried, but my grades have been good."

Some students who have gambled online have not been as fortunate as Ricky.

In his freshman and sophomore years, Paul Fleischer, a senior who plays poker an average of two nights a week on or around campus, saw students suffer from gambling habits.

"Some of the kids that were in our original crew…have lost thousands of dollars," he said.

Fleischer said that they became "addicted" to gambling and started using their money to go to Las Vegas and Atlantic City. According to Fleischer, this process so spiraled out of control for some students that nobody wanted to play with them any more.

"It put them into bad situations with their parents, their friends [and] they had to start borrowing money [to cover expenses]," said Fleischer.

Of the few people he knows who nearly or actually have failed out of school because of online gambling habits, Fleischer said, "It affects their grades; it affects everything. Winning and losing, that's the nature of the beast."

Assistant Dean of Students Dan Cook-Huffman stated that the school cannot be liable for the debt that a student may incur by gambling online. Cook-Huffman does believe, however, that the school has a moral obligation to ensure help to any student who is suffering from the consequences of gambling.

"A student who is in such trouble - or knows someone who is - can definitely contact our office for help," he said. "We can help arrange counseling or other support a student may need to address such a problem."

For Fleischer, as with Patitsas, it is not so much about winning money as the time spent with friends. Recently, he participated in a March Madness pool with twenty or so of his friends. The entry fee was only five dollars.

The Clarkson family, too, is participating in their own brand of March Madness betting. "The winner gets to pick dinner of their choice," said Kris Clarkson. He recalled eating boiled hotdogs and mashed potatoes when his son won the pool a few years ago. "If I win," Clarkson joked, "I'm going to have liver and onions and brussels sprouts."

Free printing an issue

continued from page 2

Juniata charging for printing in the future, but it is always being discussed."

If charging does become a more apparent solution to the abuse of paper waste on campus, Yelnosky said there are many different models Juniata can follow to resolve the issue.

Woodling said, "It is something to be said, putting a price on printing. Penn State Harrisburg has an allowance for so many print pages per semester. If students go over their allowances, they make up the difference. If Juniata does decide to charge for printing they may go somewhere along those lines."

Many students may not realize that during a student's entire college career, his or her number of printed pages is recorded by a computer program.

With the tuition increase, some students are against any sort of printing charge.

Freshman Erica Bennett said, "We are already paying a lot to go here. It makes me wonder where all our money really goes when we pay tuition bills."

Free printing is a privilege and a responsibility for Juniatians. If the latter is missing, the former may soon be as well.

Staff evaluation process

continued from page 1

faculty evaluation process. The second slice, called "professional development," is based on forms completed by a professor's department peers. The last two wedges are surveys in service and advising. All the information from all the surveys, both good and bad, is then compiled into a PEC summative report based on the facts and subjective data from the surveys.

"We certainly hope for high return rate because it gives high validity," said Rhodes. "It's not wasted energy because it's very important.

"I think staff evaluations would be a good idea."
- Lori Martin, senior

"If a student doesn't think that their opinion is being read, they're very wrong," he said.

Student opinions about faculty can help make or break a professor's tenure or termination.

But what about student opinions about staff members? Are student persepctives taken into account in a similar way to evaluate, rehire or fire staff?

"You'd be in trouble if not," said Dean of Students Kris Clarkson. Student opinion is taken into account, he said, but not in the same way as it is in faculty assessments.

"We use different tools and vehicles of evaluation," he said.

Student opinions of staff reach Clarkson and other supervisors of service departments through the Juniata grapevine. If students complain about or praise a staff member, odds are that their student service department's direct supervisor will eventually hear about it, and it goes into the mix.

"It's a pipeline process," said James Lakso, provost and vice president for student development. "There's not any systematic way of gathering student opinion."

Staff members are evaluated, but there is no equivalent to the faculty evaluation form for staff. Student surveys – which make up a majority of professor evaluations – are a small sliver of staff evaluations percent-wise. The main ingredients in staff assessments are mid and end-of-the-year evaluations that vary by department. Staff members prepare a self-evaluation and are evaluated by their supervisors. They also have regular meetings with their supervisors.

"What we're really looking for is what went well, what didn't, and what we're going to do about it," said Clarkson.

According to Clarkson, there are times and situations when student taste is measured into the mix through senior surveys, student feedback surveys, exit interviews or other means, but to a large extent, staff are only evaluated based on performance and objectives.

"There isn't a setting where you ask everyone in housing to evaluate someone like Tim [Launtz, director of residential life]," he said. "But if you got prevailing complaints, that would come back to the staff director."

Clarkson said that supervisors who are in regular daily contact with students are in a better position to evaluate using anecdotal evidence.

However, student opinion is not a quantified slice of the evaluation pie.

"The culture at Juniata College for the most part is being mindful of student needs, and for the most part that's taken very seriously," said Lakso. "When it isn't, students aren't afraid to complain."

But lack of staff evaluations is beginning to leave a bad taste in some students' mouths.

Senior Kevin Fasick definitely thinks students should directly measure into the staff evaluation mix.

"They have such a huge influence over our experience at Juniata that not only should we have the ability to evaluate them, but we should directly be able to say whether or not they are doing their job," he said.

Senior Lori Martin agrees. As president of the Students of Business club, she has extensive contact with departments like the Office of Student Activities.

"I think staff evaluations would be a good idea," she said. "It may be hard to implement because not all students interact with the same staff members, but evaluations would help the administration make better decisions about promotions and increase the helpfulness of college staff."

Lakso agrees that staff evaluations would be beneficial, but right now, they are not an essential part of the mix.

"There are some areas where they would be good, but there is nothing that requires or mandates them," he said.

Plus, staff evaluations, like Martin said, would be hard to implement because of the diverse nature of student service groups. Where Campus Ministry feeds your soul, Campus Technology Services nourishes your Dell. Judging effectiveness by one blanket set of standards could be an issue.

For the time being, the evaluation processes for faculty and staff are different, but Clarkson still urges students to use their voices, even if a systematic way of doing it doesn't exist for staff.

"We want you to be questioning and challenging," he said. "Be vocal and engaged and active."

A full organizational chart of College departments, and who supervises each one, is available in the "Institutional Research" section of the Outlook public folders.

Unfair gap exists in evaluation surveys

EDITORIAL

Faculty evaluation surveys hit students' inboxes this week as they do at the end of each semester. Where, though, are the evaluations of the others who affect student life, the student service departments on this campus? As reported in this issue of the Juniatian [PAGE 1], students do not have nearly as much official input to who runs campus life as they do to who runs the classrooms.

Student input needs to be a measurable and systematic part of the evaluation process for the staff and organizations that have significant roles in student life. This type of input would be fair and beneficial to both the student body and to the College's student services themselves. Rather than only hearing the statements of the most vocal individuals, true patterns could be observed in student opinion through formal evaluations.

The precedent is set with faculty evaluations. Students, overall, make up at least half of a faculty member's assessment, but college is not all about the classroom. Student surveys are a negligible percentage of student services assessment. While student services do evaluate themselves, it seems that the College is not actively pursuing the opinions of its main audience: the students.

Evaluation on criteria like approachability, openness to student concerns, fairness and overall performance become especially important for recent hires and programs undergoing rapid growth.

For example, the Office of Student Activities (OSA) has changed dramatically in the past two years since the appointment of Staci Weber as director. The OSA's physical move to a larger office area symbolizes its programmatic expansion with initiatives like the Leadership Series, Leaders in Motion and First-Year Mentor Program. Significant changes in Student Government and JAB have happened alongside the OSA, such as the budget allocation process, coffeehouse and concert events.

It is no secret that many on campus have been critical of some programs and actions that fall under this new OSA. However, a true student survey, like the faculty evaluations, would give accurate feedback to the patterns of student opinion.

Weber and the OSA undergo regular assessments with College administration, as do all student services, but student input is measured through perceived opinions, the Juniata grapevine. This is not enough, not just for OSA but for all organizations that directly affect student life. Change is essential for any institution, and effective change takes time and careful evaluation along the way from those who the change affects.

The OSA and Weber have direct influence on Student Government, JAB and all student clubs. Almost ninety student organizations and hundreds of student leaders fall under the OSA's authority, not to mention the total 1,449 students those organizations represent.

Furthermore, the OSA's influence extends to the entire Juniata community. Many of our most beloved traditions fall under the scope of JAB, such as Mountain Day, Springfest and All Class Night.

True patterns of dissatisfaction could be easily observed in formal evaluations.

Tonight, a group of students will independently perform a second All Class Night apart from JAB. They organized this revision in part out of frustration after OSA and JAB heavily censored this year's official All Class Night.

There is no question that administrators would discontented rumblings through the rumor mill, and this second All Class Night is certainly a larger statement than a simple piece of paperwork. But a more accessible evaluation process is needed in addition to the vocal, active students.

The same grapevine that reaches College administrators tells the Juniatian editors that students are dissatisfied with some of the Resident Directors on campus. How can we know the real trend, though, and reasons for dissatisfaction, if there is no formal evaluation from the students living in dorms?

Residential Life and OSA are obvious areas where student interest overlaps with the functions of the College outside the classroom. For over one-third of the student body, though, there is another: athletics.

Athletics play a pivotal role in the life of many students, not only determining who starts and who rides the pine, but also limiting a student-athlete's ability to schedule and take a wider course load.

Students and players, whose academic and social progress are influenced by involvement with the athletic staff, should be able to provide input for administrative evaluations on a yearly basis. Students not playing sports should also be able to comment on the effectiveness of the athletic staff. The athletic department and its teams are playing a role in forming each student's memory of Juniata and public opinion of the institution.

Success is very subjective in departments like athletics because a grace period must be granted for coaches to become established and have an opportunity their individual program to their ideals. Counting wins and losses alone may not be a fair assessment because the new staff hasn't had the proper time to gel or recruit players. But also no assessment can truly be deemed fair without feedback from the most influenced group: the students.

Unlike faculty evaluations, each department, from athletics to OSA and the rest, has its own mission and performs different services for the student community. Therefore, each should have department-specific evaluations available to students.

Most student services on this campus report to Dean of Students Kris Clarkson and Provost James Lakso. Each department has its own head, of course:

- Office of Student Activities, Staci Weber
- Residential Life, Tim Launtz
- Athletics, Larry Bock
- Office of Diversity and Inclusion, Rosalie Rodriguez
- Campus Ministries, Dave Witkovsky
- Registrar's Office, Athena Frederick
- Career Services, Darwin Kysor
- Safety & Security, Rocco Panosetti

Currently, the only real option for voicing student opinion is to contact these individuals directly.

Perhaps student evaluations of influential staff will one day become reality. In the meantime, we urge students: speak up. Speak up loudly. Use the grapevine to your advantage. Right now, that seems to be the only way administrators will get the message.

Race and workshops

Some diversity events succeed where others have failed to make the grade

Emily Eller

The diversity workshop "Blue Eyes/Brown Eyes" sparked the most honest, public discussion on race that I have heard since I arrived at Juniata.

I was hesitant to attend the workshop. The last racial awareness event I went to was called "It's OK to be White" and left me feeling like it was not okay to be white. I appreciated the irony, but not the lecture.

After leaving "Blue Eyes/Brown Eyes," I felt good. I felt like it was ok to be white and good to talk about race, which naturally left me wondering: What made one event so good when another failed so miserably?

I think there were two major differences between the two events: focus and methods.

First, focus.

Juniata College is a predominately white institution. Acknowledging or not acknowledging this has a huge impact on how receptive students are to the conversation.

The OK event was primarily focused on understanding the minority experience. Brown Blue repeatedly emphasized the importance of white people in the dialogue on race and the ways that they can have a positive impact on racial equality.

Also, the presenter at Blue Brown was white. The truth is that Juniata students are used to being taught by white faculty. Asking students to converse honestly under the supervision of a non-white lecturer makes already nervous white students even more nervous.

Ideally, Juniata would have a much more mixed faculty and students would be used to hearing lectures from non-white professors. So naturally, having discussions led by nonwhite discussion leaders would be devoid of anxiety. But, for now, they are not, and ignoring this fact hinders the flow of dialogue.

Minority students are repeatedly asked to speak for all people who belong to their racial groups.

In this same vein, it's important to recognize how nervous white students are to talk about race.

It may seem backward to tailor a discussion about race toward white students. But, if we want open dialogue, there must be an examination of the category "white." Without the participation of individuals in that group, the discussion can never progress.

Much is asked of non-white students. On top of having to live and study in a place where they are in the extreme minority, they are repeatedly asked to speak for all people who belong to the same racial groups as themselves. Considering the enormous contribution that non-white students make to the discussion of race on campus, does it seem unreasonable that white students should be asked to contribute something as well?

More racial awareness workshops should be focused on white students and their experiences and responsibilities as a majority in the United States.

Now on to our second concern - methods.

The OK speaker began the presentation by talking about the history of racism in the United States.

By beginning the event with a history lesson, he ensured that the discussion would be framed in its historical context. This can be a useful way to frame a discussion, but it is not productive if you want people to share their personal feelings. Those feelings can easily be colored by a very specific framework for their experiences.

The discussion was disjointed and many students did not feel comfortable sharing because their experiences didn't fit what the lecturer had just taught as the racial experience of our country. Students began the discussion after already being "called out" as belonging to historical racial categories.

Blue/Brown, on the other hand, began the event by giving the participants a common experience which diverged greatly from

Letter to the Editor

Physics does have a female employee

The recent Juniatian printed an erroneous statement pertaining to the Physics Department (vol 87, issue 9, page 6, highlighted box in "Gender, academics and the future" article). It listed Physics as a department that is "composed on (sic) only male instructors and professors." This is incorrect – Mary Atchley is in her second year as an instructor in the department, and I might add, plays a vital and indispensable roll (Editors' note: sic) in both our educational and pedagogical mission. Any student who has taken Physics Lab (PC 206 or PC 207) would have recognized this oversight. Please either include this note as a "letter to the editor" in the subsequent edition, or, at the very least, as part of a retraction.

James D. Borgardt
Associate Professor of Physics

Editors' Note: While many adjunct instructors play a vital role in student life, we calculated gender ratios for the article in question based on the official list of full-time faculty available from the Provost's Office. Adjunct instructors are not considered full-time faculty.

Presidential Perspective

President Kepple wants to hear from you! His column will appear each issue this semester to answer any college-related question from the campus community. Simply e-mail questions to juniatian@juniata.edu. Editors will compile questions and forward them anonymously to Dr. Kepple.

"What specific upgrades and expansions can we make to the Fitness Center in Kennedy to benefit our sports teams and students who use gym facilities for workouts? It seems like the Fitness Center is overcrowded much of the time."

This is a very nice problem! Juniata is a healthy community that is highly motivated to be fit, strong and well. We average over 400 usages per day in the Fitness Center throughout the academic year. We do know that during peak times of operation, from January until early March in the early weekday afternoons, the fitness facilities are at their busiest, and there are some waiting times for some individuals and some teams at some stations. But our Fitness Center management is very comfortable with the situation even at those peak times. There are certainly many total hours of operation, racks, weights, machines and benches at the Fitness Center.

Juniata also employs a full-time certified strength & conditioning professional, which is remarkable for a school our size. We have dedicated more than 7,000 square feet to our fitness operation, and that is also significantly beyond the norm for NCAA Division III institutions. There are ongoing discussions about adding cardio equipment to auxiliary areas of the Sports Center or in residence hall spaces. Two additional platforms for Olympic lifts should also be in place by the fall. In the meantime, students will always see less crowding during the spring and fall and outside of the winter 4:00 - 6:00 weekday time slots.

"Student teachers are allowed to stay on campus over breaks at no charge, yet international students must pay $20 per day for the same accommodations. Why the discrepancy?"

There are many reasons why we need to restrict the number of individuals permitted to stay in residence during scheduled breaks – primarily safety and security, i.e. no residential staff to respond to emergencies, securing the buildings/keeping doors locked is more difficult with larger numbers, fire safety and health codes related to food preparation, etc. The $20/day fee is a way of accommodating special circumstances but discouraging frivolous requests. Student teachers are involved in a college-sponsored academic program, which requires participation throughout our scheduled spring break.

Are we living in a canned culture?

Mary Gardiner

Surprise, surprise: I've found myself caught in another hot issue. In class, we were discussing the means with which the Roma, more often known incorrectly as Gypsies, should express and maintain their unique culture.

I am entangled in a big question: How should a culture preserve itself? Or, perhaps, should a culture work to preserve itself in the first place?

I've seen quite a few of the United Nations Educational, Scientific and Cultural Organization (UNESCO) Heritage sites - which include the Pyramids, Stonehenge, the Vatican and the Church at Wittenberg - all of which are preserved and kept by the U.N. Committee.

Some of this cultural preservation is necessary. For instance, UNESCO's World Heritage Committee was created to protect places like the Egyptian Abu Simbel temple, which was in danger of submersion under the Nile River after the construction of a dam. Had the organization not raised 80 million dollars, the 3,300-year-old temple would have decayed under a lake.

But how far is too far?

Last October, UNESCO adopted the Convention on Cultural Diversity (CCD) in an attempt to protect the world's cultural richness, as it is being called, and prevent global cultural goods from becoming simple commodities.

For a good example of cultural heritage becoming pure commodity, consider Kraft Parmesan cheese. The cheese name comes from the French version of the original, now-protected Italian Parmigiano Reggiano. The Kraft corporation could come under fire and be asked to change it's parmesan product's name.

Even more bravely, the European Union (E.U.) has gone as far as prohibiting the sale of products under certain names. If the product isn't made according to the traditional specifications that it gets its name from, it must be relabeled. That means: bologna becomes "lunch meat," mozzarella becomes "pizza cheese," Chablis becomes "light wine" and Dijon mustard becomes "spicy mustard."

However, cultural goods aren't limited to food - think Enya-style Celtic music, pashmina and cashmere scarves. Think babushkas. These items are all protected by law.

I believe that a culture is a free entity, composed of whatever society makes it up to be

I had quite a few encounters with imitation "cultural goods" during my recent trip to Egypt. Everywhere in Egypt, people sell machine-made, tacky Tutankhamen prints on papyrus paper. Sadly, papyrus, once a significant cultural tool, crucial in the development of a written language, is now mass-produced for tourists.

All of these goods have both an economic and a cultural component. Can we separate the two? Or are we left sacrificing one for the other?

For another example, consider the King of Beers, Budweiser. You might not know that the Anheuser-Busch brand gets its name from a Czech town, České Budějovice. Local German speakers, who couldn't pronounce the Czech name, called the town Budweis. Hence, the beer that was made by Budweis citizens, since 1265, was called Budweiser. Over 600 years later, Mr. Adolphus Busch and Mr. Eberhard Anheuser decide to name their new beer Budweiser, milking off the reputation of the old Czech beer.

So, the question that the CCD and E.U. want to answer is: Should the 750-year-old Czech brewery change its name because Anheuser-Busch has a lot of money and because Americans don't want to call Bud anything but Bud? Or should we protect the Czech beer's rights to the name Budweiser because it's historic?

Or should those crazy Europeans just shove it?

I believe that culture is a free entity, composed of whatever society makes it up to be. Governments that force certain cultural ideals onto their people are… well, China and Iran.

I suppose a convoluted version of Heisenberg's Principle applies here: you can't "preserve" the culture of a society and let it continue to evolve at the same time. Cultures change. America's culture has changed drastically in the past ten years alone.

After all, Pilsner beer, hailing from Plzeň, close to České Budějovice, wasn't created until the 19th century because the brewers in Plzeň kept making bad beer. It was experimental, free change that allowed the birth of that yummy stuff that we know and love today.

It's obvious that we can't let significant historic monuments rot. But there's a point at which preservation crosses the line, disallowing a culture's evolution.

Plus, what else would we call Kraft Parmesan Cheese?

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Studio Arts program gets a facelift

Students can expect new faculty, new facilities, new classes and a new POE

Jessica Perry

It's the end of an era. The studio arts program is finally receiving a much needed facelift. By the end of next year, Juniata students can expect the studio arts program to have a new full-time faculty member, new facilities, new classes and an updated POE.

As reported in the Dec. 8 Juniatian, world renowned artist and ceramics instructor Jack Troy will retire at the end of this year. According to the art department chair, Dr. Karen Rosell, the department realizes that Troy is irreplaceable. However, she says the art department sees the retirement of Troy as an "opportunity to replace a legend…to find someone who can step in and do just as great a job."

Selecting the final three candidates from the over 100 applicants was a long and difficult process that started back in January.

Members of the art department weren't just looking for someone to fill the job requirements. According to Rosell, they wanted a person that would have "energy, enthusiasm, the ability to relate well to students, to excite them, and turn them on to new ways of thinking about art."

The final three candidates who met these requirements were invited to Juniata to teach a ceramics class and then give a visual presentation. According to Troy, this gave the department the opportunity to discover whether the candidates had "that intangible factor, that kind of chemistry that should develop between the presenter and students."

To evaluate the ability of the candidates to connect with Juniatians, students in ceramics and painting classes were expected to attend each presentation and provide feedback. Both Troy and Rosell explained that student opinions would be regarded just as highly as other factors when it came time to make the final decision.

According to Provost Lakso, an offer was extended to one of the candidates the week of March 27. At press time, he was still awaiting a response.

Much is expected of the new faculty member, who both Rosell and Troy hope will help to bring about many positive changes.

Unlike Troy, the new studio arts professor will be full time. This means a Ceramics, 3-D Design and Sculpture class would now be available every semester.

Hannah Rauterkus / Juniatian

This untitled Anagama – wood-fired stoneware, by Brosi Bradley – is one of many featured pieces at this year's student exhibit which highlights the re-emergence of 3-D art as a primary medium at Juniata.

Rosell also added that having another full time faculty in the studio arts program, along with Professor Bruce Erikson, should make it possible to develop a stronger Studio Arts POE.

One of the greatest responsibilities expected of the new member of the faculty is providing input for the design of new studio art facilities.

As reported in the Feb. 9 Juniatian, there are plans to move the ceramics studio, better known as the "pot shop" to the third floor of BAC.

According to Lakso, those plans are still in place, but have been delayed a semester. He explained the reason for the delay was because "they wanted the new professor to have significant say in how the new area will be designed."

As a result, the plans for the move will take place beginning in the fall of 2006 when the new faculty member starts.

Both Troy and Rosell agree that a thriving studio arts program is central to a liberal arts education.

Troy explained that the studio arts "allow people to feel comfortable with that original part of themselves… to express themselves in a totally different language."

In spite of losing Troy, the art department has hopes that with the new professor and his or her new vision, positive changes can be made in the studio arts program.

Troy explained, "I never had aspirations of continuing a legacy. I believe when the door opens, it opens as wide as possible. The person coming in is going to shape the program."

Those Guys in that concert (again)

A capella group holds concert to benefit southern school

Ryan Conrad

If you enjoy traditional choir music, the Beatles and the song "Gangsta's Paradise," you will want to mark your calendars for April 9.

Those Guys, a male a cappella group composed of 12 Juniata men, will perform a benefit concert on April 9. Last fall, Those Guys' benefit concert raised over $1,000 for Hancock Elementary School in Kiln, Mississippi, an area affected by Hurricane Katrina.

The a cappella group has great hopes for this year's upcoming event.

Senior member Shane Fuhrman said his hope for the show is to "walk out on stage and see the house full."

In fact, the concert might be the last chance to see Those Guys perform. With the group losing six seniors this May, its future is in question. According to Fuhrman, "a lot of what happens [next] will depend on this concert."

Fuhrman sais that the group has come far in the last three and a half years since first uniting to "solely blow off steam."

The group originally formed as a hobby. However, the members soon put their talented voices to work. The original eight member group started to perform the National Anthem at athletic events and its popularity soon grew. After recruiting four additional members, the group performed at Altoona Curve games, campus events and the Huntingdon Presbyterian Church.

"This is not a class; it is personal commitment," said sophomore member Ken Tomlinson.

Ken Shibuya, head men's volleyball coach, suggested to Those Guys that they hold a benefit concert after hearing the group's performance of the National Anthem at sporting events.

Fuhrman said the group "never thought we could get a concert to the fill the house."

Shibuya disagreed with Fuhrman's claim, and eventually Those Guys decided to hold a concert last fall.

In this year's concert, Those Guys will perform for an hour and half, featuring a 17 set song list of music from all genres. Sophomore Adam Stanley pointed out the group's fun nature, saying that "the last four or five songs are ridiculous; it is us acting as idiots."

Support for the group from the campus and community has been strong. Fuhrman claimed that "this group has been formed because of the community support." In addition to Shibuya's words of support, the Student Alumni Office has helped Those Guys in a variety ways, including purchasing music.

Audiences at the April 9 concert will be contributing to a charitable cause along with supporting the group. The raised money will once again benefit the elementary school in Mississippi.

The concert starts at 7:30 p.m. in Rosenberger Auditorium. Admission is $3 with a student ID and $5 for general admission. Tickets can be purchased at the information desk in Ellis Hall or at the door.

Those Guys' posters sum it up: "100 % satisfaction guarantee… We always leave our customers satisfied."

France funding Juniata College French film festival

James Trent

Juniata College is in the midst of a type of International Film Festival new to campus - a French one. And students are enjoying this new entertainment.

"I thought it was just great," said Angela Tribus, a freshman. "I was really glad to have the opportunity to see it," she added.

Tribus and other satisfied students owe their entertainment to Associate Professor of French Michael Henderson. In order to fund the festival, Henderson applied for a grant from the French Ministry of Foreign Affairs. The Ministry, through the French American Culture Exchange (FACE), presents the grants to small campuses in an effort to vitalize interest in French cinema.

"The French government takes the responsibility to protect and disseminate French culture," said Henderson.

Three movies have been presented thus far.

The most recent film, "Grand Voyage," showed a thought-provoking perspective of the Muslim youth in France. It emphasized the alienation of the youth from both their parents and society as a whole.

The protagonist, a son of a Moroccan immigrant, speaks French the entire movie, as his father speaks Moroccan Arabic. Communication between the two is difficult, if not impossible, during their pilgrimage to Mecca.

"The movie displayed the problem very well," said Zineb Gormat, a senior from Morocco. She continued, "[The youth] feel totally alien; they don't identify themselves with their heritage, especially with Islam."

Not all of the films shown featured dramatic subjects. The movies, specifically chosen by Henderson, vary in popularity in order to appeal to broad audiences. "Les Choristes," for example was the largest French box-office hit of 2004.

"These are popular films," said Henderson. But "not all French go to movies and then sit around at a cafe drinking coffee and talk-

Fashion: *onto the streets*

Lucia

It is hard to tell by the ever-changing weather, but at last spring is truly here. It really is - there are even flowers blooming on campus. So, without anymore delay, let's make way for spring fashion in all its high sea and high stepping glory.

A sailor went to sea to see what he could see. And what did he bring back? Well, let me just say "Hello gorgeous" to new hemlines, wedges, platforms, sailor stripes and more. The spring items are hiking up the skirts, giving height to the less fortunate and taking a look out to sea.

The sailor stripes are not only being seen on the runways, ladies, but also in your local stores. From the outrageous Emporio Armani to the shelves of the reasonably priced H&M, you can find this style. For those who do not know, H&M is a European store that has recently migrated to the United States, and take my word for it, it's amazing. This spring fling is an ultimate must because it is easily dressed up or down. It can slim a figure or add curves to the less curvaceous. So, add this item to your shopping cart and let's proceed.

Another hot item strutting down the runway is wedges and all types of platforms. This shoe has been seen on the irresistible Jessica Simpson and plenty other stylish celebs.

There is a certain magic about platforms. Women who are vertically challenged can add a few inches when they slip on this shoe. In other words, platforms equal instant height. And those who have height advantage can add killer mileage to their already elongated bodies. So it's a win/win situation for both types of women. Another key for these types of shoes is that you can

Movie Review: "V for Vendetta"

The mask is the least of the movie's problems

Holly B. Brown

I can remember when I first saw the trailer for "V for Vendetta." I thought: "Oooh... stylish, and edgy, with Natalie Portman and a dystopian setting! But, can I ever get over that mask?"

As it turns out, the mask is the least of the movie's problems.

"V for Vendetta" is a futuristic dystopian film set in London and full of the Wachowski Brothers' ("The Matrix") style. The film was directed by James McTeigue from a screenplay by the Wachowskis, adapted from the original graphic novel by Alan Moore.

The plot and history are incredibly complex, with many twists and turns, but I'll do my best at a summary. First of all, Fawkes was a 16th century would-be revolutionary who tried to overthrow the Catholic rulers of England by blowing up Parliament. He was caught and executed, and the British celebrate Guy Fawkes Night (don't ask me why they named the day after the bad guy…) every November 5.

"V," the masked "hero," wears a Fawkes mask because of deformities he suffered from medical testing at the hands of the new "1984"/Nazi Germany-ish government. His plan is to uncover the lies of his government and bring the people of Britain together by blowing up the Parliament building, a symbol of the unjust government. He does this with the help of his recruited revolutionary, Evey (Natalie Portman) and lots of cool knives.

Now, the realm of the dystopia, be it novel or movie, is one of my favorite genres. "1984" is one of my top five novels of all time. The methods and ideologies of a controlling power structure unveil the most hidden things about human nature, whether it be base and animalistic, or passionate and unbreakable.

And I suppose that's one of my main problems with "V." The pieces are there, but the government doesn't seem too evil or omnipresent, and the passion and suffering of the oppressed was fairly muted. Portman, God help her, attempts to straddle an awkward line between an everyday woman and someone pushed to be a violent revolutionary. It doesn't work very well.

Evey's opening scene sets the awkward tone of the film. V has just used his kung-fu moves to save her from the crude hands of some lesser government officials. He spouts into a long diatribe about who he is and what he stands for in a rehearsed speech using words starting with "v" a lot. Portman, looking nonplussed despite the fact that she was just nearly molested and is now being monologued to death by a man in a mask and cape, deadpans: "Are you a crazy person or something?" Is this supposed to be funny? Realistic? I couldn't figure it out through the entire film. Let me know if you have any luck.

Portman deadpans her way through "V" just as she did in "Star Wars." I really want to like her. You can't deny a movie like "The Professional." But her clumsy blundering destroys what could have been subtle, meaningful scenes, and her casualness takes important weight away from the struggles.

Hugo Weaving ("The Matrix") does an admirable job as the voice of V and creates a character more whimsical and human than we're used to our "superheroes" being.

Stephen Rea is brilliant, as he always is, as a government official investigating V and eventually coming into his own integrity. Rea seems to be the only one who truly brings the sadness and weight of the story fully to the screen.

It was obvious that the film was pieced together from another, perhaps better, source and not meant to be one continuous, two-hour film. The way the scenes jumped around, focused on different characters and lacked consistent emotional tone made the difficulties the Wachowskis and McTeigue had in translating "V" to the screen very obvious.

Plot and structure critiquing aside,"V" is a great visual pleaser. The cinematography is funky and artistic. And the fight scenes are pretty awesome, especially the last knife fight. Definite eye-candy.

I generally liked the film. I'm not disappointed that I saw it. It tells an interesting, if not crazy, story and brings up many parallels to our own government and time. Whether mine are valid critiques or random, sensationalized jabs is unclear to me. But I guess one of my fellow movie friends summed the film up perfectly by saying: "I didn't think it was bad; I was just disappointed because it could have been better."

"V for Vendetta" boasts powerful themes and a fascinating story but massive difficulties in storytelling. It is definitely worth seeing, but leave your red pen at home.

Global Threads

Hannah Rauterkus / Juniatian

On April 2 the Asian Sensations United, a new JC club, put on the Global Threads Fashion Show to raise money for the Pakistani Red Crescent Society, which provides vital aid to the victims devastated by the late 2005 Pakistani region earthquake. There were approximately 40 models wearing outfits from Vietnam, Korea, Bavaria, China, Japan, Ireland, Russia, Bangladesh, India, Africa, Guatemala and many more. Said Nuara Siddique (co-pres of ASU): "Everyone keeps coming up to me, saying how unbelievably fun the show was: the stunningly gorgeous and charismatic models, the awesome music and the amazing dancing. They want us to make Global Threads an annual event." The event was more than a success, raising almost $350 with 150+ students in attendance. Han Nguyen (co-pres of ASU) said, "We learned a lot this year about putting on a show: how to not kill each other and coordination between a large number of people; we almost failed at the former. Next year, Global Threads will be bigger and more stupendously beautiful." The group would like to extend a special thanks to Japanese Club, Chinese Club, an anonymous philanthropist, Facilities, Mohammed Jami, Jigar Patel and Jessica Nieves. More information about the Pakistani Red Crescent Society is available at www.prcs.org.pk.

Naked Truth: The bases

Rebecca

I was six when I had my first field experience in baseball. Four boys and four girls (me included) lined up in my neighbor's tree house. Each kid paired up with the member of the opposite sex closest to his or her age and waited for the opening pitch. The oldest pair at a mere ten years old explained that this was a game of bases and that each pair was going to go to different bases according to age. (For example, the youngest would go only to first and the oldest would go all the way home). And so, at so young an age, I watched a pair of kids go at it until they slid home.

For the record, when I was six, a home run was a French kiss. And that experience was like T-ball for me - it was hard to mess up first base when it was just holding hands.

I have not aspired to be Sue Johanson of "Talk Sex with Sue." (But who wouldn't want her for a grandmother? Can you even imagine what Christmas would be like?) Nor have I aimed at something similar since childhood. But I have noticed an interesting phenomenon through the years. The bases of sexual activity have evolved dramatically from kindergarten to college. And even girls who've never touched a ball (for sporting events, ladies and gentlemen) have probably taken a walk to first base.

The bases have been significantly refurbished, and it seems that, depending on who you talk to, there are some differing opinions about which base is WHAT. My findings have led me to believe that there are three popular definitions when it comes to the bases these days. Additionally, I've noticed that two bases keep the same meaning across these different ideas. First base and a home run are holding their own as staple points in sexual interaction. And the batting order is…

• French, above waist, fondling one another's Cracker Jack prizes with hands, sharing your Cracker Jack prizes

• French, Hands, Mouth, the Wave …

• The Four F's: French, getting a Feel for the field, Phalanges (I don't mean toes, but if you're into that…), the Fantastic pop fly

The Four F's is by far the most common of the three theories. I only have one problem with this. Where is the mouth action? You can't tell me it's not part of the game. In my opinion, it's a classic American pastime by itself. It's like chewing tobacco for baseball players. Most of them do it. Some spit and some swallow, but either way it makes them feel good.

In my human sex class, one group did a presentation on whether or not oral sex should be considered sex. In fact, when talking about the bases, the presenters mentioned that some people consider oral sex as past a home run! Then again, some refer to oral sex as an inside the park homerun. I don't care where number 69 is on the field...he'd just better be out there.

There is one big exception to these plans…skipping bases. We don't always go in the culturally accepted pattern. So, if you'd rather steal home and not spend time on third, I suggest you employ the ghost runner. This was a tactic I used when playing one on one baseball with my brother (no seriously, the real sport). Obviously you aren't done batting until you have three outs, therefore the one player must bat at least three times. Since I couldn't be on a base and at home plate to hit the next ball, I would tell my little brother that there was a ghost runner on the base in place of me. I think this could work for the alternative past time as well, for example: "Ghost runner on third!" Translation: I owe your bat one spit shine. Then again, many enjoy the view from third base, for extended periods of time. So the ghost runner is a "just in case" tactic.

And of course, people always have these fantasies…like hitting the cycle. This was introduced to me this past weekend by a male athlete. He thought it would be a hall of fame moment if in the span of one night he went to each base with a different girl. I would like to remind you people that this is a small campus. Think instant replay times 30…on Facebook.

Here's the problem with the bases: they can be briefly stopped at, they can be confusing and they can be held by ghost runners. If a girl says, "Let's go to third tonight," does she want you to admire her uniform or get it dirty? More importantly, there are a dozen different ways to get to first base (and who knows what you're doing when you get there!)

In the end, it doesn't really matter what third base is or even what first base is. The point is that when and if we hit home, we should be happy, proud and relieved to be *safe* (no one wants to get thrown out of the game for lack of equipment). Remember, if there's grass on the field wear a glove. And if you don't know the difference between the mound and the backstop…keep it in the dugouts, JC.

Fashion: off the runway and onto the streets

continued from page 10

wear them with jeans, a dress, shorts - basically anything. So naturally, like with stripes, you can dress them up or down for equally stunning results.

There are plenty more extraordinary accessories. This spring is going to make plastic fantastic. Plastic colorful headbands are all the rage. They will add a little hip retro aura to any outfit. Just be careful, because they will be overpriced. Don't be afraid to check out Target for good deals or even from peddlars in New York.

Here's a true story. I was shopping in Soho with my best friend over spring break. We walked into a store, absolutely adored the headbands, but found they were priced at $16. "Outrageous," I thought, but I actually got a tiny ping in my heart because I loved it so much. I passed this "deal" up, walked outside and, there on the street, found the same headband for five bucks. So, I think I can say with conviction that this season, spring fashion can literally be found on the streets.

French Film Festival

continued from page 9

ing about [them]." He further explained that American movies are extremely popular in France, which hints at similarity between the response to film in both cultures now and in the past.

"Before WWI, France was the epicenter of cinema," explained Eliza Ferguson, assistant professor of history. Now, taking a back seat to American movies, French cinema focuses on artistic or intellectual themes.

Henderson explained that "these movies are subsidized by the French Government" for development and production. They may be viewed at "les cinémas d'art et d'essai," or theaters specializing in such films.

In the U.S., such films are presented in large cities and college campuses. "College campuses are where these films are finding life," asserts Henderson.

Upcoming festival films include more colorful topics.

Showing April 9, "Le Placard," portrays an accountant who, fearing the loss of his job, spreads the rumor that he's homosexual so that his boss will be afraid to be sued for sexual discrimination.

Showing April 18, "L'Esquive," features the life of a band of teenagers in a neighborhood near Paris. Instead of focusing on the negative aspects of impoverished city life, the movie presents daily life and small pleasures of youth.

Both films will be shown at 7:00 p.m. in Neff Lecture Hall.

A Midsummer Night's Dream, Hallbritter April 19-30

Men's tennis serves up a record-breaking start

Kim Wagner

The Juniata men's tennis team is having a record-breaking season. The team is currently 10-1 after its match with Lycoming on April 3, and 4-0 in the conference. They have already broken the program's single season win record, set last season when the Eagles won six games.

"We are hoping to have a historical and memorable season," head coach Bobby Pennington said.

According to Pennington, the team's ultimate goal is to win the MAC.

Juniata is switching things up a bit this season. The team traveled to Hilton Head for a different atmosphere to conduct pre-season training. So far its training techniques are paying off. The team is carrying a heavier schedule this year as well, which hasn't been a problem for the Eagles.

The toughest match for the Eagles this year will be Messiah, a strong conference foe. Luckily, they have almost their whole season ahead of them to prepare for that match.

This year co-captains - Eicher, Walfish and junior Brandon Long - lead a deep team.

"[The team] has a lot of depth," Pennington said, "There are no superstars."

Four freshmen were added to the program this year, two of whom are in the starting line-up. Freshman Jon Skoner is currently number two in the line-up. He was named conference player of the week for the week of March 12 after he went a perfect 6-0 during the first three matches of the season.

"If it wasn't for the freshmen, we wouldn't be where we are today," said Walfish. "The future looks bright. We have high quality freshmen."

Hannah Rauterkus / Juniatian

Junior Jonathan Cohen and senior Robert Bowser warm up before doubles action began in a recent home match. The Eagles have dominated both doubles and singles contests this season, starting 10-1.

On March 24, the men traveled to Susquehanna for their conference opener. They dominated the Crusaders, 7-0. By winning six singles matches and all three double matches, the team beat last year's record of combined matches won. Eicher, Long, junior Jon Cohen, sophomore Brian Sykes, Skoner and freshman Ryan Navarro all earned wins in singles.

On March 27, Albright gave the Eagles their closest match of the season. The men succeeded with a 4-3 victory. Albright had won all three singles matches and had the Eagles stuck, but Juniata dug out of a 3-1 deficit to tie the match, 3-3. The deciding match came down to Long, who pulled out a 6-7, 7-5, 6-2 win in three matches.

Many of the Eagles' matches have been close, coming down to the last set of the match. But players build confidence for each other.

"We are a very supportive team," said Walfish.

On March 29, Juniata played another close match, winning 4-3 over Lebanon Valley. The team earned its points in the singles matches while the Dutchmen won the all double matches.

Down the stretch Skoner won on the third set tiebreaker 3-6, 6-2, 7-6 (9-7). And Long and Navarro also pulled off come-from-behind wins to help Juniata secure the win.

Juniata looks to build on its record-breaking season tomorrow at 3:30 versus PSU-Altoona.

Out with the old and in with the new

Records fall and look to be topped again

Corinne Barabas

Guns are not the only things exploding on the track and in the field this spring. The Juniata track team is off to a banging start as they produced several high finishes and showed solid performances at its opening meet at Susquehanna University.

Overall, the Eagles managed to shatter three school records at the fifteen-team meet.

The 4 x 100 relay record had been standing for six years until the team, composed of senior Meredith Troutman, sophomore Caitlin Hinson and freshmen Kelsey Buffenmeyer and Amy Reynold, ran a 50.67, crushing the old mark by almost 23 tenths of a second.

Senior Katey Glunt topped her previous school record in the 3,000 meter steeplechase (which requires hurdling water pits as well as barriers).

Hinson captured a second-place finish in the 100 meter dash as Troutman did in the 200 meter dash. Buffenmeyer had yet another exceptional day, taking first in the high jump.

Hinson stated, "We've been showing a lot of improvement in all aspects, on the field and the track. People have been breaking old records, which raises motivation to excel even more and look towards big results at MACs."

The women weren't the only ones breaking records. The men handed in several top performances, including a record of their own.

Chris Sheaffer and Justin Fritzius took turns breaking another school record.

"The [men's] 5,000 meter run was crazy," Fritzius said. "Chris and I were seeded about two seconds apart. He was put in the slower heat, which was run first and won it, breaking the current record with a time of 15:47. I ran in the second, faster heat and broke his new record with a time of 15:46. When we are able to run the 5K again, together later in the season, that record will definitely fall."

The 4 x 100 relay took gold with a time of 42.99. That was only the beginning of the first place finishes.

Matthew Booth posted two victories in the long and triple jumps. Randy Anderson won the 100 meter dash and sophomore thrower and Kyle Mazur took first in the javelin.

Freshman Tripp Rudolph and senior Adam Loser took third in the 800 meters and high jump, respectively.

On April 1, the Eagles traveled to the Western PA Championships at Carnegie Mellon in Pittsburgh. In a field of 15 teams, the men brought home a seventh place finish and the women beat half of the teams in their 16-team contest.

continued page 13

Eagles seek third national title

Katie Laucks

The men's volleyball team started April off right as it defeated New York University, 3-2, to claim the EIVA Division III title and earn an automatic berth into the Molten Division III Men's Invitational Volleyball Championship. The Eagles will look to claim their third consecutive championship in the tournament.

It almost seemed to be a bad April fool's joke as the men dropped the first two games to NYU. But Juniata came out as a different team in the third game.

The Eagles took game three and won game four with a close score of 34-32. The men took that momentum into the crucial fifth game. The Eagles had a little more fire power than the opposing team as they took game five and with it, the championship.

Juniata's fire power came from Nate Ocasio, who hammered home an impressive 32 kills and six blocks. For his efforts, he was named the tournament's Most Valuable Player.

Glen DeHaven had 19 kills, and Matt Fritz added 16 for the winners. Defensively the team was led by Casey Dale with 11 digs, and freshmen setter Matt Werle who dished out 61 assists.

Fritz and Jeremy Barndt joined Ocasio on the all-tournament team.

"We wanted that match, and I think coming back and fighting for it showed how much we really wanted to win," Dale said.

Prior to the championship match, the Eagles took on Vassar College. The men easily defeated its opponent, 3-0. Leading the way for the team was Barndt, who hit an outstanding .692 with 10 kills, and added a team high five blocks. Matt Springer also added 10 for the team and seven digs.

The team prepares to defend its Molten title at the Molten Division III National Championship at Steven's Institute of Technology on April 7 and 8.

Baseball drops first Commonwealth contest

J.R. Byer

After starting the Commonwealth Conference schedule with six straight wins, the Eagles dropped two and tied one with Widener. Their record in the conference is now 6-2-1 and 12-7-1 overall.

"One thing that we stressed is that one bad weekend doesn't change the identity of our team," head coach George Zanic said. "We were playing so well and anytime you go to Chester, it's a tough place to play. I think having the seniors that we do and the leadership that we do, we bounced back pretty well."

"After the losses, we turned around and beat a good team in Alvernia," sophomore Jay Enoch said. "We understand that everyone has a bad weekend here and there. It's just part of the game. We just have to make sure we play strong the rest of the way out."

Juniata jumped out to an early lead in its first game against Widener. The Eagles scored two in the first as sophomore Dan Kauffman drove home senior Dave Saintz for the first Eagles run. Senior Will Russell used a sacrifice fly to bring home Kauffman for the Blue and Gold's final run of the frame.

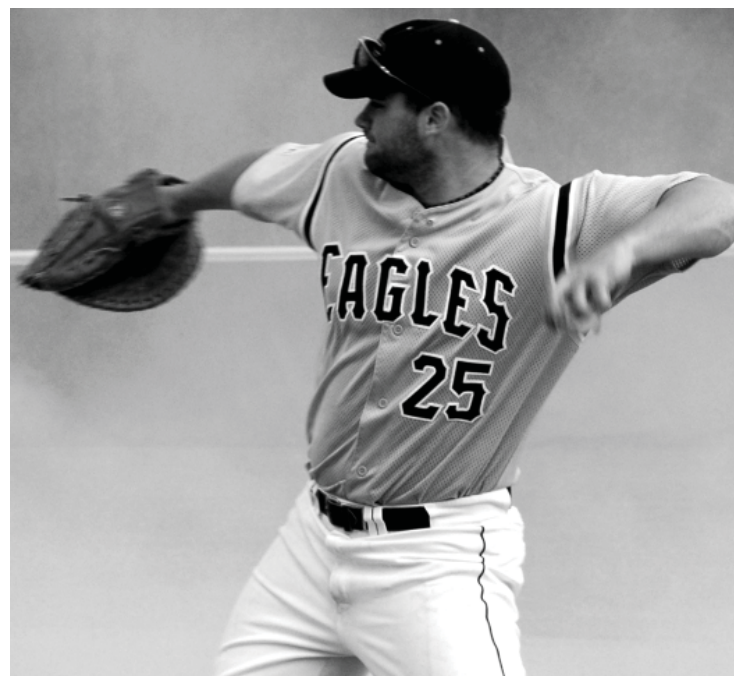
Juniata led 4-2 going into the bottom of the sixth before Widener scored four runs to go ahead, 6-4. The Eagles answered right back, tying the game in the top of the seventh with a sacrifice fly from senior Walt Goedkoop. An infield error by Widener allowed the final run of the contest to score. Due to darkness, the game was called after the ninth inning, tied at six.

The next day the Eagles dropped two contests to Widener, both by a score of 3-2. The Eagles were held to a combined seven hits in two games.

Juniata got a strong pitching performance in game one from senior Cody Zong, who went six innings, giving up two earned runs and scattering six hits. He also struck out five on the day. Juniata's two runs were driven in by Saintz and fellow senior Jesse Leonard.

In the second game, the Eagles got another strong pitching performance. This time it was from sophomore Andrew Snyder, who went 7 2/3 innings, allowing only two earned runs. He struck out six while allowing only six hits. Leonard had the lone RBI for the Eagles, when he drove in Goedkoop in the second inning.

"They threw pitchers that just beat us," Zanic said. "It was one error in each of the games that cost us the games or we could have won all three. They are a great team, 14-2 now, and hopefully we'll see them in May in the playoffs."



The Eagles bounced back from the Widener series with a non-conference win over Alvernia by the score of 10-8.

Dan Kauffman led the way offensively as he had two hits including his ninth home run of the year. Kauffman drove in three runs and scored twice for the Eagles. Senior catcher Zach Sternberg and sophomore Josh Lingenfelter each knocked in two runs for the Blue and Gold.

"Dan Kauffman, we're lucky to have him, he is the best power hitter in the league and around the bag at first base he is fantastic," said Zanic. "Dan's getting pitches to hit because of Walt, and if it wasn't for Walt hitting behind him, Dan would just walk every time."

Enoch picked up the win as he went seven innings and allowed seven runs, four earned. Enoch's record on the hill is now 4-0 with a 2.91 earned run average.

"Whenever Jay has the ball, we have a very good chance to win," Zanic said. "He's one of the top three pitchers in the league and his stuff is electric. If he were 6'2" he wouldn't be here; he'd be making money somewhere playing baseball. And he has a rubber arm. He always wants the ball and never wants to come out which is the kind of guy you want."

Hannah Rauterkus / Juniatian

First baseman, Dan Kauffman (25) currently ranks in the top five in 12 separate offensive categories for the Eagles.

On March 30, Juniata dropped a non-conference game to LaRoche, 11-9. The Eagles led 9-3 after six innings, but LaRoche scored eight runs in the final three innings to win the game.

Senior Troy Beaver belted four hits and drove in a run for the Eagles. Beaver also scored two runs. Saintz and Russell had three hits apiece for the Eagles. Sophomore Steven Wilk drove in two runs for the home team.

The Eagles start an 11-game home stand today when they host Penn State-Altoona.

Hannah Rauterkus / Juniatian

Senior infielder Will Russell picks up a mouth full of dust while he picks off a steal attempt in a recent win for the Eagles on College Hill.

Track and field breaking records, one after the other

continued from page 12

Yet again, the athletes showed outstanding efforts which led to even better results.

On the men's side, Fritzius won the 3,000 meter steeplechase, topping his old record of 9:46 by 11 seconds. Sheaffer also established a new record in the 10,000 meters, running it in a time of 32:39.

For the sprinters and jumpers, Anderson took home gold in the 100 meter dash and Gary Ondecko produced a long jump good enough for fourth place.

For the women, Glunt had another exceptional showing on the track, registering another school record in the 5,000 meters with a time of 18:30, edging out the previous record of 18:35.

"It shouldn't be a bad thing that we are breaking so many old records" Hinson said.

She also projected that "People won't burn out, we are just that much more prepared and healthier this season," Hinson said.

Freshman Meghan Jones captured fifth in the 10,000 meters and Buffenmeyer jumped to second and fourth place finishes in the high jump and long jump, respectively.

The Eagles' track team is now in full force, practicing hard to prove to the rest of the Mid Atlantic Conference that it is a serious threat and ready to do whatever it takes to win. From what they've shown thus far, they look primed for a strong showing down the stretch.

The team will compete at the Messiah Invitational on April 8.

Hannah Rauterkus / Juniatian

After making a play in left field, freshman Liz Schmitt looks to gun down an advancing runner.

Eagles split MAC double header

Women's softball rallies to defeat W & J in 10

Robb Patty

The Juniata College women's softball team traveled to Widener on Saturday for a conference double header.

In game one, the Eagles had a difficult time mounting any sort of offense and fell to the Pioneers, 3-1. Juniata was held to just one run on two hits.

In game two, the bats came alive for the Eagles and they managed to split the doubleheader, winning 8-3.

With the win, Juniata now stands at 8-16 overall and 2-4 in the conference.

Virtually every time the Eagles take the field they are playing two games a day. The key for the players is to stay focused on the task at hand.

"Double headers are tough. Your body gets tired. The main focus is to keep the momentum going from the first pitch of the first game to the last pitch of the second game," sophomore pitcher Kim Stoia said.

"We go into games really confident and pumped up," freshman Heather Lockwood said. "We know we can beat the teams we are playing, so when we have lost the first of the two games we know that we can [still] win and we do it."

The Eagles have definitely been staying focused. In their last two doubleheaders the Eagles have dropped the first game, but have stayed focused and were able to come back and get a victory in game two.

The second game saw the Eagles' offense strike quickly as it put four runs up in the first. Freshman Liz Schmitt drove in the first run on an RBI single. Then freshman Pam Mansell delivered with another single that brought home two more runs. Fellow freshman Kaylee Kachik added the final run of the inning as she stole home to give the Eagles the early 4-0 advantage.

Widener responded with two runs of its own in the first. This led to a quick exit for starting pitcher, senior Lizzi Bartosik. Senior Renae Hobbs came in and got a double play lineout to end the Widener threat.

In the second, Juniata did not even need a hit to score. All three runs in the inning were scored curtesy of two Pioneer errors and two wild pitches, extending the Eagles' lead to 7-2. Each team would tack on another run late to set the final at 8-3 in Juniata's favor.

The Eagles were able to split last week's doubleheader with Washington & Jefferson as Juniata scored three runs in the bottom of the tenth inning to rally past the Presidents, 10-9.

Down four runs entering the top half of the seventh inning, the Presidents scored four runs to extend play. The Presidents then went ahead in the ninth using the international tie-break format which places a runner on second base. The Presidents used the rule to their advantage as a single by Valerie Schultz scored the runner from second.

Juniata answered in its half of the inning, getting an RBI single from senior Julie Hatfield to tie the game at seven.

Washington & Jefferson then responded by scoring two more in its half of the tenth inning to make it 9-7 and put the heat back on Juniata. The Eagles were able to mount a comeback in the bottom half as senior Abby Sener doubled in the first run to cut the Presidents' lead to one. Sener then plated on a double by freshman Tara Carl. A wild pitch moved Carl to third setting the stage for Mansell to deliver the game winning hit.

Sener was 3-for-5 in the game for Juniata with two runs and an RBI, while Hatfield and Carl each added a pair of hits.

The Eagles jump back into conference action Saturday in a doubleheader versus Messiah.

"Doubleheaders are tough. Your body gets tired. The main focus is to keep the momentum going..."

- Kim Stoia, sophomore

Hannah Rauterkus / Juniatian

Senior lead-off hitter Renae Hobbs connects again at the plate. Hobbs leads the Eagles in runs scored (16) and hits (19). She ranks third on the team in slugging percentage, at .449.

By The Numbers

2

Games the men's volleyball team was down against BYU before rallying to win the EIVA Division III Championship.

22

Kills for Nate Ocasio, a season-high, against Princeton. For his play, Ocasio was named the AVCA/Sports Imports Division III National Player of the Week.

3

Players Juniata has leading the conference in home runs. Dan Kaufman leads everyone with 9, while Walt Goedkoop and David Saintz each have 5.

6

Major individual offensive categories in which Juniata baseball players lead the conference.

9

Consecutive singles win for Brandon Long to begin the men's tennis season.

6

Years the women's 4 x 100 record had been standing before it was broken this past week. All tolled, the men and women broke three school track records.

Get out your pencils, kiddies.

Time to test your tournament knowledge

Tommy McConnell

Florida's win over UCLA in Monday night's championship wrapped up the – say it with me – greatest month in sports. It was a long month, but that's no excuse for not paying attention. Since no one playing in the tournament has taken a test within the last month (ah, ever?), we might as well have one now. Ready? Begin!

Heading into the tournament, what looked like the least likely scenario?
a) George Mason making a Final Four run.
b) All four number one seeds missing the Final Four.
c) Billy Packer stringing together a coherent, basketball-related sentence.
d) J.J. Redick and Adam Morrison simultaneously crying like schoolgirls.

Heading into the tournament, what looked like the most likely scenario?
a) Gus Johnson giving himself multiple heart attacks.
b) Billy Packer being wheeled to an old person's home in the middle of a game.
c) George Mason being completely left out of the field of 65.
d) J.J. Redick and Adam Morrison simultaneously crying like schoolgirls.

What was the biggest upset of the tournament?
a) George Mason over UConn.
b) Wichita St. over Tennessee.
c) Northwestern St over Iowa.
d) Someone finding a way to keep Dick Vitale out of the Tournament. Whoever you are, thank you.

What was the single most annoying event of the tournament?
a) Applebee's "Three Hour Teweeeer" commercial
b) Applebee's "Three Hour Teweeeer" commercial
c) Applebee's "Three Hour Teweeeer" commercial
d) Applebee's "Three Hour Teweeeer" commercial

What did Glenn "Big Baby" Davis say was in his stomach?
a) Duke's Greg Paulus.
b) A fire hydrant, the kitchen sink and several bowling balls.
c) Mini Me.
d) Tapeworms.

Why did the guy who was leading ESPN.com's office pool heading into the tourney's last weekend have George Mason in the Final Four?
a)He is a huge George Mason fan.
b)He was an expert on the mid-major conferences this season.
c)Because green is pretty.
d) He thought he was picking George Washington.

What was the most secretly enjoyable part of the tournament?
a) Blowing off everything to watch the first two days of the tournament because it's an unrecognized national holiday.
b) Watching J.J. Redick go 3-18, completely lose his cool and single-handedly eliminate Duke from the tourney.
c) Finding out that someone named "Big Baby" wears braces. Seriously.
d) Hearing announcers say "Shockers" during the Wichita St. games while everyone else in the room giggled.

Which of these did not happen?
a) The Stanford tree was kicked out of a game (OK, it was in the women's tourney. But it still happened).
b) Jim Nantz actually said something funny. After watching an old clip of Yannick Noah hit a tennis ball between his legs: "Good thing he didn't hit that a little harder; Joakim might not be here today."
c) Bill Raftery made me all warm inside by saying, "man ta man!"
d) Duke made it past the Elite 8.

What was the biggest name at the Pittsburgh-Bradley game?
a) Jay-Z
b) Jack Nicholson
c) Pamela Anderson
d) BRAD PITT

With Charlie Villanueva jumping to the pros, who took his spot as the ugliest player in the NCAA Tournament?
a) Josh Boone, UConn
b) Lorenzo Mata, UCLA
c) Sheldon Williams, Duke
d) Major Wingate, Tennessee
e) Jared Dudley, Boston College

What was the most annoying thing about UCLA's Jordan Farmar?
a) How he pretentiously pronounces his last name, with the last syllable rhyming with the first. Far. Mar.
b) That he looks like Mr. Tumnus from "The Chronicles of Narnia."
c) That if it wasn't for Mike Nardi, he probably would have had the worst tattoo in the tournament.
d) Far – Mar. They rhyme! And there is no emphasis! They rhyme!

Why was George Mason's run through the tournament the best moment since The Miracle on Ice?
a) Because they were an 11-seed that barely made the tournament in the first place.
b) Because the school fight song didn't have any words until the Final Four, when their assistant AD made them up.
c) After knocking off UConn, the school's president sent out an e-mail to all profs encouraging them not to punish students for missing class.
d) A couple of years ago, Billy Packer bashed them, saying the whole school was comprised of students with "400 SAT scores." Before the tournament, he bashed them again, saying they didn't deserve to be in. Then they went to the Final Four, making Billy look like he was the one with the 400 SAT score, which isn't that hard to do, but it still should have been included in "One Shining Moment."

Essay Questions:
a) Billy Packer cemented his status as the most senile man on television, to everyone's horror except CBS's. Why do network executives gleefully trot this man out once a year to make a mockery of himself?
b) CBS showed clips of every single player's father or mother every time they scored. Is this necessary? Discuss.

Bonus Question:
a) What college would Greg Paulus have attended had he not decided to play basketball at Duke, and what sport would he have played there? I believe this was briefly touched on, but you may have only heard this if you were paying extremely close attention.

Pencils down, kiddies. Better luck next year.

THE RANDOM ELEVEN

Matt Russell

All Class Night: 8pm tonight, Halbritter, 30 minutes, free, hilarious, uncensored. I think those last two things are related.

My ACN commercial: Cap guns: $20. A couple 40x50" prints: $27. Watching two larger-than-life personas argue over the souls of faculty recently slain by the JCPD: priceless.

Tower of Pizza: I couldn't go fifteen minutes without running into another delivery person during that Dominos sale last week. South Hall had a fire drill in the midst of the madness and I half-expected them to be lining up at the entrances waiting for the all-clear. That sale resulted in the greatest massing of cardboard in the hallways since move-in day.

Dating in 2006: I can sum it up with what I overheard the other day in Baker: "I'm fine with it until it gets all weird and she wants a relationship or something."

Practice for the big night: I understand Coach Smith has athletes do an exercise that basically amounts to repeatedly lifting a keg-like container. I think this is usually done in sequence with the "keg toss" and "jump out window" exercises. The JCPD won't ever bust one of his students.

College logic: My stomach hurt really badly the other night... so I decided to give it a break by eating leftover pepperoni pizza and drinking Coke rather than going to Baker.

Magic button: While my roommate was enjoying the cheese pizza he had just ordered, I got two slices of my day-old pepperoni pizza out of the fridge and microwaved them. When I pulled them out, my roommate, obviously not grasping that I had my own leftovers, got a very confounded look on his face and asked in amazement, "Dude… how did you get pepperoni on that?" to which I calmly replied, "The pepperoni button..."

'24' never ceases to amaze: MacGyver was just a rough draft of Jack Bauer.

Student in computer lab: "Do you hear a song bird?" [five minutes past] "I swear I hear a song bird chirping!" [gets up and asks another student in lab] "Are you by any chance playing bird sounds?" There were no sounds.

What am I missing? There are signs in Muddy that say "Eat a salad, save a tree." But, wait… is it the tree-saving lettuce or environment-protecting croutons? I need to talk to a member of the Conservation Club immediately.

I played the role of Bottom the Weaver in grade school: A group of students and faculty were discussing the upcoming performance of A Midsummer Night's Dream and who had been cast in various roles. Someone asked "Who's playing Titania?" but I quickly interjected, "No, what I really want to know is… do they have a strong Bottom?"

Can you file a grievance against barnyard animals? I think I know why they had those goats in the playground beside Lesher. Petting zoo? No, no. It's just that mowing around all that playground equipment is really annoying. Do you think the goats need to pay union dues?

Hippies come standard: My friend and I were driving behind a hybrid car the other day. Its back was plastered with a number of bumper stickers proclaiming, among other things, that the driver was a "tree-hugger" and that "Oil is not forever." I immediately turned to my friend and asked, "Do you buy those separate or do hybrids come standard with them?"

All Class Night

8:00pm Tonight, FREE, Rosenberger Auditorium

Come watch us give Juniata a good spanking

Some diversity events succeed where others have failed

continued from page 7

historical experience: blue eyed students were separated and mistreated while brown eyed students looked on.

By choosing a physical feature that, in this country, has not been used for the purposes of discrimination (for example, even among the participants, there were white and nonwhite students in both the brown group and the blue group) race as an issue was somewhat diffused. It was then a platform from which many things could be discussed: gender, sexual orientation, race and ethnicity.

When it was time for discussion, students could speak about the activity instead of being forced to address race directly. Also, because of the nature of the activity, white and nonwhite students were asked to speak from the point of view of oppressed and oppressor. In this way, white and non-white students were not immediately polarized, unlike in the OK event.

Juniata is making good progress toward a healthy race dialogue, but too many students still think that "diversity issues" don't apply to them. At the end of the day, it's okay to be a member of a majority group, but that doesn't mean you don't have to participate in oppressing the minority group members.

The improvement in dialogue is no accident. The office of diversity and inclusion has provided a series of events this year called "Beyond Tolerance."

The series, according to director Rosalie Rodriguez, is "much more aimed at difficult issues." And there is a heavier emphasis on dialogue "rather than being just purely educational."

Technological advances aid -and reveal- cheating

Jason Najarian

As final exams come closer, stress and workloads will soon reach a semester-long high. Most students step up their studying, but the enormous pressure of exams and maintaining GPAs drive some to seek out dishonest alternatives.

It is one of the unfortunate realities of academia that cheating will always exist, but what many may not realize is how quickly cheating has evolved with current technology. As Jill Keeney, chair of the biology department, said, "I can't say if the amount of cheating has gone up in recent years, but how students cheat has definitely changed."

The biggest element of change, predictably, is the Internet. As Sarah May Clarkson, director of academic support services, said, "The number of applications of the Internet creates a lot of temptation to cheat."

Among all the options available on the Internet, the most common violation of academic integrity is plagiarism.

"I'd estimate that about 60-70% of the cases I deal with are about plagiarism," said Clarkson.

Kathy Jones, a professor of education, said, "I think it's a common form of cheating because it is easy to get information from the Internet, and many students don't realize it's cheating."

The offenses range from cutting a sentence from an article found online to lifting whole papers from a Web site. Carol Peters, director

Seeing eye to eye on advising expectations

Exploring perspectives on Juniata's student-advisor relationships

Sarah Anne Wharton

Advising fever has Juniatians wondering about the nature of student-advisor relationships: what jobs do advisors have, and do they meet student expectations and needs? More importantly, are students satisfied with the quality of their advising?

The faculty handbook Academic Advising Policy describes academic and non-academic advising as vital at a small liberal arts school like Juniata. The jobs of a JC advisor, as outlined in the policy, are many and varied. Advisors help their advisees transfer in as freshmen, meet FISHN and POE requirements, give sound advice and explore options in careers and post-graduate education.

"Basically, your job is to be someone who is working toward the success of each new advisee, each being different and unique," said Sarah May Clarkson, director of academic support services. Clarkson both advises students and oversees other advisors, so she knows firsthand what

Dr. Jack Barlow sits behind graded papers and revised theses as one of his senior advisees (the photographer) comes in for last minute advice.

Some seniors raise questions about thoroughness of senior exit survey

Nick Carney

Just like clockwork, this year's seniors found their inboxes filled with requests from administrators to complete Juniata's exit survey this month. While many seniors are relieved that this survey was shorter than most, a few are also irritated by the survey's apparent brevity.

"It struck me almost as insulting. They didn't seem to be interested in our actual experience here, so much as the on-a-scale-of-one-to-ten quantification," said senior Scott Stephan. "I'm inclined to indicate that this is indicative of an administration more interested in running a business than a school."

According to Cindy Clarke, director of institutional research and primary designer of the survey, the survey administered this year was intentionally shorter than normal.

"This year, as we do every three years, we had our seniors participate in the NSSE survey," said Clarke. "So the senior survey we administer at the end of the year doesn't need to be as long as it would be normally."

The NSSE, the National Survey of Student Engagement, measures a number of key indicators, such as the ability for students to speak effectively or solve real-world problems, and compares them to national averages.

Because many of the measurements taken on the NSSE survey would be duplicated on the standard, annual senior survey, the in-

Overcrowding, busy schedules in Juniata College Fitness Center

Michael A. Vella

A sports editorial in a recent issue of the Juniatian highlighted some athletes' concerns about the fitness center being overcrowded by certain teams. Due to a large number of student-athletes and a Juniata community interested in fitness, overcrowding may be inevitable. However, Juniata's coaches are satisfied with their ability to schedule team workouts in the fitness center.

Dean of Students Kris Clarkson was a member of the committee that helped make the 5,470 square-foot Sam and Martha Brumbaugh Fitness Center a reality in 1997. "The initial reaction was, 'Wow, this is way too much,'" he said. "It was believed to be the premier Division III fitness center in the country."

Twenty-eight percent of Juniata's students compete in NCAA athletics, but many more take advantage of the fitness center and other athletic facilities.

Busy schedules allow less time for intramural activities, said Clarkson, and many students prefer individual workouts using the weights and cardio equipment available in the fitness center. Even a state-of-the-art facility cannot keep pace.

Unlike some schools, Juniata has no separate recreation or intramurals department. As women's field hockey coach Caroline Gillich explained, "[The athletics de-

Student Government elections see record student voter turnout

James Trent

Turnout for the 2006 Student Government's executive board elections was the "highest ever in memory," said Javaid Zeerak, current president of the Board. Over 490 students voted, bringing in four new board members. Two years ago, only about 95 students voted.

As for the surge in voting, Zeerak said, "A lot of the turnout is attributed to technology and the candidates." Even though no laptops were set up in Baker Refectory on voting day, students voted in full force online.

This year's campaigning also found new vitality on Facebook.

According to the officer of technology-elect, Jigar Patel, "All of the canidates had 'events' on Facebook." In addition, both candidates running for president had Web sites publicizing their campaigns.

"I sent out a flyer on Facebook," said Rejane Frederick, the newly elected vice president. "That was the only campaigning tool I used. All I put out was the date and where they could go online [to vote]."

"It's a whole new media source to advertise," said the treasurer-elect, Shawn Rumery.

Traditional campaigning was heated as well. At least two candidates ran in opposition for every position, except for secretary, for which one candidate dropped out.

When asked about the opposing candidates, Demetri Patitsas, the new president-elect, remarked, "They were very aggressive in their campaigns."

One candidate for president, John Parajuli, went door-to-door in campus dorms the night before voting took place. When asked about his campaign ambitions, Parajuli's said, "We should really do something to motivate voters!"

Initial turnout expectations were low, due to less than promising feedback from campaigns. "People kept saying, 'What is Student Government?'" said Patel.

Rumery further explained that "some people think Staci Weber is the head of Student Government."

However, given past experience of campaigns, Patitsas said that this year's candidates "raised the standard." This year, campaigns also utilized t-shirts, posters and online forums.

Patitstas wishes to return the executive board to a position under close student attention. He said a huge difficulty is clarifying the role of executive board, especially concerning student issues.

Acting within Student Government, the executive board's primary purpose is to be a source of ad-hoc student input regarding campus issues, according to the Student Government Constitution. Among other things, Student Government acts as an overseer of the budget for Registered Student Organizations and the Juniata Activities Board.

Newly elected executive board

Demetri Patitsas: President-elect, class of 2007
Patitsas wants to put the emphasis of the Executive Board on tradition. Among his many ideas are creating social events that include resident assistants, varsity team captains and international students. Patitsas wants to create "mutual relationships" among students so that Executive Board can "act as a forum" for their ambitions.

Rejane Frederick: Vice President-elect, class of 2007
"I'm bringing to the table my experience as a senator [of Student Government]," Frederick said. Frederick wants to ensure that traditions such as All Class Night are upheld.

Shawn Rumery: Treasurer-elect, class of 2008
"One of the things we need to change is Student Government awareness," said Rumery. This would focus on "what it does" and why there is "distrust." In addition, Rumery said he wants "to make the allocations process a lot clearer."

Ashley DeMauro: Secretary-elect, class of 2008
Among other things, DeMauro is concerned with Juniata College's appearance. According to her, the Executive Board can "make the campus look better… by incorporating student art, especially in Baker."

Jigar Patel: Officer of Technology-elect, class of 2008
Patel wants to start up an IT Task Force, which would "act as an intermediary between the students and the Executive Board" for technology issues. One of his ambitions is to utilize Juniata's channel 98, which he says is currently underutilized.

JAB Open Forum dead on arrival despite vocal complaints

Kevin "Par" Fasick

"JAB ruined All Class Night." "They censored it." "JAB calls this a Major Concert?" These are some of the more polite - and printable - complaints directed at JAB recently. People across campus have heard the complaints, and so have the student leaders of JAB. So JAB members decided to respond to this criticism. They organized an open forum on March 15 at 8:30 p.m. and invited the entire student body to attend.

No one came.

Room draw had just ended. There were no speakers on campus. Conferences and Events ensured JAB that there were no scheduling conflicts. Audio/Visual staff had set up microphones so all could be heard.

The executive board members of JAB, along with eight JAB committee chairs, sat in the front of Neff Lecture Hall and waited for thirty minutes, ready to answer questions that were never asked.

"Everybody's all about complaining," said Megan Allison, JAB chairperson, "so we decided to give them a chance to come and give us [feedback] so we could actually change things."

A senior with a POE in Elementary, Early Childhood, and Special Education, Allison continued, "We expected to get a pretty good crowd," especially in light of the recent All Class Night backlash.

Allison reported that the JAB members were disappointed by the lack of student response. "We've been trying, and trying, and trying, year after year after year" she said, "and nobody is giving us anything to work with."

Along this same line, Allison said, "I read the [online] forums, and it just makes me so upset because people are complaining … and then we provide something for them to come to … and there's no one there."

The forum was intended to be student-to-student feedback. No administrators or faculty were present, though JAB advisor Staci Weber knew the event was planned.

Sophomore Ryan Conrad, JAB executive board member and concert chairperson, agreed. "When no one showed up … that was disheartening for us," he said. "Some people give us a bad name, but when given the opportunity to speak with us directly, they're not willing," he said. "We were looking for constructive criticism."

Conrad (also a Juniatian staff writer) added that it is JAB's goal to "provide activities for the students that they enjoy coming to … and I think JAB is a pretty good starting point for finding entertaining events on campus." He is "still baffled" as to why no one attended the open forum.

Allison suspects several factors for the lack of student turnout. The open forum was advertised in the Daily Announcements, which she said many students do not read. "That's probably a big issue," said Allison. She also recognized that organizations are now unable to send reminder e-mails immediately prior to an event, owing to the e-mail policy implemented by the College two years ago.

In addition to her immediate concerns with JAB, Allison worries about the Juniata community. "I don't know if it's just me, or the seniors I've been talking to," she said, "but it feels like the College community is definitely changing." She continued, "People just don't want to be involved."

Regardless of any changes in the sense of community at Juniata, JAB will continue to organize events that are unique to the College. "As for traditions," Allison said, "we have to provide them for the students." She pointed out that JAB does more to maintain the culture of Juniata than many students probably realize.

Conrad agreed. "Students don't understand how far JAB's reach is," he said. "I always come back and think … if JAB didn't exist, we wouldn't have Mountain Day, Madrigal, and [other important Juniata events]."

"Everybody's all about complaining"

- Megan Allison, JAB chairperson

Roving Reporter

Do you think students are too apathetic about participating in events or issues at Juniata?

"Yes, but I think that people have gotten used to not doing stuff on campus, so because they already have their own routine, they don't go to things out of habit." – Denise Bearer, senior

"Yes, but at the same time, they have their own All Class Night and get mad and speak out when [people] try to take away their traditions."
– Megan Minerick, junior

"There *isn't* a lot of participation. People are always struggling to advertise and reach out really hard to get students to do things."
– Charlie Foster, junior

"I think so, but it's mostly because they don't have enough time. They are busy with classes, schedules and homework." – Kari Dundore, senior

Women's Roundtable discusses women's roles in society

Kim Wagner

The women's roundtable was an informal event to follow up on women's month that occurred in March. It fell during this April because it was difficult to coordinate everyone's time. The discussion was located in the back of Baker on April 11 from 12-1 p.m.

"I was hoping not to mask the bad things that happen in society, but celebrate the good," said Kerry Fagan, coordinator of the event.

The conversation lasted about 45 minutes. Only five or six students showed up to the event, but multiple faculty and staff members attended.

Shawna Little, a resident director, said that although only one male came to the roundtable, it was interesting to hear his point of view.

The purpose of this discussion was to generate topics about women among all who attended. Everyone from professors to students, female and male, were invited. There was a facilitator at each table to make sure the questions were flowing properly and in case discussion stopped, they would start it back up again.

Participants discussed a variety of questions at each table. A question such as "Who are two women who have impacted your life and why?" would be asked and attendees would take turns to describe who the female influences in their lives were. According to Little, many people chose their mothers, but some chose grandmothers and teachers.

Sarah Anne Wharton / Juniatian

More than twenty participants showed up to talk about women's issues, women's roles and gender inequality in society. The discussion was held as a follow-up to the women's month activities held throughout March.

She said, "There were both positive and negative reactions from this."

That is the reaction they were hoping to get in order to make conversation and discuss the differences in feedback.

"It helps you to realize that you are like your mother in some instances," said Fagan.

Other questions were meant to make the audience think about certain things throughout life that people take for granted, such as voting.

"We don't think about the idea that there was a time [when] we couldn't vote," said Fagan.

Other things were discussed such as body images and expectations of women. Little explained how body image was brought up and how there is an unrealistic image in society that puts pictures in women's minds of what they feel they should look like.

They also talked about how athletic women sometimes are stereotyped, as well as other stereotypes involved with females, such as childbearing. A stereotype that women are the ones to raise children is in the minds of society and as is the way people react when a man is a stay at home dad.

"There was a definitely mixture in responses about choice and whether we should have a woman president," said Little.

The event will become an annual event and the coordinators hope to publicize more for next year. They would like the event to become larger and have more student input.

J Crew aims to increase spirit, attendance at events

Aly Pompeani

The J Crew is the newest student organization on campus, acting as a fan club and promoter for campus events and athletics. Its main goals are to increase school spirit and community support for the College's activities.

The organization's mission statement reads, "Members of the J Crew have no formal obligations, but simply must be willing to attend and encourage attendance of campus events."

Sophomore class president, Ryan Conrad, originated the idea for the club. With the help of his fellow officers, Shawn Rumery, Corinne Barabas and Shiloe Mokay, the J Crew went from being an idea to the first organization of its kind at Juniata College.

When asked about the catalyst for the club's inception, Rumery said, "We thought, as freshmen, while there was support for athletics, there wasn't enough."

For now, the organization will focus mainly on sporting events. However, the officers hope to branch off into other non-athletic events, according to Rumery.

All four founders are athletes who hope to have "a united show of support" from students, said Rumery. They are currently advertising their club using the Facebook, posters, announcements and word of mouth.

J Crew had its first appearance at a men's volleyball game on March 29. Athletic Director Larry Bock was impressed with the J Crew's procedure and performance at its first event.

"I think this is wonderful," said Bock. "Anything that promotes a positive and enthusiastic environment where people can have a good experience within the bounds of family entertainment is a good idea. It was very well-organized and well done."

The Crew will finish the semester tailgating a tennis match, a softball game and a baseball game.

The officers of the J Crew are using donations from sponsors as incentives for students to join the organization. Sponsors include Sodexho, ProActive sports, the Juniata Activities Board (JAB) and the College Bookstore. Those who are members will automatically be included in a drawing for prizes. The drawings will take place before each event that the J Crew publicizes.

Sodexho will donate pizza to eight events next year. At each chosen event, one member of the J Crew will be chosen to sit in selected seating and will be given pizza for nine friends. Hal McLaughlin, general manager of Sodexho, hopes to "give students a more positive opinion on Sodexho Catering Services."

"I sponsor a lot of student activities during the year, and this is rather large," said McLaughlin. "It is a really good thing to benefit all sports."

The Bookstore will offer gift certificates and clothing through raffles to members of the J Crew. JAB donated megaphones and will donate thundersticks and "JC terrible towels."

Upon signing up for J Crew, each student received a yellow t-shirt representing the organization. A portion of these shirts were donated by ProActive, and the initial funds came from the Student Government Executive Board.

The J Crew is not currently a Registered Student Organization (RSO) but plans on becoming one next year. Becoming an RSO will help the group continue to attract students. The founders hope that J Crew will not only last, but become "bigger and bigger each year."

Presidential Potter fashions Empty Bowls

Sarah Anne Wharton / Juniatian

At the Empty Bowls dinner, to be held by PAX-O on May 5, guests will buy bowls full of soup for $10. Proceeds will go to charity. This semester's ceramics students threw more than 250 bowls to sell for the project. On April 6, President Tom Kepple decided to lend a hand and made a few bowls himself. It was Kepple's first experience throwing clay, but he quickly found his artistic side and completed three bowls before the afternoon was over.

Overcrowding, busy schedules in Fitness Center

continued from page 1

partment] has to absorb all of the [athletic] needs of campus."

According to Doug Smith, Juniata's strength and conditioning coach who is responsible for scheduling times in the fitness center, "Everyone shares the same problem [of overcrowding]."

The fitness center is not only used by student-athletes but by general students, faculty, staff and the Huntingdon community. "Some people who work the hardest," said Smith, "are not even involved in athletics."

Smith said the fitness center is never reserved solely for athletic teams. Any student is permitted to exercise while team workouts are in session. In addition, every coach is given the option to schedule a workout program and time slot in the fitness center with Smith.

This "open-door" policy may contribute to overcrowding, especially between 3:30 and 6:00 p.m., when most sports teams hold practice and students leaving class wish to workout.

Use of the fitness center reaches its peak height in the weeks between the start of the spring semester and spring break, which Director of Athletics Larry Bock refers to as "crunch time" for indoor facilities. During this period, the end of the winter season collides with the start of spring season, and many teams hold off-season practices.

Freshman Lindsey Lanzendorfer, who uses the fitness center five times a week and is not involved in organized athletics, experiences the crowding first hand. "I think that there are too many people from sports in the gym at one time, but you really cannot do anything about that," she said. "But I also feel that they are not given preference. Whoever is there first gets to use the equipment."

Priority in the fitness center is not necessarily given to in-season teams, Smith explained, including those who are unable to practice outside due to weather conditions. The off-season gives athletes, especially those on the football team, the opportunity to build up strength and work on conditioning for the upcoming season. Teams spend less time in the fitness center during the in-season, when more priority is given to technical aspects of each sport.

Smith said that the number of athletes needing to use the weight room, not what team they compete for, takes priority. The 60-member football team is allotted adequate time and space in the weight room due to its size, and Smith has begun to schedule workouts in smaller groups to alleviate some of the crowding.

According to Jon Cutright, head men's and women's track and field coach, "The situation is never going to be perfect." Although some of his athletes have complained about overcrowding, he said, "We have been able to work around it and do everything we need to get done."

Echoing Cutright, Gillich is satisfied with the way the teams work together to utilize athletic facilities like the fitness center. "The coaching staff does a good job working together all year round," she said. "There is a lot that goes into scheduling. Sometimes [we have] three different updated schedules per week."

The athletics department has begun to address the issue of overcrowding. "An empty gym is a wasted gym," said Bock of all athletic facilities. "What we don't want is an empty gym." He suggests moving sports practices as well as club and individual workouts to the morning and during hours when the gym is less crowded. Unfortunately, not all sports teams can take advantage of such "off-hours." Gillich said her team cannot even take shots at a goalie without a trainer on duty, so early workouts aren't possible.

Although Smith said physical expansion of the gym is unlikely, he does hope to add new equipment like free weights and platforms. Clarkson said there is also talk about purchasing new cardio equipment and moving the old machines to residence halls, which would alleviate some crowding in the fitness center.

The relatively new Student Athletes Advisory Committee (SAAC), made up of representatives from each NCAA team on campus, works to foster positive relationships among Juniata athletic programs. Junior Lauren Gates, secretary of the organization, explained that the club does not single out individual teams. Instead, it works to create a unified athletics department.

Bock is pleased with the overall cooperation his department has had from Juniata's students, who he says are very creative in finding ways to workout. "This is an awfully good problem to have," he said. "[We] have a community that wants to be fit and well. [Juniata's students] work hard and play hard."

Who can athletes turn to?

by Michael A. Vella

Overcrowding of indoor athletic facilities is not the only problem facing Juniata's student-athletes. Many athletes do not know where to go with their concerns.

"Some people go first to President Kepple," said director of athletics Larry Bock. He encourages athletes to talk first with their coaches or one of the staff members appointed to deal with specific issues in athletics.

Field hockey coach Caroline Gillich is the advocate for gender equity and agreed that many student-athletes do not know where to seek help. In fact, when asked who she would turn to with gender equity concerns, the secretary of the Student Athletes Advisory Committee (SAAC) Lauren Gates said she didn't know.

According to Bock, student-athletes and any student with concerns about athletics on campus can talk with the following staff members. Ken Shibuya, men's volleyball coach, is in charge of scheduling of indoor facilities and event management in the fall. Danny Young, women's basketball coach, helps coordinate fall and spring athletic events. Head football coach Darrell Alt manages winter events.

Men's basketball coach Greg Curley is assistant director of athletics and is involved with improvements to indoor facilities. Soccer coach Scott McKenzie is the athletic department's liaison with club sports and the enrollment center, as well as director of intramurals. Tony Nabozny is in charge of locker rooms and athletic equipment. Doug Smith schedules workouts for teams and individuals in the fitness center.

Head trainer Jeff Leydig deals with injuries and health issues like eating disorders. Finally, athletes with concerns about academics can talk with Heather Pavlik, associate head coach of women's volleyball and Professor Jim Donaldson, the faculty representative to athletics.

Technological advances can both aid in and reveal cheating

continued from page 1

of the Writing Center, said, "Part of it is a perception that cheating is easier to get away with online. At least once a year, I see someone lifting a paper or heavily plagiarizing."

What makes plagiarism so prevalent is unknown, but Neil Pelkey, a professor of environmental science and information technology, believes that "it is a cultural epidemic. Everybody does it to some degree. Even well-known scholars have been found guilty of it."

Plagiarism is not the only thing to watch out for. With smaller and more portable technologies being released, devices like PDAs, cell phones and calculators have become tools for cheaters. Professors must be vigilant in watching for things such as equations programmed into calculators, or students using camera phones to take pictures of exams.

"It's getting to the point where we may someday provide the calculators for tests ourselves," said Keeney.

Pelkey felt that even though technology has made cheating easier to perform, it also has made it easier to catch.

"Moodle and other programs have filters that can be useful to help find cheaters. Some programs can scan assignments for correlations between answers, and flag responses that are similar," he said.

He described these programs as a computerized scan that helps determine the similarity between two assignments.

"It's basically a comparison of various parameters among two pieces of work. It can compare anything from the percentage use of a certain word to the proportion of letters to words. The goal is to determine if two documents are fundamentally different," he said.

One of the program's most powerful functions is the ability to bypass traditional methods cheaters use to cover tracks. Pelkey explained how some of the search parameters will remain unaffected if a cheater goes back and changes a few words, because they compare less obvious traits.

The programs are powerful tools, but the system is not foolproof. "It is only flagging items that have a high likelihood of being the same," Pelkey said.

Most professors agree that plagiarism is one of the most obvious cheating methods to detect even without computer programs.

"Plagiarism is pretty easy to catch," said Peters. "It is pretty obvious when a student's paper suddenly becomes a totally different writing style from what I'm used to with them, especially at a school with small class sizes like Juniata."

Since Juniata is a place where cheating is typically easy to spot, people may wonder who is the typical cheater? It always depends on the individual, but Peters and Clarkson find in most cases it is a basically good student scrambling to get work done, who then makes a bad decision. They both admitted that there also will always be the student who is a regular cheater, or one who cheats out of laziness.

"In my case, it's mostly freshmen who have a panic reaction to their workload and cheat without thinking it through," said Peters.

Clarkson said, "When students get caught, it's usually a moment of bad judgment on their part. In many cases it could be avoided with some effort on the student's part."

In some cases this situation can be avoided by communication with the professor. Peters's philosophy is that, "If students talk to me about it, I'm usually willing to work something out with them."

Consequences, however, are much grimmer for students who get caught cheating. Clarkson said that professors have a certain degree of choice with punishments, and the options range from a zero on an assignment to failing a course. Besides compromising relations with the professor in question, cheaters face the J-board and the possibility of being expelled from Juniata.

Cheaters are given three choices: plead guilty and accept the punishment, plead guilty and appeal the punishment or deny the allegation and appeal the punishment.

"I don't want students to make uniformed decisions," said Clarkson. "I give students three days to discuss it with professors, family or whoever the student wants. However, many students own up to what they did when confronted about it."

As Clarkson said, many professors are willing to negotiate with students if they come with legitimate excuses. "Students should understand that they will most likely still be punished, but it is better than being accused of academic dishonesty. Unless you ask, you already have your answer."

Clarkson's feeling about the issue is that she wants students to learn and move on. "Students should reflect on what got them to this point, not let it dog them for the rest of their academic careers."

Seeing eye to eye on advising expectations

continued from page 1

both students and advisors expect from advising.

The most important thing students expect of their advisors is a personal and individualized approach to each advisee.

Junior Amanda Harris thinks this is crucial in a good advisor. "I want someone who is willing to really listen to me and what I want to do. If I don't know what I want to do, I want someone who is willing to say, 'This is what I think. This is what I would do.'

"I want my advisors to kind of put themselves in my shoes," she said.

Freshman Troy Carl agreed. "My advisor puts the extra effort in beyond what his advising duties entail," he said. "It's really appreciated when a teacher does that."

David Sowell, chair of the history department, is one of these professors who is appreciated by students for his advising. Sowell thinks a personalized approach comes first in advising.

"The first thing I want to do is to establish a kind of trust or dialogue within the relationship," he said. "You need to get to know the person a bit so you can react to who they are."

"One size does not fit all," he added.

Along with a personalized approach, students want advisors to allot them ample time to talk and counsel them. This is sometimes difficult to work into schedules, but students who felt that their professors made time for them had overwhelmingly more positive feedback.

Advisors who do not give students enough of their time leave students feeling neglected and angered. This translates into the student feeling that his or her advisor does not care about advising.

Senior Craig Dickey, who has had many problems with differing opinions between his advisors in the history and education departments, said that some of his advisors did not seem to think advising was important.

"They didn't particularly care," he said. "When that happens, you kind of become uptight because you don't want to talk to them, so then you spend only five minutes with them, they sign your paper, and you leave. It's a domino effect."

Senior Scott Sakowski, who has also had problems with advising said, "Your advisor should be genuinely interested in your progress and education....I felt like my advisor was giving other students preferential treatment."

"I would sit outside his office for an hour and a half and when the student inside would finally leave, I would get 30 seconds," he said.

Clarkson thinks that making time for advisees is sometimes difficult with busy schedules but critical. "You have to commit a certain amount of time and make a commitment to be responsive," she said. "You have to put out the fire that's right in front of you." If that means letting something else get consumed by the flames, so be it.

Advisors who do not give students enough of their time leave students feeling neglected and angered

If an advisor is not giving students personal attention or time, Clarkson says to "go and be advised by someone who will meet your needs."

Students who feel that their advisors are not doing anything for them are able to switch at any time. They can make the change by filling out a form from the Registrar's Office and obtaining a few signatures.

Despite this, a majority of students do not switch advisors for bad advising reasons. Many simply use their same advisors for signatures and technicalities. Students may find professors with whom they connect on a friendlier level and get advice from those professors instead of their original advisors.

Clarkson calls this Juniata's "informal advising culture."

Sakowski never switched because he had other people to go to for advice about classes and the future. "I found professors I was more compatible with and kind of inadvertently made them adopt me as their advisee," he said.

Dickey agreed. "I get advice from professors I connect with."

Some think finding outside advice is easier than going through the hassle of switching professors and offending someone. Officially, though, why most dissatisfied students do not change advisors is unknown.

Harris is one of the few students who switched her advisors because of complications. "I felt that I had to switch because I hated the worry and stress related to going to see that advisor to sign forms or whatever," she said.

"I think it's good to have relationships with some professors for outside input, but if you're getting serious advising advice, just make the switch." She did, and she claimed it makes much more sense.

"Don't have a filler advisor," Harris said.

For the most part, the Juniata advising infrastructure works, and students are happy with it. Students feel that their academic and career well-being is more valuable when the advisors' expectations are met. When they aren't, someone hears about it or they live with it.

To sum up Juniata students advising experiences, Dickey said, "I think most people are fine."

Concerns with senior survey

continued from page 1

house senior survey was shorter than normal.

This abbreviated survey included 61 questions and took around ten minutes to complete. Of these 61 questions, 26 asked seniors to rate various Juniata College offices and services on a sliding scale from "very dissatisfied" to "very satisfied."

Addressing concerns from some seniors that this survey did not include a "not applicable" option in this section of the questionnaire, Clarke said that this would be an option in future versions.

"[The students who took the survey] are right, a 'not applicable' option should be included," said Clarke. "It will be added the next time [the abbreviated survey] is given."

Additionally, many seniors interviewed were concerned that taking the survey is needed in order to obtain their caps and gowns.

"These surveys are really important," added Clarke. "While we can't force anyone to take them, [the administration does] ask that students complete them. We understand that [seniors] are surveyed-out, but this is the only way we can get real numbers on the College."

An additional concern raised by some seniors was that the survey did not leave significant room to provide free feedback. As one senior put it, the text box at the bottom of the survey was "hilariously small."

"The only place we really had room to 'talk' was in a little box at the very end"

"The only place we really had room to 'talk' was in a little box at the very end," added Stephan. "It was one of those comment boxes made for things like 'I love this place' more than any cogent thoughts on my time at Juniata. I did, nevertheless, abuse the space with a lengthy diatribe."

Clarke explained that, despite the apparently small space allotted for feedback, the text box does permit students to write a great deal.

"I'm actually not sure why it looks so small," said Clarke. "But I do know that it allows you to go on virtually forever [with writing feedback]. It just doesn't look like it."

Clarke went on to explain that the appearances of surveys are very important to the Institutional Research Office, and that the Office is well aware of the effect it has on results. She added that this problem would, potentially, be resolved in future surveys.

"If students have any [lengthy] feedback they want to give now... and they couldn't fit it in the box, they can always call or e-mail me, and we'll take that into account. Students always have that option" Clarke said.

The senior survey, as opposed to the NSSE survey, gives the College information about Juniata-specific offices and activities. These types of specific numbers can only be gleaned from the Juniata in-house survey.

In the past, the NSSE survey, in addition to the in-house survey, has given the College crucial insights into current policies and practices.

The results of the surveys, once compiled, are presented to the Juniata cabinet, and are used to suggest areas for potential improvement.

For example, the surveys in the late 1990s and early 2000s indicated that Juniata College had an average number of students studying abroad compared to other colleges of its type. This was different than the common perception at Juniata, which indicated that there were more students abroad than average. As a result, a successful push has been made over the last few years to have more students study internationally.

Other improvements spawned by the survey include decreased focus on the lecture-teaching method in classes and a heavier emphasis on world languages.

Despite the concern some seniors had over the specifics, most had a relaxed attitude toward it.

"By this point, [the administration makes] everything a requirement, so it was just one more thing," said senior Cara Yancey. "I actually don't even remember doing it, but I got my cap and gown, so there you have it. Must not have been too bad!"

Coming up in the final Juniatian of the semester, May 4:

How many surveys does it take to graduate?

EDITORIAL

A few weeks before the Class of 2006's graduation, all seniors received in their inboxes at least two surveys: the National Survey of Student Engagement and the College's own senior questionnaire. Anyone with a federal Stafford or Perkins loan also received a financial aid survey in the amount of one survey per type of loan. All of this was on top of the regular faculty and advisor evaluations e-mailed each semester.

Quantifiable feedback is critical for any institution to measure its successes and failures in order to move toward future improvement. These senior surveys, ostensibly, fulfill this purpose. However, the accuracy and implementation of these surveys are at times suspect.

These surveys, to the complaint of many seniors, are long, often taking 20-30 minutes to complete. They have many questions, yet they give little opportunity for accurate and extensive student feedback.

It is already apparent to some that the College's own internal survey was not well constructed. First, survey questions lacked the choice of "not applicable." A student in the history department, for example, would be mandated to comment on science facilities, even if he or she had never set foot in a lab.

Without seeing "not applicable," students were forced to choose different levels of "satisfied" or "dissatisfied." If there is no "does not apply" option, students are apt to vote "satisfied," bumping up the overall approval rating, which can then be marketed by the College as a success, when really students had no other choice.

Second, students were asked to give specific, detailed feedback, yet the size of the text box for general comments was misleading. The box looked barely large enough for a full sentence, though it would keep accepting text after reaching the boundary of the box.

Cindy Clarke, director of institutional research, has already noted that these issues will be corrected on future surveys (see article on page one). But, regardless of flaws in the survey itself, the way to gain valuable and authentic student feedback is to offer genuine surveys to those interested in taking them – not to force students to take them. Students who truly enjoyed or loathed their experiences will articulate these passionate (or dispassionate) feelings truthfully and fully if given the correct means to do so. Mandating so-called "student opinion" will only increase apathy and error-prone results, especially when there is no "neutral" option.

Quantifiable feedback is critical for any institution to measure its successes and failures in order to move toward future improvement.

The catch is that these surveys that seem disingenuous to students are compulsory for obtaining required graduation materials or for verifying diploma information at Senior Salute. Along with GPA, FISHN and credit requirements, seniors must complete surveys before they can walk. It is not a direct requirement, but a definite chain of succession. Completed surveys are needed for students to

Go abroad! Seriously.

Mary Gardiner

When I agreed to do this column for the Juniatian, I decided it would be a "global issues from a global perspective" sort of thing. But I think it's about time to make it personal – and to even pay a little lip service to the saint that is Jarmila Polte.

A few days ago, I was sitting on the beach in Barcelona, and I got to thinking that I might not have been clear enough in my "Disneyworld Mentality" column two issues ago. I said that for many Americans, the world has become a big theme park used for entertainment and not cultural education.

As I've said before, many students use and abuse their study abroad as a base for touring the world and seeing things like the Eiffel tower. It's horrible. I heard a student say a few days ago - and these are her exact words - "Yeah, I want to hit Italy too, but I want to see, like, all of Italy so I'm going to go for a week sometime."

However, I fear that my column had been misleading. I don't want you to think that I hate travelers or to think that I'm not one myself.

In fact, I'm writing from a café in Morocco, sitting next to fellow study-abroader Bobby Wadud, as we explore Souks and are treated to tea by Marrakech natives. We just spent 11 hours on an overnight train last night, meeting people from all over the world. In between uncomfortable naps, we spoke varieties of Spanish, English and French and even learned a little Arabic.

So, I realized, traveling is not the problem. In fact, I think that traveling is the only true compliment to a liberal arts education and perhaps the most important thing people can do in their lives. There's a reason that one-third of us at Juniata go abroad, you know.

For instance, I took Professor Nagengast's International Law & Human Rights class last year, a fantastic class, with several of our international students from the Middle East. We spent a few classes discussing human rights in the Islamic world, and hearing these students' thoughts challenged our preconceptions about the topic.

But, as they say, experience is the best teacher. Yesterday I was invited to a Moroccan's home and watched Mexican soap operas in Arabic with women, some with headscarves and others without. We laughed at the same funny characters and scoffed at the liars. Bobby and I marveled at their china collection and their prized VCR.

The women, who are often used as ammunition in ignorant idealist battles in the West, were having tea with us, the so-called "real" women. This sort of experience is what's missing from Nagengast's class and other on-campus activities.

While I am positive that Nagengast and others would love to transport these Moroccan women to their classrooms just for a one-on-one experience like I've had, it's impossible. (Though Nagengast's efforts invested in the Senegal and Gambia trip should not be overlooked!).

It is possible, however, to take the initiative to meet, understand and befriend all sorts of people from all sorts of countries, with the help of Jarmila Polte and the gang. Who knows, you could even end up having tea with kind strangers in Morocco.

The death of the poopfinger re-visited

Emily Eller

Well, the "renegade" All Class Night was a jaw-dropping success. The performance hilariously poked fun at PAX-O, the ice cream machine, the von Liebig painting and TK's inability to remember students' names. But this gentle teasing served as a smooth back-drop to an impressively seething attack on censorship.

Censorship is a tricky issue since its effects are hard to measure. After all, for every skit that was given the ax in the first All Class Night, there were many ideas that were self-censored because of an overall environment of hostility toward expression.

Student self-expression has certainly taken a hit since I started here as a freshman in 2002.

The biggest blow came with the death of the poopfinger, and with it, the loss of the student privilege to mass e-mail. On the whole, I think that not receiving 50 club e-mails a day is good, but it has had its consequences too.

Communicating club events has become more tricky. Let's face it; very few people read the Daily Announcements, and putting up flyers can be a hassle that requires serious manpower. Flyers practically wallpaper the stairwells; it's easy to ignore an announcement when it's hung like a quilt patch among other announcements for job-search Web sites and sporting events that are already over. The inability to communicate campus-wide via e-mail has removed a former sense of community.

Attendance at events has therefore suffered, and club leaders are struggling to coordinate their activities with other clubs in the absence of any meaningful way to communicate with one another. Clubs seem like fringe groups or cliques, and their activities come across as sporadic.

Perhaps the fact that students can no longer mass e-mail hasn't seriously damaged self-expression, but it has highlighted the hierarchy of rights to self-expression that exist.

After the first All Class Night, the Juniatian ran a news-commentary piece and an editorial about the difference in the censorship between students and non-students. Chad Herzog sent an e-mail to the whole campus, at the behest of the Provost, apologizing for and defending himself against allegations made in those articles. The Provost allowed the mass e-mail system to be used as a personal forum despite the fact that mass e-mailing was taken away because it was being used as a way for people to communicate personally to the whole campus.

I don't question Herzog's right to defend himself, but I feel obligated to point out the irony that he was able to e-mail the entire campus (a privilege formally enjoyed by all students as well) while the students (both those involved in the incident

Juniatian Editorial, Letters Policies

Corrections: The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu. Points of view which differ from those presented in any Juniatian article should be expressed in a letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Letter to the Editor

Residential Life evaluations

I just read the editorial on student services evaluation [Juniatian, volume 87, issue 10], which I fully agree with. However, in the editorial it was stated that Residential Life isn't evaluated. As a former RA, I know that isn't true (unless Tim changed the policy over the last year). There is an evaluation at the end of the academic year. Every student is asked to fill out a sheet on their RA and RD. Naturally, there's a section for comments, so if students have problems or concerns they can express them. Some staff members may not be as diligent in sending out evaluations or giving them to Res. Life, but they are supposed to be assessed by students (including members of their building staff).

Michelle Schoonmaker
Class of 2006

Presidential Perspective

President Kepple wants to hear from you! His column will appear each issue this semester to answer any college-related question from the campus community. Simply e-mail questions to juniatian@juniata.edu. Editors will compile questions and forward them anonymously to Dr. Kepple.

"Students independently produced a second All Class Night skit on April 6. They performed this skit to protest the high level of censorship in the 'official' event. Since this second show was a success, what will the administration do to ensure that students will have freedom of expression in future All Class Nights?"

I wondered how it went. We have no interest in censoring a student-sponsored All Class Night. Next fall, a group of alumni volunteers will work with those classes who wish to discuss how to create a quality All Class Night. From my view it is the lack of quality that is the biggest issue.

"JCEL recently sent a Juniata student to Oregon for the National Collegiate Innovation and Inventors Association for Entrepreneurship conference. He learned that Juniata is considered a leader by schools such as Stanford, Cornell and more. Exactly what leadership role does Juniata take among such larger and more prestigious institutions?"

Juniata is a place where a good idea is easy to implement. Larger places and even many small colleges have major barriers to innovation that in Juniata's culture do not exist. So lots of folks marvel at our ability to create an IT program, JCEL, the semester at Raystown and the Gravity Project all in just a few years. Most graduate programs already recognize Juniata's quality based on their experience with our alumni as graduate students or faculty, and now they are recognizing us as a place that is very innovative.

It is nice to see that the big guys have noted that not every idea or superior program comes out of the best-known colleges in the country.

How many surveys does it take?

continued from page 6

get their caps and gowns at Senior Salute; academic attire is a requirement for the commencement ceremony.

The ceremony, by the way, is another mandate. According to the memo sent to graduating seniors by the Provost, exceptions to commencement attendance can only be granted on a case-by-case basis.

The results from the NSSE, one of the three-plus surveys, are available on Juniata's Web site, under "Academics" then "Quality of Education." In the aforementioned Juniatian article, Clarke cited study abroad trends as one change brought about by these surveys. They are important. They do have an impact.

Nevertheless, they can be improved and made more accurate without being mandatory.

Death of poopfinger re-visited

continued from page 6

and those on staff at the Juniatian) were unable to respond in the same medium. Students can and have responded in the Juniatian and on the forums.

Herzog isn't the only one exercising the (now elite) access to mass e-mailing. The Provost's Office, President's Office and other administrative offices regularly send out their own surveys and announcements via e-mail. They can access all of us, but we can't even access ourselves.

Mass e-mailing aside, there seems to be an effort to "clean up" student expression. The ban on sexual innuendos on t-shirts is the most obvious example of this. It's hard to know which slightly-less-than-press-release-able Juniata tradition will get cleaned-up next: Storming of the Arch? Pig Roast?

The vulgar, the racist and the sexual are being mopped clean from the forums, the classroom and All Class Night instead of being addressed.

At the "Brown Eyes, Blue Eyes" discrimination workshop, a black student recounted a time in when his class read a short story that used the word "nigger" over and over. In the discussion afterward, not one person mentioned the use of the word. It's hard to know why, but my theory is that it's an example of what can happen when you try to teach an uncensored curriculum to a censored student body.

If students weren't so used to being silenced or afraid of being chastised for saying the wrong thing, maybe they wouldn't be timid of talking about tough issues in the classroom. In an ideal world, the short story could have been read in class and then all students would feel comfortable talking about the pain, indifference, guilt, confusion, etc, which they might be feeling after hearing such a hateful word.

Free speech is messy, and it can get downright ugly, but you have to take the good with the bad. If you don't like what people think, you can try to address why they think that way, not their rights to express their thoughts.

Secrets revealed at Juniata

Jessica Perry

The secret's out. Art Alliance and Kvasir have teamed up to create a Juniata version of the nationally acclaimed Post Secret exhibit. Students now have not only the opportunity to reveal their deepest secrets, but also the ability to find out others' highly classified information.

Since the beginning of this month, Art Alliance and Kvasir have been asking students to contribute their secrets. The clubs have been accepting anything from confessions to weird habits and crushes to hate mail. Any secrets are game as long as they are anonymous and submitted on a decorated four-by-six inch postcard.

According to Art Alliance president and senior art history POE Holly Brown, the idea came when she discovered the Post Secret blog created by Frank Warren.

Brown saw the posted secrets as "mini works of art that provide interesting insights into other people's lives … that express not just through words but through something symbolic, something visual."

Brown, a Juniatian editor, added that the Juniata Post Secret exhibit is also just another way for the club to promote art on campus.

Holly B. Brown / Juniatian

Senior Karen Stringer paints, glues and collages to make a confessional postcard for the Post Secret exhibit co-run by Art Alliance and Kvasir. Secrets go on display in Muddy Run on Friday, April 21.

She explained "people have an idea of art as being high and lofty, as being something they don't have the capabilities to create, but the Post Secret exhibit says that everyday life and people's confessions can be art."

Kvasir's president, sophomore Suzanne Ostyn, said her club jumped on board because Art Alliance and Kvasir both stand for the same thing - student expression.

Ostyn believes that since college students do have secrets that are significant and hard to keep, the Post Secret exhibit provides opportunities for students to feel better by revealing those secrets in a safe environment.

That safe environment is part of what encouraged AWOL's president, senior Michelle Schoonmaker, to designate time during one of the club's meetings for creating secrets postcards.

She explained that members could "use Post Secret as a way of speaking out, expressing themselves in a manner without having to draw attention to themselves."

To encourage student involvement in the exhibit, Art Alliance and Kvasir hosted three sessions where students could use the materials provided by the clubs to post their own secrets.

Junior Julia Williams said she came to a session because she liked that it was an "anonymous way of getting something off your chest."

Schoonmaker admitted she made secrets because "I have all these random thoughts that I don't normally write down because I don't want to admit they're mine. [Making secrets] gets them out and on paper so I can stop having to obsess over them in my head."

Starting tomorrow, secret postings created by Juniatians will be on display in Muddy Run for everyone to see. A reception will be held from 7 to 9 p.m. with food, entertainment and plenty of secret-making materials.

Ostyn recommends students visit the exhibit because the secrets will make them think about things they haven't thought of before. She also feels that finding a secret similar to one of their own can make students feel not so alone.

Schoonmaker added, "It provides you with that guilty pleasure of knowing other people's secrets."

Anyone who still wishes to contribute to the exhibit has the opportunity. Brown said the Art Alliance will accept secrets until midnight tonight. Drop boxes are located at the Information Desk and in the Health & Wellness Center.

Those interested who aren't able to submit a secret to the Juniata exhibit can still contribute to the national Post Secret exhibit. Details on submitting pieces, as well as examples of other people's secrets, are available at http://postsecret.blogspot.com/.

The Naked Truth: I have a bad case of the ex

Rebecca

Having an ex-boyfriend or girlfriend is a learning experience for anyone. As some of you well know, our exes don't always give up and instead do some stupid things in hopes of coming out on top (of the relationship). The entire situation is like a carnal complication: you keep going at it even though you're out of KY. The situation has dried and equipment has shriveled. At some point, you just have to go home on your shield, because if you don't, you'll end up looking like one of the following morons. (NOTE: Names have been change to protect the identity of a few idiots.)

Moan and groan. Don't talk about grooving to a new beat in front of your ex, in hopes of making him or her jealous.

However, if your ex happens to do this to you, I don't suggest taking any surprise kicks in the backdoor without suing for internal damage. Take this TRUE AIM tidbit for example:

ImissYourMusk: It's nice to have a verbal clue when I do something good for a change.

NotachanceinAsia: Well good for her! Sorry I wasn't very vocal. I regret it now, but at the time I didn't want to hurt your feelings because you were putting so much effort into it.

Since sliced bread. It's not beneficial to tell your ex that you are the best for him or her--especially if, when at your best, you were more attentive to the television and/or computer screen. And now, at your worst, you're calling your ex drunk and begging to be taken back. This happened recently to my best friend about two weeks ago. Her ex called back this weekend and informed her that he is now on Yahoo personals. I am advertising for "the best of the best" because I have a feeling he needs all the help he can get.

Tantric Termination. You owe your ex nothing, especially not "one more time together." Do not, for any reason, believe your ex when he or she tells you: that gettin' dirty was "different" with you; or that you could meet somewhere and you wouldn't have to tell anyone, but that he/she needs to be "one" with you a final time. If you want to be ONE during sex, there are plenty of magazines that can help. That, my friends, is oneness at its finest.

And now for some of the more bizarre ex situations…

Cheating is not smart, nor is exposing it. My sister, Mel, dumped her boyfriend, Pete, after she found out he'd been cheating on her for several months while away at college with Lisa. What is so strange is how Mel found out about it. Lisa was under the impression that my sister had been given the boot, so she sent an AIM message to my sister requesting that Mel please stop calling Pete, because it was upsetting their relationship. Defining moment in the history of everything stupid: Pete gave his college girlfriend his supposed "ex"-girlfriend's AIM screenname (along with her phone number and e-mail). His reasoning? Well, Pete thought it was a good idea just in case they ever needed to talk. Yeah, I think he's a moron too: not only for cheating but for basically asking to get caught.

Why did he give his ex-girlfriend's phone number and AIM name to his new girlfriend? Well, just in case the girls ever needed to talk...

Furthermore, Facebooking your current partner's ex is creepy. I was caught off-guard this past weekend when my ex's new girlfriend Facebooked me. In utter disbelief of a "friend request," I briefly contemplated the benefit of accepting: filling out friend details. Then I decided I didn't want to be immature and write something stupid like "we hooked up in 1983 and ditched our boyfriend because we both decided he's worth less than a strawberry-banana gumball." In conclusion, I can't wait to see if she writes on my wall.

Trivia. No wonder she Facebooked me! My ex recently told me that his new girlfriend is fascinated by me. Maybe I'm going to be a category on Jeopardy one day, as she needs to learn every detail about me. I hope he gave her the correct response, playing World of Warcraft for endless hours and forgetting about me on numerous occasions, for the daily double: why he was dumped. Apparently he thinks I should meet her and then mud wrestle for his heart. I think he's forgotten that I stepped on it and threw it down a drain (his opinion). And oh yeah, I'm not about to go retrieve it.

Think about it like this: dealing with an ex is like wearing a condom. If you let your guard down for one moment, the ex can misinterpret maintaining a friendship as wanting to get back together. Hence, that person becomes an STD, and you just can't rid yourself of that person's presence.

I don't think it's necessary to ignore an ex in public or devote your info to your demise of a former partner. But I do think that it's appropriate to be as neutral as possible. Debate why "third base" is not just the one to the left of home plate as opposed to why you sucked in bed (or didn't ...you know what I mean). Be decent, and please, please be careful who you Facebook.

Hannah Rauterkus/ Juniatian

"A Midsummer Night's Dream" is the next project to come to fruition through the Gravity Project. It opens on April 19 and runs until April 30.

Shakespearean show brings new life to Juniata's theater program

Hallbritter Center opens with "A Midsummer Night's Dream"

Christopher Burlingame

The Halbritter Center for the Performing Arts will open tonight with its first production, William Shakespeare's "A Midsummer Night's Dream." The traditional play has been altered and promises to make full use of the new black-box theater.

Stage Manager Andrea Locke wants to bring a new kind of theater to the JC community. "Theater has become too mainstream, but we are able to take dream sequences and represent the absurdity of life," she said. Locke explained that theater professor Andy Belser wanted to open with a piece that was familiar to audiences and use its imaginative potential (with dream sequences and other such elements) to put the new space on display.

Assistant Stage Manager Jesse Parsons said, "This is a much more flexible space than we've had before, and it allows the theater program to explore new relationships that couldn't be seen in traditional theater."

"The Elizabethan era and its language don't translate well today, and we are able to show that meaning can come from more than just the words," said sophomore performer Mandi Yeager.

Rather than relying on Shakespeare's woodland setting with fairies and nymphs, Belser and his team have created a world of plexi-glass, projectors and mirrors to replace traditional setting and language.

"We've gotten rid of the trees, and cut down a lot of the script so that we can explore a more movement-based performance," Locke said.

To showcase Halbritter's new potential, the cast will be utilizing each of the theater's three levels. The black-box theater has a main floor, an intermediate balcony and a catwalk that houses most of the moveable lighting elements and covers the entire staging area, as well as the audience.

"The greatest benefit of the new facility is that we can explore transformation by using a lot of different exits and keep the [audience's] eyes shifting from level to level," said sophomore performer Kellyn Miller.

More than the performance space itself, Halbritter offers numerous other benefits to the newly established performing arts POE. Parsons describes the new facility as "bigger and better," with more up-to-date equipment that offers "endless possibilities for the emerging theater POE."

The additions to the space include a movement studio where performers can safely experiment with movement and contact exercises on spring-enhanced floors. Also, the space offers a performance arts management POE room. The room is complete with new Apple Macintosh computers and the necessary software to create a complete creative experience.

Locke said, "It's convenient, because before, when we needed to alter the script, we would have to run back and forth to the TLT, but now we just go downstairs. Everything we need is self-contained."

"The new space allows us to comment on the fact that we are in the theater," said Yeager. "Theater is just as life is and not a way of creating a world that doesn't exist, but rather showing parts of life that most people can't reach."

The building gives Juniata's theater program and the members of its POE a permanent home and positive outlook on the possibilities that the future hold.

"Every day is a new day, and I like the process that I can come in and leave happy every day with a new experience," Locke said.

Tonight's performance begins at 7:30 p.m. Information on upcoming show times and dates can be found on the events calendar on Juniata's Web site.

Movie Review: "Thank You For Smoking"

Holly Brown

Whether you're a smoker, nonsmoker or just on the fence about the whole issue, "Thank You For Smoking" should not scare you off. The film is just as much about argument as it is about the pros and cons of smoking. The movie is so clever, it even argues you into loving its characters.

I've been waiting for this film ever since I saw the trailer a few months ago. Flexible morals, snarky dialogue and Jason Reitman (son of Ivan Reitman, responsible for "Ghostbusters" and "Stripes," among other things) as director? How could my little ironic heart resist?

"Thank You For Smoking" is based off of the 1995 novel by Christopher Buckley. It follows the machinations of Nick Nolan (Aaron Eckhart), the head lobbyist for Winston-Salem, and his struggle against an entire world that hates him.

Nolan teaches his son the finer points of arguing ("If you argue right, then you're never wrong"), is kidnapped, is duped by a beautiful reporter (Katie Holmes) and confronts a dying Marlboro man. In the end, he takes a stand against a senator who wants to put a rotting skull and crossbones on each pack of cigarettes.

Eckhart himself is the perfect charmer. It's not so much that he stands for cigarettes; it's that he can argue for anything.

"You know the guy who can pick up any girl?" Eckhart asks us. "I'm him... on crack."

Besides Eckhart's everyman charm and the sharp, witty arguments, the cast is well-rounded and balanced out by equally ambiguous and lovable characters. Maria Bello and David Koechner are Nolan's only friends and members of the MOD Squad – the Merchants of Death. Bello's character, Polly Bailey, lobbies for alcohol, while Bobby Jay Bliss (Koechner) is a gun-toting spokesperson for firearms. They're ridiculous in their arguments about who warrants a kidnapping more and they're lovable in their wicked sincerity.

The tone of the film is just right. In a world where everything is a spin, nothing can really be too serious – and that includes a scene featuring a "cancer boy" on the Sally show, a kidnapping with an ironic twist or a bribe to a former icon, now dying of cancer. It's serious stuff, but it's not really the issue.

What's interesting is the portrayal of the "other" side – here it's Senator Ortolan K. Finistirre (William H. Macy), who is seen fighting against Nolan at every turn. Instead of being the serious, saintly defender of human health and common sense, Finistirre uses the same methods as Nolan... just not as well.

"When you look for a cancer kid, you want someone who's hopeless!" Finistirre says to his aide after seeing the Sally show.

Is Nolan a hero and the role model for his son as he so desperately would like to be? Well, probably not. But when the truth is evident (cigarettes kill) and common sense can be foregone through a spin, maybe Nolan is right. Maybe we should all just stop listening to what other people say and make up our own minds.

Note: Last issue's movie review said that Guy Fawkes attempted to overthrow the Catholic rulers of England, when in fact Parliament at the time was mostly Protestant. Despite the inaccuracy, "V for Vendetta," which is set in the future and not even really about Guy Fawkes, is still worth seeing.

National Poetry Month celebrated all over Juniata

Juniata students have been placing poems throughout campus. The Aughwick Poets and Writers, a local poetry society, have also contributed poems written by central-southern Pennsylvania writers. Look for them on campus, in the announcements and in your favorite restaurants and stores downtown.

Look for the Kvasir spring issue soon!

April 19 – Faculty poetry reading, 7 p.m. in the Ballroom
April 21 – Post Secret Exhibit Reception, 7 p.m. in Muddy Run
April 24 – Local poet Phil Miller reading, 7 p.m. (location TBA)

May 1 – Students in EN303, Poetry Writing, reading their favorite works, 7 p.m. (location TBA)
May 8 – Professor Jack Troy poetry reading, 7 p.m. at C@ffeine

Kim Reveley and Lindsay Brunner are collecting poetry for continuous publication until May 1.
Submit to revelkd04 or brunnlm04@juniata.edu, any length, any format; just include your full name and title.

Fashion

Swimming in sweeter seduction for the summer

Lucia

Finally, the time to start planning your vacations far away from work and school has arrived. It is also the time to start looking for those sexy summer fashion finds.

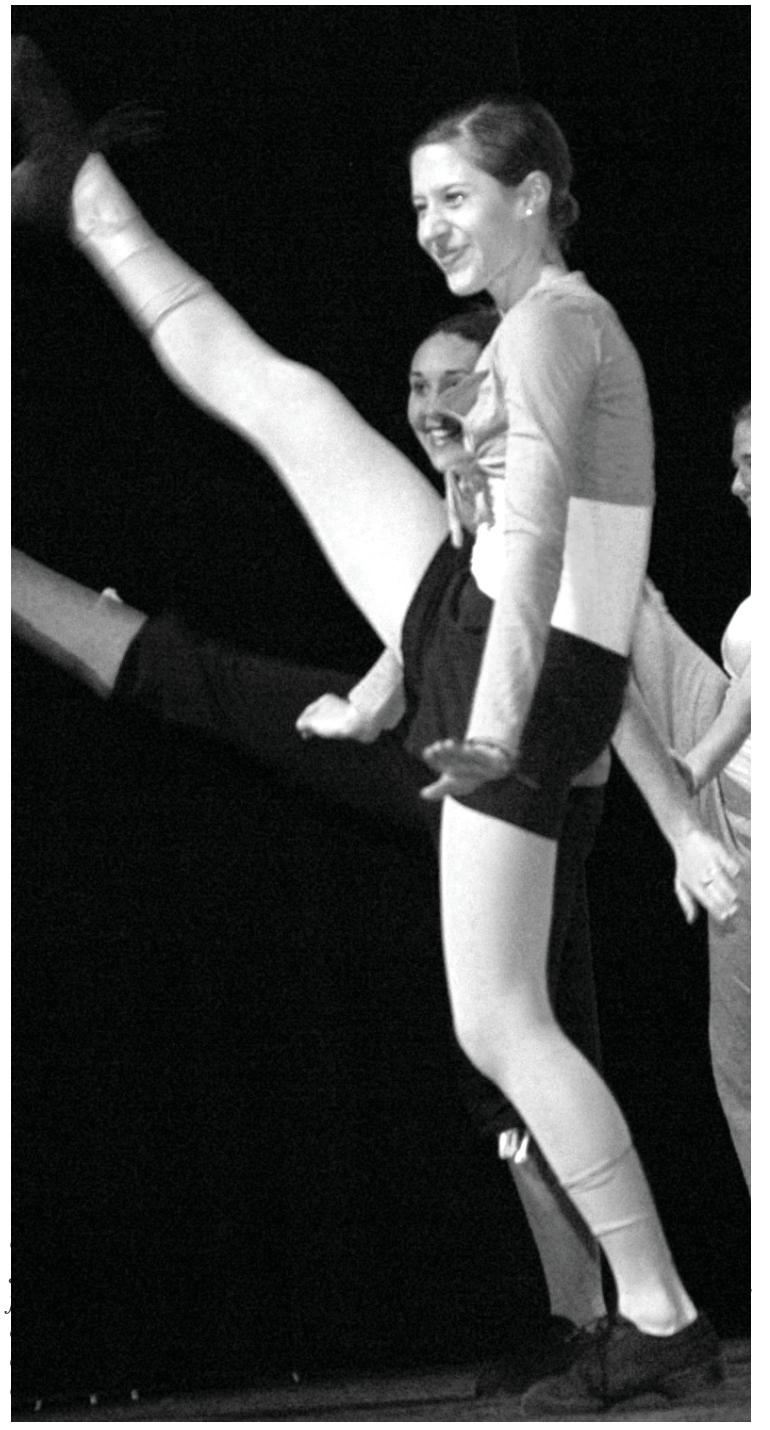
The most popular catch of the summer is the swimsuit. This year suits are simple and retro with a twist of "sweet seduction." (I picked up that line from Vogue - catchy isn't it?) The rule this season is: don't think that less is more. Instead, think "the more the better." Now, metallic colors and neon show stoppers are stylishly walking down the runway. Metallic accessories from belts, hand bags and sandals to jewelry are all this year's rave, not teeny weeny yellow polka dot bikinis. This year is about not overexposing, ladies.

The cut of this year's suit is also new and fun. This is the year of boy short bottoms and lacy romantic bikinis. These suits will flatter any shape or size - tall, petite, short, the double Ds and the less fortunate in that area. There are even stylishly shaped suits for the amazing expecting mother. For further description, simply pick up a copy of the nearest Vogue magazine.

For now, I want to discuss other summer articles that I am enjoying a little too much.

Large belts coupled with large shirts, that can be either long and tight or loose-fitting, are an adorable new pairing.

And don't pack all of your winter fashion pieces away yet. In the warmer weather, you can still wear fabulous leggings, which have now acquired lace at the bottom. They come in many colors and can continue to be worn just by themselves, under skirts or with dresses. And the dress is something you are going to want to fall in love with this summer.



After waiting so long in your closets, you can finally let those dresses out. The fun and flirty dresses, along with the fox-trot shoes, are glamorous and fun. I adore the latest look of chiffon mini dresses, and the versatile way they can be worn. As mentioned prior, yes, they can be worn with leggings, but I am talking shoes, now. Ladies, you can be a knockout in a pair of platform sandals or comfortably stroll the sidewalk in

continued page 11

Dance ensemble turns it loose

Swimming in sweeter seduction for the summer

continued from page 10

a pair of flats.

Another fashion find that is reforming into a rather cute accessory for this summer is the vest. I know vests are often thought of only in winter; however, they have been shortened with the added benefit of lighter material for hot summer nights. They look cute over tank tops or a short sleeved, collared shirt.

Lastly, don't let me forget to mention that the warm spring air will bring a romantic feeling that can be intensified with ruffles and bright whites. Amid the airy sundresses and skirts you can find a romantic mystery of ruffles gracing the edges of skirts, as well as tops.

Now, with a head start on what the warm weather fashions will be, one can only think, "What's left to do?" Well, how about get through the last few weeks of classes and then plan that last day of school outfit to WOW this campus.

7:30 pm, Cyber Connection, Ellis Hall

Records continue to fall as team eyes MAC meet

Corinne Barabas

The Eagles enjoyed shattering more school records, as well as some top-eight finishes, both on the track and in the field this past week.

Competing against top–ranked Division I and Division II athletes on April 14 and 15 at the Bucknell Outdoor Classic, Juniata was able to hold its own and provide its opponents with some fierce competition.

For the women, freshman Kelsey Buffenmyer tied the current school record in the high jump and took first place at the meet after clearing 5'5".

Senior Katey Glunt broke her own school record in the 5,000 meters with a new time of 18:29.32.

Senior Nancy Hayes, one of the top distance runners on the team, said, "We've been fortunate to have some solid contributions from new team members this year, and everyone has continued our strong momentum from the indoor season. Upperclassmen have also made some huge strides with some new personal records."

Everyone on the team has proven his/her value, not only for points, but to support and rally other team members as well. Hayes said, "Our freshmen have really provided great competition and training partners in distance running."

On the men's side, Randy Anderson sprinted to a second place finish and new school record in the 100 meter dash, running a 10:74, besting the old mark by :04.

Thrower Kyle Mazur had a solid meet, throwing 175 feet in the javelin, which was good for a fifth place finish. Mazur has high hopes for MACs, both individually and for the team.

"I think the throwers are going to make a big impact this year at MACs," he said. "Teams are not going to look at Juniata as just a running/sprinting/jumping team but one that is well-balanced over all events because of the solid performances of our throwers."

Senior Chris Sheaffer once again showed exceptional efforts. He crushed the existing school record (set just two weeks ago) in the 5,000 meters by over 25 seconds, with a time of 15:21.02. Sheaffer is looking to go even further and hopefully break it yet again before the season is done.

The team still has three regular season meets remaining on the schedule until the conference championship.

"I'm really happy with the season so far, especially given that we are only half done," said senior runner Mike Vella.

If the team continues to have as much success as it has experienced this early into the season, good things are yet to come as they continue training to get mentally and physically prepared for the Mid Atlantic Conference Championship meet. Positive attitudes, natural talent and unyielding dedication will keep this team reaching for more until it hits the top.

The team will compete at the Indiana University of Pennsylvania Invitational on April 22.

Hannah Rauterkus / Juniatian

Freshman Aubrey Cyphert's face shows that it's good to be leader of the pack. The Juniata women's track team practices at home as the spring weather and MAC season both heat up.

Men's volleyball wins DIII title, again

Juniata Eagles win third consecutive national title

Katie Laucks

The men's volleyball team can say the third time is a charm.

On April 8, Juniata claimed its third national championship after defeating U.C. Santa Cruz in three games. The team hita collective .330 to coast to its 25th consecutive win over Division III opponents.

The championship match was owned by junior Jeremy Barndt. He notched seven kills, three blocks and two aces en route to being named the tournament MVP.

Joining Barndt on the all-tournament team were fellow teammates Nate Ocasio, who had a match-high 13 kills, and Matt Fritz, who finished with 12 kills of his own.

"We knew we could win it again. It was just a matter of doing it," said Casey Dale who led all passers with 10 digs.

With the win, the Eagles became only the second team ever to win three consecutive Molten Division III titles.

To get to the championship match, the men defeated Steven's Tech in three games.

Freshman setter Matt Werle led the team to a .425 hitting percentage and also came up with five blocks on the defensive end. Ocasio again led the offense with 14 kills, while Barndt added 13.

Although a national championship usually defines a season, as well as closing it out, that's not the case for this team. Immediately following the weekend celebrations, the Eagles were preparing for what is to come: the EIVA playoffs.

The Eagles opened that second playoff run last evening in Kennedy Sports and Rec Center against East Stroudsburg. Results from that match were unavailable as of press time, but full game coverage can be found on Juniata's homepage.

In preparation for its EIVA run, the team faced two quality opponents.

On April 13, the Eagles defeated Mercyhurst, 3-2, on senior night. Leading the way was senior Matt Spinger who pounded out 14 kills, put up five digs and added four blocks. Senior Cordt Withum had an outstanding night as well. He had eight kills and led all players with six blocks.

In the final game before the EIVA tournament the team faced George Mason, who is tops in the TAIT division at 11-1.

Juniata claimed game one but could not hold off the Patriots as they would go on to the victory. The Eagles were led by Ocasio, who chalked up 20 kills. Fritz and Glenn DeHaven added 15 and 13 kills, respectively.

Tennis begins playoff run

First appearance in MACs in over 25 years

Heather Lockwood

With an overall record of 13-3, the men's tennis team is heading to the MAC postseason. The Eagles' playoff debut will be their first in well over 25 years.

"It may be the first time [the team goes to playoffs] in school history, which is big," said head coach Bobby Pennington.

The men's conference record of 4-2 earned them the number two seed in the postseason tournament.

The men hosted a semifinals match against Albright College on April 19. Results from that match-up were unavailable as of press time. Full details and scores can be found on the Juniata Web site's athletic page.

The team has been on the courts since September preparing for its season with one goal in mind: the MAC playoffs.

Junior Brandon Long said, "We have a very talented bunch of guys who have worked extremely hard all year long to prepare. [Making] playoffs was bound to happen."

In his second season as head coach, Pennington has found much more depth in this team than last year.

"We have twelve guys that can play, and play well," Pennington said.

For the Eagle's long-desired playoff run, just a few things needed to fall into place.

"We finally have a dedicated coach who's hopefully here to stay for a long time," Long said.

Dedicated coaching is not the only factor that contributes to the team's playoff appearance.

"We are without a doubt the best team in the conference as far as chemistry, support and general fun. There are no personal issues between any two guys. We all respect each other

continued page 13

Juniata baseball gears up for stretch run

J.R. Byer

As the weather gets nicer, the Juniata baseball team begins its stretch run toward a second Commonwealth Conference title in three years. The Eagles are currently 11-3 in the conference and 18-8-1 overall. They are currently tied for second with Widener. The Eagles have been rolling as of late, winning seven of their last nine.

Against defending conference champ Messiah, sophomore Steve Wilk provided some late game heroics to lift the Eagles to a 3-2 victory. Trailing 2-1 heading into the bottom of the ninth, the Eagles used a walk to sophomore Josh Lingenfelter to put the tying run on.

After a sacrifice bunt and a groundout, Lingenfelter moved to third. This brought up Wilk, who drove a Ben Jordan pitch over the left field wall to give the Eagles the victory. Wilk and senior Dave Saintz led the Eagles with two hits a piece.

"It was the greatest feeling in the world," Wilk said. "I remember running to first base thinking I had just hit the ball hard and was trying to get to second to put myself in scoring position. Then I heard the crowd yelling and when I looked up to see the ball, it had gone over the fence already.

"Coach Zanic, who jumped on me when I reached home, was even more surprised than I was and probably even more excited," continued Wilk, who was named Commonwealth Conference player of the week after this walk-off home run. "It is definitely the best feeling I've ever had on the baseball field."

A strong pitching performance by senior Cody Zong helped the Eagles defeat Messiah 6-2 in their next outing. Zong threw a complete game four-hitter and struck out seven.

"I sometimes have to change my style of pitching slightly for each team we face," Zong said. "We usually are able to scout a team and we take notes on each hitter in the lineup. We try pitch to the strengths of the pitchers and adapt them to fit the scouting report and then pitch our game."

Seniors Jesse Leonard and Will Russell provided all the run support that Zong would need. They each drove in two runs during the five-run fifth inning for the Eagles. Wilk hit his second home run in as many days to round out the scoring for the Eagles.

"With a team full of great hitters and the fact that I hit 9th in the lineup, I get to see a lot of fastballs," Wilk said. "So, I sit dead red and I'm waiting for that "mistake" fastball that the pitcher leaves across the plate. That's the one thing that I've really changed in my hitting approach this season."

The Eagles dropped their third game with Messiah 12-1.

In the first game of a three-game series with conference foe Elizabethtown, Juniata pulled out the 8-7 win in 11 innings. Senior Zach Sternberg knocked a one-out single to put the go-ahead run on base for the Eagles. Pinch runner Shawn McDonald advanced to third on a single from senior Darren Hake. McDonald scored the game-winning run on a wild pitch from Elizabethtown pitcher Matt Woehnker.

Junior Jeff Hayes picked up the win for the Blue and Gold, while sophomore Paul Dunklebarger picked up the save when he got the final three outs in the 11th. Hake and senior Walt Goedkoop each had two RBIs for the Eagles. Hake and Saintz split 6 of the team's 13 hits on the day.

In the final two games of this series, Juniata got two complete games to help pick up two victories. In game one, senior Cody Zong allowed only two earned runs and struck out three to pick up his fifth win of the season. Wilk and sophomore Dan Kauffman each hit long balls for the Eagles. This was Kauffman's tenth and Wilk's third of the season.

"I think that this year we have an excellent chance of winning the MAC," Zong said. "We have our ups and downs with our pitching, hitting and fielding, but if we play our best in all three I think we have a good shot at winning the MAC."

In Juniata's final game with Elizabethtown, sophomore Andrew Snyder allowed four hits and struck out four as he picked up the win. A quartet of Eagles had two hits a piece. Senior Troy Beaver and McDonald each knocked in two runs for the home squad.

The Eagles next conference game is a weekend series with Lebanon Valley on April 21-22.

Hannah Rauterkus / Juniatian

Juniata sophomore Josh Lingenfelter does damage at the plate. Lingenfelter boasts a .500 slugging percentage this season, ranking him in the top five on the team.

Tennis sits at no. 2 seed in the MACs

continued from page 12

and it plays an important role on and off the court," Long said.

Though the team's chemistry may surpass most other teams, the men were not able to pull through in their most recent conference match against Messiah College. Juniata was well-prepared but fell to the conference leader, 7-0.

"Messiah is the best team we play by far in the conference," Pennington said.

Despite strong efforts from all players, only one victory surfaced. Doubles team Tom Nelson and Robert Bowser defeated their opponents, 8-3, in the second doubles position.

Though no matches were won in singles, Jonathan Cohen served up fierce competition against his opponent, winning his second set, 7-6, but would ultimately come up short in a tight match.

"We've...done something very special and historic at Juniata."

- Brandon Long, junior

Prior to the Messiah match, the men swept Frostburg State, 7-2, on April 10. The team finished the non-conference match with two wins in doubles and five singles victories.

In doubles, Tom Nelson and Robert Bowser cleaned up, 8-5, in the second doubles position. Also claiming a doubles victory was Jack Walfish and Jonathan Cohen in the third doubles seat with an 8-2 win.

Singles competition was as fierce as doubles. In first singles, Neil Eicher topped his opponent, 6-4 and 6-2. Jonathan Skoner dominated his Frostburg competition 6-3, 6-2 in second singles. Ryan Navarro and Jonathan Cohen also sailed in the fourth and fifth singles positions. Navarro finished with a 6-0, 6-4 victory, while Cohen won, 6-4, 6-2.

The Eagles' toughest win came from Long in the third singles seat. Playing into the third set, Long finished with a 6-3, 4-6 and 7-5 victory.

Winning the Frostburg match was a solid way to rebound after a loss against Moravian.

In singles, the third, fourth and six seats pulled away with wins.

Brian Sykes at the third singles position posted a 6-4, 6-3 win. Long, at fourth singles, triumphed with a 6-0, 6-4 win, while Casey Chew finished with a 1-6, 6-3 6-1 victory in the sixth singles seat.

Doubles partners Eicher and Long claimed the lone doubles win 8-6 in the first seat.

"On paper we are a much better team than Moravian," Pennington said. "Every match we need to be ready to bring it. The real lesson is that we can't just play and expect to win."

Finishing the match with one doubles victory and three singles wins, the team looked at the defeat positively rather than negatively.

"A loss doesn't mean the end of our season, nor does it mean the season was a failure. We've still done something very special and historic at Juniata. To go from worst in the conference to near best in two years is pretty outstanding," said Long.

The team looks to continue its historic season with strong performances in the MAC playoffs, possibly leading to a rematch with the undefeated Messiah College Falcons.

Previewing the NFL Draft

Robb's fearless NFL Draft predictions

Robb Patty

The combine is over and the individual workouts are coming to end. That can mean just one thing: the NFL Draft is right around the corner.

This is make or break time for many teams and general managers. The draft can turn some teams into contenders with a solid two days of work in New York City, or leave teams scratching their heads wondering how they let the next Tom Brady slip through their fingers.

Coming off its first Super Bowl win since the '70s, the Pittsburgh Steelers have a lot of work to do in this year's draft if they hope to repeat. With the retirement of Jerome "The Bus" Bettis, as well as the departures of wide receiver Antwann Randle El, defensive end Kimo von Oelhoffen and safety Chris Hope, the champs have some major holes to fill.

When it comes to defensive ends, the Steelers do not look for your typical rush end. Their ends are more like a defensive tackle, allowing for linebackers like Joey Porter and James Farrior to stop the run and rush the passer. Look for Pittsburgh to address this need in the later rounds of the draft.

Safety is a position that the Steelers need to fill as well. They failed to resign the young and hard-hitting Chris Hope and that could prove to be costly come next season. They still have all-everything Troy Polamalu, but they will be looking for another athletic hitter to accompany Polamalu in the secondary.

Donte Whitner of the Ohio State Buckeyes had an impressive showing at the combine; however, in the 40-yard dash he ran a 4.45 which could have dropped his stock. Nebraska's Daniel Bullock is another option, and at 6'0" he has good size at the secondary position. His 40 time of 4.40 also improved his draft stock, but is probably not ready to jump in and be a major contributor at the start of the season.

With that said, look for the Steelers to address either their need at wide receiver or running back, depending on who is still available at pick 32.

It's doubtful that Minnesota's Laurence Maroney will be on the board or speedy receivers Santonio Holmes of Ohio State and Chad Jackson of Florida. It's likely that Pittsburgh would have to pick a second tier wide receiver; either Sinorice Moss of Miami or Derek Hagan of Arizona State would be likely candidates. This would address the loss of Randle El and give Hines Ward a solid number two receiver.

However, if USC running back LenDale White were to drop down a few spots, he would be a great one-two punch with Willie Parker. My prediction for the Steelers' first pick: LenDale White, RB, USC.

The first five picks overall-look to have as much certainty as whether or not Brett Favre will retire, but I'll give it a shot, anyway.

The Texans have struggled since they became a franchise. However, they have the opportunity to get a playmaker that doesn't need David Carr to throw him the football to be successful. Carr just simply has to hand it to him. Reggie Bush is by far the most electric and talented player in the 2006 draft. The only way I see the Texans passing on this pick is if someone offers them an entire offensive line. My prediction for #1: Reggie Bush, RB, USC.

At pick two, the Saints have filled their need at quarterback, so defense and offensive line play is their major concern now. The Saints are in a great position because they could trade down to fill other needs or they could draft stud tackle D'Brickashaw Ferguson out of Virginia or defensive end Mario Williams from N.C. State. The Saints would be glad to have either player on a team that won just three games last season. My prediction: the Saints trade with the Jets, then select D'Brickashaw Ferguson, OT, Virginia, with the fourth pick.

At three, the Tennessee Titans need help on defense, but Steve McNair is not getting any younger. Offensive coordinator Norm Chow coached Matt Leinart at USC, but I see the Jets trading with the Saints and grabbing Leinart with the second pick. That leaves the Titans with Vince Young, which is what the fans of Tennessee wanted all along. My New Orleans prediction: Vince Young, QB, Texas.

The New York football Jets have the fourth pick and are in an interesting position. They could stay at four and take whichever quarterback falls to them, or move up to get the guy they want. Look for the Jets to make a deal with the Saints and jump into that two spot. If not, either Young or Vanderbilt's signal caller Jay Cutler will go to the Jets. My prediction: NYJ trades with the Saints, then select Matt Leinart, QB, USC, with the second pick.

With the Green Bay Packers it's no secret they need defensive help. However, if they draft an offensive playmaker, would that entice quarterback Brett Favre into returning? That possibility aside, the Packers desperately need help at the linebacker and defensive line positions. Linebacker A.J Hawk is the best available, and if Mario Williams is still around he could be a great addition to a defense that struggled in 2005. My prediction for the Packers: Mario Williams, DE, N.C. State.

Softball struggles down the stretch

Ryan Conrad

Recent games have not been in favor of the women softball's team, despite solid performances. Juniata's record stands at 9-23 overall and 2-8 in conference play with the season entering its latest stages.

Last week saw Juniata playing in a total of six games in a four-day span. The Eagles hosted Frostburg State on Monday while playing away at Messiah on Tuesday. On Thursday, JC hosted conference foe Elizabethtown. The games were not very friendly to the Eagles as they went on to lose all six games.

Juniata has found it tough to play so many back-to-back games this season.

"We do not play just seven innings; we are playing 14 innings," said freshman Heather Lockwood. "It is hard to pick your head up after the first game."

Even though playing 14 innings in a row can be physically taxing, emotionally the players feel that they are staying strong. "The team is always there for each other," sophomore Kaleigh Driscoll said.

The Blue Jays of Elizabethtown earned 4-3 and 4-2 victories over the Eagles on Thursday afternoon.

Game one saw the Eagles winning, 3-1, as the game went into the seventh inning, but Elizabethtown was able to score three runs to pull off the win.

The Eagles were able to score early runs off Blue Jay errors. Freshman Liz Schmitt delivered a single which scored a run, bringing the score to 3-1, but Juniata was unable to hold the lead.

Senior Renae Hobbs pitched a complete game as she struck out five and only allowed the Blue Jays to find hits in the first and seventh innings.

In Tuesday's games against Messiah, the Eagles did not score a run, as they were kept off the scoreboard in both games of the double header. The first game ended with a 2-0 loss while in the second, the Eagles fell short, 4-0.

The first game was a defensive struggle as senior pitcher Lizzi Bartosik threw six solid innings of work. Bartosik allowed just two runs while striking out three and allowing only two walks.

The Eagles threatened the Falcons several times but their efforts fell short. Senior Abby Sener knocked a single which put runners to be in scoring position. However, the Eagles posted three outs before anyone scored.

Senior Leann Leymeister hit a single, which combined with Messiah's errors, loaded the bases with only one out. A strong pitching performance from the Falcon's hurler allowed them to get out of the jam with Juniata failing to take advantage of the opportunity.

Game two once again saw Messiah and Juniata in a low scoring game.

Leymeister and freshman Tara Carl led the offense for Juniata. Leymeister had a pair of hits against the Falcons, with Carl adding a base hit.

On Monday Juniata challenged the Bobcats of Frostburg who won the first game by a 10-5 score while taking the second game, 8-6.

In the second game Eagle's freshman Liz Schmitt hit a two-run homer in the fifth to tie the score at six.

"Our problem right now is hitting," Driscoll said. "We all know that we can hit. We just can't seem to string them together."

Schmitt's homerun started what the Eagles hoped to be a late game rally until the Bobcats were able to score twice in the sixth inning.

"Our team has so much talent and unfortunately we don't have the luck," Driscoll said. "We never seem to give up; we always put everything we have into our games."

Hannah Rauterkus / Juniatian

Juniata's hitters have been able to put hits on the board but not enough runs across the plate late in the season.

The Eagles hope to pick up a couple of wins on the road as they play two of their final three games away. Juniata faces Lebanon Valley at home on Saturday, then goes on the road to close the season against Penn State-Altoona on April 27 and against Albright on April 29.

By The Numbers

3

Consecutive DIII titles won by the men's volleyball team.

4

AVCA All-Americans for the men's volleyball team. Cordt Withum, Matt Fritz, Jeremy Barndt and Matt Werle were all honored.

30

Walks by Dan Kaufman this season. He leads the conference by nine in the category.

0

Conference losses this season by the baseball team.

4

School records set by the men and women's track and field team at the Bucknell Bison Open.

6

Games in six days played by the softball team.

13

Wins by the tennis team so far this season, crushing the previous mark set last season.

The D League slowly sliding down slippery slope...

...and they're taking everyone with them. This is not good.

Tommy McConnell

Sometime last week, the NBA's Developmental League announced it was lowering its minimum age requirement one year, from 19 down to 18.

The announcement was so seemingly insignificant that I can't even remember what day it happened on. So some minor basketball league changed an age requirement by a year. So what? I've never seen a D league game, and I'm guessing the overwhelming majority of basketball fans haven't either. In fact, I would bet my '92 Dream Team action figures that most basketball fans haven't even heard of the rule change, and if they did, few cared.

So why is this a big deal? Well, in the immediate future, it really isn't. But eventually, it could be. It has the potential to completely alter the face of the sport of basketball as we know it (could I be any more dramatic here? I sound like the bad guy in a cheesy movie, revealing my sinister plot for world domination). And no one seems to really care. That's not good. At least not if you care about basketball.

So who gets affected here? Well, everyone does…but the NCAA is the one with the best chance of getting completely obliterated. If you enjoy college basketball, its officially time to start holding your breath.

The NCAA has to be so ticked off with the NBA. The NBA seems, at least to me, to be the older brother who messes with the younger brother just because he can. First, the NBA institutes its Go to College for At Least a Year Policy, to the absolute delight of the college game. The NCAA was getting all the best players back, at least for a year, which, hey, is better than nothing.

The top prospects had to go to college for at least a year. What were their other options? Go to a prep school and dominate pimply kids with glasses while their peers competed for national championships all while in the national spotlight? Maybe go overseas, collect a decent paycheck and live thousands of miles away from everything they know - family, friends, culture – just for a year?

With the NBA's new age limit, going to college for a season was the fastest and most viable route to the NBA.

Not anymore. Now that players can play in the D League straight out of high school, the nation's top prospects can get paid to play, all while living in America and having the undivided attention of NBA scouts while competing against the best talent not in the NBA. Deep breaths.

I mean, if you were a top prospect, why would you even go to college? Live in a dorm, or live in a mansion [if you don't think an agent isn't going to front these kids money, well…maybe its time you helped Isiah run the Knicks (Parentheses inside parentheses! How fast did Isiah Thomas become a national punch line? Dick Cheney has to be ecstatic.)]? Go to class or go to the club? Have coaches who are bigger (figuratively) than you yell at you every day or have the power to get your coach fired? Maybe the only thing colleges have going for them would be the cute little co-eds over the trashy D League groupies.

Now, this probably won't happen right away. But the point is, college hoops isn't looking like the highway to the NBA that it was just about a year ago. All it takes is one enterprising young baller to open the door, and there will be an absolute stampede away from Chapel Hill toward Roanoke, home of the almighty Dazzle.

And when that happens, the NCAA is done. Without the top talent, the NCAA just isn't as much fun to watch. This year's Final Four was a colossal bore, with the only entertainment being the chance Billy Packer would say something so stupid and irritional, even Jim Nance would start yelling at him (Just curious: has anyone watched a basketball game that Billy was announcing and not yelled at the TV? My grandmother? The Pope? Anyone?).

The NCAA was banking hard on the infusion of talent coming in next year. They needed it. But pretty soon, that talent could be in the D League. And it will be even worse than before. Under the old system, maybe the top 10, 15 guys skipped college. But with a readily available pro league as an option, how many top players will skip school? 50? 100? More?

Can you imagine an NCAA Tournament with the top 100 players gone? It would be atrocious. It would be boring. And the most important thing: it would be meaningless. Sure, the NCAA could continue the routine and trot teams out hoping fans would tune in just to see the names on the front of the jersey. But the quality of play would be so eye-poppingly inferior, only the hardest-core fans would keep watching.

All of this is fine for the NBA. This system will probably help them create a more skilled, more talented, deeper and ultimately more fun product to watch. But they are doing it at the expense of the NCAA.

The NCAA may have only one choice: pay its players. And with the NCAA's well-documented stance on that issue, along with a brain trust that makes MLB's front office look like a Mensa meeting, I think its safe to say we had better enjoy March Madness while we still have the chance.

The NCAA will "amateur" itself right into oblivion, and March Madness will become a glorified high school tournament. All because of an insignificant rule change in an insignificant league.

Thanks, D League.

THE RANDOM ELEVEN

Matt Russell

It's its own food type: A friend asked me the other day if I wanted to have a Normlet for breakfast. The worst part was, I knew what he meant.

Toppings exchange: A friend went to Muddy and did a meal exchange for a sub without the bread. Basically, she came back with a plate of onions, green peppers, black olives, and pepperoni. My confusion grew as she proceeded to sauté these things on a George Foreman grill. "What in the world is that for?" I asked. "You'll see" was the only reply. Five minutes later a plain Dominos pizza arrived.

Trading paintballs: I walked in on my mom watching an episode of Trading Spouses in which the father and two sons took their well-to-do and whiney new mom paintballing. After one round, she went and pouted in the corner because she'd gotten her finger hurt. I turned to my mom and joked, "You could totally kick her butt in paintball, mom," knowing full well my mom had never touched a paintball gun in her life. You wouldn't believe the look of indignation I got. "Well YEAH… I'm not a WUSS!" Whoa, sorry…

Infrastructure needs: It feels like cell phones have largely supplanted to campus phone system. It is, of course, much easier to be able to get the person directly than worry if they're actually in their room. Actually, the campus phone system as one great benefit: they aren't traceable. Is it just me, or has it devolved into a campus prank call system?

Diminishing returns: Over Easter weekend it felt like our dining options in Baker diminished by the day. By Saturday night, there was only pasta bake with mystery meat and pizza left to choose from. Quipped one of my friends: "by the time we come in tomorrow, it'll just be down to the soda machine." Eh, at least we wouldn't suffer a nutritional loss.

Paper cup countdown: Me: "Dude, that paper cup is for snacks. There's no wax in it. It isn't supposed to hold water." Friend: "But it's a paper cup; it's working fine." Me: "You have like 30 seconds to finish it, seriously" Friend: "Whatever" [10 seconds elapse] Friend: "This water tastes like paper" Me: "Seriously man…" Friend (as cup starts to turn to mush in hands): "Ah! Oh no…" (gulps down the rest and spits disintegrated pieces of paper back out). …and what did we learn today?

Signs of the season: Ah, the Juniata sprinkler system is back in full production. The other day, one of the sprinklers was stuck pointed directly at a rock. Some day, when it's big and strong, Facilities will transplant it somewhere else to it can grow bigger and be enjoyed by everyone. I mean, ten years and a couple tons of Miracle-Gro ago, the cliffs were just some gravel outside Founders Hall.

Some Made It – Some Didn't

Originally published May 23, 1973
Written by Sue Blum

Juniata's 1973 Raft Race began at around one o'clock last Saturday afternoon. There were twenty-four rafts altogether at the beginning of the race. The Smithfield bridge was the site of the starting point, and the ending point, to which only a large select made it, was down across from Top's Diner.

As my eyes scanned the river, they caught sight of some very interesting situations and structures. One of the rafts made in front of Cloister Arch was gigantic. It was boarded with an outhouse, sofa and about twenty-five people. The big barge sunk but its treasures were saved (the kegs). Another raft which attracted my eyes resembled the old steam boats, only its power came from a bicycle hitched up to a rubber conveyor belt. The conveyor belt turned paddle wheels in the water. Its construction was quite original. Next I saw six guys dressed in bathrobes in a raft constructed similar to a bathtub. There was a bar of ivory soap tagging behind the white work of art and large foam pads carried it rapidly along the water.

Some of the rafts from last year were back for a second try I heard. The canoe-like fiberglass structure with pontoons headed by Tim English, and a saucer type bowl headed by Lidian Pow could be seen again. As for the rest of the canoes, I could go pages on end describing them. Mostly males entered the race. But two rafts headed by girls caught my eye as they came into finish, although they did not place among the winners. The two rafts were headed by Cindy Sleeth and Nancy Agnew. Both these rafts used inner tubes for their means of flotation.

The canoes carried the judges for the race. The judging was based on theme, construction and of course the fastest speed. Raft number one, headed by Bill DeMuth, was second into finish. The raft's theme was excellent, though, and that put it into first place to win the $100. This raft was a Rub A Dub Dub six men in a tub. Second place was given to Tim English and his crew. They were no. 7 and first into the finish. Third and Fourth place was a tie. The winners were no. 2 and no. 8. No. 2 raft captained by Owen Thompson was the fourth to into finish but it had the best over all theme. No. 8 raft was headed by Walk Proziaeck. Their raft was 3rd into finish and one of the most carefully constructed. It was the Blue Space Lab. Fifth place went to Ron Walters and his crew who got all their points on their theme. They were no. 22 and they won $10.

The raft regatta was certainly exciting for the spectators and tiring but fun for the captains and their mates who set sail on the deep muddy waters of Juniata on the day of May 19th in the year 1973.

Class Skits Feature Fantasy in 16th Annual Class Night

Originally published December 5, 1952

The curtain rises tomorrow night on the 16th annual All-Class Night in Oller Hall at 8:15 p.m. Fantasy will be the keynote as each class vies for the trophy awarded to the victor.

According to Martha Petre, chairman [sic], the order of the productions, determined by drawings, is senior, junior, sophomore, and freshman.

The senior presentation "Sic Eunt Fata Hominum" was written and directed by Bob Bailey and Ron Cherry. An average American, Mr. Smith, finds himself transported to heavenly levels where an impartial jury of Greek gods and goddesses is trying such famous characters as Aristotle, Little Bo Peep, Diana and Jane Doe.

The junior try for the coveted trophy is "A Modern Odyssey" written by Jack Freymuller, Louise Gehman and Helen Stutzman and directed by Wilfred Norris. Based on Homer's epic poem, the skit takes place in the Kentucky mountains where Penelope Longgone is besieged by persistent suitors. Penelope's husband left her many years ago to journey to the big city.

The sophomores, victorious last year, will try to repeat their winning streak with "The Playwright and the Angel," directed by Janice Ludwick and Jeanne Snively. A downhearted playwright, desperately in need of an idea for his script, is helped from his predicament by his guardian angel.

Coming up in the final Juniatian of the semester, May 4:

63 credit POE limit to be phased in

Education department foresees difficulty reconciling new limit with state requirements

Kevin "Par" Fasick

All Juniata College Programs of Emphasis will eventually have a 63 credit limit. This rule, proposed by the Curriculum Committee, was passed by Juniata faculty members at the April faculty meeting. The changes are scheduled to be implemented in two to three years.

This curricular change will affect academic requirements for many disciplines.

Currently, a Business-Information Technology POE requires 67-72 credits. A Unified Early Childhood and Special Education POE requires 73 credits. Environmental Studies, 75-82. Earth and Space Science, 85-88. General Science Secondary Education, 87-91.

As such, many departments will need to drastically alter the manner in which business is conducted to comply with the credit cap.

Ryan Mathur, professor of geology and chair of the Curriculum Committee, said that the committee was charged with the task of "trying to re-evaluate what the POE is at [Juniata College]."

Toward that goal, the Curriculum Committee began looking at the different POEs, and, according to Mathur, noticed that "some of the [POE] titles and names are very specific, almost in a [vocational/technical] sense … and we're not that kind of institution."

Senior Steve Knepper, the only student member of the Curriculum Committee, agreed. He said that after analyzing the problems and strengths of the POE system, the committee saw a "need for revision."

"We thought that the POE had grown into too large of an entity," said Knepper. "If you take 90 credits in your POE, how much of a liberal arts education can you really get?"

This concern was the motivating

Symposium celebrates research

Sarah Anne Wharton

What school would ever cancel classes as a way for students to learn more?

Well, Juniata College did just that on April 19.

On that Wednesday, students had a class-free day for Juniata's first-ever Liberal Arts Symposium. The day, likened by some to a Mountain Day for the mind, was for students from all disciplines to present research, projects or theses to the rest of the JC community.

"It was a reflective day," said Jim Tuten, professor of history and this year's chair of the symposium. "Students were able to present individual projects that they had dug deep on over an extended period of time."

The new event piggybacked on Tri-Beta Honor Society's previous research days, held annually at Juniata mostly for science students to present their studies. But instead of presenters being from only a few different POEs, the Liberal Arts Symposium was open to everyone from students in art to politics, geology to biochemistry.

"We couldn't count on Tri-Beta completely because it was used to doing it just with the sciences," said senior Lori Martin, one of the Symposium's student organizers. "We had to mold all the departments together for one day," she said.

And the interdisciplinary event seemed to work.

A little dip outside Enrollment to celebrate Founders Day

Anna Elias / Alfarata

Last week, some students took advantage of springtime weather and held a short beach party in the fountain outside the Enrollment Center. Left to right: seniors Jim Serfass and Scott Sakowski, junior Brandon Long, and senior Brenton Mitchell toasted the end of the semester in style.

Woe to the Wikipedia user: cite with caution

Nick Carney

As the spring semester comes to a close, students across all disciplines rush to complete last-minute projects, research papers and presentations. In their haste, many of them will take shortcuts in their research. Specifically, many of these students will go to the Internet to allay their research woes.

Wikipedia, the user-edited and highly popular online encyclopedia has, in recent months, become a topic of great controversy at Juniata College. Many professors have forbidden their students from citing this four million-article-long encyclopedia on the grounds of questionable accuracy.

Many students say that there is simply not enough time to find other sources for their research. This includes Anita Desai, a sophomore biology student who has little extra time.

"I use Wikipedia because I like how easy it is; it's really fast," said Desai. "The information, too, is really accurate. You can depend on

Syllabi subject to change

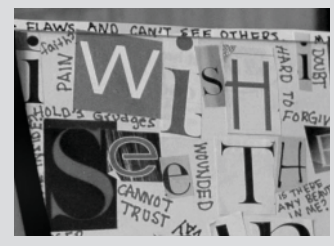
Not a legally binding document

Michael A. Vella

Professors are required by the College to distribute class syllabi at the start of each semester, giving students an idea of what material will be covered and how they will be graded.

However, the Provost's Office, on advice from the College's attorney, said that syllabi are not binding contracts between student and professor. Professors have the freedom to add or remove exams or assignments at their discretion.

Some students see this as unfair. Adding assignments introduces more work into already busy schedules, and removing assignments takes away potentially valuable grading points.



"If [syllabi] are not binding," said junior Nick Price, "it gives [professors] free reign on your grades."

According to Juniata's Faculty Handbook, "Faculty members should have the ability to construct an effective syllabus…and develop a clear policy on attendance and grading which should be stated unambiguously to the student at the beginning of the course, preferably in the course syllabus. The policy should explain the relative value of class work, field trips, papers and final examinations."

At the same time, the Handbook clearly states that "changes during the term in the system must be announced clearly to the students, preferably in writing…and faculty members are strongly urged to give frequent quizzes and tests throughout the semester, with or

Empty Bowls: PAX-O, pottery students throw for good cause

Holly B. Brown

What started as a modest idea to aid Huntingdon food kitchens has ballooned into an event involving students, faculty, the community and over 250 bowls. On May 5, the PAX-O club will host an Empty Bowls event in the Holy Trinity Catholic church hall starting at 6 p.m.

Empty Bowls is a national organization that lends out its name, Web site and original idea to anyone wishing to fight hunger.

Juniata students made ceramic bowls and will serve a simple meal of soup and bread to patrons who make a $10 or greater donation. The patrons may then keep their bowls as a reminder of all the empty bowls throughout the world.

Senior Karin Brown, a PAX-O member and a student in "Modes of Clay," was working with fellow club members and faculty to host a fundraiser. When she presented the idea to her Modes class, she asked if they would be able to make and donate 50 ceramic bowls.

But ceramics professor Jack Troy and the class were so enthused by the idea that they insisted they could do much more. To date, over 250 bowls have been thrown, fired and glazed.

Empty Bowls began at a Michigan school in 1990. In exchange for using their logo and advertising on the Web site, the organization requires that people "maintain its original name, intent and integrity," and make sure that "all money raised under the name of Empty Bowls must be used for fighting hunger."

In addition to the pot shop, a great portion of the Huntingdon community has volunteered to donate supplies. Some donors include Sodexho, Hoss's, Mimi's, Memories and the Bric a Brac.

That connection between Juniata and the community was another goal of the event, according to Brown.

"We have lots of arts and crafts here [on campus], and we wanted to take advantage of what we have here and bring it to the community," she said.

Although the event is still in the works, there has already been interest from PAX-O and the pottery shop to continue Empty Bowls as a yearly tradition.

Sarah Anne Wharton / Juniatian

More than 100 bowls cover a table in the Pot Shop for PAX-O's Empty Bowls project. Students in Jack Troy's ceramics classes threw over 250 bowls in total for the event. At the dinner, to be held on May 5, guests will pay $10 for one bowl full of soup and can take the bowl home. All proceeds will go to the local food bank.

Tickets are on sale at the Information Desk in Ellis and in various churches throughout Huntingdon. Information about the organization is available at http://www.emptybowls.net/.

Research opportunities and obstacles

Jason Najarian

At many colleges and universities, faculty focus on academic advancement through research, but at Juniata, professors spend the majority of their time teaching. Due to the College's focus on teaching, it is sometimes overlooked just how much research Juniata's professors accomplish. But there are some obstacles.

Many faculty interviewed noted that actively researching is not always easy at Juniata. Richard Hark, professor of chemistry, pointed out that research takes a lot of time.

"It depends on the individual situation, but research usually entails a time a commitment. It can involve taking time during weekends and nights," he said.

Hark also discussed how the different disciplines perform research differently. He explained how many fields face different time commitments. In particular, he described how scientific papers are frequently team efforts, lessening the pressure on the individual researcher. "Science is moving in a collaborative direction. Scientific sources very commonly are published by teams."

Ryan Mathur, professor of geology, agreed that time is an issue during the academic year. He accomplishes most of his research during the summer when teaching pressure is lessened.

"It is a question of time," Mathur said, "and people have different situations. Some don't have time to spare for research or access to funds."

Sarah Anne Wharton / Juniatian

Seniors Justin Kanter and Dan Eleuteri investigate a fellow student's project in politics.

Many faculty members incorporate research into lectures and view it as an invaluable classroom tool.

David Sowell, chair of the history department, believes that research helps him remain current in his field.

"If you don't keep up to date, classes will reflect [a professor's] graduate school knowledge," Sowell said. "Research forces you to stay current."

Sowell researched and published a book on the social history of medicine, which is used as part of a course at Juniata. He uses it as an opportunity to help students acquire a new perspective on how to learn the material.

"The course is structured around the same process as the book. It helps students begin with the same theoretical foundation," said Sowell.

Several professors, including David Widman, chair of the psychology department, see research as another teaching tool.

"The point of research is teaching. It is in the service of students," he said.

Widman's foremost goal is quality teaching, and he believes research plays a vital role in this endeavor. Many of his students are also exposed to career options through exposure to research.

"Psychology is a science, and I believe teaching students research helps them figure out what they want," he said.

Research has become an important part of the classroom, and Juniata has flexibility to allow professors to be involved with and apply research as they see fit.

Celia Cook-Huffman, professor of conflict resolution, said that Juniata attempts to be clear at the beginning with prospective faculty that Juniata is a teaching institution. With the diversity of teaching methods and philosophies here, it is difficult to fit everyone's needs.

"Tenure and promotion are based primarily on teaching,' said Cook-Huffman, "but Juniata does give credit for being a scholar."

She felt that Juniata recognizes that people can have different strengths and that having researchers is important.

"A lot of collaborative work with students still gets interesting work done. I think it's a testament to the notion of a teacher-scholar. There is less of a dichotomy between the two at Juniata," Cook-Huffman said.

Other faculty agreed that a great aspect of Juniata is the flexibility and choices professors are given.

"I enjoy research. It's part of what I do." said Mathur. "You have the chance here at Juniata to choose if you want to do research or not."

Cook-Huffman emphasized that research is very individualized among professors.

"It's a balancing act that everybody has to figure out for themselves. It depends on who you are and what you teach, and the system at Juniata recognizes that."

What do Juniata professors research?

Many students are aware that Juniata faculty are involved in research, but they may not know what it is that the professors are working on. Here is a brief look at what scholarship the professors in this article are involved in.

David Sowell has researched topics that include labor history in Columbia, social violence and the social history of medicine.

Richard Hark is involved in chemical synthesis projects. One of these includes a chemical equivalent to the powder used for fingerprint testing. This could be used on materials that do not show normal prints, like paper.

David Widman focuses on looking at behavior through a biological lens. A long-standing project has been examining how attraction to males differs across the female menstrual cycle.

Celia Cook-Huffman recently looked at the mechanisms used to resolve community-based conflicts. She was part of a project that examined the effect of large scale pig farms on communities and their reactions.

Ryan Mathur uses geochemical approaches to help determine the age of ore deposits. He also examines how metal deposits form.

Sustainable advertisements

Have the Daily Announcements and restriction of mass e-mail been bad for Juniata?

James Trent

Students have questioned how the lack of mass e-mail capabilities has affected how effectively clubs advertise events on campus. As flyers fill the stairways of Ellis, academic buildings and dorm hallways, it seems to many as if current advertising methods are excessive and wasteful.

The Juniatian asked various staff members and Registered Student Organization (RSO) leaders to weigh in on the issue and found that:

• It only costs about $10 a month for JAB to advertise all of its events. Colored flyers cost only 8 cents apiece, and supporting academic departments subsidize the larger posters. Some visiting activities actually provide free advertising materials beforehand.

• To help with sustainability, the Office of Student Activites (OSA) reuses old flyers in its printers for regular office use. The office reused so many flyers that OSA has only had to use one ream of new paper throughout this whole year.
•Many club members said that if mass e-mail were reinstated, their RSOs would still put up flyers, in addition to using mass e-mail to advertise.

• David Fusco, director of campus technology operations, said that mass e-mail already exists in the form of the Daily Announcements.

• According to Joel Pheasant, director of academic and business systems technologies, 262 announcements were e-mailed to the campus in April through the Daily Announcements. Of those, 108 were event announcements, and "most of these were sent out three times each plus a feature each day."

• Staci Weber, director of student activities, said that people are also already using a tool like mass e-mail through the Facebook. Students and RSO leaders can send event invitations to students through the Facebook, and the Web site automatically sends the invited recipients an e-mail telling them about it.

Heart of Math: students teach abstract concepts

Kim Wagner

Students in Professor Cathy Stenson's "The Heart of Math" course presented a poster session on May 1 in the Tussey and Terrace lounge.

As students passed through the exhibits, one project partner explained the posters on a one-on-one basis with each of the viewers. Students were told to evaluate at least four posters on content, creativity and the ability to answer questions knowledgeably.

This project ends up being a substantial percentage of the final grade. The students were also required to write a ten-page paper to accompany the poster.

According to the course description, class's goal is to give non-mathematics students hands-on experience with mathematics. Topics include infinity, higher dimensions, chaos and probability.

"[The class] makes you think outside the box," said sophomore Cheryl Koza, a current student of the class. "It's problem solving instead of just writing."

The class usually consists of about two-thirds education POEs. Individuals with education POEs usually choose "Heart of Math" because it is meant for students without a concentration in mathematics, and it allows them to fulfill one of two math requirements for their POEs. The course was formerly offered as a CA II, but currently is only offered as an N for FISHN requirements.

The project's objective is for pairs of students to take one of the sections they have not yet covered in class and prepare a 5-10 minute presentation. The students must understand every aspect of their projects in order to teach it to their classmates.

According to Stenson, the poster presentation is supposed to be a commercial. The segment should intrigue classmates and visitors while giving both a better understanding of the topic.

"They are very abstract concepts," said junior Tim Penrod, a former "Heart of Math" student. "Learning from my classmates helped me because they taught it in ways I understood it."

"The projects range from being pure and abstract to being very applied," said Stenson.

Projects have included the mathematical concepts behind bar codes, algorithms for encoding credit card numbers and how they are transmitted, as well as geometry with platonic solids, which involves understanding the symmetry of solids with flat surfaces.

The students break into smaller groups and present to the other students in their groups. Some presentations involved hands-on material and visual aids to help other students understand the mathematical concepts.

"It is easier when you teach yourself because you can take it literally in your own way," said junior Chad Steiner, another former "Heart of Math" student.

"It gives the students a chance to learn something on their own," said Stenson. "By the end of the class, the students feel that they own their projects."

Relay for Life exceeds goals for American Cancer Society

Hannah Rauterkus / Juniatian

Team members of Shipwrecked Sherwood walk in Juniata's second annual Relay For Life, a 24-hour fundraiser for the American Cancer Society, held on April 28 and 29. Student and faculty teams participated in the Relay. Donations are being accepted until the end of May, and as of press time the event raised $13,110, exceeding the $12,000 goal.

Syllabi subject to change: not a legally binding document

continued from page 1

without advance notice."

The Provost, whose office oversees faculty and academic affairs at Juniata, said professors should not make "major" changes to class syllabi. Although no formal College policy exists, Lakso said a general rule should be that "[professors should] not make changes [to a syllabus] that seriously disadvantage students."

But rarely can a pre-semester plan account for events that arise with a term.

Even Lakso, also a professor of economics, said, "I can't think of a semester when things turned out exactly as I had them on the syllabus."
According to Lakso, a clear problem would be a professor changing the percentage of a class grade devoted to class participation during the semester or choosing not to drop a low test score after agreeing to do so on a syllabus. Both of these involve changes to grading and exam policies, which are advised against in the Faculty Handbook, not changes in the number of exams or assignments. In this case, no official policy exists.

The consensus among Juniata's faculty is that syllabi should be flexible to allow classes to follow the progress of students. Changes to class material and even the number of assignments are generally viewed as acceptable, whereas changes to grading policies are not.

Professor of Environmental Science Dennis Johnson, who teaches a project-based technology class, said, "[Syllabi need] to have inherent flexibility to adjust for classes. Education should not be that binding."

Johnson said some students might need additional lectures to accomplish projects or extra homework to ensure that they understand the material. He added that syllabi should be flexible in order to incorporate new information or ideas professors discover through lectures and conferences.

Education professor Kathy Jones said that, although she tries to avoid adding or removing assignments, the schedule of her syllabi often change. "One of the big things about a syllabus is that you have to be willing to change things," she said. "[Syllabi] are a guide of how the class is going to run."

Jones referred to changing her class schedule to accommodate a guest speaker, whose schedule could not be anticipated while creating the initial syllabus. This semester she did remove one assignment in her educational technology class after first consulting the students, and the points were assigned to another project. Updated versions of her syllabi are always available on her public drive folder.

"[A syllabus] is effectively a contract," said Professor of Physics James Borgardt. "Making major changes should be avoided."

He said, though, that some first-time professors who are experimenting with new classes may find themselves needing to rearrange syllabi. He added that professors should have flexibility in changing dates because students expect the same when arranging exams and finals around athletic events and other activities.

The music department adjusts syllabi in periods before performances.

"We try to get everything on a syllabus for a given concert period," said music professor James Latten. "We do our best to not call extra rehearsals and try to choose the right music, but we will call extra rehearsals if needed."

In the "Music Fundamentals" class, Latten had to move one class period to an unscheduled date, but he did provide the students with advance notice.

"I have never, ever had problems with changes to syllabi [as Provost]," said Lakso, who added that syllabi will never be considered binding contracts regardless of whether or not they are signed by students.

Lakso also said that Juniata's professors are unlikely to make changes to syllabi that will hinder student progress.

Woe for Wikipedia users

continued from page 1

it when you need it. If my professors say I can't use it, [sometimes] I'll just cite another source. I love Wikipedia."

While Wikipedia has enjoyed popularity among students due to its ease of use, clarity and depth of information, most professors are less than thrilled that this source is finding its way into bibliographies.

"I think Wikipedia is a nice tool for getting started," said Dominic Peruso, associate professor of accounting, business and economics. Peruso is one of many Juniata professors who does not permit his students to cite Wikipedia as a source. "It's an incomplete tool; it's not peer reviewed. [Wikipedia] is not held to the same standards [as] academic journals."

While Wikipedia articles can be edited and reviewed by experts, Wikipedia cannot guarantee the validity of those articles. Any Internet user can edit content.

Wikipedia pages actually feature a "disclaimers" link that warns users of this danger.

"Wikipedia is not uniformly peer reviewed; while readers may correct errors or engage in casual peer review, they have no legal duty to do so," reads the disclaimer. "Thus all information read here is without any implied warranty of fitness for any purpose or use whatsoever. Even articles that have been vetted by informal peer review or featured article processes may later have been edited inappropriately, just before you view them."

Because of this disclaimer, some Juniata professors, while allowing students to cite Wikipedia, caution them that relying on it whole-heartedly would be a bad idea.

Philip Dunwoody, professor of psychology, said that he didn't mind students using Wikipedia as a source, just not *the* source.

"[I] have a pretty good opinion of it," Dunwoody said. "[But] it's an encyclopedia of one form or another, and it is then necessarily already an interpretation of some other source. So, I think it can be a good place to start and to get kind of a big picture overview of a topic. But a research paper, in my field, what I'm used to, involves the original source material to a large extent."

Original sources, along with scholarly journals, books and other printed sources are what Julie Woodling, a Beeghly Library instructional librarian, would like to see students use instead of Wikipedia.

"Many times reference materials are a springboard. It's a place to start if [students] don't know anything about a type of topic or for some definitions and background information," said Woodling. "And I think Wikipedia is fine in that same genre. [Students can] go to Wikipedia, do a search and see what other people have written about it and [find some other] ways to search for information. I certainly wouldn't recommend somebody citing it in a paper."

Woodling added that all Internet sources must be carefully evaluated. She referenced the "Ten C's for Evaluating Internet Resources" as a tool to students should use to determine a Web site's validity as a source.

Wikipedia's accuracy was at issue several months ago on Juniata's online forums. With lengthy posts, faculty and students debated with the journal Nature and its findings that the online encyclopedia was just as accurate as the Encyclopedia Britannica.

Nature, in an attempt to evaluate the validity of Wikipedia, published a study that compared 50 Wikipedia articles to 50 similar articles in Encyclopedia Britannica. The journal found that the sources had roughly the same number of "serious errors" when it came to important concepts and ideas.

Peruso researched a few topics on the journal when he found that his students were citing it in their papers. He concluded that, contrary to Nature's findings, many Wikipedia articles were inaccurate or incomplete.

"I'm wary of all Internet resources," said Peruso. "[Wikipedia articles can] orient you, but they're not entirely correct. They don't have a complete list of resources. Some articles are good in that regard, but other topics aren't all that hot. Wikipedia is not the beginning and end of any research."

Other sources are in line with Peruso's feelings. The Encyclopedia Britannica, outraged by Nature's findings, published a 20-page statement that demanded that the journal retract its findings.

In the statement, the Encyclopedia Britannica claimed: "Almost everything about the journal's [Nature's] investigation, from the criteria for identifying inaccuracies to the discrepancy between the article text and its headline, was wrong and misleading."

At one point, the statement calls Wikipedia "fatally flawed" and suggests that no one should use it.

Professors and librarians at Juniata want to see students work a bit harder in their research.

"Juniata students should be using high-quality information sources, sources they have learned how to validate themselves," said Woodling. "I think that it's so crucial. Students should always question the source. Is there a bias, is there a reason that they're being told what they're being told?"

More information on validating Internet resources can be found on the library's website, located at http://services.juniata.edu/library.

Evaluating your Internet sources: 10 'C's to consider about anything you find

63 credit limit to be phased in

continued from page 1

factor behind the push for the 63 credit limit.

While some departments may adjust easily to the changes, others are unsure of how they will be affected. "The impact on our programs is unforeseeable," said Sarah DeHaas, education department chair.

"Several of our programs exceed these numbers," said DeHaas of the credit number cap. "We don't know yet how [we're going] to handle it….We're going to continue discussions with the Curriculum Committee" to see if a solution can be found.

"The education people are very upset," said Mathur. "[And] they are the most problematic because they have this…external force coming down on them," he said of the Pennsylvania Department of education's rules, by which all college education programs must abide.

Both Mathur and Registrar Athena Frederick agreed that education POEs have special considerations. Though talks between the Curriculum Committee and Juniata's education department continue, no solution has yet been found to be sure that the department complies with both internal and external rules.

Frederick said that the credit limit will not go into effect next year. Therefore "departments will have a couple of years to figure out how to go about [adapting their programs]."

A possible solution to the problem, mentioned by Mathur, would be to take a POE that exceeds the 63 credit limit, and divide it into primary and secondary emphases. "[The Education Department] may have to do something…of this nature," Mathur said.

While such a proposal may solve valid concerns for education POEs, it is possible that this practice could merely provide a way for some departments to escape the credit limit, and once again eliminate students' opportunities to explore varied interests.

Junior Leanna Wright has a POE in English Secondary Education, which currently requires 90 credits to graduate. Thirty-six of these credits are in Education, and 54 are in English.

"I realize that this is a lot," Wright said of the number of required credits, "but I don't see how any of these classes could be eliminated."

But Wright also said that she has found it "somewhat difficult" to fit all of the required courses into her schedule each semester, while trying to fulfill FISHN requirements. This pressure on students is one of the things the Curriculum Committee sought to lessen.

Juniata Registrar, Athena Frederick, described the 63 credit limit as a way to "prevent departments from stacking up [credits] and… making students prisoner [so that] they can't explore" other options and interests.

Mathur, who emphasized that the new rule is not targeted toward any specific department, recognized that loopholes may exist. A student, perhaps encouraged by an advisor, could still decide to take as many credits as possible in a particular subject area. "Ultimately, the student makes the choice," he said of the new rules. "They will assume more responsibility, and that is the objective."

"The changes reaffirm our definition of a liberal arts education," he concluded.

Knepper also recognizes that some students may be "psyched up about their POEs, and therefore take all of their extra credits within [that] department." He pointed out, however, that there will be students who will use the extra flexibility to explore the diverse educational possibilities that the College offers.

"These students will really benefit from that credit cap," Knepper said.

He also added that, "a reform of FISHN is on the horizon, and that could really change things up."

A POE in Communication and Conflict Resolution - currently 46-75 credits - may be required to weather that storm.

Symposium celebrates research

continued from page 1

"People were delighted," said Tuten, "especially with things that hadn't happened [in research days] before."

Rooms in Ellis, von Liebig and Good were packed to capacity with presenters and onlookers. More than 190 students gave presentations, and hundreds of non-presenting students filed through the lectures and exhibitions throughout the day.

"The participation exceeded all my expectations and more," said Tuten.

Some professors required that their students attend the day's events, but many did not require it, and students went anyway.

"Some students were there because professors suggested it. But some were there simply because they were interested in the topics," said Martin.

The large number of participants in the Symposium was impressive, given that the day had a few strikes against it.

The first was the faculty's major worry that the day's cancelled classes would prompt the Mountain Day effect – an excuse for students to party and drink the night before. According to Tuten, this concern was the biggest hurdle in getting classes cancelled and the event held in the middle of the week.

Faculty's worry was not far from the mark. Many students did use the day's cancelled classes as a chance to party on Symposium Eve.

"A lot of people were like, 'Hey, Mountain Day in the spring, and if I have to show up to something, I'll do it with a hangover,'" said senior Scott Stephan.

The night before the Symposium, he and his friends drank and reveled to their heart's content, citing no classes and nice weather as great reasons to party. And, according to Stephan, many other students partied as well. "I ran into a lot of drunk people that night," he said.

But, his partying beforehand did not stop Stephan – or others – from participating in the Symposium the next morning and afternoon. He even presented a video project for his media class, showing videos he and fellow students filmed for a project called "My Juniata."

Despite all the partiers he saw the night before, "the room was packed," said Stephan. "We expected no one to be there, so I was really amazed."

"Some students did consider it a Mountain Day, but a lot of stu-

Why the debate on abortion need not divide us

Emily Eller

The abortion debate in the United States has grown particularly nasty. People on both sides of the debate are caught up in a game of name-calling and even violence around the issue.

The irony here is that both sides have common goals.

Everyone involved in this debate wants there to be more options for women. The aspect of this issue that has been left lurking and untouched beneath the anger around legal rights is the fact that motherhood has become a nearly impossible task in the United States.

Women have limited access to health care, child care or other forms of assistance that would make motherhood a more viable option. The cost of living under these circumstances makes single parenting a near economic impossibility, and society does not teach men to respect and care for their partners or the children they conceive together.

"Pro-life" advocates make a very good point that many women feel like they have no options but to have an abortion, and "pro-choice" advocates should listen to this criticism seriously. But where pro-lifers miss the mark is by assuming that, by removing the legal right to abortion, the underlying difficulties for women will somehow disappear as well.

There are many ways to reduce abortions that would fit the needs of both sides. Giving women access to education and opportunities to women living in a society which does not support motherhood. Affordable child care and health care, supportive partners and the ability to pursue education and a career while being a mother would then theoretically reduce abortions by 56.2%. Wouldn't that make everyone happy? Or at least be a good start?

The irony here is that both sides have common goals: more options for women

has been proven to reduce abortions. Also, I would guess that when people are in loving, healthy relationships they are less likely to have abortions. Couples with honest dialogue are more likely to use contraceptives correctly and regularly and, in the case of pregnancy, raising a child is a more viable option.

According to the Center for Disease Control and the Guttmacher Institute, among women who have abortions, 21.3% cite not being able to afford a child, 14.1% cite problems with their partner and 10.8% cite that having a child would disrupt educational or job opportunities as the reason for having an abortion. None of these problems would be addressed by deciding whether or not abortion should be legal.

These are all issues which point

This may seem idealistic, but even if it didn't reduce abortions, it would be a good way to improve the livelihoods of women.

Both sides of the abortion debate should put their focus and energy into projects which improve the lives of women and thereby reduce abortions instead of screaming at each other and pouring their resources into legal technicalities.

The recent "gains" on the pro-life side are disturbing to me. There has been a campaign against late-term abortions deemed "partial birth abortions." Only one percent of all abortions are performed after 21 weeks, and these are the abortions under attack? The women who have these late abortions are overwhelmingly aborting because of medical risk

Presidential Perspective

President Kepple wants to hear from you! His column will appear each issue this semester to answer any college-related question from the campus community. Simply e-mail questions to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

"Students are paid minimum wage for campus jobs during the school year, but they are paid more than that during the summer. Why the difference in pay rates for the same jobs at different times of the year?"

The additional pay provides a supplement so that students can afford housing in the area.

"There is currently a petition circling campus calling for a 'Tuition Guarantee' contract. In this contract, students and the administration would agree upon a 4-year 'Tuition Guarantee,' which would place a cap on annual tuition increases. Are you receptive to this idea? Can JC students expect a tuition contract for the 2007/2008 academic year?"

I'm always interested in new ideas, but this one will take a lot of review in a time of general price uncertainty, especially in health and energy costs.

This is the end, my only friend, the end...

Mary Gardiner

There was a beginning. There must be an end.

It's really sad - really, really, really sad - to think about the fact that my experience abroad in the Czech Republic is over. I've been here for almost eight months, and I'm leaving in a few weeks. But I'm not ready to let the friends I've made and the experiences I've had enter the realm of the past.

I'm beside myself. I've known this was coming, but I've tried not to think about it.

Because, boys and girls, a year is a long time.

***

I have to start packing soon. My wall is literally plastered with receipts and ticket stubs to movies, with coasters from Italy and Poland, with maps from every city I've been to - and they have to come down.

For those of you who think that packing on the way over here is hard (I remember the daunting task of fitting my life into a suitcase in September), I should tell you that it's quite harder to pack for the way back. I have to pick and choose the items that go along home with me: Bring the favorite mug. Leave the great books I've read. Bring the teddy bear I've traveled with to 13 countries. Leave that cool shirt I got in Budapest, Hungary.

It's going to be interesting to see my return. I'm pretty convinced I'll rush to the nearest grocery store and kiss the first box of Betty Crocker that I see. I'm going to spend a whole week munching on Pringles, Oreos, steak, mashed potatoes and Pepperidge Farm cookies.

I'm definitely going to watch four straight episodes each of "Law & Order" and "Seinfeld."

I can't wait to get back to great second hand stores, something I've really missed, especially that Goodwill in Huntingdon.

I might even shop at American Eagle.

And then there's my church. I miss going to church services, and getting bulletins and singing songs I know, shaking hands and hugging people I know. I especially miss hearing sermons in English!

These things are constants that will be strangely, but comfortingly, familiar when I return. It's as Nelson Mandela said: "There is nothing like returning to a place that remains unchanged to find the ways in which you yourself have altered."

***

Don't think that the difficulty of leaving all of these things behind means that I don't want to come home. As much as I make fun of the U.S. and some Americans, I really miss all of these things - not to mention how much I miss my family and friends. It will be nice to live again in a place where you don't have to explain the advertisement jingle for Goldfish or what exactly a "tool" is.

It's just hard to say goodbye to my best friends - who took me in for Christmas when I had nowhere to go - and not know exactly when (or, sadly, if) I'll ever see them again.

Perhaps one of the most comforting things is the fact that among all of these things, "Law & Order" included, I'll be returning to Juniata, to see all of you, my friends, my professors, my mentors. I'm excited to see you, you know.

Thanks for reading my column this semester, folks. I appreciate it. I hope you had just as great a year as I did. I'm looking forward to hearing all about it when I meet you in the fall.

Juniata is putting "the arts" back into a liberal arts education

But are students taking full advantage of the opportunities in front of them?

Jessica Perry

After what seems like years of neglect, it appears that the Juniata community is finally making serious efforts to put "the arts" back into its liberal arts education. Within the past year alone, the College community has witnessed a significant increase in the presence of "the arts" on campus.

The construction of the new Halbritter Center for the Performing Arts kick-started the College's yearlong celebration of "the arts."

The new facility opened the door for the Gravity Project as well as the "Nine Gates," Artist Series and "A Midsummer's Night Dream" performances.

JAB's new programming, consisting of weekly coffeehouses, contributed to this year's increase in the number of student-sponsored productions. This year, two "Those Guys" benefit concerts, the BBB&L benefit concert, the Florida Zoo Relief BYOB Coffeehouse and the Fight Apathy Tour promoted the presence of the arts on campus by increasing the amount of musical talent showcased as well.

Student involvement was also a key influence on this year's promotion of the arts as seen in the increased presence of events sponsored by clubs such as Art Alliance and Kvasir.

"In efforts to make visual art accessible" on campus, president of Art Alliance and senior art history POE Holly Brown, said the club sponsored events such as the Body Art, Vagina Monologues, Student Artwork and Post Secret exhibits.

Thanks to efforts from sophomore anthropology POE and Kvasir club president, Suzanne Ostyn, the campus was exposed to literary works of art through not only the literary magazine this year. The club added student and faculty poetry readings in April, which is poetry month.

A review this year's events shows that indeed the presence of the arts on campus has increased and that the opportunity for a solid liberal arts education does exist at Juniata. However, it seems like most students are not taking full advantage of the opportunities such an education provides.

When asked about the presence of the arts on campus, the majority of students agreed that it has increased and efforts should be made to ensure that it continues to increase. Yet, most students could not identify more than five events from the whole year that occurred on campus to promote "the arts." Even worse, the students listed an even smaller number of events that they actually attended.

Brown commented that "for the most part [she is met] with student

continued page 7

Hannah Rauterkus / Juniatian

The Art Alliance has had numerous art exhibits throughout the year. The most recent is the Post-Secret exhibit where students anonymously put their deep-dark or funny and embarrassing secrets on a postcard. The exhibit is displayed in Cyber Café.

American Dreamz with a "z"

My final movie review

Holly B. Brown

Well, faithful readers, it is with a sad heart that I give you my last Juniatian movie review. After the thirteenth, I will be forced back into my normal state: ranting on about movies to hapless friends and confused strangers.

But I am glad to say that my three-year review reign ends with a gutsy movie: "American Dreamz." Directed by Paul Weitz ("American Pie," "About a Boy") and starring everyone and anyone, this biting film asks the question: "What's the difference between comedy and satire?"

After watching, I'd have to say that it's hard to determine. "American Dreamz" is an American Idol knock-off, where contestants scheme and punch their way into the hearts of American viewers everywhere. Sally Kendoo (Mandy Moore) is the vicious but wholesome-looking star, set up to compete against the nervous and adorable Omar (talented Sam Golzari), who is actually... a terrorist.

But it doesn't stop there. Unhappy, ratings-hungry host Martin Tweed (Hugh Grant) eventually crosses paths with the President of the United States (Dennis Quaid) and his frightening Chief of Staff (Willem Dafoe). The President has decided he wants to read - of all things - the newspaper! And he has taken to hiding in his bedroom, surrounded by news and encyclopedias.

To get him back on the positive side of popularity charts, Dafoe wrangles him to be the last guest judge of American Dreamz. And the hapless Omar is contacted by his superiors in Iraq, who tell him he must get to the final stage of the show in order to assassinate the president.

I know. It's a lot to take in, and it's incredibly gutsy. What's startling about "Dreamz" is that it comes so close to reality, or at least what today's culture's TV-perception of it is. President Stanton is a naïve and uninformed Southern boy, who is told what to say by Dafoe through a nearly invisible earpiece. Tweed exults in merciless criticism and promotes those contestants who will bring in the most money.

Trying to make terrorism into Machiavellianism must have called for a lightness in the script

Because the insults are so dead-on and scathing and because of the serious subject matter (the war in Iraq, terrorist training-camp videos and suicide bombing, just to name a few), it's sometimes hard to know how to react to "American Dreamz."

I found it to be biting and hilarious. But ultimately, the line the film tries to balance between slapstick comedy and satire becomes too vague. Everything is sunshiny and in primary colors, with the comedy and the language sounding rather sitcom-like.

It's true that trying to make terrorism into Machiavellianism and a presidential assassination plot humorous must have called for a lightness in the script, but I feel that a more fearless and wicked look at today's culture could have made a great movie, instead of just an entertaining comedy.

Still, the zingers are fantastic and the acting is spot-on. Dafoe is like a gnomish devil on the shoulder of Quaid, who is adorably clueless and much more likeable than anyone in the current administration ever could be. Moore toes the line between a merciless fame-grabber and the cute All-American girl, but she could have pushed it some more.

Hugh Grant is always good at being a lovable bastard and Chris Klein fills his usual role of a lovesick puppy dog type. My favorite of the cast was the adorable, and surprisingly sincere, Sam Golzari. It's his character Omar who eventually asks the big questions the movie begs of us: How responsible are Americans for the acts of America? And ultimately, can the suffering of others really ever achieve justice?

These are hard questions, and ones the film offers few answers to. In the end, I wish that Weitz would have taken the criticism and satire further and then presented us with a few insights into how things could be better. The ending montage is a bit too happily-ever-after for issues this important.

Women in Sherwood bond over art

Aly Pompeani

The second floor of Sherwood became a gallery for a new art project. Assigned a community service project for her "Creative Arts and Healing" class, junior Brittany Krotzer chose the women of Sherwood as her focus. Krotzer gave each of the women on her floor a blank sheet of paper, and a patchwork quilt was born. Eventually, a four sheet mural joined this community art depiction.

In the "Creative Arts and Healing" class, students learned how the different creative arts can be used in therapy to help benefit the healing process. However, Krotzer's project was focused on exposing a group of people to the creative arts and to apply what she learned in class.

"I thought it would be fun," said Krotzer. "I have all freshmen residents, and thought it would be a good way to relieve stress and make the hall look nicer."

Two pieces of artwork were on display. The first was a patchwork quilt made from strips of paper Krotzer distributed to each woman on her floor at a hall meeting.

The other piece consisted of four themed pieces of paper, symbolizing love, tranquility, inspiration and one simply labeled "exotic." Residents added their own art to each piece, and the manifestations were notably personal. A painting of a student's breasts, made "naturally" became famous on the hall.

For tranquility, residents depicted a tree and sunset. For love and inspiration, there were quotes and magazine cut-outs.

One girl used felt letters to spell out "Boy + Girl," and someone later added "Boy + Boy" and "Girl + Girl."

Throughout the project, Krotzer saw a lot of new faces, and saw those faces interacting.

"People were talking to each other," she said. "A lot of people were excited about it ... even just to look at it."

Freshman Anna Oliveri contributed to the tranquility and exotic sections of the hall. She made contributions after she had exams. For her, adding to Krotzer's project was an artistic outlet and a stress reliever.

"I think it should be up all year and changed monthly," said Oliveri. "It gave us a way to express ourselves somewhere other people could see it."

Freshman Kelly McLin shared Oliveri's opinion. "It made us a special unit ... in some other halls, no one comes out and talks, while we all sat in the hall painting together," said McLin.

McLin hopes to become an RA and will use the idea just for fun.

"I wish I would have thought about it at the beginning of the year," said Krotzer. "I would definitely suggest it to future freshman RAs because it is such a good way for [students] to learn about each other."

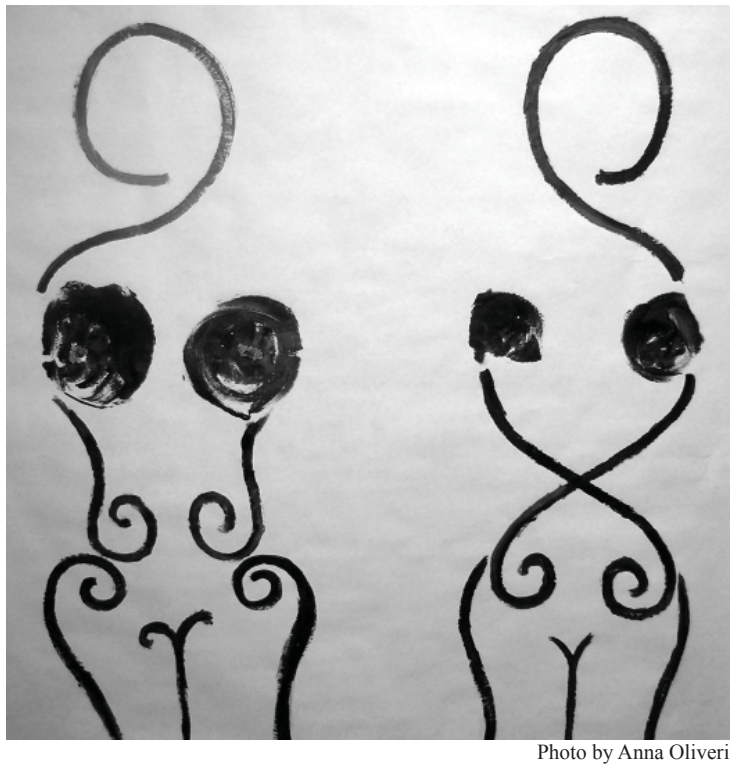

Photo by Anna Oliveri

Freshmen Anna Oliveri and Ashley Pott both contributed these exotic self-portraits to RA Brittany Krotzer's creative art project on the second floor of Sherwood Hall.

Fashion: be grungy & gorgeous this summer

Lucia

Maybe it's the end of the semester, or perhaps my realization that this is my last column, or it could even be that the warm weather has gone to my head, but I have developed an obsession for a grunge style. I'm increasingly amused with this growing trend to self-invent.

By grunge, I mean that anything is flying these days. It's a loose definition--and style. I am fascinated with this style from the idea of wearing a dress as a shirt with jeans to skulls and cross bones displayed on nearly anything. Yes, my mind is wandering because this campus is so diverse, and I love it!

The dress over the jeans style. I questioned it. I examined it. I tried it. Now, I love it.

One sunny day, I took notice to a steady trend that has now formed here on Juniata's campus - the dress over jeans style. I questioned it. I examined it. Then I tried it. Now, I love it. I tell myself I'm releasing my inner hippie - no offense if some real tree huggers here take it as such. (I secretly wish I was one myself.) But, the style is ultra-relaxing and inspiring.

Okay, inspiring may not be the correct word; however I do feel very complete and relaxed. I think if you pick the right dress and jeans the outfit looks fit to walk down the L.A. Boulevard.

Now to something a little more interesting about grunge - the skull and crossbones. Not only has this style taken celebs by storm, but it is hitting the likes of Target shelves as well. Maybe it was "The Pirates of the Caribbean" that began the trend. Regardless, tops, scarves and more don this decal. While it once only appeared during Halloween, this look is trying to prolong its life during the spring and summer days as well. Personally, I enjoy this punk rock chic look. And another perk: it's affordable.

I took a stroll in Target when I was home for Easter and found the skinless decal on adorable T-shirts, knock-off jewelry resembling the kind you would see on the likes of the now infamous Lindsay Lohan, Kelly Clarkson and many others as well.

I also do believe that these two styles can compliment any type of person, with any type of body. Short, tall, voluptuous, and so on, ladies - any body type can find a way to steal this style and make it your own.

So as my last suggestion to everyone: try this style out this summer. Better yet, try any style out to spice up your wardrobe. And remember, make this summer full of fashion experiments!

Juniata's putting "the arts" back into a liberal arts education

continued from page 6

apathy and disinterest" when she organizes an event.

Event organizers understand that students are busy, and finding time to attend just a few of the numerous events on campus can often be difficult. However, they think that other reasons are hindering student attendance.

Brown explained, "I think that most people look at art and say 'oh that's nice' and don't really think about how art can enhance a space, affect them and create a dialogue. Instead, most people seem to think art is inaccessible, too obscure and complex that they can't understand it."

Other event organizers propose that the arts get ignored because people deem them less important since they are not part of their courses of study.

Michael Boyle, the William J. von Liebig Chair in Biomedical Sciences and a professor of biology, believes students need to realize that an "academic education is not in any given discipline. It's a combination of discovering truth and beauty no matter what form it takes."

Junior Dana Nelson agreed. "The arts" she said, "are just as valid a form of study as biology. [They] have an inherently human quality that provide you with a sense of something bigger."

Regardless of sub-par student attendance at art events, "the arts" are finally beginning to find a home on Juniata's campus.

Now that the opportunities to experience the arts are increasing on campus, it is up to students to take full advantage of the benefits such experiences provide.

Kathy Westcott, assistant professor of psychology, feels students should be aware of as well as actively involved in "the arts."

"The arts provide an opportunity for students to explore aspects of the world and of themselves that might be different than their typical daily experiences," Westcott said.

Trustee, artist, and museum director Mike Streuber also encourages students to become more involved in the arts because "they are the essence of a strong liberal arts education. They are the basis of our humanity. [For a student] to be well and fully educated is to possess a strong understanding and appreciation for the arts."

Congratulations to the Class of 2006

The Juniatian congratulates all graduating seniors on making it to the finish line.

The staff especially recognizes our graduating writers and editors:

Holly Brown, J.R. Byer, Emily Eller, Kevin (PAR-dogg) Fasick, Katie Laucks, Jessica Perry, Mike Vella, Hannah Rauterkus, Genna Welsh, Sarah Wharton

Amy Mathur, the Juniatian's faculty advisor, personally thanks the true brain trust of this newspaper: Nate Drenner and Matt Russell. Four years ago these two men stepped onto a campus that no longer printed a student newspaper, and they found that to be unacceptable. They teamed up, recruited a few others and created an online version of the then defunct Juniatian. From that humble beginning they inspired the administration to call for a real print paper again, and the English department unveiled the Writing Practicum course to make that happen. With every issue they have put the student voice back into campus conversations--exactly what a student-run college newspaper should do.

Nate and Matt, you have been the conscience and the character of the Juniatian since its return to campus newsstands. As a campus community, we have been fortunate to have your vision open the eyes of many. Today marks an end of an era...thank you for making it a truly golden one.

-AEM

The Naked Truth: the not ex-boyfriend that you didn't dump

Rebecca

Whenever I hear someone say, "We're friends with benefits," they almost always mean that, right now, they have someone to fool around with, but he or she fully expects there to be a formal hookup in the future. Let's be honest. If you are bagging a true, no-strings-attached deal, you aren't going to talk about it because it might mean something. I'm not sure I know what you mean here. (And it's not because of lack of experience with these kinds of relationships.)

First, we'll define the difference. A friend is defined as someone you know, like and trust as well as someone you have feelings for. A friend with benefits is defined as someone you've seen around, you like to feel up and you trust that you can get some. Additionally, the only feelings you harbor for them are below the belt. Why not flock the block? Granted, there are different ways to approach the idea of "friends." Adding benefits has the potential to open the floodgates or consequently dry up the dam.

Keep in mind that the following scenarios apply to everyone, not just the single. Plenty of committed individuals are chopping wood in other forests.

1. **The good friend fixation.** This is the one where you are just friends and suddenly one day, whether it is by beer goggles or just a random event, you find yourself attracted to this person. This is a common hookup, and it tends to be the most complicated because of truly being friends in the first place. Sometimes it continues, and why not? Friends can be friendly! Here's the downside: your friend may eventually remember that you are a friend first, not a lover. Therefore, it doesn't matter if you get ditched. You may later find out that your friend is pitching a tent in a room down the hall and is now singing camp songs with a new acquaintance.

2. **Amigo alternation.** So I have this friend who is totally against being in a relationship, but keep in mind that she has plenty of good friends whom she alternates on a regular basis. Obviously she doesn't "belong" to any certain person, and therefore she fully reaps the benefits. She also has a thing for going at it Greek style (this is important). The other day, I noticed she had an away message up that said "taking a nap… I have a bruise the size of Texas on my #%$!" Did anyone ask questions? Of course not. My friends would rather let their imaginations consider the colorful possibilities. My best guy friend (note: our relationship does not carry benefits of the frisky kind) came up with the most plausible theory. He thinks her bruise is from a train (i.e. letting friend after friend jump the caboose through the course of a night). If that were the case, I think it is safe to say that her joy ride ended in a train wreck.

If you'd like a thrilling ride with some variety, all aboard! If not, well, try a trusty station wagon. Those are predictable and reliable, right?

3. **Ex employment.** Don't even act like it hasn't crossed your mind at least once. It makes perfect sense for some when the only good communication a former couple ever had was in the bedroom, so why not put that communication to work when in need of a good sweat that you know will end with sparks? *Problem*: you will be irate when you find your ex is lending a hand to someone else in your history class. And you can't get mad because you donated your ladle to her soup kitchen. There's no refund for feeding the starved.

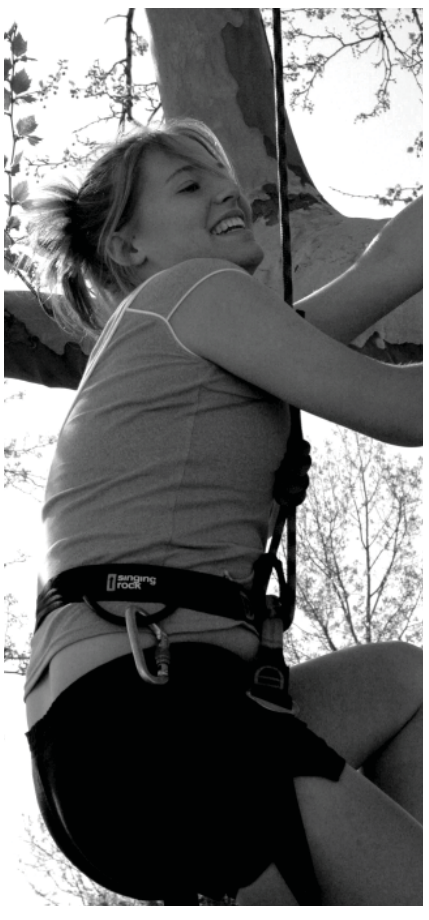
You can't get mad because you donated your ladle to her soup kitchen. There's no refund for feeding the starved.

4. **Comrade cuddling.** Sometimes it has nothing to do with getting busy. You just want someone to snuggle with during the cold nights at JC (despite the fact that it's eighty some degrees in the dorms, all year round). Typically, I tend to think the only reason someone stops at cuddling (unless you are one of the "I don't do sex" people) is because the other person sucks in the sack (context clues people, you know what I meant by that). Be careful if you're the cuddling kind, because you're going to turn unusually cold when you find out your comrade has a booty call lined up for when your warmth isn't enough.

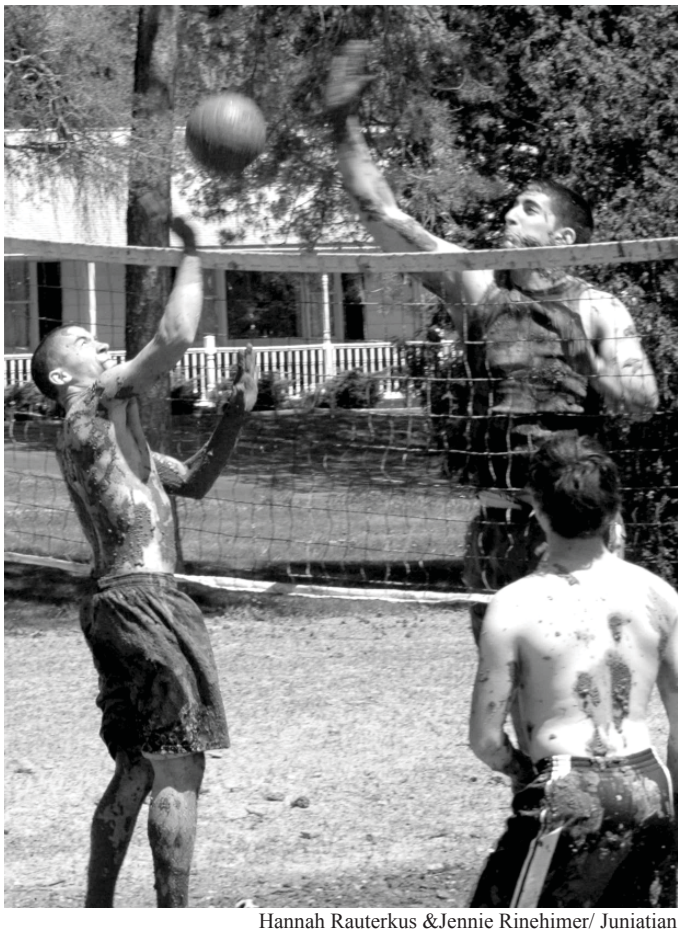
*Then again, sometimes it is **JUST** about the quiet exchange of naughtiness…*

5. **The booty call buddy.** When you're horny, you talk. When you're not, you ignore each other. Why? Because you're not naked. It doesn't get much simpler. When you get tired of this relationship, please remember: you CAN'T break up with someone when you don't know what they look like with clothes on.

The friends with benefits idea looks great on paper, and it can be a good experience. Get a little special somethin'-somethin' and then go to lab together. But, here's the thing: in many cases, sooner or later, someone starts getting attached. Furthermore, it is human nature for a friend to develop into stage five clinger. (If unfamiliar with this term, please watch the movie, Wedding Crashers.)



People LOVE to possess things, not to mention other humans. For example, let's say a girl has more than one friend on the side. That's okay, but those boys must be monogamous friends. It's like having purses (a very important accessory and statement about one's character). You can have more than one, but if any other girl dare adorn your purse, you just simply can't keep using it. I had this purse once, and then this chick (who did not sport the purse nearly as well as I did, mind you) decided she looked better with it. If anyone asks, I gave that purse to Goodwill, and she's getting sloppy seconds. I hope his strap, I mean, the purse's strap, breaks.



So here's my final thought of the semester: unless you have enough room in your closet for multiple purses (provided those purses know about and accept one another's presence), you will end up like me, who has one giant purse to hold all important things (example: my gallons of green tea) and who is happy that it's the sole keeper of my life's most precious materials (i.e. a boyfriend, who thankfully is not a fan of the backdoor).

And just for the record, his strap is *not* broken.

Springfest: get muddy, wet and tagged

Hannah Rauterkus &Jennie Rinehimer/ Juniatian

Juniata's long-standing tradition, Springfest, held its main events on April 29. The day was sunny and the activities plentiful. Among them are some old favorites like mud volleyball (above right) and water balloon fights. Other new additions were tree climbing (above left), laser tag (left) and free spray paint tattoos. Lunch and dinner were on the lawn with bands playing in the background. Habitat for Humanity's auction in front of von Liebig was also a big hit.

Eagle's baseball soars into No.1 seed in MAC playoffs

Ryan Conrad

The Eagle's baseball team is flying high as the regular season ends. Juniata currently holds an overall record of 27-10-1 and 16-4-1 in conference play. By taking one of the two games on Saturday against Albright the Eagles captured the number one seed heading into the MAC Championship. With a win against Albright on Friday the team broke the program's record for most wins in a season.

Sophomore Shawn McDonald said, "Winning the conference is the most important aspect of this season up unto this point."

Saturday saw the Eagles play at home as they took on Albright. Juniata split the double-header, winning the first game, 8-0, and then losing 5-1.

Senior Day started out with a bang in game one as senior Daivd Saintz delivered a two-run homer. Seniors of Troy Beaver, Zach Sternberg, Walt Goedkoop, and Saintz all had two hits for the Eagles.

After cranking out 12 hits in the first game, the Eagles were only able to produce five hits resulting in one run in game two. Darren Hake had two of the Eagles five hits, while Dan Kauffman launched his 14th homerun of the season. Kaufffman's homerun leads the MAC.

"Now that we've clinched a playoff berth, we want to start by winning the conference and then go from there," said McDonald.

Sophomore Pitcher Andrew Snyder led the way for the Eagles as they beat Albright on the road 6-0 on Friday. Snyder's performance gave him his first career shutout.

Once again, the Eagle's offensive attack overpowered the host Lions. Juniata finished the game with 11 hits. Beaver had a team-high three hits while Saintz and Kauffman each added a pair.

Lately, the Eagles have separated themselves from the rest of league with their high powered offense.

"We each know that we can hit, and hit well, so when it comes to believing in the next person in the lineup we don't get nervous," said McDonald. "Baseball is 90% mental and when you're relaxed and confident up to bat, everything becomes a lot easier."

Last Wednesday's saw Juniata post a 13-6 win over PSU Altoona. The Juniata offense slowed until late in the game when they were forced to rally in the eighth inning when the Lions were able to pull within one run at 7-6. Sophomore Steven Wilk and Sternberg lead the offensive charge that plated six runs to end to the Lion's threat.

Sophomore Paul Dunklebarger threw a solid six inning performance. He fanned five while allowing just one run on four hits. The Eagles were lead by Wilk and Beaver. Wilk helped the Eagles with two RBI's and three runs scored while Beaver went 3-for-5.

Prior to that, Juniata traveled to Lebanon Valley where the Eagles posted two wins

The 10th inning was the turning point in game one. Beaver drove in pinch-runner McDonald and gave JC the win. Beaver again paced the offensive comeback as he went 5-for-6 and added a run and an RBI. Sophomore Jason Enoch pitched nine innings in which he fanned 10 and allowed three runs.

Cody Zong silenced LVC's bats in game two.

"Our defense has been playing well and it is much easier to pitch when the defense is making plays behind you," said Zong.

Zong allowed only four hits in seven innings of work while striking out five. The win improved Zong's record to 6-3. The senior dominated the game, only allowing three batters past first base.

"I was able to spot my pitches and keep their hitters off balance for most of the game," he said.

The offense helped Zong's pitching performance with six runs. Leonard scored a run with a RBI single while Sanitz plated two more with his single.

"It is important for the team to stay focus as we head into playoffs," said Leonard. "You want to be playing your best baseball at the end of the year."

The Eagles start first round action today as they travel to West Lawn for the MAC championship.

"The wins thus far this year are impressive," Leonard said. "But we still need to work hard and finish strong."

Senior Darren Hake gets under a popup at one of the recent baseball games.

Men's tennis finishes with legendary season

Heather Lockwood

Legendary is a word that sums up the men's tennis team's season this year. With a season record of 13-5, the men strongest the school record for wins in a single season. Arriving at Lehigh for the MASCAC Individual Championships, April 29-30, the men sent four singles players and a pair of doubles competitors.

Singles competitors Brandon Long at fourth singles; Ryan Navarro at fifth singles and Jonathon Cohen at sixth singles all moved on to the final round of tournament play. Neil Eicher at first singles and Jonathan Skoner at second singles ended their play the first day of the championships.

Doubles competitors Tom Nelson and Robert Bowser at second doubles; Jack Walfish and Cohen at third doubles and Eicher and Long at first doubles were all victorious on day one of the championships.

Consisting of six singles tournaments and three doubles tournaments, most of the men made it to the final round of the conference individual championship but none finished with victories.

Prior to the individual championships, the men competed in the semi-finals of the Commonwealth Conference playoffs on April 19. Juniata battled Albright College to the very end, but finished the day defeated, 4-3.

"We were pretty shocked and disappointed, but not disappointed to be where we were," said junior Brandon Long. "It was a close one, just like the last time we played them. Iit came down to a few points that could have gone either way."

In singles, Jonathon Skoner dominated his opponent at the second position with a 6-0, 6-7, 6-3 victory. The fifth singles competiton was claimed by Juniata's Ryan Navarro with a 6-4, 6-3 win over. Jonathan Cohen at sixth singles also claimed a win for Juniata with a 4-6, 7-6, 6-3 win.

Though Juniata lost the match, the team played with strong efforts. Long and Eicher played tough in both their singles matches. Eicher at first singles and Long at fourth singles entered their third sets with 3-2 leads. However, Albright managed to defeat both players which earned the win for the Lions.

With the only win in doubles competiton, Robert Bowser and Tom Nelson secured a victory in the second position with an 8-5 win.

Finishing 4-2 in the conference, the team is still extremely pleased with its performance this year.

"We could have won the conference, but with a team not as close, and I'd probably not have had as much fun as this year," said Long.

Even though the team didn't win the conference they made school history with the number of wins they had this season. The team looks ahead to next season with high expectations.

"I think we will have higher expectations. Losing the seniors will be tough, but the goal will still be to win the conference," said Long.

Though the team will be missing players next year, they still plan to have a good season.

"We return five of the top six singles, and only lose three seniors," said head coach Bobby Pennington. "We will miss their leadership. They were great for team chemistry. With the younger guys and a strong recruiting class, next year will be even better than this year."

Volleyball stumbles in EIVA

Eagles forced to play from behind, fall to SFU

Katie Laucks

On April 22, the Juniata men's volleyball team ended its accomplished season. The goal of making a run for a berth in the NCAA playoff came to a close as the team lost to Saint Francis University in the EIVA Quarterfinal.

"It was a really tough match. Saint Francis played really well," junior outside Glenn DeHaven said.

Hannah Rauterkus / Juniatian

Junior Steve Yeager returns the ball during a recent home match.

What the Juniata men's volleyball team's post season match came down to was service errors. With 22 errors, the Eagles allowed The Red Flash to side out easily and gain momentum. With that momentum Juniata was forced to played catch up for most of the contest.

Juniata eventually dropped the match to the Red Flash, 3-0.

"I think our overall season we were pretty successful. We put a lot of pressure on ourselves, and we worked hard. I'm proud of our seniors and the team," sophomore Matt Fritz said.

In the last match of the season Fritz led all players with 12 kills, while junior Nate Ocasio added 11.

Before taking on Saint Francis, the men defeated East Stroudsburg, 3-1, in the first round.

Leading the way was junior middle Jeremy Barndt who pounded out 15 kills and hit an amazing .700. He also added a team-high five blocks.

The Eagles finished the season with a record of 14-13.

The team also placed two players on the EIVA All-East team. This team recognizes the top 20 players from Divisions I, II and III. Juniors Jeremy Barndt and Nate Ocasio were selected to the second team for their contributions and outstanding play this season.

The Eagles graduate two seniors in Matt Springer and Cordt Withum, but return a strong nucleus that should once again contend for a national title.

2006 track and field regular season closes

Athletes ready to take gold at MACs

Corrine Barabas

The Juniata track and field team ends its season in the upcoming week. The season thus far has proven to be filled with personal records, solid performances during meets with Division I and II competition and nine shattered school records.

The Eagles have shown their fierce drive to succeed and an ability to push their limits, and next weekend they will demonstrate their skills and talents at the Mid-Atlantic Conference Championships at Widener University in Philadelphia.

Currently, 37 athletes have qualified for the MAC meet.

`"Getting better is our main goal, not breaking records," head coach Jon Cutright said. "We just need to compete hard and throw everything we have into every event. We are a strong and talented team with no room for error. It is a matter of coming together as a team to make it happen, and the possible outcome could mean the difference between first place and fifth."

On April 29, the Eagles put up a tough fight against a tough field at Shippensburg University. Once again school records fell.

On the track, the women posted many respectable showings. In the 100-meter dash, senior Meredith Troutman broke a school record with a time of 12.67, which bested the 1984 record of 12.69. Senior Katey Glunt topped her own record in the 3,000 meter steeplechase by ten seconds, running an 11:33.

Kelsey Buffenmyer took first in the high jump. Only a freshman, Buffenmyer has handed in several outstanding performances, and is only one of two Juniata athletes currently provisionally qualified for Nationals. She has learned much this season and looks to continue her success.

The men also grabbed the opportunity to break records in the season's last meet. Tripp Rudolph scored a second place in the 800 meters, breaking the previous JC record with a time of 1:55.38. Sprinter Randy Anderson claimed a first place in the 100-meter dash, as well as lowering his own record from 10.74 down to 10.73. Anderson is Juniata's other athlete already provisionally qualified for Na-

continued page 11

JC Athletes play for the love of the game

Overall Juniata Athletics record 158-139-3

Robb Patty

Competing in Division III athletics is all about heart and the love of the sport that the athlete plays. There are no scholarships, just playing for the sheer joy of competing and representing Juniata College. This year again Juniata has seen many team and individual accomplishments. It is these students and teams that put Juniata athletics on the map.

There were many notable team accomplishments in the 2005-2006 season. The women's volleyball team captured its 25th consecutive conference championship and made its second straight trip to the Division III National Championship game. There would be no repeat, however, as the women lost a thrilling five game match to Wisconsin-Whitewater. On the men's side, the team was able to rebound from early season problems to win its third straight Molten Division III National Championship.

The men's tennis team had by far the best season in team history finishing with a 13-5 record and making it to the conference semifinal against Albright.

For the third straight season the women's swim team placed third at the 2006 MAC Swimming Championships. The third place finish ties the highest finish in the program's history.

The men's baseball team also set a single season win record, finishing the regular season with a record of 27-10-1 and 16-4-1 in the conference. They will be making another Commonwealth Conference playoff appearance.

Team accomplishments would not be possible without the efforts of the players themselves. They suffer through Coach Smith workouts, two-a-day practices and bad bag lunches on the road. They sacrifice experiencing the full college life and going out on the weekends to play the sports they love.

In men's cross country, senior Chris Sheaffer ended his career by posting a personal best 23rd place finish at the NCAA Mid-East Regional competition. Sheaffer also earned All-Regional honors for the second time in her career.

In track and field, junior Randy Anderson established a new school record in the 100 meter dash as he finished with a time of 10.73, breaking the previous record set back in 1991.

Senior Kristen Kirk closed out her Juniata basketball career by scoring 21 points in her final home game to move past the 1,000-point mark. Kirk was just the ninth Juniata player in school history to reach this milestone. Kirk's teammate and fellow senior Katie O'Brien was also named to the All-Conference second-team for the first time in her career. The two seniors helped the women to a 13-12 overall record, while going 6-8 in the conference.

Men's basketball's senior point guard Tommy McConnell also was selected to his first All-Conference team, earning second team honors for his play on the hardcourt.

Men's and women's volleyball again had a handful of individuals recognized for personal achievements. Juniors Nate Ocasio and Jeremy Barndt were selected as second team choices to the all Eastern Intercollegiate Volleyball Association (EIVA). Barndt makes his second consecutive appearance on the second team, while Ocasio makes the team for the first time in his career. Four Eagles were also chosen as Division III All-Americans. Senior Cordt Withum and sophomore Matt Fritz both captured first-team honors; Barndt and freshman Matt Werle were named to the second team.

Four members of the women's volleyball team were also chosen to the Division III All-America Team. Senior Katie Laucks and Stephanie Kines were both selected to the first team for the second time in their careers, while freshman Amber Thomas and junior Rachael Schatz were named to the second and third teams repetitively. All four players also earned AVCA Mid-Atlantic All-Region honors, while Thomas was selected as the AVCA Division III Freshman of the Year.

Juniata athletes came away with successful seasons, competing against and beating some of the best Division III competition in the country while representing both the College and their teammate with class.

Track and field ends sucessful season

continued from page 10

tionals.

On April 22, the team traveled to Indiana University of Pennsylvania, where it faced miserable weather as well as a field of almost twenty teams. Despite the crummy conditions, there were many top eight performances from both sides in most of the events.

For the women, Buffenmyer claimed first place for her high jump and Debbie Delaney took fifth in the discus. Glunt's efforts in the steeplechase earned her a third place finish.

For the distance runners, freshman Meghan Jones and junior Kristen Gochnauer clocked times good enough for fourth and fifth places, respectively, in the 10,000 meters.

On the men's side, the sprinters and the jumpers had a couple standout performances, capturing gold medals in the 100-meter and 200-meter dash by Anderson and also by Matt Booth, who dominated the long jump.

"We had a successful season and the momentum of hard work and success will continue."

- Justin Fritzius, senior

On the track, sophomore Mark Modak took fourth place in the 110 meter hurdles, and Rudolph and Chris Sheaffer took sixth place in the 800 and 1500 races. Modak is confident in the sprinters' abilities and feels they will dominate many of the relays and individual events at MACs.

Stepping it up for the long distance runners were Mike Chirdon, Jason Hoover and Craig Pannone, who all placed in the top eight in the 5,000 meters.

Senior Justin Fritzius summed up the efforts of the 2006 season on both the track on in the field by saying: "We all had a successful season and the momentum of hard work and success will continue....Everyone seems to be mentally and physically prepared for MACs, so we should be able to come home with records, national qualifying times and plenty of medals."

Poetry in motion: Why no sport approaches basketball

Tommy McConnell

It was in early February, I think, as I was getting ready for one of my final practices. I was dribbling little circles around my feet, getting a feel for the ball, getting loose, when a thought hit me: I have been doing this little routine for as long as I can remember. Every time before I play, practice, whatever, I dribble little circles around my feet. And in about two weeks, give or take, it was going to be useless to me. Something I had been doing for pretty much my entire life was not going to matter anymore.

I'm not sure if this has some greater significance or if it is just a trivial little thing that is only interesting to me (probably the latter), but it got me thinking: Was it worth it? Was it worth it to put countless hours into something that will physically have no direct impact on the rest of my life? If you think about it, it would be the same as reading hours a day for 22 years or playing online poker for hours at a clip. It was fun at the time, but wouldn't that time have been better spent preparing for whatever it is I'm going to do with the rest of my life? Basically, would I do it again? Was it worth it?

The short answer: yes

The long answer: hell, yes.

The reason is simple. Basketball isn't like reading or playing poker or any other arbitrary activity, and it's really not even close. Basketball is never a waste of time, ever. Basketball is better than all those things, and everything else, too.

Yea, football is now the most popular sport in the country, and baseball is allegedly the nation's pastime, and boxing is the sweet science, and poker's growth is almost exponential, but none of them – or any other sport, for that matter – can hold basketball's jock. And here's a few reasons why.

Catching an outlet pass and just going. It looks simple and maybe even mundane, but there are few joys greater than seeing your big man grab a board, watch him scan the floor for you, clapping once to get his attention, snagging his pass out of the air, ripping through and taking those first two or three exploratory dribbles down the court.

After that, it's all question and answer. What do I have? A shooter on the wing. Flick – hit him spotting up for a three. Some one streaking down the sideline? Wap – bounce pass for a layup. Defense backing up? Pull up J – pure. Defense playing too close? Crossover, get to the rim, and one. It's something unique, something different every time. When you catch that ball, you have no idea what's going to happen, but you get to create something out of nothing. What's better than that?

Nothing, that's what.

You know what else I love? The game within the game. How are you going to guard the pick and roll? If you go under the screen, that's an open jumper. Try to go over it, and you're getting beat to the rim. Trap it, and you better pray your help defense is there, because if not, it's a dime every time. And say the defense does get there. Now there's a skip pass to the open shooter across court. Defense runs out at him, he's either shooting the three or putting the ball on the floor and attacking the rim. Now the defense helps again – are you giving up a layup or a jumper? Something as simple as a ball screen sets of a chain of events that's again totally unpredictable. It's just constant motion, action and reaction, question and answer. There's never time to regroup or rethink: just play.

I love that it's impossible to take one player out of the game. All of the other team sports, to some extent, can take an individual out of a game. In baseball, you pitch around a guy. Double-team a dominant wide out our stack the line against a running back. And in both those instances, the superstar is only on the field half of the time, at most.

But in hoops, you just can't. Sure, you can double-team him, but he can still get his shot off. And he can still hurt you with the pass. Or he can hurt you on the defensive end or on the glass. There's so many ways for one guy to beat you. The best players will always dominate. Double-teaming in basketball is more dangerous than in any other sport.

But then, out of nowhere, the little guy burns you (see: Paxson, John or Kerr, Steve). As much as one player can dominate; he still can't do everything. It's still a team sport at heart. How much fun is it to reverse the ball, then throw it in the post, cut off the post, fake a handoff, then hit someone else cutting backdoor for a layup?

But maybe the best part of basketball (heavy emphasis on maybe; catching those outlet passes and running is just pure joy) is the one-on-one battles. You get a guy on the crossover one time, then fake it the next time. Now he's playing off you, respecting the drive, so you drill a few jumpers in his eye. Now he crowds you, so maybe you give a little shot fake and go buy him. Or maybe you burn him time after time on your go-to move (say, oh, the crossover, my personal favorite) because he just can't stop it. But then he has a chance to come back down and get you right back. That battle *is* basketball.

I could go on all day – running a two-on-one fast break, knocking down buzzer-beaters, jumping in passing lanes, finishing in traffic. The list is endless.

So, yea, there a lot of life lessons taken from basketball, and you make close bonds with your teammates and you'll always remember the stuff no one sees, like practices and road trips. But just playing, at least to me, is enough.

Just playing is enough.

The great philosopher Jesus Shuttlesworth put it best:

"Basketball is like poetry in motion. Cross the guy to the left, take him back to the right, he's fallin' back, then just J right in his face. Then you look at him and say, 'What?'"

Couldn't have said it better myself.

Eagle's softball split with Albright to end season

J.R. Byer

In a season that has been plagued by run production issues, senior Renae Hobbs got just enough support to pitch the Eagles to a victory. The Eagles beat Albright 3-2 in game one of a doubleheader. The win improved their record to 10-28 overall, and 3-11 in the Commonwealth Conference.

The Eagles dropped game two, 3-0.

"Playing Albright today and splitting with them showed me that even though we knew we didn't have a chance at the making playoffs, we went down there and handed them a loss and we never gave up," Hobbs said.

In game one, freshman Liz Schmitt got the Eagles on the board in the fifth with a leadoff home run. Freshman Tara Carl and Hobbs led off the sixth with back-to-back singles to set the table for the middle of the lineup. Carl scored off an Albright throwing error and Hobbs touched home on a fielder's choice. This was all the run support that Hobbs needed as she pitched all six innings only allowing two runs.

"Hitting leadoff adds pressure no matter what your age," Carl said, "but as a freshman I saw it as an opportunity to prove myself and help my team. For most of the year I hit in the second spot, but the last couple games I hit leadoff and was happy for the added pressure."

"When we had a pitcher quit, we were only left with three pitchers - myself, Lizzi Bartosik and Elsann Machotka," said Hobbs. "This left me with the majority of the pitching duties because I am the most experienced and the quickest at warming up. I am glad that the coaches had faith in my ability and let me lead the team."

Previously the Eagles traveled to Lebanon Valley for a doubleheader and were shut out in both games by scores of 12-0 and 3-0, respectively.

In game one, the Eagles only hit was off the bat of Hobbs.

Machotka picked up the loss for the Eagles. She went all five innings, allowing 10 earned runs.

The Eagles faired better in game two as Hobbs allowed only six Lebanon Valley hits and three earned runs. Hobbs went the distance and struck out three while not allowing a run until the sixth inning.

Unfortunately, the Eagles could not get their bats going, as they could only muster four hits off of Flying Dutchmen starter Alisa Albers. Senior Marcie White accounted for half of the Eagles offensive production with two hits. Seniors Abby Sener and Hobbs each added a hit for the home team.

"We (the seniors) had to be the leaders and step up to help the freshmen get experience on and off the field," said Hobbs. "We are a very close team, so it was easy getting to know everyone. I know I will miss the girls a lot. They are like a family."

THE RANDOM ELEVEN

Matt Russell

The start of a glorious trail: I noticed a porcelain throne in the lobby of Ellis recently. I think it's an emergency stop for those who think they could make it back to their dorm after dining in Baker, but miscalculated.

Disintegrating community? Nah. I visited another college a few weeks ago and was stunned. Their security? Just hired help. Their cafeteria staff? Hired help. They could have as easily have been working at a convenience store as a college. For all the tireless jokes and sucker punches I've taken at the expense of those who provide services to the students here, they're the backbone of this place and truly make it a community. I know Tim, Rocco, Tristan, and Hal, the respective heads of Res. Life, Security, Facilities, and Sodexho, and you know what? They're all good guys and have a lot of friendly people working for them. Students sporadically complain that the community of Juniata is somehow waning. I say bull. If that student, Facilities employee, or Founders 'suit' you're walking by doesn't acknowledge you, just be the one to say 'hello' first. You'll quickly realize how strong the community is.

Disintegrating community? Er, well maybe. The Pod people! That's what I call all these idiots who feel the need to listen to half an emo song on their iPod during their walk from BAC to Good Hall. I know it's terribly difficult to actually be confronted by humanity between classes and perhaps have to talk to someone, but Ricky Martin can wait until later.

Let it all hang out: Cop: "Do you know how fast you were going?" My friend Will: "Yes sir... 120." Cop:"No, 75." Will: "Duh, I was saying in KPH." Cop: "Don't be a smartass." Will: "You know your fly is down and you're going commando?" Cop: "Let's just forget this whole thing." True story.

"One, two, FIVE!" "Three, sir!" All right, let's check out this math. If a graduating senior requested one extra ticket to commencement, they got one. If requesting two, they got two. Now it gets weird. If requesting three, they received **two**. If they requested more than three, they got **three**. The lesson to juniors is "request more tickets than you need so you don't get screwed by weird cutoffs."

JC Candidacy, part 1: I commented on a sticker a friend was wearing that supported a candidate in the studgov elections. After a confused look and then a moment of clarity, she replied, "Oh, I hadn't read it, he just gave me gum to put it on." The apathy was so thick I could cut it with a knife… I just didn't have the energy.

JC Candidacy, part 2: A few candidates invested a bit of money to make big color campaign posters for Baker, but didn't take five minutes to remove the terrible red eye in them first (and another misspelled 'sophomore'). Hey, there's a campaign pitch: "I'm so driven to succeed I don't care how the results come out." But wait… what if they DID try to remove the red eye, but couldn't? PHOTOSHOP SEES THEIR INNER SOUL.

Revolutionary Weeeee: Have you heard the name of the new Nintendo console? Previously code-named "Revolution," it turns out the real name will be the "Wii" (pronounced "we"). Were they aiming for puerile humor? As an added bonus, you only need one hand to use the new controllers. All across America, mothers will be delighted to hear their sons say, "Hey Mom, I'm going over to Jimmy's to play one-handed games with his Wii!"

Hot tray-on-tray action: I went to lunch while the State Science Olympiad was on campus and picked up a plastic tray and silverware as usual. I went into the Grill line and picked up food… served on a Styrofoam tray... that sat on my other tray. I just felt really awkward.

I looked up the rates: Using a Yahoo phone card it is nearly twice as expensive to call Afghanistan (97 cents) as Antarctica (50 cents). I guess Antarctica's infrastructure is better? And, since the rate is listed (yes, really listed) at nearly $5 a minute, I should probably reconsider living in the Atlantic Ocean.

Why Coach Houck should resign: After writing a sports commentary in this semester's third issue (taking issue with how certain sports teams monopolize facilities), the student author was punished by her softball coach, Mr. Houck, by being made to run more than three miles and was told she could not play in the next game. Strike One. A teammate quoted in the story suffered the same punishment. Strike Two. He specifically told them that neither had any **right** to contribute to the story. Whoa, strike three. Is this how we promote thinking at Juniata? Is this how athletics compliments academics? Hell, if Mr. Houck is allowed to simply resign, he should consider himself lucky given how flagrantly out of touch with the values of this institution he has demonstrated himself to be.

Moving on…

Super Soaker Oozinator commercial: It's the work of a perverse devil. This gun shoots, according to its website, "a shot of icky bio-ooze," and the commercial features young children getting hit in the face and chest with them. Basically, it's encouraging little boys to shoot each other with globs of colorless goo. It ends with the announcer mumbling "major pumping action required."

Becca, author of the Naked Truth: "If you can say 'hell' in your column, why can't I say 'vagina'?" Me: "You gotta earn the vagina." Or, you just gotta stay up later than all the other editors and say both, heh.

Heather, a direct quote: "I had to explain why I got a midterm notice about Water. I thought I might not pass Water. Now I'm passing Water. Do you know why I passed Water? I had an epiphany. I started buying liter bottles of water and polished off several a day until it was time for the test. And my skin looks better."

If you remember that Becca and Heather are my layout assistants, it becomes clearer why my last column is nothing but rants and puerile humor. Er, wait… that was every issue, wasn't it? Accept no imitations. Here ends the Random Eleven.

One last time, the new and improved Amp tower, an aluminum monument to my inability to focus and stop procrastinating about school work.

Symposium celebrates research

continued from page 4

dents participated also," said Martin. "I was shocked at the number of students who attended the 9 a.m. session that I was at."

"People partied some, but they still came, and it was a success," said Tuten.

The high number of student attendees was also surprising because students didn't know much about the Symposium.

Junior Chris Russell said he only knew about it from a few professors that had mentioned it. He wasn't even sure what it was.

"There was a lot of talk about it, but I didn't know exactly what was going on until the day of, when someone who went told me," he said. Even after looking at the itinerary, the set-up of the day was still vague.

Stephan agreed.

"Research day just showed up on the syllabus," he said. "I realize it's a new event, but I don't think there was a particularly spectacular amount of discourse between faculty and students as to what it was."

"I think it caught students by surprise," said Tuten. "They didn't know to expect it," due to the late and hurried planning.

"It could have been advertised better, but that all goes along with the fact that it was the first year for it," said Martin. "Next year I'm sure the planning and the organization of the day will run more smoothly because we have set the first year precedent."

Tuten said that the few problems with the Symposium – like little advertising and confusion during the day's many events – will be easily fixed in future years.

"There's a fairly substantial post-mortem file," he said. It will be drawn upon to improve future Symposiums.

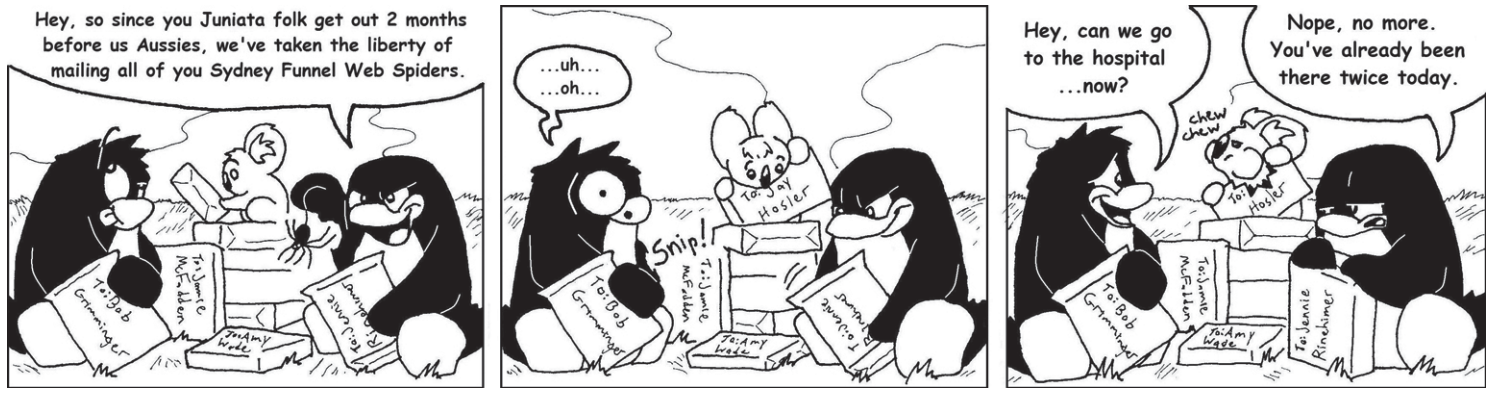
Regardless of this year's issues, the Liberal Arts Symposium seemed to be a success.

"The feedback from all quarters was overwhelmingly positive," said Tuten. He chalks it up as another of Juniata's ways of teaching alternatively and creating tradition.

Abortion divide

continued from page 5

associated with their pregnancies or, in some cases, the death of their fetuses. Focusing on this tiny group of women means targeting the most vulnerable and keeping them away from medical care, regardless of specific needs. Is it possible that the pro-life movement has become so self-obsessed that it's forgotten its original goal of improving the lives of women?



Meanwhile, the pro-choice camp seems completely oblivious to the fact that most pro-life people want to help women. Their anger at the pro-lifers keeps them too distracted and angry to make any real improvements in women's lives.

The two sides of this debate have taken hard ground. Let's face it--things are not going very well politically in this country, and the abortion debate is dividing people who should be working together for change. The peace movement especially needs to find a way get pro-life and pro-choice people to sit in a room together and work toward common goals.

There is no reason for this issue to divide people in the way that it has. We are distracted and blinded by technicalities, while we should There's much work to do. It seems like listening to each other would be a good start.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

SEPTEMBER 21, 2006 | JUNIATA COLLEGE | VOLUME 88, ISSUE 1

Campus improvements: revealing the renovations

Christopher Shannon / Juniatian

Humanities students find Good Hall more homey after a summer renovation project. Jesse Parsons, Clear Bear Daugherty and Emily Wiggins discuss a project in the new student lounge on Good's main floor.

Devin Couillard

Good Hall, which has increasingly been criticized by both faculty and students, was renovated during summer break, as were the Brumbaugh Academic Center and the Raystown Lake Field Station. There are also additional changes to the campus planned, including a student union in Ellis, further improvements to Good Hall and additional lodging at the Field Station. South Hall is expected to see some changes in the future as well.

There have been many visible changes to the campus of Juniata in recent years. The most noticeable of these included the von Liebig Science Center, dedicated in October 2002, and the Halbritter Performing Arts Center, dedicated in April of this year.

After years of various grumblings from the social science departments and their students about the need for renovation and the lack of more modern and reliable technology, Good Hall received some much-needed TLC.

"The improvements to Good Hall were absolutely necessary and have significantly improved the building," Tristan delGuidice, the director of facilities services, wrote in an e-mail interview. Although he is pleased with the work done thus far, delGuidice added that there are still improvements that need to be made in Good Hall and the planning for these changes is underway.

There have been several renovations made to Good Hall since last spring. Room 202 was remodeled and is now a modern lecture room. Room 119 is now home to 11 PCs and serves as a research space for the psychology department, and Room 219 is the new Technology Solutions Center Annex/Human Interaction Laboratory.

TNT exterminates unwelcome residents

James Trent

Spider sightings are a common occurrence in the Terrace and Tussey residence halls. They may be seen outside windows, creeping through hallways and startling passersby. But a single e-mail has made students look at these otherwise benign creatures with terror. The e-mail subject: the poisonous brown recluse spider.

The e-mail, sent to TnT residents by an RA in August, included a five page attachment titled, "WANTED: Brown Recluse Spider." It listed details about the spider recently found in TnT, including sections entitled "The Bite" and "First-Aid."

The e-mail explained how the recluse often hides in clothing, shoes and even in residents' bed sheets.

Students were advised to shake their clothing and bed sheets to rid them of any unwanted arachnids.

The effects of the spider's venom were also detailed. Complications such as necrosis, where poisoned flesh turns black and dies, often arise.

According to Jim Morris, an operations manager of Ehrlich Pest

Blue and Gold Goes Green

13 trees to be part of sustainablity effort

Aaron Shotts

Sustainability is a word heard often on campus these days. It promotes environment-friendly behavior, recycling and conservation. With Juniata's deep environmental roots, it is no wonder sustainability efforts have been sprouting up everywhere.

This fall, 13 trees will be planted on campus to mark the success of last year's paper saving campaign. From January to May of 2006, the campus printed 192,000 sheets less than the previous year; the equivalent of thirteen trees. The reduction in printing is due to the duplex printers as well as student effort to print less.

"192,000 sheets of paper don't not get printed without students doing something," said Rob Yelnosky, acting vice-president and CIO.

Yelnosky oversees sustainability efforts on campus. Juniata's plans for this year include participating in Recyclemania, an intercollegiate competition gauging per capita college recycling.

Despite recycling efforts, Yelnosky describes Juniata's annual waste sent to the landfill as "equivalent to a three-story building the length and width of a football field."

Yelnosky said that one problem with recycling on campus is that many students don't believe that recyclables are sent to the recycling center. He attributes this to the fact that recyclables and trash are hauled away in the same truck. Clear plastic bags are now used for recyclables to distinguish them

Study in the Gambia

Ibada 'Bobby' Wadud

It is the teeniest nation on the African continent and awkwardly situated in the belly of Senegal.

"The Gambia is perhaps the most peaceful country in Africa," Emil Nagengast, professor of politics and Gambia program founder, said of the West African enclave. It is in uncommon settings like the Gambia, that Juniata students will [be offered the opportunity to] develop into innovative thinkers and achievers.

The first Juniata Eagles to cross the North Atlantic and arrive at the "smiling coast of Africa" (as it is commonly described) were accompanied by Nagengast in May-June 2005 for a three-week study abroad program.

After the first trip, word spread swiftly, and student curiosity grew as the number of student participants increased from four to twenty within just one year's time. After such a tremendous success Nagengast began planning the semester-long program, to be steered by colleague Dr. Buba Misawa of Washington and Jefferson College. This spring he will be assisted by 2006 alumnae, Denise Bearer and Emily Eller, both former program attendees.

Bearer attended the program in its first year and also acted as a course assistant this past summer.

"I feel like this country is ripe," Bearer said, while describing the importance of studying in an uncommon setting such as the Gambia.

This spring, she and Eller will work as onsite coordinators, organizing credited internships for prospective students who wish to study in the Gambia.

The coursework will include a class centered on the Gambian culture, highlighting the Mandinka language and local traditions. According to Nagengast, this

College rankings

Looking beyond the numbers

Jason Najarian

This year, Juniata moved from rank 100 to rank 95 in U.S. News' top 100 Liberal Arts colleges. Juniata was also listed in four other distinguished college guides, but U.S. News is the most publicized. These accolades are a testament to the College's success, but the benefits and what determines the rankings is less clear.

What these rankings actually do for Juniata is not concrete. John Wall, Director of Media Relations, believes that they mainly have residual benefits for the College.

"Every year we give out a press release detailing the rankings. It is primarily for local interests and media. It might just be what sparks interest in Juniata."

There is the chance that the rise in ranking can influence the College's reputation, creating more positive reactions from a variety of sources. Thomas Kepple, President of Juniata, uses the rankings to gauge the College's health.

"Moving up is a good thing for the College because it suggests that we are doing things well, and that, in turn, encourages students to apply and donors to give us funds. The main thing it does is show future graduate schools and employers that our students are graduating from a fine institution. So students and alumni very much benefit from better rankings," said Kepple.

Gaining exposure and name recognition for Juniata's reputation is key to continue rising in the ranks. Wall said that "A lot of the process is uncontrollable. All we can do is just display the quality of Juniata, and how unique we are."

Kepple attributes this year's success to the quality of incoming students, and a general increase in applications to Juniata.

"I think we moved up in the listing because our numbers continue to be better. More students apply and more students graduate," said Kepple.

Cynthia Clarke, Director of Insti-

Christopher Shannon / Juniatian

Club sports struggle for field space

Mike Chirdon

In addition to the varsity sports like football, volleyball, soccer and cross-country that compete in the fall, Juniata has three highly competitive club sports teams: men's and women's rugby and ultimate Frisbee. Because there are so many varsity teams, the leaders of the club sports teams say that they have trouble finding field space to practice on.

There is only one field available for the club sports to use for practice: the field in front of Sunderland Hall. This field was unavailable for the last two years because of the construction of Halbritter Center.

While the teams are happy to have the field back, there are still some problems with it. For example, there are a number of stones in the field leftover from the construction, which pose safety hazards to players.

Staci Weber, director of student activities says that there are several improvements being made to the Sunderland field. Facilities has been working to remove the rocks from the field, with help from the sports teams themselves, to make it safer. Also, Facilities has recently filled a narrow ditch that was on the field.

But the major problem is that there is only enough room for two of the three teams to practice on that field. According to Kevin Warner, senior and president of the men's rugby team, this means that one team must practice at Lion's Field in Petersburg which is a fifteen minute drive from campus.

Scott McKenzie, head soccer coach and director of intramural sports, said that field space has been an issue in the past.

It is like trying to get ten people to enjoy eight slices of pizza," he said. "There is only a little space, but there is enough space for everyone as long as everyone can be flexible."

Warner said that everyone is trying to do just that. All the teams have been working with Weber to make sure everyone gets as much field time as possible.

Looking for a potential long

continued page 4

Q & A with Dave Fusco

James Trent

The Juniatian recently sat down with Director of Technology Operations, Dave Fusco, to talk about the state of technology on campus.

What can you tell us about the recent hacking of Juniata College's homepage?

"We believe that it was hacked from overseas. They were able to pass a variable in PHP script… which essentially allowed them to rewrite the homepage. Either somebody knew it was there and exploited it or they randomly searched web pages on the Internet."

And the cryptic message that was posted, "Innocent boys inside"?

"Innocent boys is a common hacking name for the process they used."

To what extent was Juniata 's system hacked?

"[The webpage] was as far as they got. They weren't able to access anything else due to the security measures we have in place. We filed a formal complaint with C.E.R.T., a company in the supercomputing center in Pittsburgh.

Is Juniata technology safe?

"We searched for exploits, and found one other. Both exploits were fixed."

Juniata College recently changed from Blackboard to Moodle for its online courses. What were the reasons for the change?

"Blackboard purchased WebZT, which was positioning itself for a monopoly. This would not be a good thing for Juniata. We felt that in order to one, cut costs, and two, choose the best system, that we should go with Moodle."

What are the advantages of Moodle. Are there any disadvantages?

"Moodle is open-source, meaning that improvements are submitted by users from the public and it's free. It's also used by a lot of other universities, meaning it has a really good user-base. There is no separate password too, you can use your Juniata screen-name. That is just wonderful. I really can't think of any disadvantages."

What improvements have been made concerning technology on campus?

"We also have 'appserver', which [is a device that] gives us the ability to use older hardware while at the same time giving access to software in a 'one-stop location'. You can be sitting in your room and do remote desktop and use appserver. You'll then have a virtual desktop [here in Brumbaugh Academic Center on a server]. We increased inter-network capacity from 13.5mbps to 30mbps. To all you gamers out there: our first goal [concerning bandwidth] is for academic research. You can access your Student Billing Statement online. We have Extron, which is a new course management system [for faculty]. Faculty can see who is on their waitlist for classes and also the student's class ranking, GPA, and year."

How was the transition into the network this year? I hear that TLT workers actually went door-to-door around campus helping students to register their computers.

"It went tremendously well. I want to thank the students for keeping their systems up to date and for registering themselves without bogging down the helpdesk. The R.A.s and R.D.s were a great resource. Everyone pitched in and helped. By Monday morning we had above 85 percent of the student body registered."

If you have questions...we'll find the answers.

In each issue, the Juniatian will sit down with another member of the College's staff or administration to ask the direct questions that matter to you. The Juniatian invites you to submit questions for next issue's subject: Residential Life. Questions will be taken to The Office of Residential Life, Facilities, the JCPD and other administrative offices. No lewd or personal questions will be addressed. Please submit your questions to: juniatian@juniata.edu

Juniata College diversity on the rise

Mat Carter

Juniata College is successfullyincreasing diversity on campus. The admission of minority students increased from 2.7 percent in 2001 to 7.7 percent this fall. Considering the number of non-dominant minority students and international students combined, the admissions office boasts 10 percent diversity for fall 2006, an increase of 5.4 percent from 2001.

According to Rosalie Rodriguez, special assistant to the president for diversity & inclusion, the term 'diversity' is too ambiguous. Diversity on campus is not limited to meaning students of color, but also applies to different countries of origin, religion, gender, sexual orientation and socio-economic backgrounds. Rodriguez stated that diversity is "in every facet of life at Juniata College."

Admission of minority students increased from 2.7% in 2001 to 7.7% this fall

JC considers itself a leader in the diversity movement on liberal arts college campuses. Juniata demonstrates its dedication by attending college fairs designed to further the best interest of African American and Hispanic students. The College has attended similar fairs for the benefit Jewish students as well as fairs for the students involved with the interests of the Lesbian, Gay, Bisexual, Transgender and Asexual (LGBTA) community.

Rodriguez explained the difficulty in locating students that haven't received offers from other colleges and who are academically prepared to attend Juniata College. Rodriguez stated that the College competes with other schools that can offer more scholarship money. She believes that it is a difficult task to attract urban students to Juniata. Rodriguez also explained that Juniata appeals less to urban students because they hesitate to deal with the unnecessary culture shock of moving into a rural and predominantly white campus.

Junior Tasia White, special student assistant for diversity and Inclusion, said that many students who visit JC every year opt to attend schools in more urban areas. They also choose to attend schools that are less expensive.

The Unity House offers services to help students understand and confront issues with which they are unfamiliar or uncomfortable. The Unity House even hosts a series called "Beyond Tolerance." These workshops help students adjust to living in central PA. This program is also designed to help students get to know and understand their peers.

The College dedicates a great deal of time and energy into maintaining diversity. The key to making Juniata a more diversified environment is exposing the College's name to areas that are unfamiliar with it.

Also, according to Rodriguez, the College has geared more recruiting toward members of the LGBTA community.

But according to White, many current and prospective students are still discouraged when they do not see a sufficient numbers of faces that match their own.

White said, "People are definitely trying, but we aren't quite there yet."

TnT exterminates unwelcome residents

continued from page 1

Control, which services Juniata College's dorms, "Brown recluse are very, very rare."

"All dorms are treated [for pests] at the end of the school year, again during mid-summer and again just prior to the start of school," said Dave Coder, operations supervisor for Facilities Services.

To allay any anxiety the e-mail created, Facilities took the precaution of ordering an exterminator inspection the day the spiders were found.

The problem was above all a "psychological" issue, said Director of Residential Life Tim Launtz. According to Launtz, there were no complaints from students about the problem.

Not to live in fear, one TnT resident took a Steve Irwin approach to the problem. Jeremy Weaver, a resident of Tussey, captured a live specimen, sedated and then photographed it for review by an expert.

Fear has subsided, replaced with general apathy as the spiders dissipate with the coming of winter. TnT residents may hold steadfast, until spring, when spider season starts anew.

Have you seen this spider? It's NOT a brown recluse if any of the following are true:

Larry Miller/Photo Researchers, Inc.

1. It's really BIG. A spider's body is in two main parts. The size of the body, not including legs, of a recluse is smaller than a dime.

2. It's really HAIRY. Brown recluses have only very fine hairs that are invisible to the naked eye.

3. It JUMPS. Jumping spiders live up to their name, and some other spiders including wolf spiders occasionally jump, but recluses don't.

4. It was found in a WEB. Brown recluses don't spin a web to catch prey; they spin silk retreats and egg cases, but don't form a typical recognizable web.

5. It has DISTINCT MARKINGS VISIBLE TO THE NAKED EYE, such as stripes, diamonds, chevrons, spots, etc. that are easily seen.

- www.ascendedhealth.com/ brown-recluse/

Campus improvements: revealing the renovations in Good, BAC and RFS

continued from page 1

Claire Dempsey, a senior with a psychology POE who takes two courses in the newly renovated Room 202, likes the new changes to the room.

"[I feel that] the space is utilized much better. The multi-level seating gives students more ability to see what's going on in the front of the classroom and to move around with much more ease," Dempsey said. "It also feels like it has more of an intimate classroom atmosphere and is less like a spread-out, impersonal lecture hall."

There is a new Mac/PC lab in 200, replacing the lab in Room 422. Additionally, Room 201 is now a computer-imaging studio, created especially for visual design use.

Part of the funding for these renovations comes from a portion of the Class of 2005's class gift.

The Brumbaugh Academic Center is made up of three wings which, as of the summer of 2004, housed the information technology and computer science, business/accounting/economics, mathematics, physics and geology departments. At the opening of fall 2005, the communication department moved from Quinter House to the C-Wing of BAC. Science in Motion left the BAC, moving to the recently renovated Baxter Building.

These changes come as a continuation of the transformation of the Brumbaugh Science Center into the Brumbaugh Academic Center, a transformation that began when the sciences moved to von Liebig.

The Class of 2005's gift to the College also included contributions for a new student union, in Ellis Hall's Cream Room. It will feature another pool table and serve primarily as a social and gaming room.

Two other Ellis projects include converting the OSA reception area into a screening room and making the Cyber Café into more of a lounge space. New furniture is expected in all three areas soon.

A less apparent improvement to the campus has been the two new residential lodges built at the field station at Raystown Lake this past summer. Each lodge houses eight students and is environmentally friendly in design and upkeep.

Starting this fall, students began to live in the lodges for a semester-long experience in a self-contained ecosystem and watershed.

There are hopes for four more residential lodges to be built, enabling up to forty-five students to live at the Field Station.

Juniata moves up five places in the college rankings

continued from page 2

tutional Planning and Research, said that college rankings are useful as a means of measuring where Juniata stands compared to other colleges. The ranks are too subjective to be the primary tool for evaluating colleges though.

"Everyone uses them, but college rankings are a very difficult thing to measure. I think the overall categories are correct, but the individual rankings are off," said Clarke.

The problems may arise because the U.S. News uses a ranking system that is comprised of seven criteria that carry different weights. The most important area is peer assessment. This is when the U.S. News polls liberal arts colleges and has them critique other institutions. This subjective approach has some inherent problems.

Clarke said, "U.S. News sends out surveys to presidents, provosts, and enrollment officers of liberal arts schools and has them rank other colleges. This lets competitors undervalue their competition, and relies heavily on name recognition. It's the wrong source for this measurement."

Juniata is traditionally hurt in this regard because it is not as recognized as other schools. "We would be higher up if the school was more well-known," said Clarke.

Another issue with the rankings is their reliance on input factors. Input factors are statistical data about an incoming class, such as class rank and GPA. This means that the rankings examine more heavily what incoming classes look like, rather than what happens to them during the four years they stay.

"What is really important to our current students is what does not directly show up in the numbers--our selection of faculty devoted to great teaching, improved facilities that provide space for hands-on learning and our very good reputation with graduate schools and a wide range of employers," said Kepple.

Sustainability on campus

continued from page 1

from the trash in black bags.

"Same truck, but separating colors so it's visible," said Yelnosky.

Four Juniata students are doing independent studies on sustainability with Yelnosky. Senior Brad Simpson and juniors Shawn Rumery, Eric Hoover and Jason Hoover plan to overhaul the recycling program by putting a recycling bin in every room on campus and using larger recycling bins.

"We want to make it so it's as easy to recycle as it is to throw away," said Jason Hoover.

These four students and members of the Conservation Club attended a sustainability conference at Wilson College this month. The conference featured workshops on solar and wind power, energy-efficient buildings and global warming. Rumery said that as "sustainability ambassadors," they can use this experience to teach others how to be conservation-minded.

"If we start by teaching freshmen that sustainability is what we do on campus, that will carry on for the rest of their lives," said Rumery.

Rumery, Simpson and the Hoovers are also looking at alternative sources of energy. They're working with Yelnosky on a grant to install solar panels on the roof of the Brumbaugh Academic Center. They also plan on purchasing electric-powered vehicles to replace the golf carts used by various offices on campus.

In an effort to reduce campus gas emissions, senior Celina Isenberg, president of the conservation club is working on building a biodiesel processor. The processor, when completed, will use vegetable oil to make fuel for diesel engines and oil furnaces. Biodiesel emissions are less harmful to the environment than petroleum fuels. Isenberg said that using the processor to make fuel for the oil furnaces on campus would reduce the amount of oil purchased by the College.

Sodexho is also promoting sustainability through its coffee mug campaign. It is trying to limit waste material by providing mugs for coffee as an alternative to paper cups. The coffee is sold for only $1.00 and the mugs can be returned to Jitters, Muddy Run and Café a la Cart.

Additionally, the freshman IA course now includes a module on sustainable practices.

Sustainability is even the topic for this year's Bailey Oratorical Contest.

"It's kind of the year of sustainability," said Isenberg.

Study abroad in the Gambia

continued from page 1

may help to correct many of the stereotypes often unconsciously sustained about the continent, or weaken many of the "strange conceptions" that are presumed such as "disease, starvation and war and conflict."

Referring to the false impressions often held about the continent of Africa as a whole, Nagengast said that "it isn't just Juniata, it's all across the U.S."

"A dominant theme of the trip was deconstructing the stereotypes, and it did," said senior JP Melle, who attended the program this past summer. "I didn't see any wild animals outside of zoos or game preserves. There are a lot of stereotypes associated with the continent of Africa, which is absurd because it's a whole [expletive deleted] continent!"

Nagengast suggested that the obstacle is overcoming initial fear, rooted mostly in the misinterpretation of African culture. He says that conquering such fear will be fairly easy for students after chatting with former participants and African students on campus.

Nagengast described it not only as a 'fun' place, but also as "very safe." He said. "I feel much safer taking my students to the Gambia than Germany."

Gambians, whose official language is English, are widely described as a friendly, welcoming and curious people, particularly by program returnees.

"I have never heard any student say this experience was anything but wonderful," Nagengast said proudly.

Senior Tyler Hazui described it as "mind-blowing."

According to Nagengast, the Gambia is an extremely inexpensive place in which to live for four months. Tuition is transferred like all of Juniata's semester exchange programs, and students are placed together in houses surrounding the University of the Gambia.

"[The Gambia will] change you as a person," Nagengast promised. "You won't recognize yourself as the person who you were before you left." He says he seeks to reconcile the paradox between the peaceful and warm nation that is the Gambia, and the stereotypes of violence and disorder that are often attributed to many African countries. He admits that the experience may be challenging, but it may also encourage the diplomatic capacity of his students.

Field space

continued from page 2

term solution to the problem, Warner said, "The plot of grass behind Brumbaugh [Academic Center] would make a great field for club sports."

To make the plot of land into a field, Warner says that it would need to be leveled out just like Sunderland Field. Doing this would create enough space for all the club sports teams to practice everyday. Rugby and Frisbee could also host more home games. Currently, Juniata hosts a few competitions on Ellis Field.

Weber says that there are no current plans to convert that field, but thinks that it could be looked into for the future.

Weber is also looking into purchasing lights for the fields behind Ellis Hall so that those fields could be used at night.

According to Weber, finding field space is only one of the challenges that the leaders of the club sports teams face. She said that being in charge of a club sport takes a great deal of work because the captains must function like coaches. They are responsible for planning practices, arranging transportation to competitions and doing all of the paper work required to be a registered student organization. Weber is confident that the teams will be able to overcome these obstacles because there is a strong group of student leaders in charge of the teams this year.

Juniata remembers with a candlelight vigil on eve of 9/11anniversary

Kevin Dundore / Juniatian

Nearly 85 students gather outside of the von Liebig Science Center for a non-denominational candlelight service to commemorate the fifth anniverary of the events of September 11, 2001.

Drop the paper in Drop/Add process

EDITORIAL

Three weeks ago, students dealt with the normal back-to-school excitement—and stress: moving into dorms, finding new classrooms, adjusting to new schedules and trying to find two advisors to sign drop/add forms. A semester's start is always stressful for students, advisors and the Registrar staff, but we can help reduce the chaos through an easy solution: making the Drop/Add process electronic.

According to Registrar Athena Frederick, the process is kept on paper partially to encourage face-to-face discourse between advisors and advisees. While advisor-advisee contact is important, it should be up to students and their advisors whether a meeting is necessary to discuss a regular drop or add.

Here's the scenario: Student McGee decides he'd rather take Intro. to Environmental Science than Intro. to American Government. He sends an e-mail to his advisor, who either a) says, "No problem!" and approves the change electronically, or b) requests a meeting with the student because the advisor sees a potential problem with the change.

Making the leap to electronic drop/add would not eliminate advisor-advisee relations. If a student needs guidance from the advisor, or the advisor has concerns, the option is there to make an appointment.

Juniata is unique because of its two-advisors-per-student system. Students should take advantage of the guidance and attention they can receive, and advisor meetings should continue to be mandatory for freshmen and transfer students, who frequently need help picking out a schedule to fulfill POE and FISHN requirements. But requiring veteran students to meet with both advisors just for a signature to drop or add a class is excessive. This approval process can just as easily be accomplished online.

Not only would an online drop/add process reduce stress for students and their advisors, but it would also significantly reduce the workload for the Registrar's assistants. At the start of the year, the Registrar's Office is busy processing pre-/co-requisite waivers, instructor's consents, waitlist overrides, credit by exams and internship forms—registration procedures for which it's hard to lose the paper. This fall, the Registrar's Office processed around 2300 total drop/add forms, according to Frederick. 2300 forms on a campus of roughly 1400 students.

Making the standard dropping or adding electronic would surely

The Media's blood flood

Networks have viewers dying for entertainment

Chris Burlingame

There was another school shooting, a family of six slashed with a machete and a car bomb explosion down the street. No, it's not a nightmare or a summer blockbuster: it's the evening news.

While checking the New York Times and CNN Web sites, I was shocked to see the number of headlines concerning violence and human suffering. Lately, it seems that unless someone has died or been injured, a story doesn't deserve a headline.

Professor of history Jim Tuten said it best: "It's not 'no news is good news' anymore, but now 'good news is no news.'"

What is this phenomenon? Why has the news become so inundated with violence? More importantly, why are we watching?

"It's the same reason we slow down to look at a car wreck," said professor of philosophy Janet Lewis. "We are a violent country, and that has always been accepted."

Accepted and awarded. For instance, the winner of the 2006 Academy Award for Best Picture was *Crash.* This movie discusses desensitization and the human need to crash into each other to feel something. In this way, it addresses the human longing for violence in America.

Our obsession with violence stems from a need to feel danger at a safe distance. Violence is entertaining as long as it's not happening to us. This isn't anything new; humanity has used violence for entertainment since the gladiators battled for accolades in the Roman Coliseum. In more recent history, the horrors of the Vietnam War brought bloodshed into American homes on the nightly news. Now, we seem to need our violence fix.

Who is there for us but the media: a business simply trying to make a buck. They are the dealers supplying their junkies with all they can handle. For the media, business is booming.

"The networks are competing to see who can get more sex and

continued page 7

In the censored words of the greatest comedian alive...

Mary Gardiner

...Screw bees.

Last week I was in the hospital—for the first time in my life—because a freaking bee stung me in the leg. My lungs closed up and my whole body was covered in some pretty unpleasant hives. At least I got some drugs out of it.

Better fate than some others, eh? I liked the parody of Bon Jovi's lyrics "Shot through the heart" that someone dedicated to the Croc Hunter. RIP, Steve Irwin. You will live on in all of our hearts. (Since, of course, the sting ray got yours.)

Speaking of hearts, I felt like mine was trampled on by stilettos (to quote the South Park goth) when I got back to Juniata finally, after a year hiatus, to almost totally new faces. Who are you people?

Thus is the life of the study abroad returnee. After a trip to East a few days ago I was pretty vividly reminded how out of place we really are—and how much I miss Czech beers and European techno music. Several of my fellow study abroad veterans have expressed similar reactions.

I never thought I'd say this, but I missed Huntingdon

Much has changed since I left Juniata in May of 2005. We have a freaking Wal-mart. Are you serious? And where did Bric-a-Brac go? Facebook has taken over the world—let's not talk about the new mini-feed or whatever it is—and Halbritter is actually completed, meaning I can't go play in the construction at 1 a.m. anymore.

Good Hall is finally a decent building to have class in. Thanks for paying attention to us non-science majors, Juniata, a semester before I graduate.

And of course, life off-campus is totally different than the claustrophobia of Juniata's dorms. (Can you say, hookah(s), anyone?)

I guess much has stayed the same, though. Same old professors: Dr. Nagengast still doesn't remember my name and Xinli Wang still loves tennis. Baker still sucks, and von Realbig is still… well, really big. East is lame, like it always was.

And, as I've mentioned to several other people before, Juniata College is still full of way too many overachievers. Aren't there 100 or more clubs on campus?

So, here's my charge to you freshmen and sophomores: try and treat us study abroad veterans with a little caution. Don't ask if we're freshmen. (If I had a dollar for all the times I've been humbled by that question…). We just want to be home.

I must express some gratitude, though, for the number of people that have encouraged me by reading my column while I was away. You guys make the return that much better. Thanks.

So, amidst the familiarity of campus and old friends, and the change of all of things new, it is truly good to be back. I never thought I'd say this, but I missed Huntingdon and the mundanity of Juniata life.

In that vein, I'd like to dedicate this column to the beauty of mundane life at Juniata. (And Steve Irwin.)

Presidential Perspective

President Kepple wants to hear from you! He uses his column to answer any college-related question from the campus community. Simply e-mail questions to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

"Was the new entrance being built at Knox Stadium paid for by private, restricted gifts? If not, why did the College put money into a ticket structure instead of into actual facilities or equipment that the student-athletes on the track and field teams need in order to host meets here?"

Good question. The gate is a gift from an anonymous donor. It will honor the classes of the 1950s and the incredible football teams of that same era. The gate will certainly help the appearance of the entrance. We are now working on raising funds for a new track (a lot more expensive than the gate) which we expect to complete within two years.

"On my walks to the Cliffs, I've often noticed the JCPD vehicle driving through the neighborhoods up there. Why, especially in this time of inflated gas prices and the College's public sustainability efforts, does the JCPD use gas to patrol neighborhoods that are outside campus and that don't house students?"

Actually they are passing by the president's house which is in that neighborhood and of course there are lots of students who walk up to the cliffs as well.

Drop/Add forms

continued from page 6

redirect registrar efforts to where they are most needed.

It is only in the past two years that regular registration has been conducted completely on the Web, and it, like any change, brought praise and criticism from the Juniata community. However, it has undoubtedly simplified the registration process. Now, with the Web interface already present, making the start-of-the-semester drop/add period electronic would only require a few clicks of the mouse, according to Frederick.

The Registrar's Office and the Student Academic Development Committee have explored many possible scenarios for every registration process, according to Frederick. She says that the Registrar's Office has heard few complaints about the current drop/add process, but if there is discontent, she is open to hearing about it.

"If you can make it work, great," said Frederick of an electronic drop/add. "My concern is reflecting what the faculty and community want."

This isn't an issue of making everything we do electronic. Juniata's small-school, community feel is part of our flavor. But at the beginning of a semester, the last thing students and advisors need is a parade just for a signature.

The Media's blood flood

continued from page 6

violence because it means more advertisers," said professor of communication Donna Weimer. In the eyes of the media, the TV shows we watch are only "bait"—a reason for us to turn on the tube and be exposed to advertisements. The broadcasting corporations make almost all of their money from these commercials.

Thus, if viewers will turn on the TV to see violence, that's what the media will give us. According to Weimer, shows like *Law & Order: Special Victims Unit* take advantage of this. The show has a high concentration of sex, violence and human suffering at a safe distance.

Substance has disappeared from television and has been replaced with violent talk shows like *Hardball with Chris Matthews,* where talking heads are more concerned with getting in a personal jab than informing the viewer.

Professor of politics Dennis Plane said, "Unfortunately, Jerry Springer sells and PBS doesn't. Fighting, yelling and screaming gets more viewers because it is more interesting and less taxing on the brain."

We have become too desensitized to violence. And, like any other addict, we need more to feel the same rush. The media has us hooked and longing for that next injection of violence. People don't have much further to go before they plan a massacre just to be the lead story.

Essentially, we have become sheep being led to slaughter and the media corporations are bathing in our blood and dollars.

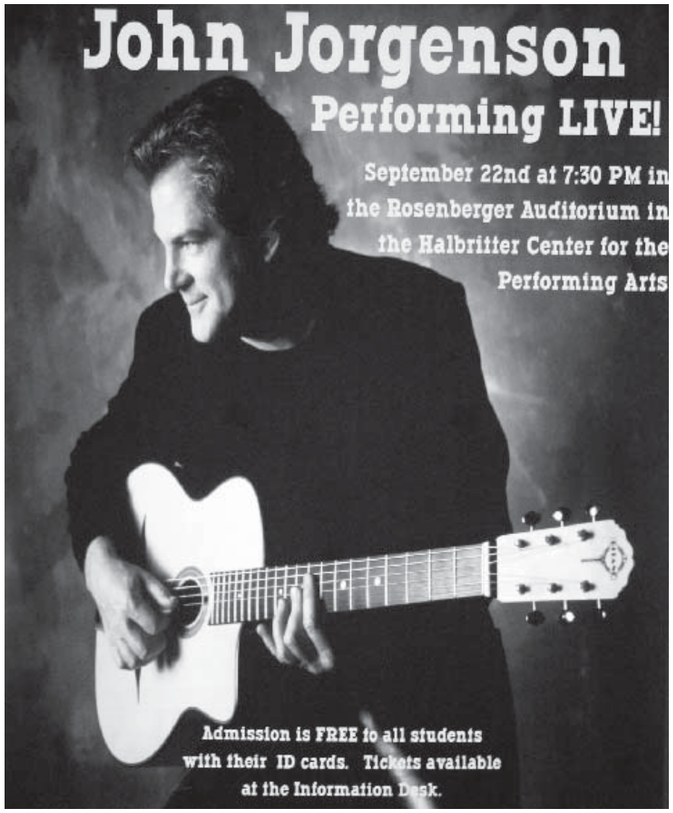
Even if we don't want to see violence, if we want to remain "informed," we have watch and read what the media tells us to.

Few other options exist in this age of materialism, and it seems that the only alternatives to the money-hungry corporations and their violent messages are the Public Broadcasting Service (PBS) and National Public Radio (NPR). These more objective branches of media are proof that though violence maybe a part of life, it is not a way of life.

The world is dying around us and I cannot sit by quietly while my neighbor is gunned down right next to me for entertainment's sake. I'm on the lookout for the truth.

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.



Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Prior Review: The Juniatian does not allow interview subjects the opportunity to read, edit or censor articles before publication.

Expect the uncommon: famous performers at JC

Christopher Shannon / Juniatian

A snapshot of a poster advertising John Jorgenson's performance tomorrow night at 7:30 p.m. in the Halbritter Center for the Performing Arts.

Sarah Kotora

With a new theater and state-of-the-art performers to go with it, the arts have finally been given a sense of place at Juniata College. This year, Juniata will host seven major performers on campus, four of which are Grammy-award winners.

This year's Juniata Presents includes everything from dancers to magicians, including musicians from different musical backgrounds (see box at right). Also, four student productions will be performed, quadrupling last year's total of one.

The Artist Series has changed its name to Juniata Presents because the former title did not encompass the range of performances Juniata has to offer. Now, instead of just including musicians and dancers, the title is more inclusive of performers such as lecturers and storytellers. But, as Chad Herzog, Director of Performing Arts said, "We haven't changed at all; we're still a series that is for our students—that's our primary focus—and for the community. And we're still bringing culture, because that's what is important."

John Jorgenson is the first performer for this year's Juniata Presents. He performs tomorrow night, Sept. 22, at 7:30 p.m. in the Rosenberger Auditorium. He is one of the biggest performers featured this year: he was a member of Elton John's Band for six years and a member of the Desert Rose Band and the Hellcasters.

He has also recorded and performed with many other prominent musicians such as Bonnie Raitt, Luciano Pavarotti, Benny Goodman, Sting and Billy Joel.

A guitarist, vocalist and clarinet player, Jorgenson is a musician whose mastery lies in gypsy jazz, in the style of Django Reinhardt. For the distinguished films "Head in the Clouds" and "Gattaca," he recreated Reinhardt's music.

The student productions this year will include "airstonewater," "Far Away," "Enrico IV" and "Solo."

Because the new space in the Susan von Liebig Theatre is a small, compact and intimate space, it will be used primarily for the student productions.

Like last year's student production of "A Midsummer Night's Dream," the students will hold multiple showings of each production in the von Liebig Theatre. This will give everyone the opportunity to experience an intimate session with the performances.

"airstonewater" will be the first student production of the year, being performed on Oct. 19-21 and 26-28. It is meant to emphasize the power of movement. It is a piece that uses low-hanging trapeze, and focuses on the relationship between text, images, movement, aerial work and sound.

Chad Herzog hopes that the outside performers he brings will make a lasting impression on current students. He reminds us that one can never know the impact an unknown artist can have on a person, as he shares this story:

"Billy Joel was here February 2, 1974. Tickets were $2 dollars a piece. Now in 1974, nobody knew that Billy Joel was going to be as big as he is today. But you never know what it's going to be like in your life in twenty years, when you can say, I saw them at Juniata." Chad's aspirations match perfectly with Juniata's motto, Expect the Uncommon at Juniata College.

"But you never know what it's going to be like...in twenty years, when you can say, I saw them at Juniata"

Accepted not rejected

E. LaBrecque

The world is full of losers and people who think they're winners (but who are, in fact, still losers). The film "Accepted" shows us that losers can eventually become winners so long as one of them has stellar public-speaking skills and a technology-savvy best friend. Accepted also shows us that a mildly funny satire about fake college is especially entertaining after a few weeks of seriously stressful real college.

Bartleby "B" Gaines (Justin Long, a.k.a. the better half of the great Mac vs. PC commercials) is a silver-tongued high school graduate who didn't quite make the college cut. He feels pressured to succeed by his clueless parents ("Are you huffing grass?") and responds by wildly inventing a university that accepts him. The name of this fine establishment is the South Harmon Institute of Technology (S.H.I.T.). Feel free to laugh at that very clever bit of wordplay. Bartleby enlists his best friend, Schrader (Jonah Hill), to make an official-looking Web site so that B's parents will buy that South Harmon is the real thing. The site does the trick, but B's parents want to take him to move-in day. There's one tiny problem: a nonexistent college has a nonexistent campus.

Bartleby and his other collegeless friends lease an abandoned loony bin and turn it into S.H.I.T., seemingly overnight. Several protracted shock-treatment and bouncing-around-padded-rooms scenes follow. Before long, a lack of authority figure at this place of higher learning becomes problematic. Enter Lewis Black.

For those of you who don't know, Lewis Black is a brilliant, angry, topical comic—the best of our time, really. He is cast as Uncle Ben, Schrader's uncle who used to be an academic, who Bartleby and friends hire to work as the dean of South Harmon. "Accepted" may not have been comedic gold, but it certainly deserves brownie points if only for giving Lewis Black a cinematographic platform. If you disagree, it's probably because you have no sense of humor. If you have no sense of humor, quit reading this review because "Accepted" will not interest you.

At any rate, move-in day is a success. Other kids begin showing up for classes at South Harmon, and B accepts them into his fake school because they weren't accepted elsewhere. But he doesn't deign to tell them that it's fake.

continued page 10

Photographing the unseen

Maria Piazza

An apple exploding is just applesauce, until a photograph pauses the moment when the apple bursts into pieces.

On September 21, be prepared to see the unexpected; science will merge with art to create something optically shocking when the Juniata College Museum of Art displays Harold E. Edgerton's stop action photographs. The display opens at 5 p.m. with photographs that are simply unimaginable.

The photographs have stopped an apple mid-explosion, show a bullet slicing through a card, freeze a drop of milk as it hits a saucer and many more such moments that have never been seen. The show will display dozens of works of this type, all arranged to give the viewer a moment to experience what the naked eye cannot capture.

Edgerton developed his method of photography to help himself study the rotation of motors, not to show beauty in the unexpected. His photos are in the exhibit, "Seeing the Unseen," because of an accident of beauty. The oddity of seeing a bullet paused as it sliced through a card cannot fail to impress even the most determined avowers of art.

As a high-speed, stroboscopic camera flashes, the movement of an image is frozen, and a picture like Edgerton's is formed. The art show was chosen by Nancy Siegel, director of the Juniata Museum of Art, because it, "is visual pleasing and it relates well to students who are fascinated with science."

The oddity of seeing a bullet paused as it sliced a card cannot fail to impress even the most determined of avowers of art.

Judy Maloney, a curator for the Juniata Museum, asked, "Who would think that a drop of milk would be so mysterious?" Edgerton did. He began to focus on the commonplace, trying to see what others missed, in order to study it. The artwork of Edgerton demonstrates that science at work is not always stark and unemotional. The work focuses on moments that blur together for the viewer when seen with the naked eye. His work records moments of water drops dancing, swimmers diving and tails wagging, combining physics with beauty.

The contemplation of a moment can lead to new insights in the sciences and the arts. The museum exhibit will be designed around that concept. Each photo will be hung in just the right spot, at the right angle to bring the viewer into the room and then into the photo.

"More work goes into the preparation of an exhibit than the average person might think," said Emily Fitzgerald, a junior with a POE in art history and museum studies. "Just the selection of paint for the walls takes great discussion and concentration."

The photos feature the unification of art with science; the exhibit must reflect that. The exhibit in itself will be a work of art, designed to best convey the meaning of the art.

The conscious choice of a man to study motors through photos has brought stop action photography to the world, and now, to Juniata. Students will be given a chance to observe what, before Edgerton, was only imagined.

The chance to examine something that has never before been exposed to sight is at the heart of science, and at the heart of each of the pictures on display.

Any student interested in science should come to this presentation to see how the practical sciences can turn into art, and art can be used for science.

The Juniata College Museum of Art is located on 17th and Moore St.

The Naked Truth: summer vacation

Rebecca

www.kitesandpuppets.ca

I directed a porn this summer. To start off this year, I figure I should try to explain my vacation. Most likely, the rest of the campus went home and got sick of their families within the first week. Well, my situation is a little backwards.

Sure, my family tends to rub me the wrong way (not physically), but they have priceless moments that make me wish we had a reality television show. I'll illustrate the following situations as best as possible, but describing my family with everyday adjectives is…like trying to trip your trigger in a shampoo bottle with a small opening (a.k.a. challenging). My family is worthy of much more, and I can only hope to give these situations their due credit.

Oh, and for those of you who don't know me, I'm your campus sexpert. (Not really, but I am all about havin' fun…maybe taking my pants off.) Simply stated, the naked truth leaks from my pen.

Mother's Day: How did my brother, Ben, and I thank the woman who birthed us? With a Playgirl magazine. We were showing support, as her boyfriend of the moment was rather unmotivated. And, I'm not even sure his Viagra ever enhanced anything. You may think this is a strange gift, but Mom finds our presents to be unique and very complementary. A few years back, we ordered her one bucket-o-condoms for her birthday. She was flattered.

Father's Day? Not quite as exciting. My dad's a Lutheran minister. For the record, my parents are happily divorced.

Truetones: I wanted to send an encouraging message to my mom's limp (in more ways than one) boyfriend in hopes of loosening him up a bit. While mom was in the shower, I downloaded a new tune onto her cell phone and waited for the dead fish to arrive. Then I called.

"Loosen up my buttons babe, but you keep frontin'…" He just sort of stared at the phone and acted

continued page 10

Lost in the Record Store: *Good* hip-hop exists!

Kevin Warner

When you walk into any party in East, you will undoubtedly hear the thumping bass of the latest rap song. Most likely, you'll hear a scream infused, off-beat lil' Jon song or, perhaps, the latest enlightened track from Chamillionaire about "ridin' dirty" or whatever. As a hip-hop fan, I naturally can identify with the beat. But, while most of these songs are fine for a drunken dance session, the lyrics and message leave something to be desired.

Luckily, when you get tired of listening to songs that constantly reinforce the ideology that "he-who-dies-with-the-most-stuff-wins," there is a group of artists who recall the socio-political roots of hip-hop. Artists such as Talib Kweli, Mos Def and Common, usually referred to as "conscious rappers" (although Mos Def doesn't care for that label), consistently release solid songs with fantastic lyrics that provide the antidote to mainstream hip-hop.

Conscious rappers are known for their lyrical content, above all else. While not always overtly political, they usually focus on social issues, especially pertaining to the African-American community, feminism, anti-violence, and religion. Often these lyrics criticize mainstream hip-hop. For example, Talib Kweli spits in "Know That" (a collaborative effort with Mos Def), "I follow the code of honor like a real man gonna/never disrespect no women cause I love my Momma," as a direct attack on mainstream hip-hop's portrayal of women.

The most striking aspect of a majority of these artists is that their lyrics are positive and focus on the ability of people to come together and bring about change in the world, especially through music.

A constant theme of Mos Def's music is that "we are hip hop, me, you, everybody," as he says on his song, "Fear Not of Man." For these artists, hip-hop isn't just a type of music; it's a cultural movement that can change the world. This attitude is reflected in their lyrics and their objection with much of mainstream hip-hop.

Fortunately, we aren't always subjected just to the latest Terror Squad song on the airwavess. Nas

Students "slack-off" on North lawn

Christopher Shannon / Juniatian

Sophomore John Dawes displays great balance practicing a new adventure sport called "slack lining." On most evenings Dawes and a group of his friends can be spotted doing their "tightrope" act on the lawn between Sherwood and Sunderland. Dawes said he publicized the event during this summer's Inbound Program, and it's been popular on campus since.

Accepted not rejected

continued from page 8

Meanwhile, Schrader is suffering humiliations galore in the real university world. He decides to rush (first awful idea) because his dad did it (second awful idea) and believes that his fraternity brothers are his friends (third awful idea). The head of the frat house, Hoyt, quickly becomes Bartleby's nemesis after a few run-ins involving parties and girls. Schrader's lowly status among his brothers deteriorates even further once his connection to B is revealed. Hoyt ups his snobby git status by nosing around South Harmon.

Discovery that South Harmon is a fake university would ruin everything. Bartleby would never be trusted again, never mind being sent to jail. It would be almost impossible for the students to get into real schools after the jig is up. Does Hoyt really ruin all and send we, the audience, home wondering how a Hollywood movie could have such a realistic ending when the rest of it made us say, "yeah, right"? Well, I would be ruining this review if I answered that one for you.

Before I send you running to the theater, I feel I should warn you about the blatant stereotyping that goes on in this film. The stereotypes include, but are not limited to: the token black guy, the leggy blonde love interest, the big-haired burnout and the fat friend. If you enjoy stereotypes for the sake of satire and a decent soundtrack, you will find this film entertaining as I do. If you enjoy stereotypes but don't recognize them for what they are, you're foolish and will probably enjoy this film more than I do. Whatever your sense of humor, "Accepted" will make you smile (if not laugh) at least once, which is worth $4 if you live in quaint but dreary Huntingdon.

The running time is 92 minutes. It is rated PG-13 for language, sexual content and drug reference.

The Naked Truth

continued from page 9

nervous. I think the man threw a glass of cold water on my mom the next day. Not even kidding. Hey, the Pussy Cat Dolls and I led the horse to water, but I think he's been in the desert so long that he doesn't know just how sweet things can taste on the other side.

Sexual healing: Basically, we have this new massage table in the middle of our great room for Mom's new business. She made it clear that Ben and I had better not think about entertaining anyone on the table.

Kinky? The table is portable, and I'm not risking any position on something liable to collapse.

Then I probably would need a real massage from my Mom; and, it would just seem like a sick and twisted turn of fate.

And then there's vacation…

Cathedral of Immaculate Conception. As if the retirement building's name isn't enough to make me giggle. My dad, Ben, and I went to see my grandparents, who live in downtown Kansas City. One might think excitement would be hard to come by, when spending night and day with a building of senior citizens. But, for some reason, anything to do with nakedness follows me, even cross country.

The next thing you know, the Bingo lady is giving me all the details about (in her words) "men on men, women on women, and the women of the night entering the building." It appears that Bingo night is also amateur Sex Talk with Sue night. I should have known by the odd prize selection—toilet paper and bananas.

The Muppets Movie: Director's Cut. Ben tainted our trip to Crown Center inside a (children's) toy store. He found a massive selection of puppets—Police puppet, dirty old man puppet, Pretty Woman puppet. I gladly turned on the video recorder so Ben could begin his adult film career. Apparently, puppets are just yearning for some string stretching after long days stuck on those racks that send poles up their lower ends. They'd gladly take a hand up there instead.

Lend a hand: Much to my father's dismay, my grandparents' apartment lacks a dishwasher. Without thinking, he said, "Well, I guess it's like everything else around here that doesn't work. It's a hand job." I smiled. Immediately, he added, "Don't you dare put that in your column." Sorry, Daddy.

One Night in Paris?: My Nana gave Ben an old bottle of putrid cologne that she'd found, and my grandfather later caught a whiff.

His comment: "Why that smells like a French whore!"

"Bill! How would you know?" my Nana shrieked.

"Oh, they all smell the same…" It seems my grandpa defended his country from under the skirts of foreign women, rather than in the trenches. I doubt he was alone.

So...I make fun of my relatives in a lewd manner. I try thinking of us as a sexually supportive family, but you can call us perverted if you like. Still, I plan to phone home more often for material. And, right now, I'm going to return Ben's call. He left a message that said something about being at his girlfriend's house and her dog thinking his fingers were "finger lickin' good." I just can't imagine what that's about.

Winning tradition continues

High hopes attainable with early season success for volleyball

Derek Stanley

The Juniata women's volleyball team has begun this season like many others, with aspirations of a Division III National Championship and, thus far, a perfect season.

However, as fans look out onto the court they will see a team unlike others, a team filled primarily with sophomores and true freshmen. With such a young team it increases the challenge of building on the previous few years because most of the team was not there to go through the tough losses and hard practices.

Senior leaders Rachael Schatz and Stephanie Kines are left with the difficult task of not only performing well themselves, but also of molding these younger players into Juniata caliber volleyball players.

"It's hard sometimes to come in as a freshman and instantly understand our program and what we're all about. They honestly don't understand until we've actually started playing and sometimes don't understand until spring season. But, we have a lot of meetings about our norms and what is expected of us as Juniata volleyball players," Schatz said.

Currently ranked number one if the AVCA (American Volleyball Coaches Association) poll, the women have already defeated Wittenberg University (without dropping a single game) and most recently Washington University (Mo.), 3-1. Both opponents were ranked second in the AVCA poll at the time of the matches.

Schatz was simply unstoppable against Wash U, tallying 20 kills during the September 15 win.

Sophomore Amber Thomas also chimed in with a solid performance on the outside, recording 15 kills while attacking at a .355 hitting percentage.

"I'd watched tape earlier in the week with Larry and noticed they were leaving a lot of line and I used this knowledge to beat their block," said Schatz.

Watching tape and reviewing scouting reports are some of the traditions being taught to the current underclassmen as well as the women's basic philosophy.

"We believe that every practice and every game the team either gets better or worse; we never stay the same. Therefore it's important to not think ahead to the next tournament, regionals or even nationals. We must focus on what lies directly in front of us and kick it in the ass," Kines said.

Even though the team's focus is not yet on the post-season, that is exactly where their goals finish.

"MAC Championships are never to be taken lightly, but we expect to win them and we expect even more out of each other. Our true goal this season is to win the national championship, and the MAC and regional tournaments are steps we have to take to achieving that goal," said Kines.

With their recent performances, the women are well on their way to achieving their goal.

They will be in action again over the weekend at the Salisbury Invitational.

Juniata will return home for its final regular season tournament on October 21 at the Juniata Invitational.

"We must focus on what lies directly in front of us and kick it in the ass." - Stephanie Kines

Thomas–sophomore sensation

Sophomore Amber Thomas racked up 34 kills during the Guisler Invitational at Juniata, including 15 kills during a match against second-ranked Washington University September 15.

Thomas currently leads the team with 119 kills and an outstanding .389 hitting percentage. She also thus far has received 225 serves with only eight reception errors during the women's 2006 campaign.

Kevin Dundore / Juniatian

Sophomore outside hitter Brittany Carr (13) goes for the kill against Washington University (MO) in a home match during the Guisler Invitational.

Last attack at the MACs

Field hockey takes one more run at title

Dan Rapp

Juniata College is changing conferences next year. With one last chance at winning a Commonwealth title before the change takes place, the field hockey team has really stepped up to the challenge.

Although the team graduated two starters last year, the returnees feel that they are stronger than last year. Just two years ago the team lost five starters to graduation and was faced with a very tough rebuilding year. Through the rebuilding process, the team learned how to better communicate, especially with new players. The upperclassmen will use that experience to full advantage this fall.

Another significant change in the field hockey program is a new coaching strategy by head coach Caroline Gillich. She has forced more than half the team to learn new positions, many of which they were unfamiliar or uncomfortable playing.

Players that have been used to playing attack positions since high school have been switched between many other players' spots. This has allowed the players to bring new looks to different positions.

Gillich's theory behind the change is that it helps her to see the potential in players better and put them in places where they can be most effective. Sometimes the players will find themselves in places they might not be happy playing, but as the saying goes, it is not what's good for the player, but for the team instead.

Gillich has also started implementing her strategy during game time situations, having no fear in moving strong attack players to the defensive end of the field or vice versa.

"This new change has helped to make players become more versatile, gaining a better respect for the game and essentially raising their level of play," Senior Sierra Dickman said.

The start of the 2006 season has proven Gillich right so far. Winning their first four games, the players have a great deal of confidence behind them at the perfect time. With Saturday marking the start of conference play, the Eagles were ready to keep their undefeated record in tact.

"It really keeps the team pumped up," senior Kat Vera said. "We are undefeated and we plan on staying that way."

Juniata was able to do just that, knocking off Widener in overtime, 3-2. Kim Wagner scored the equalizer with just minutes left in regulation, and then Michelle Campbell put home the game winner in overtime.

With a unified team goal of conquering the MAC, the players have all stepped up and held themselves to higher standards. Along with a record of 5-0 (at press time), the Eagles have outscored their opponents, 15-1 this season and outshot them, 88-19. They also managed to keep the ball out of their own net for the first 240 minutes of the season before allowing an opponent to score.

The Eagles open MAC play at home on September 23 against Moravian at 1 p.m.

JC tennis: youth is served

New coach and young roster start strong

Sarah Roby

The Juniata women's tennis team posted an impressive record last season of 7-4 – its best record since the 90s. Things are looking up even more with four talented freshmen joining a roster that boasted three solid returning players.

This season youth is a strength, as the number one and three singles positions have both been claimed by first year players.

For incoming freshmen, the struggle to balance academics and athletics can be a challenging endeavor. Throw on top of that the strain that comes from holding a leading position on your team and some would crack under the pressure.

At the number one spot, freshman Amanda Fontana has been feeling that pressure as the women's season started up three weeks ago. Fontana describes her first collegiate matches as being "really exciting, but completely nerve-wrecking!" Fontana feels the pressure of the number one spot, but has an intense drive and desire for victory that has helped her earn her current record of 4-1 (record as of press time). Besides playing in the number one spot for Juniata, Fontana is also part of the number two doubles team with sophomore Aggie Kwon.

In Juniata's season-opening match, Fontana and Kwon defeated last season's second-ranked team, Messiah, 8-3. Fontana then celebrated an impressive singles victory 6-1, 6-0.

Another challenging competitor Juniata faced early in its season was Elizabethtown, the returning MAC champions. Despite the loss for Juniata, Fontana proved once again that she can handle the pressure and step up her game even when the stakes are high. After winning her first set, 6-2, she held off her opponent 7-5 in the second set to secure the win.

The tennis team's other freshman, Maggie Wolenter, is holding tight to the number three singles position and is part of the number one doubles team with sophomore partner Caroline Weisser.

"I was really nervous for my first ever college-level match," Wolenter said. "It's so different from playing in high school. I feel the pressure and pride of representing Juniata College."

In Juniata's 5-4 win over Catholic University, Wolenter and Weisser's doubles win - with a score of 8-6 - was a much needed start to the match. Wolenter also proved her singles skills in Juniata's match versus Albright when she dominated her opponents 6-2, 6-2.

Both Fontana and Wolenter had to learn promptly how to balance the demands of coursework with daily practices and long away matches. Most incoming freshman have the time to adjust and get into a comfortable routine, but for athletes, their plates can fill up rather quickly. Fontana said that playing tennis has actually helped her stay organized because it forces her to stick to a daily schedule.

Although the team as a whole is rather young – just one senior, four sophomores and two freshmen make up the squad – the opportunity is always present for tension among upperclassmen when new players enter the spotlight. Despite that potential, Fontana hasn't felt any negativity from her teammates.

"Not at all," she said. "All the girls have been great. I haven't felt any tension."

The rest of the team has also been supportive.

"I think it's awesome," said team captain and senior Molly Coursey. "They are both great players and deserve their spots. It gives me high hopes for the future of the team since they will only get better season after season."

The team's next match will be played Wednesday, September 22 against Saint Francis University at home. The team plays its three final home matches on Sept. 26, Sept. 30 and October 3.

Bleil returning to Juniata as new tennis coach

Beth Bleil has been named the new head coach for both the men and women's tennis teams at Juniata. Bleil will also be assisting with the women's soccer team during her time here at Juniata.

"Not everyone gets to attempt their dream job," she said. "I get to play my two most favorite sports at my all time favorite place to be."

As a Juniata alum, she is proud to be returning to her alma mater after six years in D.C. doing environmental work and then studying at The Ohio State University where she earned her masters in Sports Management. She replaces last year's coach, Bobby Pennington.

Simply taking it game by game

Juniata team short on wins, not determination

Jess Winemiller

Juniata is currently 0-3 overall and 0-2 in Middle Atlantic Conference. The outcomes of the past three games appear to be nothing more than losses in the record books. But in those losses lie significant gains for the team.

The Eagles led Lebanon Valley 14-12 at halftime during their most recent conference game on Saturday, September 16. This was the first time all season Juniata led at halftime. However, the Flying Dutchmen were able to take advantage on key offensive plays in the second stanza to top the Eagles, 26-14.

During the Lycoming game, the home opener on September 9, the Eagles saw the game unfold differently. After a slow start Juniata came back with a strong effort after halftime. They ended up outscoring the Warriors 12-3 in the second half.

"We just needed to feel them out," said Duane J. Ehredt, Juniata's senior running back and co-captain,, who surpassed 2,000 career rushing yards during the game. "We knew we were a lot better than what we showed in the first half. There might have been some nerves there too, being the first home game of the season."

The resilience of the team during the second half was not enough to overcome the 17-3 deficit at halftime. The final score was 20-15.

Some of the top performances during this contest included freshman defensive back Brandon Spayd who led the team in tackles with 11. Offensively, senior wide receiver Chad Steiner had a team-high six catches, while junior wide receiver Lance Tippett had 87 yards receiving.

Looking back at last season's meeting with Lycoming, Juniata did not even make it to the scoreboard. So putting up 15 points is a marked improvement.

"We are right there," said Jason Koch, senior tight end and co-captain. Koch turned in a solid performance during the season-opener on September 2, versus Dickinson, leading the team with five catches. Despite Koch's efforts, however, Juniata was shut out by Dickinson 14-0.

"We have a great work ethic and a lot of experience. There are a lot of seniors that are determined to leave Juniata with a win. There is a certain attitude that we lack yet. We need those plays that change the momentum of the game."

That attitude is hard to develop coming off last season's record of 0-10. It's difficult to manufacture motivation. But Koch believes that the team just needs to take it day by day, game by game.

"We have to expect to win. That starts by expecting to win every play," he said.

Juniata is starting to win plays on the defensive side of the ball. So far this season, the Eagles have held each of its opponents to 20 points or less, something the defense was not able to accomplish during all of last season.

Despite the opening setbacks, Juniata is a determined program that is not giving up anytime soon. "This is the best team I have ever played on at Juniata," said Ehredt. "Everyone believes in themselves, and we need that one win. We just need to get people to believe with us."

Christopher Shannon/ Juniatian

Juniata sophomore quarterback Jay Leonard hands the ball off to senior running back Duane Eherdt Jr. during his record-breaking performance against Lycoming. Ehredt hit the 2,000 career rushing mark. He currently sits 4th on the all-time Juniata rushing list.

Cross country takes steps to achieve goals

Runners show exceptional performances early, working towards faster and better

Corinne Barabas

With a summer workout schedule comprised of hill repeats, speed drills and LSD runs (long slow distance- and the *long* is emphasized) the cross country team has been training diligently for months to prepare themselves for tip-top performances throughout the season and eventually at the Mid-Atlantic Conference championship meet at the end of October. Their ultimate goal: to dominate and bring home the gold.

With three meets already under their spikes, the Eagles have shown their intensity and ability to compete. They have thus far produced many exceptional showings individually, and therefore, as a team.

This past weekend, the Eagles road tripped to the Waynesburg Invitational in southwestern PA. If riding on a bus for four hours wasn't bad enough, their scheduled departure from Juniata was 5 a.m.

The course was flatter than a pancake, and the team, despite being a little stiff and sluggish from the trip, produced decent results. The women captured seventh place out of 15 teams and the men took sixth place from a field of 14.

Coming in first for the Juniata men for the second week in a row was freshman Matt Bailey, who ran the 8K (5 miles) course in a time of 27:36 and finished in 26th place, besting his time from last week's meet by nearly 20 seconds. Behind him was junior Shawn Rumery, three seconds and three places later.

Senior Mike Chirdon placed 37th overall and was only 14 seconds behind Bailey. Rounding out the top five for the Juniata men were the Hoover brothers, Eric and Jason, who finished in 62nd and 64th places, respectively.

"We trained right through this meet and practiced hard and ran long mileage up until Saturday," Rumery said. "Our legs were a little tired, but next time we see the course (which will be at the NCAA Regional meet) in November, we will be more than ready for it."

The women were led by sophomores Aubrey Cyphert and Meghan Jones, who claimed 33rd and 36th places, respectively, with times of 25:05 and 25:14. Next to finish were seniors Lia Bella, in 52nd place; Kristen Gochnauer, in 67th; and Meghan Fahy who ran for an overall place of 72nd.

"We haven't had enough speed for this type of course at this point in the season," Jones said. "The whole race started off very slow, so we followed, and then were able to pick it up a little bit at the end, but not enough."

On September 9, the Blue and Gold ran at the Lebanon Valley Invitational to compete and investigate their current position against many of the MAC schools they will see at the end of the season at the championship meet. Both teams faired well and earned 3rd place trophies for the day's race.

On the men's side, leading the pack was Bailey, who ran his first 8K fast enough to take 6th in the entire race with a time of 27:58.

Behind him were Rumery and Chirdon, who captured 15th and 16th places, respectively. Rounding out the top five were Eric Hoover and freshman Sam Williams, who both had strong finishes.

For the Juniata women, Meghan Jones was the top finisher, earning 8th place overall with a time of 21:14. Following her was Bella, at 17th. Seniors Lauren Gates claimed 19th and Meghan Fahy finished in the top 25. Freshman Sarah Spatz had a respectable race as well, coming in 26th.

To demonstrate the dedication and the amount of steps, literally, this team takes to achieve their season goals, on average each Juniata runners logs between 40-60 miles per week, which means sometimes they run as much as ten or twelve miles a day.

"We don't have a field to play on. We run the roads, the woods, the fields, etc. We aren't a visible team on campus, in the sense that a lot of times people never see us practice. We only have one home meet and it is 3 miles outside of town. But we don't sit around and mope. We run for fun, for ourselves and for each other, because we love it," said Rumery.

These student athletes find time for two practices a day three times a week, one of them being at 6:30 or 7:30 a.m., and then the customary everyday practice at 5 p.m. Then there's always the schoolwork and extra curriculars.

To compliment their devotion to running and staying in top-notch shape, the team's philosophy is to run past satisfaction, run until it hurts because pain goes away, but getting a personal record, or winning a championship is with you forever.

Men's soccer: 2-1 in OT

Emily J. Koop

On Wednesday, September 13 the Juniata's men's soccer team added another win to its record. They hadn't beat Lycoming in three years, so this was a big early-season victory.

Tied at the end of the game, the two teams played a golden goal overtime. In the second ten-minute period, freshman Jordan McGowan scored his second goal of the game for the win. He beat Lycoming's keeper in a one-on-one foot race and was able to slide the ball into the corner of the net.

The win improved Juniata to 3-2 (as of press time).

In the first half, Juniata got off to a quick start with McGowan scoring on a header off a cross in the tenth minute. He was assisted by both Mark Turkewitz and Mike Gwiazdowski.

Juniata had many other close scoring opportunities but just couldn't seem to hit the back of the net.

"The offense has improved a lot," said captain Will Marshall. "We had a lot more shots this game. We just need to work on high pressure play and being more consistent."

Juniata's defense, led by Marshall, was able to shut Lycoming out until the last minute of play. With only 4.4 seconds to go, Lycoming's Joe Thomas scored on a rebound off of Lycoming's seventh corner kick of the game.

Juniata ended with twenty one shots on goal and its keeper, Mark Guthridge, had eight saves.

Before beating Lycoming, Juniata had yet another overtime game. But this time the result wasn't to the Eagles liking. On September 9 at Pitt-Bradford, Juniata lost in the fourth minute of overtime.

Throughout the game, Pitt-Bradford had the lead, but Juniata kept up the pressure and played with a will to win. Rio Tomlin managed to score in the last minute of play. He was assisted by Will Marshall.

The match was very physical, with a total of three yellow cards and one red card ejection for Pitt-Bradford. Throughout the entire game, Juniata was only able to get off eight shots, so working on creating scoring opportunities and finishing them will be an area for improvement.

Juniata next plays Lincoln on September 23 at home at 4 p.m. The Eagles begin conference play on September 26 against Susquehanna. The home contest again begins at 4 p.m.

Club Sports excel despite setbacks

Caroline Weisser

Too little recognition is given to our club sports on campus. The teams have made dramatic improvements in recent years which are definitely commendable, considering they are entirely student-run. Club teams have the responsibility to organize practices and tournaments themselves. However, they do have the freedom to conduct practices as they choose.

Obviously, there has been a strong sense of leadership over the last thirty-two years that the men's rugby club has been in existence. The River Rats captured the Division III Allegheny Rugby Union (ARU) title last year, defeating University of Pittsburgh at Johnstown, Geneva College, Allegheny College, and Grove City College.

With a strong crew of around thirty ruggers this year, president Kevin Warner hopes to hold on to their title. However, the team needs more support as they have lost one match so far. Its next home game is September 23 against UPJ.

Also, the Hellbenders, Juniata's women's rugby club, also has a next home game September 23 against the California Hens. The Hellbenders will celebrate their 25th anniversary playing rugby at Juniata at the annual Homecoming game against the alumni.

Captain Laura Weber said that there are many rookies this year taking over the places of former players, many of whom are studying abroad or graduated last semester.

Nonetheless, the women's team has done a lot of conditioning to prepare for their earlier than usual season. The women's rugby team, which also plays in the ARU league, and is basically self-taught with the captains leading the team and teaching the game to the new players.

Weber also said that rugby tends to get a bad reputation at Juniata for partying and drinking. However, that is not what rugby is all about. If you actually watch rugby, "you get a better appreciation of the sport. It's really a social sport and all about family."

The Irish Elks, Juniata's Ultimate Frisbee team, is not in a formal league but participates in tournaments at other schools. Captain Joe Boyd welcomes "anyone who is interested in pick-up Frisbee to meet on Ellis Field Sundays at 1 p.m."

The Ultimate Frisbee team has improved greatly from last year and its goal is to make sectionals, says club president, Jill Seraphin. The team displayed some encouraging results this past weekend with a 2-3 record improving from 0-3 last year.

All of the club sports at Juniata seem to share a common thread of friendly competition and comradery.

Warner's motivation to play rugby is to, "go out, have fun, travel, and meet people. And you don't have to be a tremendous athlete either." What is really unique about rugby is that despite its apparent violence and intensity, the teams always hang out and have drinks with each other after the games.

Along the same lines, Seraphin said she enjoys playing because, "Frisbee encourages sportsmanship and is not all about winning." It seems apparent that club sports at Juniata form lasting friendships among students who share a love of the game which is what college life is all about.

Blinding people with gold

Dan Rapp

With golden goals coming from Amanda Broadwell in this past Wednesday's game against Lycoming and from Alicia Walsh against Pitt-Bradford, Juniata has shown the ability to dominant – especially after 90 minutes.

The two overtime winning goals have helped get the Juniata women off to a 4-2 start.

fter a loss to start the season, Juniata was able to rattle off four wins in a row. Juniata has out-shot its opponents 63-22 during their four-game winning streak. With a relentless offense and a defense allowing less than a goal a game, this team is showing no sign of weakness. Juniata has also earned three shutout victories this season.

However, the real story isn't in their dominant wins, but instead in the starting rotation of their team.

Last year, the team lost several players to graduation and saw a class of five returning starters to start the 2006 season. With Coach McKenzie making it clear to the team that no position is set in stone, all returning players were forced to step up their play and earn the right to their position.

"We knew coming into the season that everything was going to be different," Said senior Kristen Yohn.

The team brought in 10 new freshmen players to help patch the holes in the starting line up. With a team comprised mainly of freshmen, adjusting to so many new players becomes a challenge. Since there is limited knowledge of the skills and abilities of the new players, the team was forced to make many quick adjustments before the beginning of the season.

One such adjustment was bringing these new players to a level of play they have never seen before. Yohn recognizes the difficulties these adjustments create, especially on-field communication.

"With such a crammed schedule, [5 games in 8 days] we spend so much time around each other that

Different players to score goals in Juniata's 7-0 win over Mt. Aloysius.

3

Number of times running back Duane Ehredt Jr. has cracked the 200-yard mark in his career. Ehredt now has 2,305 career yards, good for fourth place on Juniata's all-time list.

14

Number of goals the field hockey team has outscored its opponents by so far this season (15-1).

3

Overtime wins so far this season for the women's soccer team.

5

Number of runners the cross country team placed in the top eight at the St. Francis Invitational, helping them knock off the reigning NEC champ.

33

Sets, out of a possible 36, that the women's volleyball team has won so far this season.

Madden or NCAA?

Tommy McConnell

I think the world is divided into two types of people: people who prefer Madden and people who prefer NCAA.

Try it. Ask someone which game they'd rather play. You're not going to find too many people who say, "Hmm…you know what? It really doesn't matter. Video games are so neat, I'm just happy to be playing." It's just not going to happen. And nor should it.

Personally, I'm an NCAA football guy. I can see why people get hyped for Madden – you get to control little NFL players, for God's sake – but to me, it doesn't get any better than NCAA.

Why? Well, I'm glad you asked.

The player rankings. I know both games have player rankings, but Madden's suck. You pretty much know who's going to be good, anyway. Occasionally there are some intriguing questions – "what's Reggie Bush going to be ranked?" – but other than that, it's about as exciting as Roger Goodell.

NCAA, on the other hand, is like freaking Christmas. You have absolutely no idea what you're going to get, but you're definitely getting something good. And since there are thousands of players and no names associated with any of them, every conversation you have with your buddies go something like this:

"Did you see that receiver for Alabama? He's cookies man…you just throw it up to him. I think he's legitimately eight feet tall. I think there's a glitch or something."

"No man, I'm telling you, be Northern Illinois's running back. He's so fast. I put him at punt returner and kick returner…you can't catch him…I think he's Michael Vick's other little brother, 'cept he doesn't have a hand gun under his shoulder pads."

"Whatever man. I'll still kill you with Fresno St. I'm putting my d-back in at quarterback and running the option. He's a 99 speed. Try to stop me."

"You're a freakin' cheater."

Here's an example of the power of player ratings: My family just moved out to Colorado, so my little brother had been to a few of the Colorado football team's practices. Once I got out there, I went to a practice with him. I asked him who their best player is. He responded without missing a beat: "I don't know his name, but their kicker is a 99."

Needless to say, we spent the entire time watching a kicker practice field goals.

Recruiting. In Madden, you can create a dynasty and sign free agents and make trades. Um, who cares? You can rig them so they aren't even remotely realistic. Reggie Bush for Willie Parker and a draft pick? Yea, that'd happen.

In NCAA, you can recruit – in season. You can actually get your big time recruits to come see you play your rival. That's just thrilling, that's what that is. (Oh, and if you think Bowling Green competing with Penn St. and Michigan for recruits is unrealistic, well…no one asked you).

Plus, you get incredibly attached to these guys. You target your DB that runs a 4.2 and your 6'5" wide out and your "athletic" quarterback in week one. You visit their homes. You call them. You find out their interests. And when you land one of them, well…I mean, there aren't many things that make you happier, are there? (Oh, there is? Like real life things? Oh. Maybe you should stop reading now.)

You then get to spend the next four seasons forcing passes to your awesome wide receiver recruit and running the same counter play with your sweet running back just to try to win him the Heisman.

But when one of those guys breaks your heart, well…let's just hope there's a second remote laying around. And they always snub you for the most ridiculous reasons: "Rex doesn't think you are committed enough to the run" or "Max wasn't impressed with your groupies on his official visit."

Hey Rex, you're a safety! Oh and Max? You're a punter! I wouldn't worry about it.

There's really nothing more disheartening than opening up your recruiting page, looking for your Blue Chipper…and not seeing him there. You refresh the screen – certainly, this cannot be. You switch memory cards. You reset the PS2. Twice. Finally, you gulp and scroll down, and there's your proof: "Andre Minnis has signed with USC."

Freakin' USC! It's always them!

And now its personal. "Screw you, Minnis! You're done! You hear me?! Done! You too, USC! I'm scheduling you (note to self: at my place, of course) and I'm running up the score! No mercy! Onside kicks all night! I'm gonna put it on Junior Varsity and play 6 minute quarters and beat you 212-3!"

Touchdown celebrations. Always an underrated treat. There are few things better than going up 73-0 on FAMU and then dunking it over the goalpost. Or holding your hand up to your ear. I can't wait until my teammates start taking pictures of me (I mean, my guy. I know it's not real. Seriously, I do.). Or until I can pull a cell phone out of my sock and call my mom. I think I'd call her more if it was after I dove over a pylon for the go-ahead score.

Plus, you can create signs that your fans hold up whenever you make a sweet play, like a sack or a huge completion. They can say anything – even swear words! Personalizing these to degrade your buddy is one of life's little pleasure, like a pack of red Zingers or finding the last beer tucked away in the back of the fridge.

Now, this isn't to say NCAA is perfect. Those fans that hold up the signs are atrocious, especially the Justin Timberlake circa 2001 look-a-like. And the kicking game is a little out of control; no way that many extra points are getting blocked. And the up-close endzone view on kick returns is such a tease: it looks like there is this huge, gaping hole to run through, but then – bam! – you get leveled by a guy one inch off the screen. At least there's no John Madden.

But NCAA doesn't try too hard, unlike Madden. Case in point: the passing cone.

I don't care what anyone says, no one likes the passing cone. No one. People who are OK at it will give you this smug, superior look when you say you don't like it, but they are full of crap. Deep down, they hate The Cone just like everyone else.

Now, if you'll excuse me, I'm going to work on my audibles.

Blinding people with gold

continued from page 14

communication has been the least of our concerns."

McKenzie has not changed much about his practice routine to accommodate new players. However, in some cases he has made practices longer at the beginning of the season to allow more field time amongst the players.

Senior captains Kelly Howard and Walsh, on the other hand, have made some changes in their own routines. According to Walsh, "We have raised our level of intensity in practices to help make the freshmen play to the best of their ability."

With a record of 4-2, it is apparent that the team is playing to the best of their ability. With its first major conference game fast approaching, this winning streak has brought a confidence to the team. Their caliber of play has greatly exceeded some expectations and with their unyielding offense and rock solid defense, Juniata is looking to make a serious statement.

The Back Page Brawl

At the end of a very Random era, two are going where only one man has gone--the back page. In their attempt at humor, they have decided to debate various...um...stupid...topics for the public's entertainment and the betterment of society. The Juniatian staff is not responsible for the opinions and/or stupidity of the writers.

Tommy McConnell **Rebecca DeHass**

Beer or Liquor?

Beer. Liquor is too much work. You need your chaser, your little cup, maybe a shot glass…good God, man, just crack open a can! It's delicious! Once it hits your lips, it's so good. The only way liquor wins is if you are one of those maniacs who drink it straight out of the bottle, and in that case, well…those people intimidate me. You win.

Liquor...is quicker. I like sailing with the Captain or having a hoorah with Jose. I like drinking people when I'm drinking with people. Know what I'm sayin'?

Which is worse: Baker or Parking?

Baker. I know my predecessor in this space has taken some mild shots at Baker, but I'm not so subtle: Baker is an absolute train wreck. When the best thing you can make is a sandwich, you're in trouble. That little table outside with the day's options is like Russian Roulette – and you lost. Potato skins in the mashed potatoes: how lazy can you be?And that one-steak-per-ticket scandal is the greatest scam perpetrated on the American public since one-hour martinizing.

Parking. Look, I know my guru Matt Russell would say Baker. But he also had a bike. I'll drive to Giant and come back twenty minutes later to find my spot taken. I'm convinced that there are people who sit in their rooms by the window, waiting for an open spot. I feel especially bad for anyone at Sherwood who thinks they have a chance in that five-slot lot. And, well…I'm not even going to start rambling about street cleaning, but I will say there were many 2 a.m. Friday morning trips to move my car and dodge a 7 a.m. ticket.

Sheetz or McDonald's at 2 a.m.?

McDonalds. Sheetz is bad news that late at night, especially when you're um, coming from a party. Odds are the debit card is coming out, and then you wake up the next morning having spent 17 bucks on 9 slushies and a Hershey's bar the size of a brick. Best grab three double-cheeseburgers and a pair of apple pies – all under 5 bucks. It's a win-win.

Sheetz. Those people are happy to make you food at that hour. Micky D's…not so much. It's not Made to Order. It's Made to get the &(@# out so the employees can continue their smoke break.

Old or New Facebook?

New Facebook. If you don't like the new Facebook, what kind of a stalker are you? That's the entire point of Facebook in the first place - stalking people! That news feed thing makes stalking about as easy as taking a nap. (Oh, it's not for stalking people? Well…what's the point then?)

Old. People wasted just as much time on the site without the news feed. I don't care who added "I like to read anything" to their favorite books or who joined the "When I was your age, Pluto was a planet" group. With that said, I DO admit I like the little ripped heart that appears when relationships break up. It makes me giggle.

Washcloth or hand?

Hand. Washcloths, loofahs, whatever…they are all a huge waste. They don't do anything. Put some soap on your hand and lather up like a man! On the commercials, do you ever see people using washcloths? No! Know why? Because they do about as much good as that tong thing that you have to use to pick up potato chips in Baker. (Recommendation: Old Spice Hair AND Body Wash. You can thank me later.)

Loofah. Who uses wash cloths? And apparently showering is just a simple hand job for Tommy. I prefer to invigorate and exfoliate, thank you.

Family Guy or The Simpsons?

Family Guy. Any show where a two-year old can say, "That's right Mr. Giraffe, get all the marmalade" wins in my book.

Simpsons. 17 seasons of opening credits and a billion different ways that a family can sit on a couch. That, my friends, is talent.

Good hip-hop exists!

continued from page 9

made a brief stint on the charts with his positive anthem "I Can," And, the monolith of hip-hop that is Jay-Z, has featured many conscious rappers on his albums. A few years ago Kanye West shot up the charts after a long career producing for artists like Talib Kweli and John Legend. He also produced Jay-Z's acclaimed album *The Blueprint*, which helped start and boost his rapping career.

Despite his abrasive personality, Kanye consistently writes solid lyrics with themes that go much deeper than ice, rims and money. In his song "Never Let Me Down," Kanye raps, "now (we) can't make it to ballots to choose leadership/but we can make it to Jacob's or to the dealership," critiquing mainstream hip-hop culture's emphasis on material wealth instead political activism.

These artists are slowly making their way into the mainstream one at a time. So, when you're tired of hip-hop that seems superficial, remember that there is a group of talented artists out there who mean to take over hip-hop and its culture.

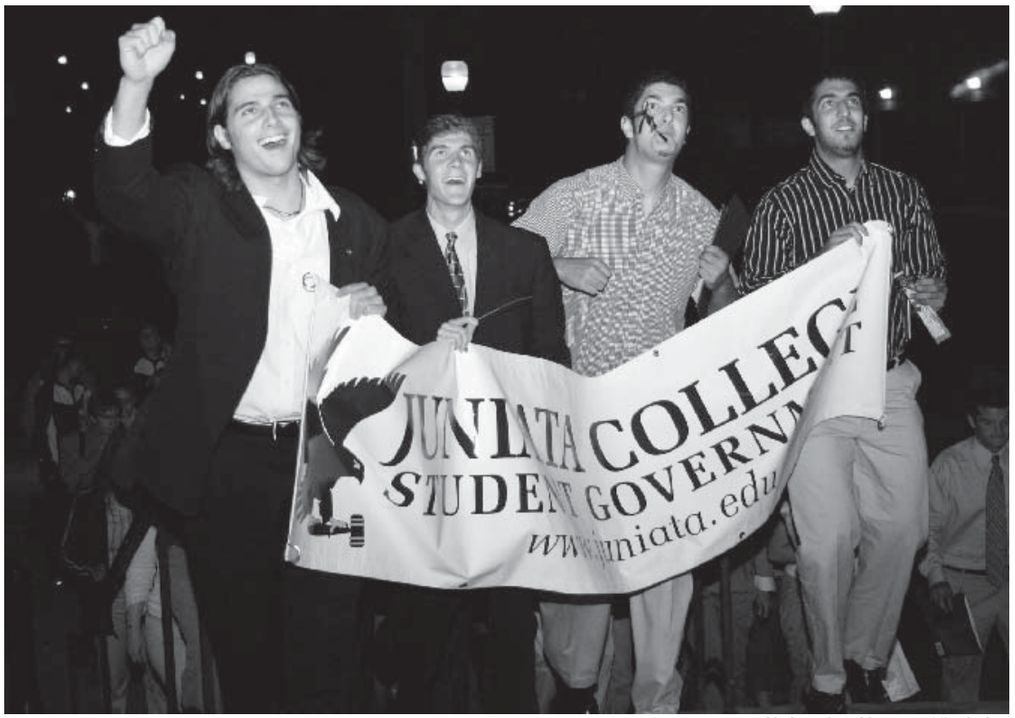
Student Government: ushering in major changes

Eric Hoover

The Student Government executive board has a completely new staff and has come out of the gates at full speed.

"There is definitely a lot of energy this year because of the unique combination of personalities amongst the executive board. I'm really impressed with the work ethic so far," said Executive Board Treasurer Shawn Rumery.

"Now that we're in college, Student Government is more than getting elected and showing up to the occasional meeting so you can put it on your transcript and hope no one asks about it," said Student Government president, Dimitri Patitsas.



At the start of the semester's third month, the Student Government has already made many changes.

It has arranged to keep BAC open 24/7 during midterms and finals as an alternate study place to muddy run. Student Government had the Peace Chapel Stone re-etched and arranged to keep Kennedy Sports Center opened until midnight on the weekends. It also organized a van service to transport roughly 40 students to State College to salsa dance every weekend.

Student Government has also supported an artist movement on campus, which will include displaying students' artwork in campus buildings. There are plans to fill a few frames on Baker's walls with artwork as well.

The executive board's main goal this year is to be approachable. "I think the focus of student government this year has turned to re-

Sickness plagues JC early

15-40 students at wellness center daily

Devin Couillard

Many students have found themselves surrounded by hacking and sneezing in these first few weeks of school, only to become ill themselves.

"Most of my rugby team has been sick," senior Valerie Bukowski said. "The first half [of the team that became ill is] better and now it seems like the rest of them are getting sick."

Although the illnesses afflicting Juniatians remain nameless, some common symptoms include cough, sore throat and runny nose. The sickness generally starts as a sore throat and leads to cold-like symptoms after two to three days. Other symptoms include sinus congestion and pressure, sneezing, nausea, fatigue, chest congestion and upset stomach.

Nurse Connie Peters of Juniata College's Health and Wellness Center reports that the increase in sickness is not unusual. September is the time of the year when she sees the most students for illnesses—even more than during the flu season of December and January.

According to Peters, there are a number of reasons why illnesses are more prevalent so early in the semester. High stress levels from schoolwork, packing and environment changes, being in constant contact with many students, sharing living space, classrooms and restrooms with hundreds of people, getting less sleep and changing nutrition can set the stage for the spread of the inevitable misery that is back-to-school sickness.

Last year she saw 523 students for illnesses in the month of September alone. This means that 37 percent of the student body visited the Health and Wellness Center. October and November signify the end of the major initial sickness period with 300 to 400 students a month paying a visit to the nurse.

Science in Motion: a program on the move

Aaron Shotts

Contrary to rumors that Science in Motion's funding is in jeopardy, the nationally recognized program remains active in promoting science in Pennsylvania schools. Operating out of a new building, Science in Motion now has more space than ever before.

For years, Science in Motion occupied three rooms in the C-wing of Brumbaugh Academic Center, but has relocated to an off-campus building at the corner of 17th and Penn streets. It moved last year when the College decided to use the rooms in BAC as classrooms and offices for the communications and IT departments.

Lorraine Mulfinger, director of Science in Motion and associate professor of chemistry, said that the new building provides "almost double the space than we had before."

"We needed more space than we had in Brumbaugh, due to the expansion in the middle school area," said Mulfinger.

Previously an industrial warehouse, the new building was donated to the College by Carl Baxter, founder of Baxter Machine Products Inc. Plans to renovate the building began last spring. Campus Facilities worked over the summer, making walls to create labs and storage rooms. Additionally, the building was furbished with lab benches, shelving and lab equipment including fume hoods, an eye wash station and a water purification system. The building also contains a conference room and staff offices.

The College paid for the renovations by using money saved from indirect costs. Indirect costs are paid to the College by Science in Motion to cover utilities such as heating, plumbing, and electricity.

Although the program incurs costs, there is no truth to the rumor that two Science in Motion employees were recently let go due to lack of funding. The employees moved on to other jobs. One position has already been filled, and Science in Motion is in the process of hiring a middle school mobile educator to replace Todd Quinter, former Juniata Resident Director and football coach. Quinter now teaches at the Huntingdon Area Middle School.

Science in Motion is funded primarily by the state government. Although funding is currently stable, it is subject to changes in the

'Pot shop' no longer packing up

James Trent

In 2005 Juniata's administration announced plans to move the ceramics studio to Brumbaugh Academic Center. These plans have since been reconsidered due to exceptional resistance from students, faculty and a hired consultant.

According to Provost James Lakso, the administration received "well over a hundred e-mails from students and other potters who worked at the shop." The majority of pottery students, who affectionately refer to the studio as the "pot shop," voiced disagreement with last year's proposed move.

In addition, Gwendolyn Yoppolo, the new ceramics professor, said the proposal was revoked after a consultant said that the move "would be wildly expensive."

At Yoppolo's request, administration called an industrial hygienist, Monona Rossol, as a consultant for the project. She concluded that the move would "damage [the indoor] kilns to some extent." She also said that the move could create the potential for health hazards and affect sensitive equipment already in BAC.

Without proper ventilation and equipment, dust can harm students' lungs, said Lakso. In an enclosed environment such as BAC, dust could also be spread throughout the building, damaging scientific equipment.

After the proposal failed, the administration agreed to renovate the existing pot shop. The renovations took place over the summer. Facilities "installed vents that pull dust away," said Yoppolo.

Other improvements to the building include shelves and a wet-grinder.

Safety concerns raised by both Yoppolo and Rossol were appropriately handled said Yoppolo, "With the respirators and vents, it's a pretty safe process."

Yoppolo also had reservations about the move. "This [the pot shop] is a good place for kilns billowing smoke," she said. In addition, the pot shop has two special outdoor kilns, which cannot be moved. As of now "students have four different ways to finish their work," she said.

On top of safety renovations, Yoppolo spent a great deal of time cleaning the building along with Juniata junior Clearbear Daugherty and professor emeritus Jack Troy. The trio reorganized materials and removed large amounts of dust.

As for the current facilities, many students are as pleased as ever. "I like the rustic nature of the pot-shop. You learn to appreciate it even though it looks like a shack," said sophomore Peter Mclean.

Lakso said, "You never want to put a ceramics studio in a nice building." Referring to dust and residue, he said, "It's fighting a losing battle."

Rossol's report concurs. Taking the entire art department into consideration, her recommendation was to move the photography department to the proposed room in BAC instead of the pottery shop. In her terminology it's advantageous to keep the ceramics studio in "structurally inexpensive" buildings.

Lakso said "We like to think that we will have a new building for all of the arts… but it will probably be sometime down the road." Until then, the pot shop will most likely remain in "structurally inexpensive" buildings.

Chris Shannon / Juniatian

Junior Mike Zanic works on a one of his pieces in the pot shop.

Q&A about Residential Life

Ryan Conrad

The Juniatian recently sat down with various staff members and administrators to talk about issues related to residence life.

Director of Residential Life, Tim Launtz:

Do RDs have the right to make their own quiet hours? And is there a directive from the Office of Residential Life to be harsher with enforcing quiet hours? If so, why?

"Each Resident Director has their own autonomy in regards to quiet hours. Quiet hours are being enforced more strictly because we heard from students that [quiet hours] were not being enforced too heavily.

There is not any directive about being harsher. However, we want an atmosphere that is conducive to learning. Recently, we heard about a hall event that went over well. We like to see that; we are not prohibiting people from having fun."

What type of dorm events are happening that you are aware of?

"Dorm programming is off to a great start this year. This past weekend they had a 'Star Wars' event happening in TnT."

There are more freshmen living in East Hall this year than in previous years. Some people see that as a problem; that they would be less connected to their underclassmen peers. How many freshmen are in East?

"At this time we have eleven freshmen and transfer students living in East. This is where the beds were available. [This] helped to eliminate the triple situation.* Res Life discussed the East living [situation] with each student before they choose to live there. We did not just throw them there."

*Note: Referring to having three students occupying one room constitutes "a triple."

Some people see freshmen living in East as a problem because they could be impressionable in regards to drinking.

"The law is simple: you have to be 21. It's no different than if a freshman would be in Sherwood and be caught drinking."

Out of the freshmen living in East, were any of them on sports teams that allowed them to room with teammates?

"Yes, for example football players rooming with each other."

What about the doors being locked in East? When will that

Meet Juniata College's newest professors: Part one

The new professors joining the Juniata faculty this year are a diverse group, coming from many areas of academia to bring their unique experiences to Juniata. The Juniatian will introduce these additions to the College in a two part series.

Monika Malewska, assistant professor of art and art history, has come to Juniata after traveling the world for her education. Born in Warsaw, Poland, she attended the University of Manitoba in Canada for a degree in fine arts. She later went for her masters at the University of Texas.

Malewska specializes in 2-D artwork: "anything you can hang on the wall," as she described it. Some of her subjects, however, may be surprising.

Many of her works deal with food and pop culture. Her art studies the interaction between the two. "I'm not doing traditionally beautiful things. I try to paint things more challenging, trying to see beyond the conventions of art," said Malewska.

This semester professor Melewksa is teaching: Drawing, Painting and Basic Photography.

Kyle Sweitzer, visiting assistant professor of accounting, business and economics, has returned to teach his alma mater. His academic interest lies in institutional research.

He is teaching a variety of business courses while working toward his doctoral degree at Penn State University. His current research focuses on college rankings and what causes schools to move within them.

Sweitzer tries to bring a different approach to teaching due to his experience as a football and track coach. "I try to have a different relationship with students. It focuses on constant interaction and teamwork," he said.

He is glad to see many of the same faces as when he attended Juniata, and believes the physical and aesthetic changes have been nice for the College.

This fall Sweitzer teaches two courses: Intro to Business and the Management Process.

Kimberly Roth is Juniata's new assistant professor of mathematics. After completing her Ph.D. at Penn State University, Roth wanted to teach at a smaller liberal arts college. She said that the experience (including her current teaching slate of: Calculus I and Intro to Probability and Statistics) has been rewarding so far.

Her research deals with chaos in fractals. Fractals are vivid images produced by a mathematical formula. "A fractal is a picture generated by repeatedly applying a function. They are generally drawn by a computer," said Roth.

Roth is also interested in collaboration with the art department to show these images.

She received a fellowship in the New Experiences in Teaching (NEXT) project. "NEXT is professional development for math grads. It's a core of people to discuss teaching with, and a great experience," she said.

Susan Prill, assistant professor of religion, gives Juniata's religious studies program enough professors to qualify as an official department. With the new departmental status, comes the need for an official religion POE which she is helping to design.

Her main area of research is Hinduism and Sikhism. In particular, she examines medieval Indian religious poems. She can weave her research into her Religions of India and World Religions courses this semester.

"I really enjoy giving students what is, in many cases, their first real glimpse into worldviews that differ radically from their own," said Prill.

She has learned a variety of languages including Hindi, Sanskrit and Punjabi. She developed these skills while studying abroad in India. "I'm hoping to expand the range of religions studied at Juniata.

Daniel Welliver, assistant professor of sociology is another Juniata alumnus. Welliver graduated in 1979. He has since worked for social service agencies, human relations commissions and discrimination law enforcement for the Commonwealth of Pennsylvania.

After a diverse career, Welliver returned to school and is currently earning his doctoral degree from Indiana University of Pennsylvania.

Welliver's research deals with autoethnography. It involves trying to understand how white people are affected by racism, and how to live life differently through understanding anti-racism.

He has already applied his extensive work experience in the classroom. "It's very easy to draw from personal experience. I've encountered a variety of people, and have a keen appreciation of individuality and commonalities," said Welliver. This experience enhances his lectures in Intro to Sociology, which he currently teaches.

- by Jason Najarian

iGo to iPod University

Mat Carter

It's four inches long, three inches wide, just over half an inch thick and weighs about five and a half ounces: Apple's little iPod is big news. Aside from allowing students to bop down the street listening to underground and alternative music, these tiny gadgets are making their ways into the halls of academia, debuting as stars of the classroom. The newest addition to the choir of academic tools is the iPod, and many Juniatians are feeling their rhythms.

Dr. Donald Braxton, chair of the religion department, currently teaches classes in which students make regular scholastic use of their iPods. Braxton's students are often assigned podcasts to download instead of pages to read.

"One reason I use them is that they are a conduit of information in a time sensitive world," said Braxton. "If a student is unable to go to class or there is a prominent speaker that they want to see... it's convenient and students have crammed schedules."

Podcasts, much like traditional radio broadcasts, are audio programs that seek to inform or entertain the listener. Podcasts can then be downloaded and stored on an iPod for later review.

"There is a great thing called iPod University," Braxton said. "If Juniata were to subscribe to it, our students could download lectures and speeches from very prominent professors."

Braxton also allows his students, in some cases, to produce their own podcasts in place of papers, but cautions that podcasts are not an excuse to get out of coursework.

"The iPod is not a substitute, it is a supplement," said Braxton. "It should be used. If you have a way to better share knowledge, why wouldn't you use it?"

Other colleges and universities are already using these tiny devices as a scholastic tool. In some schools, professors are offering all of their lectures as podcasts. Such is the case with professor Charles McKenna of the University of Southern California.

McKenna began providing

continued page 4

Juniata to trade in 15-passenger vans due to safety hazards

Sarah Katora

Juniata is trading in its remaining 15-passenger van for two 12-passenger vans in November. College officials are citing concerns for students' safety as the primary reason for the change.

"The problem with the vans—and this is not a Juniata thing, it's a federal thing—is that they are top heavy, so they're not safe to drive," said Staci Weber, director of student activities. Federal studies, according to Weber, have determined that the distribution of weight in the vehicles is a safety hazard.

According to the National Highway Traffic Safety Administration, the main problem with the vans reported by the is their potential to roll over. Although there are certain things that can be done to decrease this risk, such as ensuring that the tires are inflated properly, refraining from putting loads on the roof and from seating passengers near the rear axle, Juniata's auto insurance company, Peerless, will no longer cover this type of vehicle.

The use of 15-passenger vans has been controversial for a long time. According to Beverly A. Simpson, the College's risk management specialist, the last time Juniata renewed its insurance policies on July 1, 2003, many insurance carriers did not support the use of 15-passenger vans.

"A lot of attention was given to them [in the last few years] at the state and national level as being unsafe," Simpson said.

The last time Juniata renewed insurance on the 15-passenger vans, they were advised to discontinue use

In 2003, three of the vans were determined to be unsafe by Peerless. The company did permit the College to keep one of the four vans that it used at the time because it has an extended wheel base and stability control, a computer system that helps to prevent rollover, which made it safer.

After Peerless' determinations, the Van Replacement Committee was formed to determine the College's next option.

The committee determined that selling the vans was the best option for the College.

The Van Replacement Committee was made up of faculty and staff members from the athletic department, facilities and student services.

During the three years since Juniata made that decision, the state and federal governments have published multiple reports about the danger of these vehicles.

Due in part to these studies, Peerless amended its policies since and the van with the extra safety features was no longer eligible for coverage, forcing Juniata to replace it.

Pennsylvania law now prohibits its primary and secondary school students from being transported in the vehicles. A similar federal law is also on the books.

"The vehicles are deemed unsafe, whether they are most convenient for us on our trips or not," said Simpson. "We'll just have to come up with ways around it."

iPod culture hits academia

continued from page 3

his students with podcasts of his chemistry lectures in 2005 and says that the student response has been overwhelmingly positive. Many of his students now ask their other professors to provide their lectures online as well.

In the fall of 2004 Duke University offered all incoming undergraduate students iPods as it began a campus-wide program to integrate the audio players into 19 courses.

A similar program has been instituted at Drexel University, where professors and freshmen are given iPods. Professors then upload content onto a secure server to allow students to download them to the portable media players.

Students at schools with iPod-integration programs are able to download lectures and supplemental materials and listen to them at any time.

There is a concern that some students may not go to classes if the lectures are all available via podcasts, though some Juniata students believe that they would never take advantage of it.

"I would still go to class. In class I could ask questions and get confirmations," said student Lana Townend.

An additional concern is that college students have already found ways to use iPods to cheat on exams by recording notes as audio files and listening to them during tests. Newer iPods even allow users to download and view text files.

Some schools have taken an alternative route, banning iPods altogether, stating that they cause students to isolate themselves from peers.

"Anything that increases public iPod use is a step backward," said senior Quinn Daly. "I don't have a vendetta against the iPod; there is just an appropriate time to use them."

Science is still in motion

continued from page 1

budget whenever a new legislator takes office.

Mulfinger said: "It's a year-to-year budget from the state, and there's nothing that can be done about that. That's just the way the state budget works."

Science in Motion also receives grant money from the Pennsylvania Governor's Institute for Life Sciences and from corporate donations. Mulfinger said that grants have generally increased every year, especially in the last four years due to the development of the middle school program.

Now in its third year, the middle school program sends mobile educators to schools in nearby counties. Mobile educators teach students how to use scientific equipment through hands-on labs.

"Every year we try to get new equipment to expand what we can offer to the teachers," said Tara Fitzsimmons, associate director of Science in Motion and chemistry mobile educator.

The middle school science program, like the high school biology and chemistry programs, gives students opportunities to use spectrometers, gas chromatographs, pH meters, analytical balances and other instruments that public schools may not have.

"It's a good program and I think more teachers are taking advantage of it," said junior Joe Houck, a chemistry lab assistant for Science in Motion.

Science in Motion currently serves 24 school districts in Pennsylvania. Ten other colleges across Pennsylvania and several in other states have started programs silimar to JC's Science in Motion.

Continuing projects for Science in Motion include installing a vacuum pump and chemistry stockroom in its new building. Mulfinger also hopes to get a gas tank storage area for the gas needed for labs and demonstrations.

Fitzsimmons said that future plans may include developing a physics program due to the demand from local physics teachers.

Q&A

continued from page 2

happen?

"Residential Life has a small part in this decision. We are all in the process of studying locking systems at this time. The locking of the doors could take place on all exterior dorm doors, not just East."

Why the change now in regards to the locking of doors?

"There is not one event that has moved us towards this decision. It is just [that] the time has come. We just want to look out for the students' needs."

Will Residential Life once again be limiting the off-campus housing this year?

"I have been here for six years and I do not see a change in the foreseeable future. The priority is given to seniors."

Why is the priority given to seniors?

"They have earned the right to live off campus. If you are a senior, then you have seniority. We currently have 164 students living off campus. There is an equation that has been developed over the past five years that suggests that 146 is the appropriate number. We expanded the number this year."

Upon what factors is this formula based?

"It covers a lot, such as expected freshmen/transfers, expected non-degree students [exchange students or students only here for a year], students studying abroad and total expected students on campus."

Is the College looking into swipe cards for the laundry system?

"The school's laundry contract will be up within the next year. The swipe card system will be something that will be considered and definitely looked into."

Custodial Supervisor, Jeff Andrea:

If a student has something that needs repaired in his room, how would he go about filing a request for it to be fixed?

"If a student has an issue that needs attention, such as a shower leaking, the proper procedure is to notify their RA or RD. RAs and RDs both have the ability to turn in a work order to Facilities. Once the work order is received at facilities, it is given to the appropriate technician or custodian depending on what the issue is."

Do you care to comment on the building's custodial staff?

"I would encourage all residents to get to know their building's custodian. The custodians take a great deal of pride in "their building" and are always willing to help if a resident has a burned-out light bulb or a question about how to address an issue they may have with the building."

President Dr. Tom Kepple:

Is the College planning on buying more homes within the Huntingdon community which would allow a greater number of students to live off campus in the future?

"We do occasionally purchase houses that adjoin the campus. Occasionally we also get a good deal or a gift of a house that does not adjoin the campus. With each purchase we evaluate the condition of the home and the appropriate use of it based in the community's zoning requirements and on the cost of bringing the facility up to building code requirements. The code requirements are higher for use as a student residence than for use as a single-family rental unit.

"We do expect to purchase homes in the future and it is possible that some of them will converted into student residences. The need is now somewhat less since we have reached our enrollment goal of approximately 1400 students."

Thumb's up and Thumb's down to the highlights of the past week

to the Student Govt. for taking the baton from Matt Russell ('06) to make the new Student Union in Ellis a reality.

to the Mountain Day Committee's directions to Canoe Creek. JC administrators, a chartered busload of students, faculty and staff went to the wrong side of the lake. Perhaps that's why the daily announcements said, "bring your swimsuit."

to the Baker staff for clowning Juniatian writer Tommy McConnell's scathing "potato skins" comment in the last issue's Back Page Brawl. Thanks for retaliating with a comedic sign…and not with "meat surprise."

to the leaky soda machine in Baker that ruined WKVR's equipment, knocking the student radio station off the air. First someone shot Tupac and now this…

to Donna, the queen of Baker, who appeared on stage at the Mr. Juniata contest with Casey Chew, propelling the sophomore to crown. May the "I love Donna" Facebook group grow without end.

Student Government

continued from page 1

flect student's immediate needs," said Rumery. Student representatives want to make it clear that if any student has a problem, no matter how big or small, they should contact an officer who will try to work something out. They will even schedule lunch with a student that is going through a hard time.

"So far this year they have done an excellent job with responding quickly to suggestions or requests," said Class of 2008 President Ryan Conrad.

The executive board has made a concerted effort to get students involved this year. This involvement was seen in the freshman class elections. Ten people competed for freshman class offices and 230 freshmen alone voted, compared to last year's campus total of 389 voting students.

Student Government opened its office to anyone wishing to hold a meeting or work on a project. Patitsas said, "We have four nice desks with computers and a printer and a main table for students to use, which would be great for meetings or even just to get together and make a poster. We're trying to spread word of the availability of this space so students can maximize its use."

Rumery stressed that for students to maximize Student Government's potential, they must understand how it operates.

Student Government's regular jobs include addressing student interests, allocating funds for clubs, speakers and projects and responding to special RSO requests. It also facilitates elections and works with students to establish new clubs. Student government also works closely with Sodexho, facilities, various administrative departments, Dean Kris Clarkson and President Tom Kepple.

If a student has a question, comment or concern, he or she should contact a member of student government by phone, email or in person. The Student Government office is located on the second floor of Ellis Hall, across from the Gold Room.

To find out more about student government, visit its Web site at: http://clubs.juniata.edu/studgov/.

JC plagued with sickness early

continued from page 1

So far, Peters has seen about 15 to 40 students a day on the average. She's given out Sudafed, ibuprofen, lozenges and other over-the-counter medications where needed.

Students aren't the only ones being affected, however.

"I've been talking to other professors and everyone seems a bit 'sniffly,'" said professor David Widman of the psychology department. "I've had a low grade cold for at least a couple weeks. It hasn't made me feel terrible. It just makes me feel like I've been carrying around an anchor in my pocket."

"I've been talking to other professors and everyone seems a bit 'sniffly'"

Although various sicknesses are saturating the student and faculty population, taking some precautions can slow the spread of illness.

Covering your cough helps stop the spread of disease via the respiratory tract; however it should not be done using your hands, as you can then spread the bacteria on everything you touch. Health professionals recommend coughing into the crook of your elbow or into a tissue.

"It's something you should learn when you're five," said senior Heidi Blasenak. "When people do that [cough into the air] it makes me feel like I can't avoid getting sick."

Other suggestions for stopping the spread of illness included washing your hands regularly, not sharing any personal products and avoiding close contact with those who are ill.

Peters warns that if you have a cough with thick mucus, a fever at or higher than 101 degrees or symptoms of a sinus infection (such as congestion, pain or pressure in the sinuses), you should visit the Health and Wellness Center to get checked out. The center is located at 1622 Moore St.

If you miss class due to illness, you should talk to your professor about it, as decisions for missed work are ultimately made by the professor. If a professor asks for it, you can get a formal excuse by seeing the nurse or a doctor. If they deem you too ill to attend class, an e-mail will be sent to the dean's office and to your professors.

"Students must understand that no matter who sends an e-mail, it does not necessarily mean that they will be excused from class," warned Peters.

If you decide to seek medical help or need to request an excuse for class, Dr. Laura Siems is available on Mondays from 6 to 8 p.m. She and a guest physician are on campus Wednesdays from 9 a.m. to 12 p.m. and 1 to 4 p.m.. The nurse hours are from 9 a.m. to 12 p.m. and 1 to 3:30 p.m. Monday through Friday.

Another technological riddle: Appserver

EDITORIAL

Juniatians use a number of words and phrases that if used elsewhere would be greeted with blank stares and laughter. Words and phrases like "JAB," "P.O.E.," "BAC," "general advisors," "Peace and Conflict Studies," "Pimps and Hoes" and scores of others fill the Juniata lexicon. As of late, a new phrase has gained a popular (if not infamous) following: "Make sure you log on twice." Juniata's implementation of the AppServer has made many of us cringe with frustration while working in the computer labs.

AppServer, short for application server, is a computer utility that allows the College to deliver applications to many users at one time without overwhelming individual workstations. For example, if a student was working on a computer in the library last semester and wanted to edit a Microsoft Word file, said student would have logged onto a computer and accessed the Word program directly from the hard drive of the individual PC where he was working.

With the AppServer engine, the student now logs on to the individual workstation, waits a moment for the AppServer logon window to pop up, logs on once more and then the student accesses Word from the server. In other words, AppServer provides applications remotely over the network.

The problem is that little to no training has been offered to anyone in the Juniata community. While incoming freshmen and transfer students had the benefit of a brief introduction to AppServer by their IA instructors, few others had such training. Some faculty members did receive training on the new program, but technology officials decided to leave the podium computers in classrooms untouched in order to avoid wide-scale faculty training.

The majority of students, faculty and staff were introduced to the program by shear accident the first time they logged on. Instinctually, most of us clicked "cancel" when the dialogue box that proclaims "Connecting to appserver.juniata.edu" popped up after we logged in. Then, of course, we had a plethora of problems until a nearby tech-savvy comrade explained the AppServer.

In an effort to cease the nail biting of technophobes everywhere, we will now highlight a list of common headaches the AppServer causes and provide simple solutions to them.

This has added another common phrase to the Juniata phrasebook: "Oh my god! Where is my paper?"

The AppServer doesn't handle multimedia particularly well. If a student wants to listen to his favorite CD, the new equipment makes this difficult. The music data from the CD needs to travel over the network to and from the AppServer. The result: a choppy, broken-sounding track of music.

The solution for the multimedia lover? Simple: minimize the AppServer window by clicking on the tiny minimize bar in the middle of the screen and play the CD on the local computer.

Another AppServer headache: the crazy-characters document. If a user forgets to log on to the server and attempts to open a Word document, the result will look something like this: ÑãÄ7Ù^ThÎæW. Because the individual workstations no longer carry Microsoft Office, forgetful users will accidentally open their document in the WordPad program that will not be able to display the file properly. This has added another common phrase to the Juniata phrasebook: "Oh my God, where is my paper?"

Again, the solution to this problem is straightforward. Crazy-character documents can be fixed by logging on the AppServer by clicking on the icon on the desktop and opening the document again.

Our list of AppServer hiccups isn't over yet: the AppServer is unreliable when it comes to displaying a certain critical, web-based program: Webmail. Students wanting to access their Webmail must be mindful to use Mozilla Firefox, not Internet Explorer. Webmail does not appear properly in AppServer's Internet Explorer.

Users are advised to use Microsoft Outlook as an alternative to using Webmail when they're logged on in a computer lab. For setup instructions, reference your Information Access Manual or ask the nearest tech geek for assistance.

Readers whose heads are spinning by this point can be forgiven for their confusion. Even those of us with technological expertise find the new server perplexing.

The AppServer is not all bad, of course. It has an enormous benefit. The AppServer streamlines the entire application and program management process. If a student or professor needs a specific program added, the technology staff can simply install the program on the AppServer. Prior to this semester, technicians needed to manually install new software on individual workstations when requested—potentially taking hours.

But this benefit is muted by the fact that users are experiencing elementary technological problems that could have been avoided with proper training.

While many of us may have made it past our initial encounters with "mÜÊˆï6…ú∑," a knowledge gap still exists for most users. Training still needs to be offered.

While large-scale public lectures may be overkill, brief online tutorials could certainly be offered via the new online classroom portal: Moodle. The technology staff could even elect to send out a simple e-mail explaining the changes. Expansion of the help section of the campus technology Web site that explains AppServer beyond its current 200-word explanation (or telling users that the help page exists in the first place) could also prove helpful. Simply placing a sign in the library that reminds users of the double log on isn't cutting it.

Our suggestion: the next time a major technological upgrade is implemented, drop the rest of us a note so that the Juniatian doesn't have to explain it. Until the next major upgrade, remember: you have to log on twice.

Brad Andrew, I'm sorry

Mary Gardiner

I have an apology to make. Here's the story.

Two years ago, I started my career as a columnist for the Juniatian. Hoping to educate people on campus about various international and political issues, I wrote about immigration law, Wal-Mart, Darfur and the IMF. Though they were all written with good intentions, occasionally I was too busy decrying injustices to place them in the context of the real world.

Brad Andrew, a Juniata economics professor, saw some of the mistakes I made, and once even wrote a letter to the editor pointing out the flaws of my idealism. At that time, I didn't understand.

It took years—including nine months of study abroad—for me to see his point. Since my sophomore days (sigh!) I've changed a lot; everyone does over two years. But I realize now that instead of actively protesting the genocide in Darfur through writing to my senator or getting involved with political groups on campus, I was just whining about it in an article.

It's this kind of realization that has brought me to the conclusion that I owe Brad Andrew an apology. In the naïve idealism I harbored during my first two years at Juniata, I had painted a picture of a utopian world in my mind. Like many of my contemporaries, I would not accept Wal-Mart's involvement in that picture, nor sweatshops, nor the World Bank.

I suppose that's really not a bad thing to do. Wal-Mart does have a long list of problems. Sweatshops are obviously despicable. And the World Bank does have some pretty unpleasant conditionalities, though they are often used to install important institutions and eliminate corruption in borrowing countries.

But the fact is, we *don't* live in a utopia, and we should stop trying to act like it. Furthermore, when we want to do something about the problems that we see around us, whining just isn't the solution.

This is a major problem that our generation faces. We really like to whine about how materialistic and consumerist our nation is. We'll condemn Wal-Mart (though we still shop there) and gripe about how all of our bands "sold out" (though we still buy their CDs). We hate the fact that MTV doesn't show music videos any more (though we still watch it), and we complain about our oil problem all the time (though we don't turn off the lights).

Though we like to complain about things, our country has a lot going for it. There's no question that it's our free market, our (comparatively) well-designed democracy and our protection of first amendment rights that get us ahead.

Public education in the United States is among the top in the world, with about 90 percent of American teenagers enrolled in secondary school—and it's free! Americans live longer than three-quarters of a century, on average. And most of us have access to clean water, electricity, well-maintained libraries and even the Internet!

These two problems—an unrealistic approach to policy and a bad case of the whines—aren't so unrelated. Our useless idealism is pretty obviously connected in some way to our propensity to complain about everything and not see it for what it is, working to alleviate the problems.

Fortunately, it's not as hopeless as it seems. The solution to one problem is often the solution to other. We can kill two birds with one stone, so to speak.

So next time you want to say something about how much gas we guzzle, think about biking to school. The next time you consider griping about American materialism, make a commitment to donate $10 to Juniata's Habitat chapter instead of buying a new t-shirt. The fact is, we can change this world, but we have to do it one step at a time.

Study abroad: where should you go?

Ibada 'Bobby' Wadud

With the bustle of the study abroad fair behind us, now begins the "pick-a-foreign-program" crunch time. I suggest that prospective travelers begin brainstorming now, not later.

According to the most recent survey conducted by the Institute of International Education, U.S. study abroad increased nearly 10 percent between 2004 and 2005. The same study found that students are increasingly choosing "non-traditional" settings, such as China and Africa, as their destinations. Juniata, likewise, sends students off to China, India and Africa, in addition to the more "traditional" study abroad settings.

In all, Juniata offers study abroad programs in 18 different countries, including Austria, Czech Republic, North Ireland, United Kingdom, New Zealand, France, Germany, India, Mexico, Russia, Spain, China, Ecuador, Greece, Japan, Africa and Scotland.

So, where should you study?

The "traditional" programs in Western Europe are the most popular among Juniatians, largely because of the proximity to popular travel spots. Europe isn't the only destination that will allow travel, however.

"There are opportunities to travel elsewhere," said Jarmila Polte, director of study abroad at Juniata. "People think Europe is the only place where they can travel. That's not true." For instance, in the program in Dalian, China, students can travel independently to Beijing, China or neighboring Mongolia.

If you are going abroad to increase your foreign language skills, you should carefully consider your options. A common misconception is that countries sharing a native language are culturally, economically, racially or demographically similar, which is not necessarily so. The differences, for example, between the Spanish-speaking countries Ecuador, Mexico and Spain are actually quite remarkable. One's desire to learn or improve language skills should only be one of several criteria when choosing the study abroad destination.

If you're not studying a foreign language, it doesn't mean that you can't go abroad. And there are English-speaking destinations besides England, including programs in Australia, New Zealand and Northern Ireland. Additionally, programs in Greece, Czech Republic, Japan, the Gambia and India provide courses that are taught in English, while offering a "demanding immersion experience," Polte said.

Juniata's newly constructed and approved program in the Gambia, Africa, demonstrates the recent expansion of international education that Juniata eagerly supports.

If you're worried that a semester abroad will keep you from graduating on time, consider a summer trip. Juniata offers summer stints to Africa, Europe, Latin America and India.

"Every POE can go abroad. Sometimes a semester is all you can fit in—better than not going at all," said Polte.

The programs Juniata offers fall into different categories: honors, exchange and Brethren Colleges Abroad (BCA). The honors program includes the most competitive study abroad programs, the exchange program involves direct "student-to-student exchanges" and the BCA programs are administered under BCA directors.

A benefit of traveling and studying with BCA is its pre-planned excursions at no additional cost. The Exchange Program sites give students a stipend; students who attended Universidad Pablo de Olavide in Seville, Spain for the spring semester of 2006 received $300.

In addition, all Juniata financial aid and scholarships are applicable while abroad, and students pay the regular tuition and fees.

Competitive academic honors programs are located in Australia, Czech Republic, Northern Ireland, the United Kingdom and New Zealand.

Housing options include apartments (Australia and Greece), residence halls (Czech Republic and Spain) and homestays with host families (France and Mexico).

Each program has its perks, and they differ based on your individual academic strength, language comprehension, financial condition and, naturally, personality. It's important, though, that you start researching right away.

"There are plenty of steps to take before going to [the international programs] office. Procrastination, while anticipated, only restricts choices and aggravates the administrative process," said Polte.

Review your FISHN and POE requirements prior to making the final verdict, and consult your professors and advisors well beforehand. Get your passport and visa early! Talk to parents and mentors, and contact students who have lived and studied abroad.

Preparation and an open mind are key in globalizing your academic experience, and this may transform your life and change your reality.

Presidential Perspective

President Kepple wants to hear from you! He uses his column to answer any college-related question. Simply e-mail questions to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

"During sporting events, parking is ridiculous. People double-park everywhere and even park in fire lanes, creating a safety issue. Do you have any plans to increase parking around the gym so that Juniata fans can attend games without such problems?"

We do not have any plans to increase parking around the gym or elsewhere on campus. Mainly because we have had several new parking lots added over the last 6 years and we have now reached our enrollment goal of 1400 students.

Parking is often a problem at major events and the campus police do what they can to allow parking in some areas that would not be available during a routine day. They do however keep an eye on fire lanes and such to be sure we are safe. Safety is the highest priority.

"Recently, many schools have been integrating iPod technology into the classroom through podcasts of lectures. Does Juniata have plans remotely similar to these, and if so, when would we begin to see these changes?"

Juniata does have limited capability to integrate iPod technology into the classroom. While this has not been a high priority among the faculty, several are now considering it. My guess is that we will start slowly and meet the needs as they grow.

Letter to the Editor

To Whom It May Concern:

Brown recluse or not, exterminations should be more frequent. Living in Lesher seems to equal Spider Hotel. I see ones in, on, and near window ledges, so I check to make sure they haven't moved before I go to open the window for some fresh air. Some are bigger than a half-dollar and look like an overripe grape about to explode. It doesn't matter what kind it is if you get bitten! Trying to dial 911 may not even help since we have to wait to be asked if we want extention 1 or 2 for campus or local emergencies. By then, any amount of poison has mixed into my system and I'm going to suffer an extreme amount of pain. Even something as small as a daddy-long-leg bite can be harmful if left untouched, especially if you are someone under specific medications like I am. Only exterminating three times a year is insufficient. At the end of the school year, I'm leaving. In summer, I'm not here. At the beginning was a good choice, but what about winter? Yes, it's cold, but not INSIDE. Spiders are going to retreat to where it is warm and has food ~ aka my room. At home, living in a city not near so many trees as on campus, we still had the entire house exterminated once a month. As for the tips on how to tell if it is poisonous, brown recluse or not, if I feel a spider against my skin in bed, or anywhere else for that matter, I'm going to kill it before I decide to stop and take a closer look. While I do not have arachnophobia, I do have a certain amount of healthy fear that keeps me out of the hospital.

Bringing sexy back to Mr. Juniata : Casey Chew captures the crown

Christopher Shannon / Juniatian

Sophomore Casey Chew claimed the title of Mr. Juniata 2006 by making Donna, the sweetheart of Sodexho, smile, by splitting a stack of wood into splinters...and by sporting some seriously striped spandex pants.

Caroline Weisser

Singing, dancing, riding bikes in cut-off jean shorts, dressing in drag and exposing themselves in more than one way, each year twelve contestants compete to earn the coveted title of Mr. Juniata. On September 29, Juniata's most popular male beauty pageant celebrated its tenth anniversary. Sophomore Casey Chew was named Mr. Juniata 2006 after a jaw-dropping performance that earned him, not only the title, but the love of the crowd.

Chew's talent performance paid tribute to beloved Sodexho employee Donna ("D-O-N-N-A," as Casey called her). The renaissance man incorporated Quinn Daly into his act, which included lifting weights, eating KFC chicken and wearing spandex pants.

All of the fun was for a good cause. Senior Jen Jones, who coordinated the event along with senior Christina Jones and junior Emily Fitzgerald, said that $3800 was raised for a scholarship fund for students in Guatemala (see box below).

The auditorium was full before 7 p.m., as students flocked to see one of the "finest traditions on campus," as the master of ceremony, Bub Parker, stated.

The band Two Hours began the night with a performance incorporating the vocals of Ashley Appleman and Adam Stanley.

From the beginning of the show, it was obvious that the twelve contestants were having fun, gyrating and shaking their booties to the tune of "Sexy Back" by Justin Timberlake. Juniata's dance ensemble developed the choreography themselves and also performed to the appropriate music of Nelly Furtado's "Man Eater."

"I'm in love!" became Bub Parker's catch-phrase, restated after both impressive, and exotic, moments during the show

After the opening dance, long introductions of contestants followed. As senior Pete Patitsas mentioned, "The key is to keep things flowing and the audience engaged." Patitsas did capture the audience with his magic trick that "has never been successfully performed until tonight," according to Patitsas.

Patitsas was bound by ropes in a Sears rooftop luggage compartment and escaped in less than two minutes. However, it was actually his twin brother Demetri who appeared, freeing Pete from the rope and plastic encasement. Then, the duo ended the performance singing a rendition of John Denver's "Country Roads."

The other senior contestants were Dan Long and Quinn Daly. Long, stripping down to a skimpy blue vest and pants, performed Styx's classic power ballad, "Come Sail Away." The performance was so moving that Bub Parker exclaimed, "I'm in love!" This affectionate statement became Parker's

Mr. Juniata proceeds benefit Guatemalan students

Maria Piazza

For 15 U.S. dollars a month a child can attend Guatemala's best private primary school: Colegio Miguel Ángel Asturias. Yet, 75 percent of Guatemala's population is unable to afford sending their children to school. Mr. Juniata is helping to change that.

Circle K, the club which organizes Mr. Juniata, is donating all the event's proceeds ($3800) to the Scott Grugan Memorial Guatemala Scholarship Program. This program provides money for students to attend the Colegio, giving it to the school which then allocates it to the students who qualify for scholarships based on family income and an exam.

Jennifer Jones, the co-chair of Mr. Juniata, visited Guatemala as part of a medical delegation for three weeks this past summer. After interacting with many children in Guatemala, she wondered if there was a foundation that gave money to Guatemalan children for school purposes. She later found that Juniata Spanish professor, Henry Thurston-Griswold, had helped to establish the Scott Grugan Memorial Scholarship Program with Juniata's Spanish club. Jones was thrilled, immediately proposing her idea to the members of Circle K.

"Here at Juniata, we are very concerned with extending boundaries, embracing the world. And, our theme at Circle K is to increase international child literacy," Jones said. "We feel that donating to this group achieves both these goals."

In the past, the proceeds from Mr. Juniata have gone to the Make a Wish Foundation, which only benefits one person. By donating to the Scott Grugan Memorial Guatemala Scholarship Program, the money will help many children.

The donations from Mr. Juniata will allow Guatemalan children to attend the school and purchase any supplies needed for the academic year, including uniforms and books.

The school educates children from preschool to ninth grade. The instruction is student-oriented, teaching the children reading and mathematics, while challenging their views on gender and human rights.

Thurston-Griswold believes that the Grugan scholarship is important because, "Education is key in helping a country develop. And, the Colegio is a superlative education, because it not only helps children learn basic skills, it helps them to develop new methods of dealing with conflict and poverty."

For several decades there has been nothing but civil war and poverty in Guatemala. The children living and growing in this country have experienced little else. The Colegio's goal is to provide these children with an opportunity to learn how to deal with the world, and each other, in a peaceful and supportive way. Going to Mr. Juniata this year was not only about having fun, but also supporting the cause of peace and literacy.

O horror, where art thou?

"Pulse" flat-lines

E. LaBrecque

When an evil computer virus is unleashed, it's up to a group of college kids to stop it. "Pulse," a new horror film, depicts what it would be like if technology took over—your will to live. Rest assured, this movie is definitely horrifying. . . horrifyingly bad.

The movie opens with a scared-looking guy trying to meet someone in a dank, library basement. Why is he scared? And, who is he meeting? The next scene surely explains it all.

Actually, the next scene only makes the storyline more confusing. The guy is attacked by a nasty apparition and it's funny. It wasn't supposed to be funny. (After all, it is a horror film, right?) I still haven't decided which part of it was more amusing, though: the lame special effects or the look on the guy's face while he's being attacked. Worse is the fact that this was the first of four scenes that made the audience laugh when they should have been jumping with fright.

We come to find out that the unlucky man is the boyfriend of our poorly portrayed protagonist, Mattie (Kristen Bell). Mattie and her friends all have cell phones practically superglued to the sides of their heads. Their fondness for gadgets is their ultimate downfall, once the virus begins to spread. The vindictive ghosts get to their victims via cell phones, laptops, printers, etc.

Of course, since this film lacks logical answers for all the questions it poses, you don't understand the ghost's game until the very end (even then it's about as clear as a Cingular call). Normally, withholding information until the end of the film builds suspense. In the case of "Pulse," the only thing building is the audience's annoyance level (and the hours of your life you know you'll never see again).

At any rate, the computer virus is unique. It doesn't just make the computers sick; it also makes the people sick. In fact, the virus takes the form of some ugly ghost, who sucks off the faces of its victims. In later scenes it is revealed that their faces are just fine. But you discover that the ghost has instead taken their will to live.

This information would have been better placed at the beginning of the attacks. I wouldn't have been left wondering why people keep killing themselves. And, I guess I'll never understand why other characters were spontaneously combusting.

I know I keep saying that this film created more questions than answers, but I should also acknowledge the few observations it stirred within me.

Observation #1: bath loofahs are excellent comedic props. (A loofah is temporarily transformed into a Gollum-esque phantom beneath the bubbles in one of the more hilarious scenes.)

Observation #2: it is possible for an actor with a three-minute role to steal an entire movie. (Brad Dourif owns the role of the eavesdropping naysayer in the diner scene at the end of the film.)

Observation #3: the sock monster is a contortionist who throws out all of your other clothes before eating a sock (and then your face). At any rate, these revelations do not outweigh the cons of this movie, because it is simply awful.

You don't have to skip this movie. There are, however, a surprising number of things you can do with four dollars--obviously, apart from watching "Pulse." You could take your four dollars and buy four songs from iTunes. You could use your four dollars to wash and dry a couple loads of laundry. Laundry may not seem like much fun, but it will feel like time and money well spent, once you spend your time and money on "Pulse."

The bottom line is this: "Pulse" sucked. It was so completely illogical that following the story was nearly impossible. The acting was very poor, and it resulted in lame, one-dimensional characters. This should have been a film to send chills down my spine. Instead, "Pulse" left me feeling lukewarm and wondering if there will ever be another decent horror film.

The running time for "Pulse" is 90 minutes. It is rated PG-13 for sci-fi terror, disturbing images, language, and sensuality.

The Naked Truth: There's an age limit, you know

Rebecca

I've been told that Old Man Syndrome (as I feel it is a disease) is out to poison young women. I believe that I've experienced the first symptoms by realizing my pharmacist had sex appeal (and his face said he *liked* that I recognized Stone Age sex appeal).

Just look at what dating an older man has done to Katie Holmes. In some cases, (e.g. the man is rich, attractive, and/or good with his hands) there is an obvious reason for an older man to appear more attractive than a man of similar age. Tom Cruise is indeed rich, attractive and (I am sure) good with his hands—but he's also a couch-jumping lunatic. Dirty? Maybe not. But bizarre? Check yes.

Thus far, I have beaten the gray-haired at their own game. I don't care how much an older man adores and romances a woman… he has dirty aspirations. There are plenty of single women my pharmacist's age who would be just as energetic as me…like my mother (the boyfriend hit a final downhill slump).

Warning: the man may look mature, but deep down there is an inner yearning for an attractive girl (preferably in a housekeeper outfit) to pour extra milk on his Lucky Charms.

Shoulda said yes. As a waitress, I've had my share of marriage proposals (no lie). Even after I declined his ring offer, I got a one hundred dollar tip from my drunk romancer and his golfing buddies. At least I look like I'm worth more than a twenty dollar bill. I wonder what I could have gotten for saying yes…oh, the possibilities! But, I hate thinking what kind of lie he'd have told his wife in the morning, when he realized what had happened.

I know that looks aren't everything, but her man is THIRTY-TWO and looks like Family Guy's Peter Griffin.

Appletini please—hold the tini. A very wealthy man—with grown children—requested me as his waitress every night for a week. He was a huge tipper. (I made another hundred dollars in three days by serving him.) Obviously he thought I'd see he wasn't concerned with blowing his wad. After several days of reeling in the dough, he asked me to have a drink with him. I'm 19. What was he going to buy me at the bar? Apple juice? Had I gone, I would have taken my baby blanket (for security) and pacifier, because I wasn't sucking on any straws, or anything else. I didn't want any of his juice—in a kid's cup, or otherwise.

Cup of Suga'. The neighbor boy, er, man was after me. While at the pool one day, he told the girls I babysat how much he liked me. But he's old—so old he has a REAL JOB. On the upside, he has an eight-pack. Oh, very nice to look at, but I don't touch antiques...even if they are a mere

Lost in the Record Store

You call that music emo?

Kevin Warner

I don't really get the genre of music that people call "emo." It seems like it's a conglomeration of random bands that go across the spectrum of musical styles. How can bands such as Dashboard Confessional, Saves the Day and the All-American Rejects be called the same style of music? It's never made sense to me; and, I think I know why: "emo" doesn't really exist.

A quick Wikipedia search shows that the "emo" label started in the 1980s out of the Washington D.C. hardcore punk scene. Bands like Rites of Spring and Embrace took hardcore punk in a more emotional and melodic direction. Soon their fans began to call the style "emo" or "emo-core."

From its inception as a term, emo has never been a cohesive genre. Fans and critics started calling many different types of music emo, such as the post-hardcore music of Long Island and New Jersey, and the pop rock sound that emerged in the mid-west.

So, we have a strange grouping of artists who differ greatly in their styles of music, but are all classified in the same genre. For example, pop punk bands like Fall Out Boy and A Simple Plan are called emo. Yet, people call the acoustic rock of Dashboard Confessional the same. So, what unites these artists?

The most common answer to this question is the use of emotional lyrics, hence the name. But, I find this confusing. Does this imply that bands, which are not in the genre of emo, don't have emotion in their songs? Haven't people been writing songs about the trials and tribulations of love and relationships for years?

The lyrics of all these "emo"

Naked Truth

continued from page 9

25 years old and just beginning to collect dust. In my mind, a guy is too old for me when he's older than my oldest brother (also 25).

So the neighborhood beauty is riding the fence, but not me. I'm five feet nine inches of female tallness and he's about 5'6 of gorgeous 8-packness. Therein lays the problem. I don't want to stare down at his sweet stomach. In fact, I'd prefer it be about eye level. That isn't probable, unless I'm down on my knees; and, that's just one cup of my sugar I'm not going loan to just any neighbor.

And apparently I'm not the only one experiencing symptoms of this syndrome. In the words of the love of my life, Dane Cook, (do we have to consider him old?) "The disease is swiffering the nation. Well, at least my girl friends. Two of them now are in relationships with men in their early thirties. To date, there is no foreseeable cure, since punching them in the face didn't help."

Commitment phobia no more. All through high school, my best friend feared commitment. In her mind, a prom date was a serious relationship. Now, she's practically married—to a man 14 years her senior. (He's going on 33 and she just turned 19.) I am an awesome friend, if I do say so myself, and I support everything she does; however, there's one thing that none of my friends understand—he's not pretty.

Attractive boys, and I mean ATTRACTIVE boys (looks, personalities, life goals, etc.) have sought after her and begged for a chance. She is an adorable 5'4, maybe 120 lbs girl dating a 6'3 *large* man. Don't get me wrong, I like "Family Guy," but her man looks like Peter Griffin. I fully support the "looks are not everything" belief, but he's THIRTY-TWO. The man's cholesterol and blood pressure are already her age squared. If she plays it right, he'll leave her everything he owns and promptly keel over after another McDonald's overdose.

It's edible, right? Another of my friends was ridiculously dedicated to her Navy-bound boyfriend during high school. Then we went to Senior Week at Ocean City (and well….you know). Now she's up to number five and checking 'em off like days of the week. I jokingly tell her that she's earned "one for the thumb." I'm not going to lie, this fifth partner is a nice guy and a really good teacher (her college guitar teacher to be exact). And, apparently, he gives lessons outside the classroom. He's a thirty-one year old Japanese man who calls his wrapped package an "egg roll."

My friends and I are more amused knowing that of the five kinds she's tried, he's not the shrimp.

Fortunately, I've come to terms with the fact that Dane Cook is older than my brother (but still, I'd pour milk on that man's Lucky Charms any day). But, through it all, I did gain 200 dollars and a creepy paranoid feeling. Honestly though, what woman wants to reach her peak and be let down, because someone forgot to take his Viagra? What a flop.

You'd be left dreaming of a younger, unyielding male. Better yet, take some initiative and rob the cradle. It's working out fantastically for Demi Moore, you know. But, that's another issue for another day and a fair rarer affliction.

Record Store

continued from page 9

bands aren't even that similar. For example, Taking Back Sunday songs are riddled with angst, featuring lyrics about rejection and heartbreak, oftentimes in a self-loathing way. A line from the song "You're So Last Summer" proclaims, "you could slit my throat / and with my one last gasping breath / I'd apologize for bleeding on your shirt." How cute.

Yet, on the other end of the spectrum are bands that have songs about the hope and joy of relationships. The lyrics to Dashboard Confessional's anthem "Hands Down" are about the hope of a new relationship, which is quite different from the angry words of bands like Taking Back Sunday.

The uselessness of the label is further exemplified by many of the bands, who are classified as emo, rejecting the name. Guy Picciotto of Rites of Spring, which is considered one of the original emo bands, said in 2003, "…I just thought that all the bands I played in were punk rock bands…what, like the Bad Brains weren't emotional?" I don't get it either, Guy; I thought all music had emotion in it.

So let's drop the label – it's pretty pointless. It creates a generic stereotype of how these bands should sound, when a majority of what people call emo deserves better than that. These bands should be evaluated on their own, not thrown under a massive label that doesn't describe their sound.

Mr. Juniata

continued from page 8

catch-phrase for the event, restated after both impressive, and exotic, moments during the show.

Freshmen Greg Hoffman, Roy Holm and Stu McHenry abstractly expressed their talents. Holm, with gasmask in hand, dramatically read an original poem. He was accompanied by somber strings, played by a group of masked musicians.

Adam Stanley, Peter Bullock, and Ryan Hollister represented the junior class. Stanley sang a popular song from the cartoon "Animaniacs," which rapidly lists every country in the world. His month-long endeavor to learn this silly, yet complicated, song paid off, winning the respect, and the laughs, of the audience.

Sophomores Lance Joseph and Josh Beckel displayed original talents. Josh Beckel comically summarized the ridiculous and entertaining nature of this male beauty pageant before the performance. "My incentive to win Mr. Juniata is to show that, even though I may have heavy eyebrows and an ugly face, I'm a person too. And, I can achieve anything I want…if I stop being ugly."

By the end of the show, there were five finalists: Ryan Hollister, Roy Holmes, Adam Stanley, Dan Long and Casey Chew. Dan Long received the title of second runner-up. Adam Stanley claimed the position of first runner-up.

Pat Kepple presented the Mr. Congeniality award (decided by the contestants themselves) to Casey Chew. Before Bub Parker made the announcement, the crowd was already chanting Chew's name.

Initially, Chew wanted to perform in the pageant to"show how much I love Juniata." When he was asked if he expected to win, he replied that, "I didn't know what to expect. I was just trying to have fun."

At the end of the show Chew said that he had "the most fun backstage, goofing around with the other guys," and that "everyone did a great job."

Throughout the competition for Mr. Juniata, a good time was had by all, contestants and audience members alike. The pageant is a continual reminder of the talent and sense of humor that is present among the students at Juniata College.

Like Ryan Hollister said, "After all, we're bringing sexy back."

New members of the wanderer's guild

Juniata women's volleyball...on the road again

Derek Stanley

You are already ranked number one in the nation, and have embarrassed the two teams who are supposed to be your best competition for the national championship. There are very few ways a coach can prepare his team for a playoff run with those feats already accomplished.

However, one aspect of playoffs is often overlooked: traveling.

With 6,494 total miles tallied in travel this year prior to playoffs, the Juniata women's volleyball team appears more than ready to tackle the playoff road trip. By the end of the season the women will have played in a total of 13 gyms, with a total of 24 away matches.

"Traveling is hard," senior captain Rachael Schatz said. "Earlier in the season we had a seven hour bus ride and had to almost immediately get out and play. There is definitely a lot of mental and physical stress there. To go from zero to 60 on a mental and physical level is harder than it looks. However, in playoffs all teams have to travel and the more prepared you are the better you deal with it."

As hard as it may be, going from zero to 60 is something these women do well. Most recently the Eagles have dismantled conference foes Eastern University and Albright College, both by scores of 3-0.

Sophomore Erin Albert tied her career high in kills with 15 against Eastern while also tallying two aces on the evening.

"I've been connecting with the setters really well and have been focusing on being up early in order to beat the opponent's block," she said.

Senior Stephanie Kines and sophomore Amber Thomas aided in the effort as they both knocked down 11 kills against Eastern. The tandem also now leads the team in kills with 162 apiece although their goals go far beyond statistical leaders.

"We go out and do what is in the best interest of the team. We don't even look at stats, only wins and losses," Thomas said.

The team's first loss of the season came on October 1 at the hands of Division I opponent Princeton University, who remains undefeated on the season.

Dropping a contest 0-3 may have advantages though. Showing mortality midseason can often refocus a team on cruise control. If the Eagles use the loss as motivation, they may play even better down the stretch.

"We've only been playing together for five weeks. In another three to four weeks, come playoff time, we'll be more comfortable on and off the court with each other," Schatz said.

If you wish to hit the road yourself, you can see the women next at Moravian College October 10, or stay on campus and wait until October 18 when they take on Messiah College.

> **"To go from 0 to 60 on a mental and physical level is harder than it looks." –Rachael Schatz**

Taking names and making history

Winning isn't everything. It's the only thing.

Dan Rapp

"Ya win some, ya lose some, but we wreck some."

So says senior captain Sierra Dickman. For those of you that have been too busy cramming for first exams or too drunk to realize that we have a field hockey team, we have one. And they are really good.

With an outstanding record of 9-0 (as of press time), the team has earned the right to be ranked in the top 15 teams in the nation. Here's another fun fact. Of the nine teams they have faced, only two of them scored goals. That's right math majors: that means they shut out seven teams this season.

The reason they have shut out so many teams is not only because they have a ridiculous defense. Coach Gillich has made some serious player swaps in an effort to create more "utility players."

In doing so, "players see the field better from offense to defense," senior mid-fielder Sarah Bender said.

Bender credits much of the teams' success to the fact that eight of Juniata's starting 11 players are utility players. On the fly changes can be easily made.

Still, there is one on-the-fly change that cannot be easily accounted for and that is the ability to play on turf. The ball moves faster, takes unexpected bounces and is a completely different playing field.

But Juniata seems not to care what surface it plays on.

"It doesn't matter!" junior Ashleigh Ehnts said.

And the stats have her back. The team has gone 3-0 on turf while not allowing a single goal. Apparently their offense doesn't seem to mind either because it has scored 13 goals.

Junior scoring machine Kim Wagner (see box) explained that they are able to spread out their play on turf, making longer, harder passes, giving them the ability to create fast breaks.

Now with a relentless offense and stellar defense, the question has to be asked, "What the hell are you doing in practice that is making you so unstoppable?"

The answer was not quite what was expected. Dickman said that at about the midpoint of every season the coach likes to break things up a bit. In one practice in particular, they didn't play field hockey at all. By playing games such as four square, Dickman says, "it helps the team not to grow sick of each other and makes us remember that we are all out there to have fun."

But one final point that needs to be addressed is that with most winning teams, especially undefeated ones, there seems to be a tendency to go into games thinking that they are going to walk out with an easy win.

While Bender is familiar with this mindset, she knows it is not the case with this team. "We don't go into any game thinking it's going to be easy," she said. "We always have the fear that we can be beat and it makes us play our hardest from the start regardless of our record."

Christopher Shannon/ Juniatian

Juniata senior back/midfielder Bobbi Rickenbaugh controls the ball in the Eagles' game against Washington and Lee.

Wagner filling up the Juniata record book

This season has bought junior Kim Wagner a plethora of places in the Juniata record books. She currently holds the school record for most points in a single season (46), most points in a career (97), most goals in a single season (20) and most goals in a career (40).

The modest Wagner credits her achievements to the other 10 people on the field, who help to create the opportunities on which she has had capitalized repeatedly.

As proof of her selflessness, she was quick to point out that Meredith Low is currently leading that nation in assists, helping Wagner to many of her scoring chances.

*All tallies as of press time, before the team's latest match-up

Nothing to lose. Everything to prove.

Dan Rapp

Over the past month, the Juniata women's soccer team has made some serious noise. Consider this article the closed captioned version of the beatings they have been handing out. With only half of its regular season completed, the team has already racked up more wins than any of its Blue and Gold predecessors.

The team's win over Susquehanna in overtime marked the eighth win of the season and its first conference win. This was the fourth game where the Eagles found themselves in overtime, as well as the fourth time they have come out victorious.

Freshman Sarah Ruggiero has no doubt what makes Juniata so successful in overtime.

"That's easy," she said. "We have such heart and such a drive to win. We know what we want and won't stop until we get it."

This drive to win has greatly helped Ruggiero in burying the ball behind the keeper, especially in overtime. She has already scored two golden goals this season, helping her team reach a record of 9-2, already a new program record for wins in a single season.

But this program's accomplishments don't stop there. With another huge win last Saturday, this time against conference foe Moravian, the team has tied a program high for conference wins unmatched for 10 years. It was also the sixth shutout of the season for goalkeeper Lisa Russo.

Despite these great achievements, the team is showing no signs of slowing down. With the real test of facing the toughest part of their season fast approaching, the players are more determined than ever.

Only five conference games remain and the team is taking each one, "one game at a time, one half at a time, one minute at a time," according to senior captain Alicia Walsh.

One of their biggest challenges is this coming Saturday's game against conference rival Albright. During homecoming, with an undefeated record on their pitch (pitch means field for those of you that don't speak soccer), the team is looking to make a statement to the league.

Juniata has shown superior ball control, the ability to retain possession longer and can switch the field of play faster. All of these are key ingredients for a recipe called 'victory.'

Walsh thinks there are three reasons why Juniata will continue to dominate in the conference. First, they have a solid team with no weak spots in the starting line. Second, talented players line their bench whichgives them an edge, especially late in the game. And finally, with all of the skill brought forth by both new and old players, the team has set a standard for others to play up to, making the whole team better.

The Eagles will look to combine all three of those factors en route to putting together a strong finish to an already record-setting regular season.

Christopher Shannon/ Juniatian

Shutouts so far this season for women's soccer goalkeeper Lisa Russo.

XC team: No pain, no gain

Corinne Barabas

After a light breakfast of bread and peanut butter (sometimes right off the spoon) and plenty of H2O, the cross country team was off to race against Messiah, one of its ugliest foes, at the Falcon's home course on September 30. Quantity was small with only four teams competing; however, the quality was by no means lacking.

The women were unable to defeat any of their opponents. They competed despite being down a handful of key runners, who generally run in front, due to injuries. The "campus crud" that has so relentlessly "boogered up" training for many on the team was another setback Juniata had to deal with.

Despite the setbacks and missing links, sophomore Meghan Jones came home with a tenth place finish by turning in a time of 20:50. Following not far behind were juniors Lia Bella and Kristen Gochnauer who captured 14th and 25th places, respectively, in the 3.1 mile contest.

"In some sense, we may be in a little bit of a slump," said Bella. "Exams and miles are taking a toll on the legs and brains. But we never settle for just OK in anything. That in itself is motivation to keep on keeping on. We have our work cut out for us. There is no question about that, but we will improve. And then there's always the competition, who are working just as hard as we are. No one really knows what is going to happen until race day, when you cross the finish line and the clock stops."

Some days are better than others. The past couple of meets have proven just that and have been challenging with many less than stellar outcomes. It's simply a matter of sharpening existing potential and maximizing the results of dedicated summer and early season training.

The competition on the men's side at the Messiah meet was a little tighter and the Eagles narrowly missed a first place overall finish.

Running to the front of the pack early in the race, freshman Matt Bailey and juniors Shawn Rumery and Eric Hoover all clocked times that put them in the top ten.

Hoover, throwing everything into it, covered the same course an impressive two and a half minutes faster than his time last year. Bailey, Juniata's top runner, broke 28:00 by two seconds and Rumery followed four seconds later. Overall, the whole atmosphere of the meet for the men was improved last week's race.

"The key for us right now is to keep 'the pack' together longer," Rumery said. "Currently, we have six guys running side by side for the first three miles; we need to try to keep that momentum going throughout the rest of the race because we don't have any dominating front runners. The only way we will be successful as a team is by packing it up all the way in."

Rumery would like to see his team run in the race the same way they run during practice.

"We're running very well in practice," he said. "Our fitness level is higher than it has ever been, but we just can't seem to bring that same fitness level to the race. We need to work on racing like we practice."

Team goals are important to team cohesiveness and team cohesiveness is crucial as workouts get harder. Classes are starting to create more stress and the competition at meets is getting better. To maximize performance and commitment, the Eagles strive to make morning run one of their top achieving targets of the season.

"Every Monday, Tuesday and Wednesday mornings are dreaded," said Hoover. "We all support each other, though, and survive the dark and cold 6:30-7:30 a.m. 'death run.' It's important to know that training means as much to you as it does to your teammates, and this is a big part of getting ready for meets, mentally and physically."

On September 16 the Eagles traveled to Penn State Altoona. Both teams fell short of its Division I competition – Robert Morris and Bucknell – but their efforts were strong enough for a pair of third place finishes out of a field of eight contenders.

For the men, the top five runners placed two in the top ten and three in the top 25, including two freshmen. Bailey and Sam Williams are both adapting to the intensity of collegiate running quite naturally in their first year on campus.

Sophomores Jones and Aubrey Cyphert both secured top 10 positions with 21:05 and 21:34. Seniors Meghan Fahy, Lauren Gates and Gochnauer were in the top 20 for the women.

The team will compete at the Dickinson Invitational on October 7 to prove to their competition that despite some minor setbacks, they'll be back stronger and faster and ready to run down and over anyone who impedes on their 'course' to success.

10

Goals scored in two games by Kim Wagner en route to several school records (see field hockey article, page 11).

9

Wins already this season for the women's soccer team, tying the previous school record.

Struggling to finish

Consistency lacking

Jess Winemiller

There are 60 minutes in a football game, and only playing 30 or 40 or even 58 minutes out of those 60 is not going to put wins on the board. Now halfway through the season and posting a record of 0-5, the Eagles, both offensively and defensively, are still struggling to put together two solid halves and finish a game with a victory.

It is not an issue of the players' physical condition or hustle. In the past few contests it has been a coin toss whether Juniata will show up for the first half or second. Every game seems to repeat itself. When the defense puts in a solid performance, the offense misses key openings or vice versa. The two cannot seem to click at the same time for an entire game.

According to Lance Tippett, junior wide receiver, the problem lies more within the individual concentration of each player.

"We seem to take a play off here and a play off there. On an offensive series we might miss a key opportunity to score or a defensive mistake will lead to a first down for the other team. You can never take a play off and that is something that can't really be coached. It's something within each individual player."

Those mental mistakes here and there added up as Juniata fell to Moravian, 33-14, during its second showing at Knox Stadium this past Saturday.

"We haven't finished drives in the red zone. That's a coincidence. We can't finish drives and we can't finish games." – Lance Tippett

The Eagles gave up two touchdowns early and found themselves already in a hole with 12:35 remaining in the first quarter. Juniata scored its first points off an 11-play drive where sophomore quarterback Jay Leonard found Tippett for several completions and senior back Duane Ehredt Jr. finished it off.

Moravian and Juniata would then exchange conversions in the second quarter. "We expected to go into the locker room down by one touchdown. We were content with that," said Tippett. But then concentration came into play – or rather didn't. Juniata helmets dropped as the Greyhounds scored with about a minute to go in the first half, leaving the score, 27-14.

While offense drove the first half, the second stanza was an ode to defense. Juniata allowed only one touchdown and when the Greyhounds attempted a two point conversion, it was broken up by defensive back Tyler Hall. The true freshman led the team with 12 tackles, including two for a loss, and a sack.

The offense could not produce despite the strong efforts from Tippett who had a team high five catches for 80 yards and Ehredt who rushed for a total of 123 yards (see box).

"We haven't finished drives in the red zone," remarked Tippett, "That's a coincidence. We can't finish drives and we can't finish games."

Leonard agreed that it's all about consistency and concentration.

"We are not turning our drives into points on a consistent basis. We get in the red zone, and just shoot ourselves in the foot."

The Albright game on September 30 proved to be no different with the Eagles falling hard to the Lions, 48-14.

Juniata was silenced on both ends of the field. Though the Eagles jumped out to a 7-0 lead, they did not hold onto it long and lost their momentum quickly. The Lions retaliated by putting up 28 points by halftime.

One thing is for sure, Juniata is tired of consistently losing.

"We don't know what it is like to win and we have to realize it's not going to turn around overnight," said Leonard. "We just need to get that first win, and then the guys will know what it feels like. They will never want to let that feeling go once they have it."

Nothing new: Ehredt running all over the MAC

Despite the setbacks Juniata is currently facing, running back Duane J. Ehredt is pushing forward and making his name known in the conference.

As of Sept. 25, the senior running back leads the MAC with 132.8 rushing yards per game.

Edredt ran for two touchdowns against Moravian and rushed for a total of 123 yards.

With an equally successful showing at Albright, he posted 146 rushing yards and again found the end zone twice. Albright was the fourth consecutive game in which he surpassed the 100-yard mark.

Ehredt now currently ranks fourth among Juniata's all-time rushing list with a total of 2,574 career yards.

Men's Soccer losing nail-biters

Emily J. Koop

With only one goal scored in the past three matches, Juniata men's soccer is struggling to win.

The Eagles' lone goal was scored in its last game before conference play vs. Lincoln University by Mark Turkewitz.

So far this season it seems that every single MAC team could win or lose at any time against anyone. It is a tight conference with several favorites all vying for the same championship.

Unfortunately for the Juniata men, the opponents seem to be having the luck on most days.

A late goal in the second half proved to be enough for the Susquehanna Crusaders on September 26 to beat Juniata (5-6 as of press time) at home. There were not many chances to score throughout the entire game, but in the forty-second minute, Susquehanna's Kyle Elsenbaumer managed to score off of a low cross, which proved to be enough to win the game.

In the first half both teams struggled with offense and relied mainly on defensive play. Juniata's closest scoring chance was made in the twenty-fifth minute when Jordan McGowan's header sailed just over the net.

"We played conservatively," Juniata senior Josh Cady said. "We didn't generate enough offense. We played too defensively."

The second half was very similar to the first. Very few shots were taken, but the Eagles were able to keep the score one-nil. In the eighty-third minute, goalkeeper Mark Guthridge stopped a penalty kick after a hand ball in the box to keep Juniata in the game. But no one was able to score to tie or win the game after that.

"[It was] a disappointing result at home," said head coach Scott McKenzie. "We really missed an opportunity here. The level

continued page 14

Men's soccer losing nail-biters

continued from page 13

of competition that we compete against is at the national level and goals are tough to come by, [but] we will continue to refine our attacking and midfield players and keep working until we improve."

On September 30 at Moravian, the men's soccer team suffered yet another loss by one goal. The only goal in the game came in the thirty-first minute by Moravian after a communication error in Juniata's defense.

Juniata was able to shut down Moravian's offense for the rest of the game, but its offense could not seem to finish once again. Many opportunities were missed and the game ended one-nil.

"[It was] a gutsy performance that could have gone either way." McKenzie said. "Either team could have won this match."

Even though this was a loss for the men, the tight competition and previous close matches give them hope. The team's goal is to "win every match from this point on," according to McKenzie.

The Eagles nest take the field on College Hill during homecoming in a match against Albright at 2 p.m.

"We are absolutely ready," McKenzie said. "We are looking toward playing Albright in front of a very big and loud crowd at our home field."

Training room tightens up

Must shower before using facility

Sarah Roby

With the growing number of staph infections being found on college campuses nation wide, Juniata is cracking down on its training room guidelines.

The decision made to help protect students from transmitting and picking up MRSA is that athletes must shower prior to entering the training room. Most athletes use this facility to receive physical therapy for injuries, ice up muscles and to be stretched and taped before and after practice.

Many athletes are finding it difficult to adjust to this new rule because of the inconvenience.

"[The new rule] is a good health precaution - but inconvenient," said sophomore softball player Elsann Machotka.

Machotka voiced a common complaint among out-of-season athletes. Because teams not in season do not have access to their locker rooms, the athletes must return to their dorm rooms to shower before they can be treated in the training room.

One compromise that has been made is that athletes are allowed to enter the training room and wrap their own muscles with ice, but may not be assisted unless they have showered first.

Staph infections are spread through close skin-to-skin contact, skin openings, infected items such as sports gear and clothing and poor hygiene. It is easy to see why college athletes are at risk and can easily be targeted.

The full medical name for MRSA is Methicillin-resistant Staphylococcus aureus, but is commonly referred to as a staph infection and can be deadly if not treated properly. MRSA is a type of bacterium that is found on the skin and nasal passages but can become irritated from abrasions. Because in some cases antibiotics aren't effective, the skin infection can lead to more serious problems such as pneumonia. MRSA can even be fatal.

Kevin Dundore/ Juniatian

Full benches in the training room have the Juniata trainers busy before the evening practices begin.

Head athletic trainer Jeff Leydig explains that staph infections used to be found mostly in nursing homes, but in the past five to eight years, there has been a rising prevalence on college campuses of MRSA outbreaks. Tragic stories, such as the tale of the Lycoming football player who died in 2003 from a staph infection, have prompted Juniata to take this issue more seriously.

According to Leydig, "It's something we should have been doing all along."

"It's a big hassle to all the time have to shower first," said sophomore soccer player Mark Turkewitz, even though he understands why it has to be this way.

Turkewitz describes the apprehension of a disease such as staph infection reaching the Juniata campus as being distant. "No one really thinks much of it. It happened to someone else; not you."

Leydig encourages athletes not to fear a case of MRSA reaching our campus, but to respect the new rule and take it seriously.

"This is for you and your teammates' own health." Leydig said, "No one wants to think of the alternative."

Prevention is simple (see box below for tips).

For more information on MRSA infections, brochures can be found in the training room, located on the ground floor of the Kennedy Sports and Rec Center. The training room is available for use by all students. However only athletes on collegiate sports teams may be treated by a trainer.

How to prevent a Staph infection:

-Wash hands thoroughly with soap and water often
-Do not share sports gear or personal items such as towels, uniforms and gear
-Clean your sports gear often
-Keep cuts and scrapes clean and bandaged until healed
-Do not touch other players' wounds or bandages

I can't do this anymore

Fantasty football is destroying my Sundays, and I want out.

Tommy McConnell

I have had it with fantasy football. I really can't take it anymore.

It's only been four weeks, and I'm already losing my mind. It's the same thing week in and week out, and I don't know if I can keep it up for another 12 weeks. The toll is wearing on me, and quite frankly, my already fragile psyche is beginning to crumble.

It's not so much my players that have me recreating Art Shell's thousand-mile stare once every seven days. Although Shaun Alexander going down with a broken foot, then saying he was playing because "God had healed him" – I swear on my 200-page fantasy preview magazine he said that – and then dashing my hopes two days later when an MRI revealed that God did not, in fact, heal him was really fun. I loved riding that emotional roller coaster.

It's the other owners in my league.

(Full disclosure: I joined two leagues this year. Some free advice: don't ever, ever, ever, under any circumstance do that. It's like slamming your hand in a car door as a bird craps on your head. You're hurt, embarrassed, frustrated and have no idea what to do next. Good times.)

Every league has the same types of owners. I'm pretty sure it's a rule when you round up your buddies for a league, you have to fill certain requirements. This is just so that everyone across the country can be equally agitated at the same time, and for the exact same reasons.

The most frustrating owner, at least to me, is the guy who year in and year out makes one incredibly lopsided trade that completely screws over the entire league while every other owner just has to sit there and accept it. There is absolutely nothing that can be done, accept verbally assault him behind his back and then make reference to him in your small college newspaper.

Done and done.

This year, it was Tiki Barber straight up for Torry Holt on draft day. Straight up! The worst part – aside from slamming your head off a table out of sheer frustration until you black out – is watching the owner who just screwed the entire league smiling happily to himself like he just made the deal of the century and cannot believe his good fortune. Idiot.

Not far behind him is the owner who complains about everything. And I mean everything. He can't believe where we are having the draft; it's so unfair that he has the No. 7 pick; the scoring system is rigged so that he always loses; he can't believe our league doesn't designate a special position for third down backs and goal line situations; and why doesn't he start every week with a 10 point advantage, just 'cuz?

Then during the season, it's even worse. You get instant messages and e-mails all day: "Can you believe my running back missed his bonus by one yard? Can you believe that ball got tipped and my QB got the interception? I can't believe how lucky your team is getting; you really aren't that good."

Yes, I can believe it, because you might as well be kicking the karma gods right in bean bags. Of course, he then ends up beating you. I've lost the will to live.

If the owner who makes nine league-crippling trades per year is the Isiah Thomas Owner, then this guy is the Al Davis Owner. I hate the Al Davis Owner.

But not as much as I hate the Reverse Jinx Owner. Without question, he's the absolute worst. If you are playing against him, he just toys with your head all day long, simultaneously getting your hopes up and then dashing them before you can even enjoy it.

I love hearing the Jinx Owner's one-sided conversations all Sunday:

"No way my kicker makes this. It's a 65-yarder! Man, that's like the other side of the field…wow! It went through!" Of course it did! You reverse jinxed him! And you did it on purpose!

"Hey, my running back is on the one-yard line, but its fourth down. That sucks, they never go for it on fourth – hey! They went for it! He scored!" Of course he did! You did it again! Knock it off!

"You really had a crazy day today man. Good game. I'll concede defeat right now. Seriously, no way my guy comes through on Monday Night Football."

One day later, I'm putting another checkmark in the L column, while this moron unknowingly rubs his miraculous win in my face: "I can't believe that happened. I really can't. You shoulda won, man, really. Your team played awesome. I bet you'll win next week, though. Man, that's so crazy I won. Can you believe it?"

No, a$$#@&%, I really can't.

Other owners annoy you just because you have to feel bad for them. Like the guy who drafts every single player on his favorite team. My heart goes out to the kid, but really, I don't have any emotional energy left to care.

Like my one buddy who's favorite team is the Dolphins. This year he drafted – in order – Ronnie Brown, Chris Chambers, Duante Culpepper, Dolphins D/ST, Olinda Mare, Marty Booker, Nick Buoniconti, Snowflake the Dolphin and had Don Shula take a break from coaching Briscoe High to lend his team some pointers. I wish I were making this up.

You want to try to stop these owners as they are destroying the next 16 weeks of their lives – because not only will their fantasy team blow, but there is the very real possibility that their REAL team will blow, too. And that is a double-whammy you just want nothing to do with. Avoid that one at all costs or else you will spend every Sunday on your couch in a straight jacket mumbling about blown assignments on the Cover 2 and how Ray Finkel was right all along.

You know what? I take back everything I said about those other owners. No owner is more infuriating than the guy who completely lucks into having a good team. No one. Having to listen to this idiot brag about the brilliant team he drafted while it destroys you is possibly the most demoralizing way to spend your weekend.

Oh, you drafted Dante Stallworth in the 13th round, before he was traded and you knew he was going to be good? You drafted Frank Gore in the 10th from the worst offense in the NFL last season because you envisioned his breakout year? Oh, you meant to start Jake Plummer but you hit the wrong button and started Jon Kitna the day he threw for 300 yards and four touchdowns? Man, you really did deserve to win.

It is just infuriating. At least when you're playing video games, you have a controller to whip across the room. Here, you got nothing.

This is why I can't go on. It's too much. I care way, way too much. I know this. I really do.

Do you know what I'm scared of? I'm scared of one Sunday deciding, much like OJ did, that I just love fantasy football too much.

The Back Page Brawl

Tommy McConnell **Rebecca DeHass**

Mac n' cheese or Ramen

Mac-n-cheese...it's the ultimate side dish. You can't make a meal out of it, but pair it with a couple hot dogs and you have the classic dinner. Especially if you are four years old and have your mommy there to cut it for you.

Ramen. Aside from the fact that it is a staple food for college life, Ramen provides you with 15 flavors. I don't know what tlalpeno flavor tastes like, but you can have it, fully cooked in two minutes. Why would you want anything cheese flavored when every meal in Baker comes with cheese?

Freeze or burn to death

Freeze. Not that freezing to death would be the most enjoyable experience, but it would be preferable to being lit on fire. Anything that involves loud shrieks of pain and melting flesh is something I'm going to avoid, thank you very much. I'll shiver for a few hours until I fall into a nice, cold-induced coma. It'll be like a really cold nap, and hey – who doesn't love a good nap?

Burn. I'm well equipped to die this way. I'm convinced I'm cold blooded, like a Gila Monster. Why? Seventy-five degrees or less, I require long sleeves. If the a/c is on in my house during the summer, I require a warm body and/or an electric blanket in my bed. I'll pass out from a little smoke inhalation, enjoy the heat and never know what charred me.

Kepple asks the tough questions!

Chris Shannon / Juniatian

Last week, President Kepple lended a hand in Baker before the Student Union dedication by asking students, "Would you like fries with that?"

Sleep alone or cuddle

Sleep Alone. Don't get me wrong, I appreciate company, but well…when I'm trying to sleep, I really don't need someone draped all over me. If I wanted a straight jacket, I'd ask for one. I don't want to have to deal with competing body temperatures and someone's case of the jimmy legs. There's a reason they make king size beds, ya know. And as for freezing to death? Well, that's what your 14 pillows and nine blankets are for, isn't it?

Cuddle. My roomie has THE greatest thing in the world – a love sac. Sounds dirty, I know, but it's the best cuddling accessory ever. It looks like a giant bean bag, but is actually filled with foam. It's a queen's paradise (and her king's if she wants/needs the body heat). You can sink right in, get tangled up together, immersed in the sac of love. This is ***exactly*** why Tommy will freeze to death. Alone, detangled, and sacless. www.lovesac.com

Instant or text messaging

Text Messaging. Hearing your ring tone every time you get a text is better than that ear-splitting, obnoxious ding on AIM. It's like a little game every time it goes off – wonder who it's gonna be!?!? (I was waaaay too excited there? Oh.) Then you get to type back in T9Word, which is always fun. What's that? You don't "get" T9Word? It's too "confusing" for you? OK, well then…you need to leave and we can't be friends. People who refuse to learn T9Word are the same people who walk on the left side of the sidewalks and say things like "Oh you didn't see that movie? The wife was the killer! Crazy, huh?" Go away. Now.

Instant. The last thing I want is something that fits in the palm of my hand telling me what word I want to type. This whole T9 or alphabet or "I want arthritis in my thumbs by graduation" technique is ridiculous. Give me a keyboard. I'll type what I want and how I want it, all faster than my stupid phone that thinks I meant "So thiStle is returnoH." Translation: So this is retarded. Eh, close enough.

Coffee or green tea

Coffee. I can't believe anyone in the world can just walk into a store and purchase coffee. I really can't. There should be an age requirement and you should have to pass a test, kind of like a driver's license. Coffee is like liquid crack, only more addicting. One cup and you are up and wide awake for the next 12 hours. Two cups and you are bouncing off the walls, mumbling to yourself and trying to get your hands to stop shaking. Three cups and…well, don't drink three cups.

Green tea. Once upon a time, my parents tried to switch me over to water. They said two gallons of green tea a day is a bad idea. I went into the worst caffeine relapse ever. I needed my drugs. Theory: this liquid is no longer something I need for a mere morning boost; it is what keeps my lungs inhaling and heart pumping. To test this theory, I took a sizeable dose of Ripped Fuel (caffeine pills for weight lifting with lots of green tea extract) to measure the effect. I fell asleep in class. The theory is now a law.

RECESS: four square or monkey bars

Four Square. Are you kidding me? This may be the most awesome game known to man. Four Square has the greatest rules ever and leads to conversation like this: "No shoe shiners! Back of the line!" "I didn't shoe shine! And that was on the line!" "No it wasn't! And you spiked it the last time anyways! We called no spikes!" "I didn't spike it! You've been carrying it anyways! Just cuz you're the king, doesn't make you the boss!" "Fine! Do-over!" "Yea! Do-over!" God, I love do-overs.

Monkey bars. Boys would chase me around the playground trying to kiss me, but they couldn't keep up with my upper body strength. The kissing game is as futile as Four Square. You know you own the playground when your hands are bleeding from going back and forth across the monkey bars so many times. I had blisters the size of my palms for three days. Everyone wanted to be my boyfriend. I freaking rocked.

Using Kronos

Is the new system paying off?

Aaron Shotts

This August, the Kronos electronic timekeeping system replaced paper time sheets as the way of recording work hours for student workers and staff, including Facilities and Campus Security. Although using Kronos has many benefits, it has met with objections from both the student workers and their supervisors.

The former time sheet method allowed students to keep track of their hours on paper and make adjustments before submitting it to their supervisors for approval. Kronos requires student workers to log in when they begin working and log out at the end of their shifts.

Some student workers said that their jobs make it inconvenient to use Kronos. Senior Marty Balaban tape-records sports events on campus and is not near a computer while he is working.

"You can't accurately log hours if you're not at a computer," said Balaban.

Junior Emily Fitzgerald said: "I still think it would be easier keeping track of these jobs on paper. I lose time logging on and logging off because I have jobs back to back."

Payroll Specialist Melinda Bowser said that one reason for the switch to Kronos was that students were not turning in their time sheets on time or were waiting until the end of the month to fill them out.

"Every time I did payroll, there were at least twenty students that didn't turn in all their paperwork," said Bowser.

This often resulted in students receiving their paychecks several days late.

Bowser also said that not recording actual hours is legally non-compliant and the College could be fined thousands of dollars if students' work hours are not properly recorded. The Kronos system accurately records work

Statistics question campus's safety

Increase in reported incidents due to better documentation

Maria Piazza

Although students know that the JCPD can now make formal arrests, the total number of criminal offenses on campus increased nearly four percent from 2003 to 2005, according to a Uniform Crime Report (UCR) released by Juniata Campus Security and Services.

The increase does not necessarily indicate that Juniata is becoming crime-infested, but crimes that are committed can be better documented, since arrests can be made. Before the 2004-2005 academic year, the Huntingdon Borough Police were responsible for any arrest made on campus.

There has been an increase according to the UCR statistics in the number of thefts, vandalistic acts, drunkenness and the number of DUIs on campus. With more vandalistic acts committed on and off campus, a greater need exists for more incident reports.

Dean of Students Kris Clarkson believes that the number of incidents reported indicate that students here care about what is going on and report things when they see them.

Clarkson also believes that the number of incidents will decrease once students become more aware of the JCPD's ability to make formal arrests and Juniata's standing policy on criminal offenses.

"Students know that we have a very low tolerance for violence at the school here. Our saying is: you punch, you pinch, you steal, you deal, you're gone. And that's at the first offense," said Dean Clarkson.

"Safety is one of the reasons that I chose this school. I didn't want to have the pressure of being in an unfamiliar environment while at the same time worrying about my safety. I like being able to walk around when it's dark and not having to worry," said junior Megan Kobuck.

RFS lodges dedicated

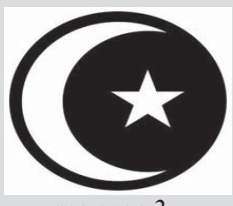
Christopher Shannon / Juniatian

On Oct. 21 senior Maggie Morgan and Madaline Perkins cut a ribbon to the dedicate the two new student resident new lodges at the Raystown Field Station as Board of Trustees Chairman David Andrews looked on.

Juniatians go for the green

Sarah Kotora

Juniata College has enlisted to compete against other colleges in a nationwide competition called the Ecomagination Challenge. The event, sponsored by General Electric and a division of MTV Networks, mtvU, asks colleges to submit plans for making their campuses more environmentally friendly. The winning college will receive an Earth Day concert sponsored by mtvU and a $25,000 grand prize to further its plan to create a more environmentally-friendly campus.



"Everything from behavioral changes to solar paneling and wind milling [could be submitted as ideas]," said Demetri Patitsas, president of Student Government. "It might be something as simple as [proposing that] we don't need receipts given to us every time we get something from Jitters or Café a la Carte."

The proposals will initially be

JC Muslim students share their culture and traditions

Christopher Shannon / Juniatian

Above, senior Imane Tounsi serves some food as part of the Muslim Students Association's "Can You F@ST" event. Below, juniors Subhi AbuAbbas and Rana Abduel-fatah prepare food for the event.

Devin Couillard

Ramadan, the holiest month in the Islamic calendar, is drawing to a close on a campus where 72 percent of students are from Pennsylvania, and the small town the College calls home has more than 26 Christian churches. This environment would not appear to be the most accommodating for the roughly 15 Muslim students on campus, but Juniata College has proven that untrue.

Senior Abdoul-Azize Seydou, brought to the U.S. through the Fulbright Scholarship Program from Niger, said that being a Muslim at Juniata really isn't as difficult as it might seem.

"To be honest, Juniata College has been a tremendous help for the Muslim community here at the College," said Seydou. "The College made arrangements such as making at our disposal a prayer room; allowing us to make meal exchanges during Ramadan; allowing us to take a day off to celebrate the Eid [holiday]; providing us with halal meat during Ramadan, etc….These are things for which we should acknowledge, as the other Muslim students in other schools may not be having these accommodations."

Junior Hafsat Musa Balarabe of Nigeria is appreciative of Juniata's work in organizing events and efforts to teach students about Islam.

"I think this is very important and a good way of sharing knowledge and accommodating Muslim students which makes them at ease and comfortable in the environment," Balarabe said.

The most recent event in Juniata's Muslim community has been the celebration of Ramadan, an Islamic holiday lasting for one lunar-calendar month. As a part of the holiday, Muslims refrain from eating, drinking and chewing gum from sunrise to sunset in order to better understand and appreciate the struggle of those living in poverty.

This year more than 30 American and international non-Muslim students fasted alongside their Muslim peers during Ramadan. The Muslim Students Association planned an event called "Can You F@st," during which non-Muslim students were encouraged to fast for a day and then break the fast over a Middle Eastern meal.

"Going to Baker after fasting all day is not the best reward," said senior Imane Tounsi, from Morocco, on why the students often chose to have the meal.

Tounsi feels that the turnout for the event was good, especially considering that Islam may be very different from many students' religion. She is hopeful that more students will be further involved with the Muslim community in the future.

Muslim students appreciated that their non-Muslim friends fasted with them, as it helped people to understand just how difficult it can be practicing Islam and being a student during Ramadan.

"It's hard for us to keep up with work," said Tounsi. "There's a lack of energy, and you feel thirsty during the day. But there's always this notion that that's why we're fasting: to feel what the poor people feel on a regular day-to-day basis."

Another student reported falling asleep in most of his classes during Ramadan because of the fatigue that comes with fasting.

Muslim students interviewed reported that they try their hardest and do what they need to do to practice their religion.

However, at the start of Ramadan, there were difficulties with accommodations for Muslim students. This year Sodexho was unaware of the start of the holiday, and halal meat, meat that is slaughtered according to Islamic law, was only available in limited quantities for several days.

Sodexho has responded to the needs and now has an ample supply of the meat.

Many students and faculty have found working with Muslim students to be very rewarding and personally educational.

"It has been a tremendous personal and professional opportunity to have had the chance to get to work with and to get to know so many Muslim students, often from diverse cultures and perhaps even diverse perspectives within their faith," said Kati Csoman, director of International Student Scholar Services. "Especially given current world events, the presence of the Muslim students has positively enhanced the campus community and our collective experience in better understanding the world."

The cultural exchange at Juniata works both ways, according to Seydou.

"[Living in a primarily Christian area] allows me to clearly see how Christians live," said Seydou. "That's good because this way I will not build in my mind false assumptions about Christians."

JoAnn deArmas Wallace, dean

JC hosts Western-Muslim relations conference

On Oct. 21, Juniata College hosted a conference entitled "The Future of Western-Muslim World Relations," a day-long event of speakers, workshops and discussions on how youth can take positive action to improve these world relations.

Organized by sophomore Sebastian Brown and sponsored by Americans for Informed Democracy (AID), the event was attended by over 90 college students from Juniata and across the east coast.

The summit's keynote speaker was Paul Wee, an officer in the U.S. Institute of Peace, a non-partisan but congressionally-funded organization.

"[The Western-Muslim relationship] is critical to understanding the world today," Wee said during his address, which focused on bridging the gap between Western and Islamic thought. "It's a matter of life and death."

According to Wee, terrorism is largely a byproduct of fundamentalist sects of Islam and not part of the religion's mindset.

The conference also featured an in-depth panel discussion focusing on interfaith dialogue and the overlap of faith and politics. The panel featured Mohammed Darabie, assistant professor of education at Defiance College; Mohammad N. Dowlut, president of the Islamic Association of Central Pennsylvania; Barry Shut, a retired Brethren pastor; and Belle Tuten, associate professor of history at Juniata College and faculty sponsor of the Muslim Students Alliance on campus.

AID is a nonpartisan organization that seeks to build a generation of globally conscious leaders in the U.S. who have a sense of global citizenship and responsibility.

The conference allowed Brown, a regional director for AID, to build a network of politically-aware students around the region. He also hopes to make AID a stronger presence on the Juniata campus.

"Everyone was so pumped about being able to mobilize with students from across the region to participate in a collaborative effort that can have results," he said.

The conference's participants have strong hopes of coming together to shape American foreign policy. "In the room we were all completely friends," Brown said. "But the problem doesn't lie within us, but within those who are in power. We have to bridge that gap."

The next AID summit is on "Global Health: Innovative Solutions to Healthcare in Low Resource Settings" and will be held at New York University. Apply to the summit online at http://www.globalscholar.org/globalhealth.

Meet Juniata College's newest professors: Part two

In the conclusion of this series, the Juniatian presents five more professors that joined the College's faculty this year.

by Jason Najarian

Henry Escuadro, assistant professor of mathematics, is one of the three new faculty members who joined the math department this year. Originally from the Philippines, Escuadro studied mathematics at Ateneo de Manila University. He then traveled to the U.S. to pursue his doctoral degree from Western Michigan University.

His research specialty is graph theory. It involves using mathematical graphs to establish relations in real life situations. "An example is a computer network. If you graph all the computers in a network, you can see what happens to the system if a specific computer goes down," he said.

Before coming to the U.S., Escuadro taught math at Ateneo de Manila. He was Officer-In-Charge of the mathematics department. "There is not much of a difference in the school systems" he said of the university in Manila and of Juniata. The liberal arts setting here is very similar."

Ronald Walker, assistant professor of mathematics, is also a newcomer to the math department. Walker's previous teaching experience at Ohio State contrasts sharply with the small setting at Juniata College. "I'm familiar with a variety of areas, and I think I bring another viewpoint to the mathematics."

Walker's research deals with complex variables. Complex variables are numbers such as the square root of negative one. These numbers branch off from the traditional real numbers. "Complex numbers provide features that real numbers don't. Some situations can be simplified by extending them into complex variables," he said.

Walker was the recipient of a National Science Foundation grant from 1998-2000 and again from 2002-2003 for his research.

Jennifer Bennet, von Liebig fellow in biology, comes to Juniata from her Ph.D. program at Duquesne University. Her position as fellow includes teaching introductory biology labs and classes, but focuses mainly on research. As a fellow, she has no advisees and is expected to split her time between teaching and research.

Bennet's main research topic is on bacterial genetics, particularly looking for industrial and pharmaceutical applications. She looks for genes and mutations in *Streptomyces coelicolor* that could prove beneficial to humans.

She has presented research at a wide variety of conferences, and would like more opportunities for undergraduate participation. "I'm going to try to start up research and conference opportunities for students," said Bennet. She encourages students interested in microbiology and microbial genetics to discuss doing research with her.

Polly Smith, assistant professor of sociology, comes to Juniata with a wide teaching background. She spent several years teaching in New York City where she encountered a diverse student body. "I've dealt with a wide variety of students from different backgrounds, international students, immigrants and people of various economic backgrounds."

Her research deals with criminal justice. Smith tries to examine both the sociological underpinnings and philosophical reasons behind the moral and legal issues in criminal justice.

Smith also has experience working with non-profit organizations and New York administration agencies. "I've worked with the New York City government in the Department of Corrections and Human Rights Commission. It lets me bring breadth and depth to the classroom," said Smith.

Gwendolyn Yoppolo, assistant professor of art and art history, specializes in pottery and ceramics. She originally studied sociology at Haverford College and elementary education at Columbia University. Yoppolo said, "I always used clay as a personal artistic medium, and eventually reached a point where I decided to change tracks."

After earning her MFA at Penn State University, Yoppolo worked on exhibits and at schools across the country. Many of her pieces deal with the natural world at the microscopic level. "The microscopic landscape is infinitely small and intricate," she said.

Yoppolo has also contributed a chapter to the "Passion and Pedagogy: Creation, Transformation, and Relation in Teaching," a book "about how teaching relationships can be a transformative process," Yoppolo said.

MRSA outbreak:

Fact or fiction?

Caroline Weisser

Rumors are flying around campus that some student-athletes have contracted methicillin-resistant Staphylococcus infection (MRSA), otherwise known as a staph infection.

Nurse Connie Peters confirmed these rumors, but could not give specific numbers or details, citing patient confidentiality. However, she said there is no reason for panic on campus.

Sophomore Matt Werle, a member of the men's volleyball team, recently contracted the MRSA infection. Werle emphasized that "people need to be extra careful with practicing good hygiene. It is better to be safe than sorry. This is a painful infection and very serious. It is not a joke."

However, this is not the first time MRSA has hit campus, both the nurse and Werle explained that there have been previous cases on campus. However, Werle praised the efforts to inhibit the spread of MRSA.

"The athletic staff is doing everything in their power to prevent staph infections," said Werle. "I know entire buildings have been disinfected as well as bathrooms."

Reiterating Werle's comments, Peters also encouraged students to practice good sanitation.

"As long as people use good hygiene, they should be okay," Peters said.

She advises people to avoid sharing towels, washcloths, soap, razors and other personal items that could spread MSRA.

Health professionals commonly classify MRSA as a "superbug," or an infection that is resistant to even the strongest forms of antibiotics, making many people on campus concerned.

Left untreated, the infection can lead to Toxic Shock Syndrome, pneumonia, blood infections, infections of the heart and even death.

However, if the infection is found early, it can easily be treated. Students are advised not to ignore any ongoing symptoms of infection.

Werle explained his initial

continued on backpage

Q&A with Food Services

Nick Carney

The Juniatian recently sat down with Director of Food Services Hal McLaughlin to talk about Sodexho-related issues.

The meals in Baker seem to be repetitive. Is there some cycle that determines what meals get served when?

"There is a menu cycle that is based at our Sodexho Campus Services Division. From there, they custom tailor [the menus] down to regional areas like northeast, southwest, etc. It is a 16-week cycle. It seems like there is repetition, but there really isn't as much as you might think. There is something called a protein grid that allows me to substitute as long as it is the same protein. For example, I can substitute chicken nuggets for chicken patties—that sort of thing. In the old days I couldn't do that; if you guys wanted chicken nuggets every Thursday, I couldn't do it. But it's much better now with this new system. "

Is there anyway to change what meals are featured in that cycle?

"Our chef has actually been promoted to district chef. He's very talented, Patrick [Executive Chef Patrick Goodman]. He's actually been invited to help [Sodexho Campus Services Division] tweak the menus because he has such a good read on it. He kind of knows what the local favorites are and tries to get them on the regional menus.

Students can also get on the Student Food Committee. At the beginning of the year we signed up 25 people. It was a record; we'd never had that many people sign up before, but only three showed up at the meetings. But anyone wanting to take a more active role in deciding what kind of items get featured on the menu can e-mail chef@juniata.edu and get more information. If you're on the committee, you get lots of free food, too. Patrick is always cooking something new for them, desserts especially."

Why are some things covered under meal exchange, like salads and sandwiches, while other things are not, like mozzarella sticks?

"Well, it all really boils down to cost. Mozzarella sticks have a higher retail cost than those other items [that are available on meal exchange], so they're not covered under the price of a meal exchange. We do try to give an ample selection of food. I mean you have burgers and subs and salads; all kinds of things. But, really, Muddy Run was never designed to function as a second cafeteria. I mean, in the old days it was a cash-only operation, and now it's completely different. So I think we do a good job with what we have. And like I said, we do have a very wide selection."

How do students determine how much money and how many meals remain on their cards?

"Students can come down [to the Sodexho office in the basement of Ellis Hall] anytime and check their balances. I just did three of them today already. It's not a big deal. Don't hesitate to come down."

Can students add money to their accounts the same way?

"Yes."

Why is it that the juice machine always seems to be broken or out of juice?

"I just asked Pepsi about that. They're working on it."

You often place comment cards from students on the board in front of Baker. Do you ever get any ridiculous ones?

"We get a ton of weird ones. If they're asinine I just throw them out. You wouldn't believe some of the cards we get."

Which comment cards do you display?

"If it's a good, constructive [criticism]. Anyone that truly wants to know an answer or wants something specific. People wanting things like soy milk or lactose-free milk—stuff like that we'll put up."

What are some of the most popular meals at Juniata?

"Chicken, anything chicken. Chicken patties, chicken nuggets; if it's chicken, it's popular."

Sodexho Statistics for 2005-2006

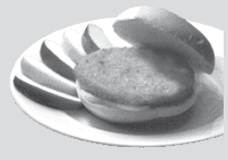
According to Hal McLaughlin, the following amounts were consumed and/or used by Juniata students during the last academic year.

478,272
Total paper napkins used

13,160
Bowls of cereal

153,000
Portions of scrambled eggs

6,750
Pounds of mozzerella cheese atop pizza



27,200
Hamburgers (That's 6,800 pounds of meat, or 14 cows!)

31,040
Pounds of McCain potato products (hashbrowns, fries, etc)

2,208
Gallons of regular ice cream (Mint chocolate chip was most popular with 252 gallons consumed followed by cookies-n-cream with 246 gallons)

905
Gallons of soft serve ice cream between mid February and May

1,240
Pounds of chicken patties eaten in ONE record setting day last April

Being Muslim at JC

continued from page 2

of the Center for International Education, has been a key figure in connecting Juniata to three programs that have helped to bring international Muslim students to Juniata.

Juniata's Muslim students were sent to the U.S. through several high-profile international study programs. Some came through a government scholarship program called the Partnership for Learning Undergraduate Studies (PLUS), which brings students from the Middle East, North Africa and South Asia to the U.S. to complete a bachelor's degree from a college here. Five others are here through the Fulbright Scholarship Program for Africa, which is also sponsored by the U.S. Department of State. One student is studying at Juniata through a program geared to help Afghani women further their education, called the Initiative to Educate Afghan Women.

Other Muslim students from abroad are here not through any program, but simply made a choice to come to Juniata on their own.

EcoChallenge

continued from page 1

judged on three criteria: the imaginative nature of the proposal, the level of environmental friendliness of the proposal and its economy. According to the contest coordinators, the benefits of the innovation must be greater than its costs.

Ten finalist schools will be announced on Jan. 15, 2007, and those chosen will go on to compete on mtvU for the grand prize.

The grand prize winner will then be chosen by mtvU viewers.

In addition to the written proposal, colleges entering the contest are required to submit additional materials such as videos, games or other extra materials to further refine their proposals and increase their chances of winning.

For this extra something, Juniata is working with the IT department to create a film that asks Juniatians what sustainability means to them.

"It is really an opportunity for a lot of disciplines to be able to offer and relate and make a contribution to it, because it is such a broad scope," Patitsas said.

According to Patitsas, other colleges and universities are finding five or six of their best and brightest students and leaving it up to them to enter the contest.

Juniata is doing it differently by trying to make it a campus-wide effort.

"There is no real criteria for how many people you can have," Patitsas added. "[So] we're just going to have everyone's name and their POE and where they're from, so we can demonstrate that this wasn't just something that four or five people came up with. This is a campus-wide effort…I think it is a strength that Juniata has and we can move a little more quickly and are more flexible than other schools."

The process of including the entire campus in this challenge begins with open forum meetings about it today from 2:30-5:30 p.m. in the Sill Board Room in the von Liebig Center for Science and in the Halbritter Center for Performing Arts.

There will be a base presentation explaining the details of the competition. Then every table at the forum will become a team, and all of the teams will produce innovative ideas and share them with the rest of the forum.

After the forum, the teams will share their ideas with the rest of the campus, and the campus will vote on them electronically. Whether the final proposal includes a single idea or portions of different ideas, it is completely up to the voters.

Patitsas hopes that Juniata's method of getting everyone on campus involved in the challenge will give Juniata the edge it needs to win the competition:

"It's such a nice project that it really doesn't take much to convince people," said Patitsas. "It really is a good cause. It's exciting. It is an opportunity for some real notoriety and publicity for the College and anyone associated with the project. From PR to producing video to helping out with the forum, they're going to reference [Juniata College and its community spirit] when we win it."

Kronos: Is it paying off?

continued from page 1

hours and automatically tabulates them, ensuring that students are paid on time and that there are no errors on the time sheets.

"With Kronos you don't have to worry about someone not being paid accurately," said Bowser.

A consequence of this security feature is that students cannot make changes or corrections to their time records. If they forget to log in or out at the correct times, their supervisors must make changes to their accounts.

Enrollment Assistant Norma Jennings, who supervises between 45 and 50 student workers, said: "I was constantly readjusting time sheets. It probably took me three full working days to reconcile everyone's time card, and I just don't have that time."

Some students with multiple jobs on campus experienced confusion using the transfer button which allows them to choose which job to log on to.

Jennings said that because students sometimes logged work time on the wrong account number "some departments were being charged for other departments' work."

Payroll Manager John Alfano said that students' unfamiliarity with Kronos has caused many of the problems. He said that the adjustment issues should decrease once students and supervisors become more comfortable using the system.

"There was a huge learning curve. …Let's look at it again in a few months and see if we have the same issues and the same frustrations, which I don't think we will," said Alfano.

"We don't want Kronos to be a burden... We are definitely open to any input, good or bad"

Initially many computers were not updated with the JAVA scripts necessary to run Kronos, hindering students from logging on. All computers have since been updated.

Many students also faced the difficulty of finding a computer and logging on to Kronos in time to begin their shifts. To solve this problem, computers called kiosks have been placed in various locations around campus where many student workers need to use Kronos, such as the library and enrollment center. These computers are used only for Kronos ensuring that the machines are not occupied by studying students when needed.

"We don't want Kronos to be a burden; we want it to be convenient. …We are definitely open to any input, good or bad," said Bowser.

Bowser and Alfano encourage students or supervisors to contact them with any issues or problems concerning Kronos.

Thumb's up & Thumb's down to the highlights of the past two weeks

Thumb's Down: to the person who stole the Early Childhood Education Center's "Mr. Slow," a "plastic green man with a red pennant flag" that the staff places in the roadway to caution drivers to slow down during times when children are being dropped off or picked up from the Center. If you see the culprit...don't slow down. Run that kid-hating thief over.

Thumb's Up: to a New York-less World Series. That's right. This year it's *not* "up to you, New York…New York!!"

Thumb's Down: to the lighting in Muddy. Maybe they're keeping it dark so that we can't see what we're eating. That's either brilliant or diabolical. We can't decide.

Two Thumbs WAY UP: to the football team for ending the drought and delivering on Homecoming. The 34-9 final gave Coach Alt the first victory of his Juniata career. Congrats, Coach. May this be the first of many.

Thumb's Down: to Juniata's administration for scheduling Family Weekend and Homecoming on the same day. This is taking multi-tasking way too far. What's next? Juniata celebrates MountMadrigalRoastFest next Thursday?

Thumb's Up: to the "Straight Talk" panelists for speaking out on issues that shouldn't be kept in the closet.

Kevin Dundore / Juniatian

Adopt a what program?

Caroline Weisser

Despite having existed for a number of years, the Adopt an Officer Program leaves many Residential Life staff members scratching their heads. Few residential assistants are familiar with the program or its purpose.

The program assigns an officer of the Juniata College Police Department to a residence hall. The officers then work with the residential directors and other Residential Life staff on safety and security issues during the staff meetings, said security officer and office specialist Carla Panosetti

Despite the program being largely unknown to student residential assistants, many residential directors have found the program to be very beneficial.

South Hall's RD, Eric Simeon, has found the program to be very helpful in his second year at Juniata. He said that the program helps establish a "better rapport between residential life and security."

Simeon said that the relationship between security officers and the campuses they protect can often prove to be difficult or unfriendly.

According to Simeon, who has worked at several urban colleges, the rapport between security and residential life is much different here.

"It was kind of like dealing with a robot," Simeon said. "Security [at Juniata] cares and they are set on making the campus safe."

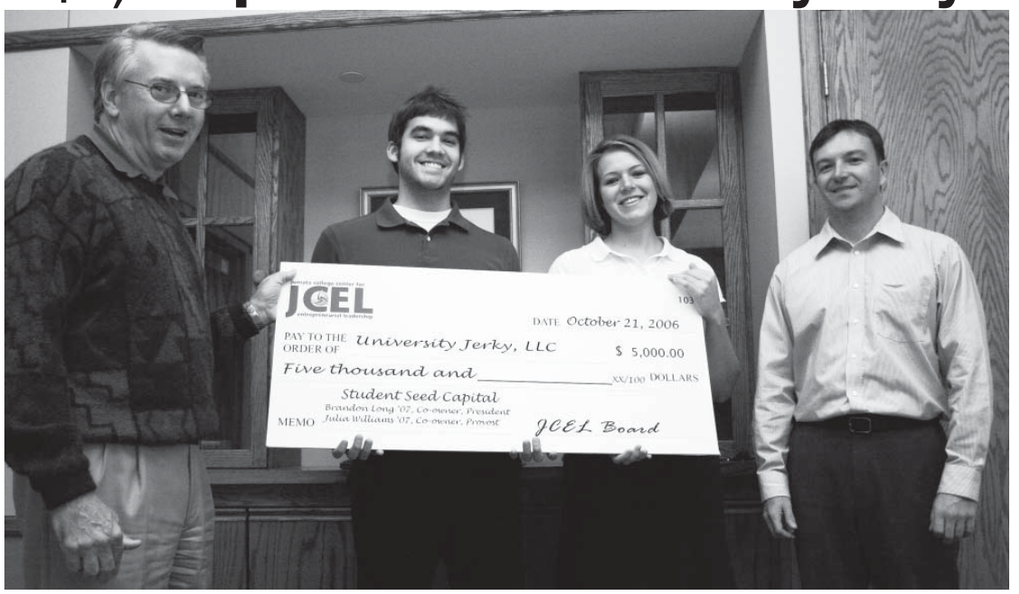
Panosetti said that the officers try to get to know the residents in their hall, but with only six full-time and two part-time officers, the department has fewer staff this year.

Despite the smaller staff, Panosetti said students are "[always] welcome to stop in and chat with the officers." In the end, according to Panosetti, creating a healthy security-campus relationship is what the Adopt and Officer program is meant to do.

Campus security

continued from page 1

Despite the increase in incident reports, JC security officials say that the campus is still a safe environment.



"The school is relatively safe. The numbers of incidents have increased, but the number of offenses that occur here compared to other schools is significantly lower. In addition, we have lowered the amounts of other incidents such as burglary and assault that were already quite low," said JCPD officer and Security Office Manager Carla Panosetti.

From 2004 to 2005 UCR, the number of burglaries at Juniata decreased from six to four. Elizabethtown and Chestnut Hill, Pennsylvania colleges of a similar size, reported yearly occurrence of burglaries in the twenties, according to their UCRs.

Juniata's statistics from the UCR indicate that from 2003 to 2005, eight incidents of assault and 78 incidents of vandalism have been committed. The Juniata College Office of Safety and Security is determined to decrease the number of offenses committed.

To see Juniata's UCR statistics, see http://services.juniata.edu/security/crime.html.

$5,000 presented to University Jerky

Christopher Shannon / Juniatian

Seniors Brandon Long and Julia Williams accept a check for $5,000 from the JCEL Board Seed Capital Committee for their business University Jerky, LLC.

Ashley R. Appleman

Show your school spirit with a spicy beef stick in a blue and gold wrapper. University Jerky, the pet project of seniors Brandon Long and Julia Williams, received $5,000 from the Juniata Center for Entrepreneurial Leadership (JCEL) to cover the start-up costs of their company. The ceremony was held Oct. 21 in the Sill Board Room.

University Jerky is a limited liability company that is marketing unique beef jerky products to colleges and universities. The products will be packaged to sport respective schools' colors. University Jerky plans to sell their products at Juniata College and Penn State University. However, the jerky market is open for most colleges and universities.

Long and Williams have been collaborating on University Jerky for the past six months. Assistant Vice President of JCEL, Dr. Michael Lehman, said that "Brandon brings the marketing creativity. Julia brings the accounting expertise, and they both bring tremendous entrepreneurial energy."

By combining their skills, Long and Williams have developed a sound business plan that attracted JCEL's attention and secured them the "big check" that could pay bigger dividends in the future.

Walking for peace

Christopher Shannon / Juniatian

Students walk up the 18th Street walkway from Ellis Hall at the start of the Peace Walk on October 12. The walk was organized in support for the creation of the Department of Peace by the U.S. government.

- Student Affairs Career Day: 9 a.m.-1 p.m. at Slippery Rock University

Breaking students down over break

EDITORIAL

As students loaded up their cars for fall break, many were dismayed by the weighty burden of their backpacks. Assignments over fall break prevented students from achieving the necessary intellectual rejuvenation. According to English professor Carol Peters, fall recess is supposed to be a "helpful brain break."

But a common complaint among Juniata students is that professors can no longer grant breaks. Why else would a professor handout an assignment the day before fall recess?

Professors no longer wish students well as they leave, but instead hand out an extended assignment, a paper or study sheet for the mid-term that will be taken the first few days back from break.

One student said a professor handed out a midterm review sheet with 70 terms and a series of questions and then told the students, "Don't worry about it until after break." Apparently at JC, professors have no concept of time if they think students would be able to complete the review sheet after returning to campus and before an exam the next day.

"I don't mind studying when I'm here, but breaks are designed for a reason," said sophomore Jess Kline.

Most students struggle to balance work as it is and count on breaks to give their synapses a much-deserved rest.

Peters explained that the "logic" behind fall break was to allow students to relax and "refresh their minds" so that they would be ready to dive back into JC's rigorous academic schedule after the respite.

"It's better to have a break than a breakdown," said Peters. There are only so many days that the mind can process "Paradise Lost," Immanuel Kant or cell bio before it reaches overload and student apathy sets in.

Some students felt so overburdened with work this fall break that they opted to stay on campus rather than go home.

After staying on campus to study for several tests over break, sophomore Liz Schmitt said, "My brain can't take anymore! I'm saturated."

In the current system, fall break is just a built-in research weekend. The College shouldn't give students the illusion of reprieve when the professors only plan to pile on the work. It's not called fall study!

Many students also look forward to fall break as a time to catch up with family and friends. Filling a social or familial void is an important fall break benefit. It's difficult to shoot the breeze with a laptop attached at the wrist or a book to the nose.

Freshman Emily Gray said, "It was the first time I had been home and I just wanted to spend time with my family."

The solution to all these problems is simple. Break means break. Let your students relax and enjoy themselves.

Professors, if you are so concerned with pursuing academics, here's an assignment for you: research "fun" and then go try to have some.

Fun is an abstract concept and may be difficult to define, but you probably knew what it was when you were college students. It's a concept worth re-investigating. It will give you an appreciation for your students and who knows, you might even learn something in the process.

Life off-campus: I never thought adulthood would be so fun!

Mary Gardiner

Many of you know by now that I was abroad for the entirety of my junior year. It goes without saying that during that year, a lot has changed at Juniata. But it's this year's living arrangements that has really made things—well, unique. Allow me to share.

Six of us live in a ridiculously large house—nicknamed *Ze Grand House* by its inhabitants—with living rooms and dining rooms and porches to spare. There's a somewhat spacious kitchen furnished with a dishwasher *and* a gas stove. (I know all of you Hess-ites are jealous.)

Even better than that is the fact that I no longer have to share the 150 square-foot jail cell with another person I barely know—or barely like. Instead, I am privileged enough to share a living space with the lovely Ms. Ibada Wadud, entirely of my own volition.

(In fact, not only do we voluntarily share the coolest attic room in Huntingdon County, but we are currently sleeping in the same bed. As nice as it is to have one's own sleeping space, I would take our cozy full-size over those despicable bunks any day.)

We have everything: freedom, a bathtub, digital cable and breathing space.

Space is a beautiful thing. Space, as in four stories; space, as in two porches larger than a room in South; space, as in a place to communally consume our own homemade meals that we made in the space for preparing said meals. Space, as in extra couches and mattresses for guests—both current students and alumni—to sleep in.

But life off campus isn't all roses and marshmallows, guys. I shouldn't give the wrong impression. It's cold—we keep our ther

My grocery expenses will have been less than a fourth of the cost of a meal plan at Baker

mostat at 60—and even lonely sometimes. (Aw.)

And those homemade meals? While the taste of Baker wanes in comparison to the flavor of Charlie Bowerman's freshly baked banana bread or Dana Nelson's mom's homemade Chex Mix, there are moments that I can do naught but retreat to the TV dinner or buttered toast. It's been over two months since I've been back at school, and I can count on one hand the number of meals that I haven't cooked for myself.

The most pervasive stressor, though: money. It has really proved itself worthy of the title, "Root of All Evil" so far this semester. When it comes to the moolah, six people can do a lot of pushing and pulling. Whether it's about the cable bill, or the costs of our communal supply of milk, eggs and other necessities, sparks fly when housemates don't pay up.

At the same time, living off-campus has saved me a lot of dough. My semester's rent is only two-thirds of the total cost for one of the cramped rooms on campus.

Making my own meals is an even bigger save: whereas on campus, a semester's plan is somewhere between $1600 and $1800, my projected total grocery expenses are going to be less than a *fourth* of that.

That means total savings approaches $2000 per semester. Since I'm a student who bears the entirety of Juniata's cost, that's pretty important.

All in all, the mile-and-a-half commute (which I make every day once or twice on my road bike) and the extra half-hour that I spend on breakfast and making a bagged lunch every morning is worth the savings.

But what's more, no price tag can be put on the freedom—and the cozy love—that we have at Ze Grand House. It's a step in a series of many in the direction of adulthood; one that I've really enjoyed taking.

Editor's Note: Any student interested in living off campus in 2007-2008 should contact the Office of Residential Life before signing a lease with a realtor. Not all requests for off-campus housing are granted.

Students protest against nuclear weapon testing and each other?

Ibada "Bobby" Wadud

The communist state of North Korea (D.P.R.K.) is dictated by one man, KIM Jong-il, whose personal history remains virtually unknown, while military exploits dwell in the global spotlight.

North Korea's recent successful test of a nuclear weapon has startled bordering nations of South Korea, China and neighboring Japan. The United States' has proposed stiff nonmilitary sanctions, which have been adopted by the United Nations Security Council.

"I feel safe here... knowing that North Korea would be a foolish to jeopardize it's relationship witih China

The regime in Pyongyang is resolutely communicating with the rest of the world, cringing at the mention of negotiation like it's a swear word. "Declaration of war" and "merciless blows" are the headlining phrases that North Korea chose to use in order to convey its stance toward the United States and other nations; however students suppose that with such widespread opposition, North Korea is perhaps a lesser threat than the North Koreans would like to suggest.

Yuko Kanomata, from Japan, is at Juniata as an exchange student.

"I am against it," she said. "I don't know why North Korea carried out…the test, but it's like [they] want to be paid attention to."

BAC dedicates Dale Hall

Christopher Shannon / Juniatian

Irene Dale cuts the ribbon to officially open Dale Hall, the new Information Technology wing on Brumbaugh Academic Center.

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Presidential Perspective

President Kepple wants to hear from you! He uses his column to answer any college-related question. Simply e-mail questions to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

"Is there any possibility of having DCB at local restaurants, Sheetz, fast food, etc? Many other schools do this, and it would be an awesome improvement for student meal options here."

Yes, we are exploring this opportunity. There are issues of technology and the exact financial agreements, but there are possible solutions for businesses in town that would be willing to offer the use of DCBs to student customers.

"Students frequently complain about Baker food. We have seen some changes, but will we see a change in food service companies any time soon? How long is the current contract with Sodexho, and how much does Juniata pay that corporation annually?"

We have a year to year contract with Sodexho but we have no plans to change contractors at this time. I do eat in Baker and Muddy Run several times a week and find the food to be pretty good. There is a Food Committee that has 24 members, but usually only a couple show up for the meetings. I think those students with suggestions and concerns should either join the committee (see Hal McLaughlin) or at least pass their concerns on to a committee member. I'll ask Hal to post the members' names at the check in.

We do not generally divulge contract amounts.

Nuclear weapon testing

continued from page 8

One student, who wished to remain anonymous, described D.P.R.K. as "a suicidal regime… an ant against an elephant."

Lyndsey Biddle, who graduated from Juniata last May, currently lives in Shenzhen, China, near Hong Kong.

"The news here is always regulated so I never know if what I'm hearing is the whole truth, but…I have talked to some Chinese about the situation in North Korea and they have all said that they do not agree with [the aforementioned] actions," said Biddle in an e-mail. "They feel the Chinese government is also against North Korea's nuclear tests, and that…the problem will not escalate."

Additional insight regarding the sentiment of surrounding countries was offered by junior Matthew Katz, who is studying in Japan this semester.

He described the Japanese as a people who "never really show any emotion concerning these things," but personally believes that North Korea's test is "not a good step."

"We Japanese just aren't used to showing our feelings," Kanomata explained. "It doesn't mean that we didn't get upset about the recent test. It is just a misunderstanding."

Across the board, it's shock and disapproval that is driving campus discussion, keeping in mind that North Korea is unlikely to cower just yet.

"China is basically North Korea's best friend and biggest trading partner," said Biddle. "I feel safe here, as do the Chinese I've talked to, knowing that North Korea would be foolish to jeopardize its relationship with China."

So maybe peace of mind lies in reading the text below the headlines as well. Maybe personal security lies in educating yourself by talking to your neighbors. As an American student in Japan or as a Japanese student in Pennsylvania we all have our opinions as individual people.

"Before, when North Korea tested a missile, it passed over Japanese sky. It was near the area where I lived. It was horrible," Kanomata said. She added that she believes the "world is against this," but that just may overextend the boundary of personal views, or even those of our little liberal arts campus, and cross into large-scale, international opinion.

Nuclear testing is scary when it stands mysteriously alone, and intimidating when it floats around without circumstance, yet when accompanied by a factual context it becomes less blurry.

'airstonewater': A naturally beautiful theatrical production

Photos by Elena Amato

Performers twirl, swing and splash in airstonewater, an original production currently playing in the Suzanne von Liebig Theatre. The show, which incorporates aerial trapeze dance, water play and contact improvisation, runs tonight, tomorrow night and Saturday night at 7:30 p.m. Tickets are available at the Information Desk: $3 for students and $7 for general admission

Sarah Roby

It's dark. You hear footsteps crossing the floor. The performers are dispersing all around you. Lights slowly spotlight two strong figures suspended gracefully from hanging trapeze. The show is beginning. You take a breath. Unsure of what you are about to witness, you are ready nonetheless. You are experiencing airstonewater.

airstonewater is the Juniata Theatre's performance in collaboration with The Gravity Project. On October 19, in the Halbritter Center for the Performing Arts, the opening night stunned the audience. This original piece was choreographed by co-directors Nathan Dryden and Erica Kaufman with eight students.

Unlike most shows where a script has already been written and edited, separate pieces flow together to create the entire performance. The script was designed as the students learned new ways of dance and movement, such as aerial dance. The exception, one duet previously choreographed and now performed by Dryden and Kaufman. The cast has been rehearsing for six weeks. Some of the students have also had previous intensive trapeze training sessions last spring.

"It is a performance unlike typical theater. There is no plot. It is all based on movement," said Junior Jesse Parsons. Parsons enjoyed the originality of airstonewater and described the process as being "created from the ground up."

From the very first beat of music to the last chant of the finale, airstonewater engages all senses. The soundtrack combines many elements of music, ranging from the chirping of birds and droplets of rain to symphonic melodies and vocal chanting. There are also several places throughout the show where poetry is woven into the

The Naked Truth: Why sex is the best sport

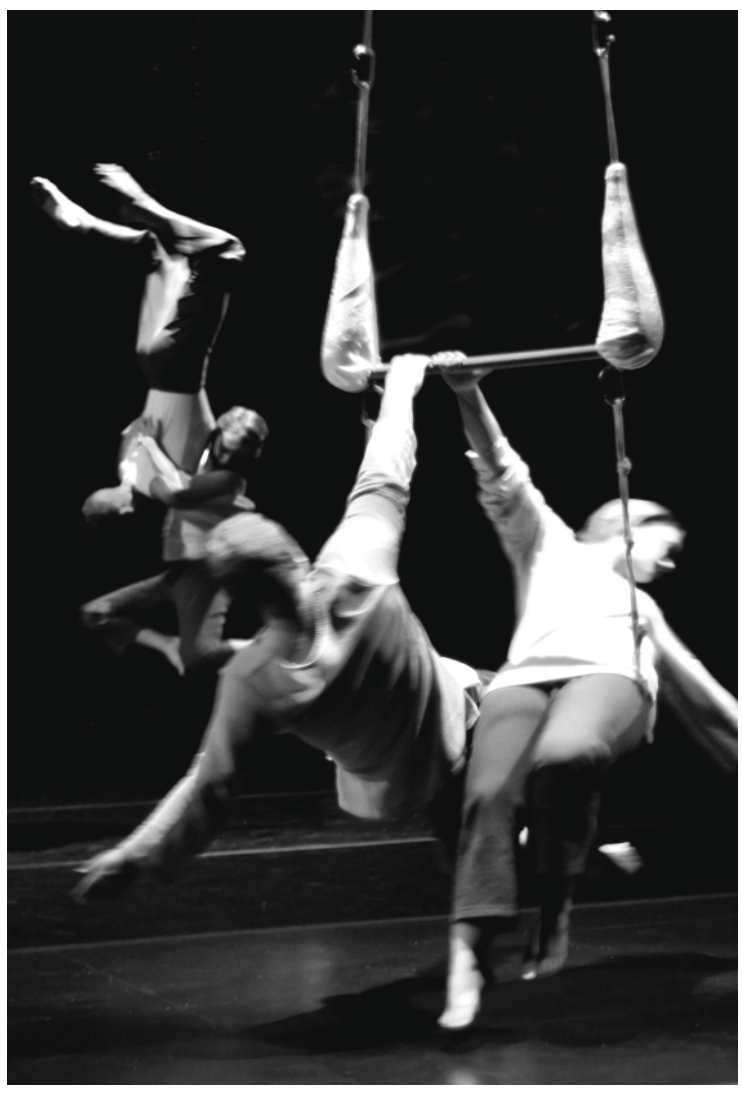
Rebecca

It's not that I don't like football. Honestly, I do. Watching the action on TV is enough for me. (Apparently that's enough for some other people too.) It's rough, it's dirty, and gets my adrenaline pumping as I eye up the quarterback. What I don't like are the time-outs, clock stopping and flag throwing that knocks the fun out like Anthony Morelli. Do you have any idea what you could accomplish with all the time that drags by?

So what if a player used a "bad" technique while form tackling? I happen to like things out of the ordinary play by play. A little brush burn to the knees is worth it.

The rules are simple: respect your opponent and slap one another's backsides occasionally. Even without this easy to follow rulebook, there are a ton of arguments for why football is good but sex IS the best sport.

What uniform? You and your "opponent" both come fully equipped for head to head competition, unlike football where you need to suit up. A little head damage never hurt anyone. Helmets are good head gear, and we all know frontal protection is in the best interest of every player. Their best asset is the one that isn't padded by styrofoam.



Hey Mickey! You are the cheerleading squad, and unlike football you can cheer about whatever you'd like. If you want to stick with a sporty themed cheer, "KEEP IT UP! KEEP IT UP! KEEP IT…" is always a good fall back. NOTE: chants consist of a short phrase repeated about three times, typically shouted. There is usually a motion assigned to each cheer. If you can't handle this, stick with the wave, just remember to synchronize. There's no penalty for excessive celebration!

I play tackle. What position do you play? Isn't it boring to be in one position for your entire athletic career? Sex is so much more accommodating to those of you who don't fear change. I mean, you can switch positions whenever you want. I'm all about versatility, it makes you more marketable. If someone asks, at least name a position that makes you sound like you play a skill position—like "missionary" or "on my knees." It sounds much cooler to say "I'm a rocket sled" versus "I'm a defensive end." For practice, he can use the swim move and I'll work my spin technique.

Don't bother with boundaries. There's a specific field with football, but with sex, you can go anywhere: bedroom, roof, cave, or junkyard. Have a home or away game whenever you feel like it. Most importantly though, you have to be the referee for your opponent and tell him when he's in and when he's out—it's the fair thing to do. Then again, maybe you want draw some lines. They'll be tasty if you make them out of whipped cream.

Don't start the clock. In football, you only get 60 minutes, but a lack of restriction can benefit people who need two practice kicks before making that game winning field goal. It could end with that moment when "It's up! It's good!" Have patience, time is on your side. Also, there are no official time outs, but if needed you can always have a pep talk off field to get yourself pumped up again.

continued page 13

Students' voices heard campus wide in speech and song

Analyzing the effects of the media on society

Mike Chirdon

On Thursday, October 19th Juniata students and faculty gathered at the Soapbox Speeches to answer the question, "How does the power of media and technology in today's world affect us?"

Grace Fala opened the event by explaining the history and the goals of the Soapbox Speeches. The first event was held in 1992 to give students an open forum to discuss the presidential elections of that year. Fala said, "It is our way of celebrating democracy and the right of free speech." With that, she invited the students to share their speeches.

Several students read poems, shared personal stories, and delivered speeches about media and technology. Speakers expressed a variety of opinions about advancements in technology. Some students said that advancements in technology have improved our lives by helping people communicate with each other more easily. Other students warned the audience about the ever tightening grasp that the media has over our lives.

SPEAK president, Amanda Albanese, talked about the technology that allows her family to keep in touch with her. "The other day, I got an e-mail from my aunt. It was sent at 5:30 a.m. You can bet that while she was typing, I was sleeping."

Laura Rogers read a poem that she wrote in response to the fact that all of the major media outlets in the United States are owned by only six different people. Her poem challenged the audience to be skeptical of the things they hear and to broaden their horizons in the quest for knowledge.

Jason Hoover gave a speech about the double edged sword of technology as it relates to campus sustainability. He noted that many technological advances have helped make Juniata's campus more sustainable. However, he said that it is important to learn how to live sustainably without this technology because it is not found everywhere. Juniata's goal is for its students and graduates to live sustainably even when they are not on campus.

Tina Leavesley closed the speeches, reminding the audience of the importance of face to face interaction in the digital age. "Even something as simple as a handshake," she said, "can help people remember who you are."

Christopher Shannon / Juniatian

Above, juniors Tara McMinn and Kelly Popernik give their soapbox speech about technological advances over time.

"Keeping Mum" buries the competition

E. LaBrecque

What would your life be like if everything that ever bothered you vanished without you having to lift a finger? In the British comedy "Keeping Mum" a dour vicar and his disgruntled family find that you can easily be rid of yappy dogs, school bullies, and lecherous men--but only if you don't mind a little murder.

Little Wallop is a sleepy, English village whose biggest celebrity is the reverend. Rowan Atkinson is nothing short of divine in the role of Vicar Walter Goodfellow. Fans of Atkinson from his days as Black Adder or Mr. Bean may be surprised, but certainly not disappointed, by his portrayal of the holy man who has turned away from his family by turning to god.

The vicar's unsatisfied wife, Gloria (Kristen Scott Thomas) lets the audience know that this is no overly pious family when she drops the F-bomb during her first minute on screen. Their daughter is off being wildly promiscuous, while their son is being harassed and beaten by school mates. The vicar is busy composing dull sermons and trying to dodge the nosy neighbor in her attempts to chat with him about the Flowering Arranging Committee. Gloria has to keep it all together while maintaining an affair with her golf instructor, Lance (Patrick Swayze) on the side.

Patrick Swayze is a little too good at playing the creepy, argyle sweater clad lover boy. Maybe it had something to do with the fact that the man has had so many facelifts and fake tans that he now resembles one of those toy trolls. In one scene, he strips down to a metallic man-thong, and I half-expected to see a large rhinestone glinting from his navel.

Just when things couldn't get any crazier, God bestows a little Grace on the Goodfellow family. Maggie Smith (better known to Harry Potter fans as Professor McGonagall) plays Grace Hawkins, the wittiest and most willing-to-please housekeeper you could ever ask for. Grace has a way of making good things happen and bad things (including people) disappear. If you aren't suspecting something sinister at this point, you've clearly not cottoned on to the ways of British comedy. Know this: if you enjoy dry, dark, tongue-in-cheek humor, then you, like I, have been waiting too long for a film like "Keeping Mum."

While this film's story line is predictable, it remains laugh-out-loud entertaining, thanks to great dialogue and superb casting. Unfortunately, you won't be able to walk down to our local theater and ask for tickets to "Keeping Mum". You can, however, make your movie going experience into a little road trip and catch the film at the Garman Opera House Theater in Bellefonte. Whatever price you pay to see this film will be well worth it.

"Keeping Mum" is MPAA rated R for language, sexual content and some nudity.

A celebration of women in literature

The fourteenth annual Unlock Your Voice coffee house, a celebration of women in literature, will be held on Friday, November 10th at 8:00 p.m. in Ellis Ballroom.

This year's event is dedicated to Dr. Ester Doyle. Doyle taught English and theater at Juniata from 1945 until her retirement in 1975. She remained active in the College community until she passed away this August. Professors Judy Katz and Grace Fala will read some of Doyle's poetry to celebrate her memory.

The simple format for Unlock Your Voice involves students and faculty readers choosing pieces of literature by women authors and performing them. Readers are encouraged to select works that appeal to them. "Readers can choose any work by a woman author," said Katz, "That way there is a good mix of writers, subjects, and attitudes."

Katz says her favorite aspect of this event is that it is a form of activism. It allows students to spread awareness of the issues that are important to them. Katz added, "It allows the students to bring the literature that they love to the community."

Lisa Detweiler, a senior, has been a part of Unlock Your Voice for the past four years. She enjoys the event for similar reasons. "There is something very empowering about being able to pick a piece of literature or poetry or song lyrics that relates personally to you, and to be able to portray that piece in a fashion that is true to you," said Detweiler, "That in itself is a gift."

Unlock Your Voice was created in 1994 by Professor Katz's "Women in Literature" class. The coffee house was originally unnamed, but a student created a flyer out of magazine clippings to advertise for the event. A clipping with the phrase "unlock your voice" was at the top, and all of the original planners of the event agreed that this would be the perfect name for the event.

Lost in the Record Store

The only band that matters

Kevin Warner

One of the biggest debates in the history of punk rock is who actually invented the genre. There are those loyal to the anarchist punk rock played by the UK's Sex Pistols, while others claim that punk started with the apathetic music of the Ramones in New York City. As far as I'm concerned, the debate is pointless. While both of these bands may have invented the genre, it was The Clash who perfected it.

What the Sex Pistols and the Ramones share is an affinity to playing short, fast songs using simple power chords, the formula for punk rock. The average Ramones song consists of three or four chords, such as the essential anthem "I Wanna Be Sedated."
The Sex Pistols are the same way. Their legendary album Nevermind the Bullocks rips through 11 songs in 38 minutes, an average of about 3 and a half minutes per song. The history of the Sex Pistols is a convoluted one, mostly focused on the rebellious antics of front man Johnny Rotten.

The Clash, however, emerged in the late seventies with influences from the music of the Sex Pistols and the Ramones. Expanding from their styles, the Clash influenced musicians across the spectrum.

Their seminal album, London Calling, took the punk rock of their earlier songs and tuned it on its head. Band founders Joe Strummer and Mick Jones were strongly influenced by Jamaican reggae, American rockabilly, and British ska and dub – all styles alien to the punk rock scene.

In addition to having a diverse style, the Clash also had lyrics that were more focused than their punk forefathers. Joe Strummer was a strong advocate for social justice and nationalist movements, even naming one of their albums Sanidinista! after the leftist guerilla movement in Nicaragua.

Strummer and Jones also main-

Ellis hall becomes a pool hall

James Trent

Staring down the length of the cue stick, a break, the crisp snap of billiard balls. They swiftly scatter, and the tournament begins.

The latest pool competition provided tense moments. The nine ball tournament, held during the Coffeehouse October 12, drew a large crowd. During a game of nine ball, players share the same billiards and pocket them in numerical order until a player wins by sinking the ninth ball.

Senior, Kyle Allen explained "there's a lot of luck," in nine ball, because missing the wrong shot could mean certain loss.

Students listened to the Coffeehouse musicians resounding throughout the student union.

Kevin Dundore/ Juniatian

Sophomore Patrick Filamor, winner of the pool tournament on Oct. 12, prepares to take a shot during a nine-ball game in the new student union.

"It's like the music was boiling up pressure," said one student in the crowd. Chatter and music filled the room for the first few minutes of each game, but on the last few balls, the crowd fell silent.

Early in the tournament, Aaron Rhodes, the sophomore singles champion, was expected to intensify the competition. However, his fate was sealed during his second game as he missed the last ball. According to the rules, his opponent could place the cue-ball wherever he pleased, making an easy win.

Fellow sophomore Patrick Filamor progressed to the final rounds, as he had done in the previous tournaments. An avid pool player, he said "When I left the Philippines, I brought my clothes and my cue."

In the final match, Filamor made most of the balls with razor precision, except for the last. Filamor's opponent took a shot for the win but narrowly missed the nine-ball. This brought the tournament to a sudden end, with Filamor as the new champion.

When the tournament ended, the pool games didn't. As contestants and spectators trickled out of Ellis, some students stayed behind to play a few games.

"The tournaments have really helped [the pool culture]," says Filamor. Students play the game more often this year, some going as far as buying pool cues and betting money on games. The culture was encouraged by the tournaments and by the addition of a new pool table in the student union, which includes a set of billiards that doesn't need to be checked out at the information desk.

"It's a great way to pass the time and make new friends," said freshmen Peter Snell. "It's a game where you can talk while you play."

Demetri Patitsas, president of the Student Government attributes some success to the student union itself. "The student union is finally a public place. You've got couches, computers, food, TV's and pool."

Nine-ball is open to players of all skill levels and only requires contestants to register at the start of the tournament. Most of the tournaments have occurred during Coffeehouse performances and may take place simultaneously in the future. Tournaments are anticipated throughout the rest of the semester and will be advertised in the announcements.

Naked Truth

continued from page 10

Then get your helmet on and get back in the game.

No practice. You don't have to hold practice (I mean you can…), but you can be in whatever shape you want. Whether you eat a bag of potato chips or go running beforehand, you'll still enjoy the action just as much. You just might not last as long…Maybe endurance is important. That's why the crab walk is a popular conditioning exercise. It depends on how long and strong you want the glory to be. If your team can't kick a field goal--well, I'm pretty sure that's what boot camp was instituted for.

There's no time for halftime. Listen, I love Super Bowls (because of Janet's breasts and wild commercials) just as much as the next kid, but even millions of dollars shouldn't stop the action (unless you've got something sparkly under the bed…).

Don't end with dehydration. As with any sport, post action showering is important. If the Gatorade doesn't quench your thirst, this will. Is it in you?

Seriously, sex is one of my favorite recreational activities, right up there with yoga. They both burn calories; one is just a solo activity. I don't do partner yoga. It's a great sport based solely on the fact that if I wanted to be a ball hog, no one would scream at me (at least not in a negative way). No one needs fans in the bedroom and this sport promotes good sportsmanship, so cheer on your opponent! Remember: you don't have to switch offense and defense unless you want to. Now go get your game on.

Record Store

continued from page 12

tained the rebellious attitude of the Sex Pistols and the Ramones. In "London Calling," Strummer rails against the idea of bands being saviors, proclaiming "phony Beatle mania has bitten the dust!" Just like the Sex Pistols, the Clash tapped into the anger of the disenfranchised youth in the United Kingdom during the late 70's and early 80's.

The Clash has also been one of the most influential bands in rock and roll. They were inducted into the Rock and Roll Hall of Fame in 2003. Rolling Stone placed London Calling number 8 on their Top 500 Rock Albums of All Time and called it the best album on the 1980's. A quick search on Amazon.com reveals 252 results for "The Clash" – tribute albums, remastered editions, reissued albums, and greatest hits compilations are all on the list.

Many current artists from across the musical spectrum call the Clash an influence. Modern punk band Green Day covered the Clash's rendition of "I Fought the Law." Even hip-hop artist Mos Def used the beat from the Clash's "The Magnificent Seven" in one of his songs, and he has proclaimed his respect for the band's politics and musical experimentation.

Don't get me wrong, I enjoy the Sex Pistols and the Ramones as much as the next punker, but the Clash brings that something extra to the table. They took the basic principles of punk rock and expanded it in many different directions. Their lyrical content and stylistic experimentation are what make them, as their record company correctly hyped, "the only band that matters."

'airstonewater' review

continued from page 10

performance.

Visually, the production is quite beautiful. The set is simple and allows the audience to focus on the emotion behind the movements. As described in the program, "At the heart of airstonewater is the physical intimacy of contact- being lifted, held, leaned on- combined with the emotional intimacy of communication with and without words."

Perhaps the most shocking aspect of this performance is its emotional impact. Without dialogue or character building, there is still a message behind each dance step, each splash of water, and each breath taken.

Freshman Allison Strausberg debuted on the Juniata stage in airstonewater and was very excited about the opening night performance. Strausberg said that much of the performance was open to interpretation, and it was purposefully meant for each audience member to connect with the performance differently.

Not everyone enjoys the same genres of theater, but many will agree with Strausberg when she says, "There are moments that are undeniably beautiful."

The show continues to run Thursday, October 26th through Saturday October 28th. Tickets can be purchased at the help desk for $7 general admission and $3 for student tickets. airstonewater is a vividly creative production unlike any other to have graced the stage of Juniata. It is an original performance, and this is a once in a lifetime opportunity to experience its beauty.

Students bring talent to Coffeehouse

Christopher Shannon / Juniatian

Junior Tyler Hazui plays the guitar and sings as part of an all Juniata-student coffeehouse. The coffeehouse takes place every other Thursday night in the Cyber Cafe of Ellis Hall. To play in a coffeehouse, contact Kelsey Brewer at brewekl3@juniata.edu.

No fluke for Eagles

Juniata football captures first victory

Jess Winemiller

Some people on campus may think Juniata football is a joke. But all the doubters should take note: the Eagles convincingly earned their first victory this season over Susquehanna University, 34-9, during Homecoming weekend. The win improved their record to 1-5.

To all the nonbelievers, senior running back Duane Ehredt, Jr. said, "“a win that big cannot be a fluke.”

It was an uplifting and touching win, especially for the seniors. “I was too busy balling like a baby,” said Ehredt, who put in another solid performance rushing for 119 yards and recording the first three touchdowns of the game. “I was so worked up emotionally. To see everyone’s hard work come together, it was good.”

Whether it was the excitement of alumni watching or the rivalry that exists between the two teams, the entire Eagles' squad entered Knox Stadium ready to perform.

From the opening kickoff, when senior running back Kiel Knisely ran the ball deep into the Crusaders’ territory, the Eagles established momentum and never let it go. “We had a good week of practice and felt well-prepared. We all knew what to expect,” said freshman Tyler Hall. “It was the first time I could feel the emotion in the team all throughout the game. We jumped on them early, and never let up.”

> **“A win that big cannot be a fluke,” senior Duane Ehredt Jr.**

The first year safety certainly did not take a play off. He led Juniata’s defensive effort, sealing the game with a second half interception and recording 12 tackles, eight of which were solo stops.

Defense wasn’t the only unit having a good day. Offense and special teams also made big plays.

All three aspects of the game finally came together, according to Ehredt. “All phases cannot be good as one another without the other,” he said.

Junior punter Tyler Templeton was named MAC Special Teams Player of the Week for his efforts in the game. “Well, I am only one man. Obviously I did what I had to do, but so did everyone else,” he said.

continued page 16

Christopher Shannon/ Juniata

Juniata senior running back Duane Ehredt Jr. scores a touchdown as the Knox Stadium scoreboard shows the results of his and his teammates’ efforts—a win. The 34-9 Homecoming victory over Susquehanna University was the Eagles’ first win in almost two years.

Regular season winds down

Women’s Volleyball's role players to define playoff run

Derek Stanley

Juniata women’s volleyball started its season August 19, before the academic year even began. Sixty-nine days and 31 matches later, the only things that remain the same are their names and numbers. With 14 of Juniata’s 17 roster spots being filled by underclassmen, including five freshmen, growing into one team has been vital for their success.

“All of us have matured individually and as a team. We have developed trust with one another and although the lineup may change depending on who we play, the consistency is still there no matter what positions people are in,” says sophomore outside hitter Brittany Carr.

This maturation is clearly evident as the women continue to roll over their opponents; most recently crushing Carnegie Mellon, Franklin and Marshall and Rutgers-Newark at the Juniata Invitational on Oct. 20-21. All three victories came by scores of 3-0, enhancing the Eagles' record to 30-1 on the season.

Senior Stephanie Kines led the Eagles throughout the weekend with 23 kills, including eight on her senior night campaign against Carnegie Mellon.

> **“Anything that doesn’t get blocked is mine. Whether it is hit deep or tipped, it is my job to get there.” – Megan Sollenberger**

Freshman Megan Sollenberger recorded a team-leading 41 digs throughout the three matches.

“The girls upfront formed a really nice block which allowed me to position myself right outside their hands like I’m supposed to,” said Sollenberger. “I was just thinking anything that doesn’t get blocked is mine. Whether it is hit deep or tipped it is my job to get there.”

Head coach Larry Bock was able to use a majority of the women’s squad throughout the weekend, using at least 11 players in each match, further developing the underclassmen and his role players.

Role players eventually define how far a team will go in its playoff run. Every team will have their stars, but having players who are

continued page 18

Templeton honored for efforts in Eagles' first win

Tyler Templeton was named the MAC Special Teams Player of the Week for his efforts in Juniata’s win over Susquehanna. It was the first weekly conference honor awarded to an Eagles' player this season. This also marked the first weekly honor of Templeton’s career.

The junior punted four times and averaged 48.4 yards per punt, his best single-game average so far this season. He also nailed a pair of 51-yarders, the first time in his career that he cracked the half century mark twice in the same game.

Templeton’s punting played a big role in the game, repeatedly giving the Blue and Gold the advantage in the field position battle against Susquehanna, which helped the Eagles capture their first win of the season.

Templeton has been giving Juniata solid field position all season long. He currently ranks second in the MAC in punting average with 37.9 yards per punt.

“It is a great honor and it’s nice being in the spotlight every once in a while” he said. “I just like to compete.”

"Powerhouses" win and that's what FH does

Field hockey dealt first loss, keep pressing on

Dan Rapp

For the first time all season, the Juniata women's field hockey team felt what it was like to be one of its opponents: finally, Juniata had to put a tally in the loss column.

In a tough game between two nationally-ranked teams, 12th ranked Lebanon Valley topped 14th ranked Juniata by a score of 3-2.

Juniata fell behind early in the contest, 1-0, when Lebanon Valley's relentless offense proved too strong to keep out of the back of the cage. The remaining first half saw a shining defensive stand by Juniata, keeping the deficit at one.

The second half saw a better offensive attack from Juniata, helping to even out the score at 1-1. However, the score would not remain deadlocked for long. Less than two minutes later, Lebanon Valley answered back with a goal.

Ten minutes later, attempting to make a deep field attack, Juniata lost a critical midfield battle, resulting in a breakaway attack and goal. The damage had been done.

Although a goal midway through the second from Wagner shed light on the possibility of forcing the game to overtime, it was not to be. The Lady Eagles were dealt their first loss of the season.

However, according to senior Sarah Bender, Juniata has bounced back, "like most powerhouse teams would, by winning more games."

They began with York College, handing the Spartans a 5-0 beating by scoring three goals in a five minute span in the first half. The ensuing second half saw limited opportunities, but the Eagles were still able to muster two more goals. A stellar JC defensive effort helped earn sophomore goalkeeper Abby Funk her school-record eighth shutout of the season.

The next big win was a come-from-behind win against Albright. After trailing 1-0 for the majority of the contest, Juniata found success in the 59th minute as Kim Wagner knocked home her 25th goal of the season. The game stayed tied through the remainder of regulation, and overtime was the deciding factor. Wagner once

Junior forward Kim Wagner pushes the ball up-field during Juniata's 2-0 victory over Albright. Wagner notched both goals for JC.

Learning not all streaks are winning ones

Women's soccer still needs one victory to make playoffs

Dan Rapp

After beginning the hardest part of its schedule with a huge win against Moravian, the women's soccer team, currently 10-6-1, had many people around campus thinking that Juniata was going to easily coast into post-season play without another loss.

Unfortunately, that has not been the case. After a discouraging 1-0 loss on Homecoming Weekend to long time conference foe Albright, the team's morale showed the loss more than the record books.

Going into its game against Albright at home, Juniata was coming off of a five-game wining streak and a shutout conference win against Moravian. Senior captain Kelly Howard claimed that their spirits seemed higher than ever.

Howard said that, "It was a great way for the team to go into such a meaningful game." And that is exactly how they played, putting a total of 12 shots on goal and constantly creating opportunities at the opposing end of the field.

One of their best opportunities came with just three minutes left in the game. A Juniata corner kick was deflected by the keeper to Amy Reynolds whose ensuing shot missed by a couple of feet. It was a tight match, but senior Kristen Yohn was still encouraged.

"Although Albright drew first blood, our offense was relentless and we lost by a matter of inches," she said.

However crushing this blow was to Juniata's morale, the hits would not stop there. The Eagles' next opponent, Dickinson College, was a team they had never faced before. Not knowing what to expect entering the match, they played them just as hard as any other competitor. The game was a tight match through the first half, knotted at 1-1 after about 30 minutes of play.

continued page 17

Mens's soccer falls behind

Emily J. Koop

The Juniata men's soccer team is struggling with only a few games left in the season. The Eagles season record is currently 5-11, with an 0-5 mark in the conference.

"The goal for the remainder of the season is try to win. That's all we can do," said head coach Scott McKenzie.

The team has gone from sporadic wins and losses to losing seven straight games, with only a total of four goals scored.

"Lots of factors lead to seven losses in a row," leading scorer sophomore Bryan Hess said. "Factors including the long season, lack of effort from the players, and the coaches not helping enough."

Hess is not only the leading scorer, but the only Eagles player to score in the past four games. Hess is proving to have a key role on the team as a goal scorer, but also as a team leader.

The Juniata men have changed things up a bit for the past few games. Senior goalkeeper Tim Penrod was put into the net to see what he could do. A few changes were made in the starting line up as well. But so far nothing has been able to change the losing streak. The team chemistry is just not there.

On October 7 at Albright, Juniata lost by a final score of 4-0. Albright scored a pair of goals in each half while Juniata could not seem to pull it together. They had a few opportunities in the first half, but seemed to lose the desire to win as the game went on.

The next game was played on October 14 at home versus Lebanon Valley College. Juniata lost 5-1, but at least scored a goal this time. Juniata's goal came in the second half, toward the end of the game when Hess scored off of an assist from sophomore Fred McNeal.

"It feels good to score, but I would rather sacrifice my goals for wins," Hess said.

The next game at Elizabethtown was a tough one for the men. They were shut out 6-0 by their conference rivals. The Eagles were able to fend off the Blue Jays for the first 24 minutes, but after the first goal was scored, Juniata once again seemed to shut down. They only had six shots on goal throughout the entire match.

"I believe the team shuts down because of the mental aspect of the game," Hess said. "When one goal goes in, the game is over and we decide to just give up on what has worked and try something new."

On Saturday, October 21, Juniata played Case Western Reserve University. The final was a 4-0 loss for the Eagles. Juniata kept the score 1-0 at halftime, but then allowed three goals in a ten minute span in the second half.

A bright spot for Juniata in the Case Western game was freshman goal keeper Brian Trinclisti. He earned his first start against the nationally ranked squad and made a handful od admirable plays, including stopping a pair of penalty kicks to keep Juniata competitive. He stopped 10 total shots on the day.

Trinclisti also played well in Juniata's previous match against Elizabethtown. He came on in the second half and stopped the first five shots he faced.

"We are continuing to practice hard and prepare for the certain teams we play. We really just need to communicate better with each other and learn to enjoy the game," Hess said.

The Eagles' final home match of the season is Sat. versus Widener.

Tennis performances are hard hitting

Players advance to Quarterfinals

Ryan Conrad

The women's tennis team traveled to Lehigh University October 21 for the Middle Atlantic Commonwealth Conference Championships. The Lady Eagles were unable to play on until Sunday's final matches as they were dealt first round and quarterfinals losses.

"The tournament [MACs] was the highlight of the season. In the years past usually it was one or two make it past the first round. It was a big improvement to have others advance this year," said first year head coach Beth Bleil.

Three singles players and one doubles team advanced into finals action. Senior Molly Coursey led the Eagles into the second round in both singles and doubles matches. Coursey almost pulled out an upset in her tightly contested quarters match, but she lost 4-6, 6-1, 10-5.

"Molly exemplifies the competitiveness we have in the team," said Bleil. "Saturday showed her effort. Molly injured her foot during the match and kept battling on which shows personal competitiveness. She is a great example."

Sophomore Caroline Weisser was one of the three players to reach the quarterfinals. Sophomore Ariel Otruba and Coursey also represented Juniata in the quarterfinals. After winning 6-1, 6-3 in the first round, Weisser was unable to rally for a win against the conference's number-one seed Alison McDonald.

Weisser said, "The highlight of my season was the second round doubles match at MACs against the number two seed, who were actually the number-two doubles champions in our conference last year."

Weisser teamed up with freshman Maggie Wolenter to reach the quarterfinals of doubles play before falling to second-seeded DeSales.

"I was proud that we made it to that point, especially considering Maggie is a freshman and doesn't have that much doubles experience," said Weisser.

Despite the fact that none of the Eagles were seeded in singles or doubles play, Weisser thought they battled hard. "The odds are against you because seeded players get a bye the first round and then they play unseeded players until the semis or finals," she said.

The Eagles' number one player, freshman Amanda Fontana, did not make it past her first single's match-up. Despite not advancing to the quarterfinals, Fontana had the honor of being recognized by

continued page 19

Fontana shines in debut season

Freshman tennis standout Amanda Fontana has been named to the 2006 Commonwealth All-Conference Team. She was one of six freshmen from around the MAC to be so recognized.

"I was really honored to be selected for the All-Conference Team. It was definitely unexpected and exciting to receive this honor," she said.

Fontana stepped onto College Hill in August and earned the team's number one spot. She held that position throughout the season, while also contributing on a successful doubles pairing with Aggie Kwon.

Fontana continually proved herself worthy of the number one spot this season as she won six singles matches while also posting six doubles wins.

Her win total was the third-highest total of any conference player. Fontana did not waste anytime this season as she opened with four straight single wins. Her biggest wins came against two other conference foes who were also named to the team.

Juniata football captures first victory

continued from page 14

The Eagles' offense went to work right away, moving the ball up the field and then finding the end zone on their first two possessions.

The defense responded by recording back-to-back-to-back interceptions. Freshman defensive back Andy Miller recorded the first of the three, which also marked the first of his career as an Eagle.

"Our defensive line put a lot of pressure on Susquehanna which enabled our second and third line defenders to have a big day," said head coach Darrell Alt.

Sophomore linebacker Josh Roy followed Miller's lead by picking off another Crusader pass and giving the Juniata offense great field position.

In two drives, the Eagles posted six more points. Junior David Nicklaus kicked his second extra point of the game giving Juniata a 20-0 lead, but they weren't content.

Freshman Brandon Spayd added the third interception, setting up Juniata once again for another touchdown before halftime. The Eagles' entered the locker room up 27-0, their biggest cushion all season.

Unlike previous games, however, Juniata was not satisfied with just a solid first half performance. "You could tell there was a little less tension in the air. We knew we were going to win," said Ehredt.

And that's just what the Eagles did; they finished the game and put to rest a 17-game losing streak.

It has been a bumpy road for the Juniata Eagles, but Alt believed that the team's perseverance, especially that of the seniors would pay off. "Tough times don't last; [tough] people do," he said.

Not only did the losing streak come to an end, but the win also marked the first time that Juniata took home the Goalpost Trophy since 2001. In a yearly tradition the trophy is awarded to the winner of the game between Juniata and Susquehanna.

"I asked the guys before the game, 'Are you going to find out if that Goalpost Trophy is taller than me or not?'" said Alt. "And sure enough it was."

Juniata cross country on the move

Fast feet, determined minds and a lot of heart have this team running after gold

Christopher Shannon/ Juniatian

Kristen Gochnauer, Aubrey Cyphert and Meghan Jones run in a pack during Juniata's home meet against Penn State-Altoona on Oct. 20.

Corinne Barabas

Senior Elena Amato put it best: "This race [the Mid-Atlantic Conference championship meet] is going to be the party of the season."

Up until the Dickinson Invitational on October 7, Amato hadn't run a race for 106 weeks, but she made her return to the lineup a good one, finishing in 10th place with a time of 15:42 in the 4K.

Amato's performance helped the women's team earn an overall sixth place out of a field of 11 teams. Following behind her were sophomore Meghan Jones and senior Kristen Gochnauer who ran 16:10 and 16:24, and placed 26th and 34th, respectively.

On a longer distance note, senior Lia Bella and sophomore Aubrey Cyphert packed it up and ran together, finishing the 6K course at Dickinson in 24:53, finishing 45th and 46th places, respectively.

All of the men competed in the 4K contest. Freshman Matt Bailey clocked a time of 12:55 to finish the course in 24th position; on his heels was junior Shawn Rumery, only seconds behind, with a time of 12:58, good enough for 25th.

Junior Eric Hoover took 29th overall with a time 13:02.

On October 14, after a 6 a.m. departure and another four-hour bus ride to the DeSales Invitational, the Eagles got a preview of many MAC teams they would be challenging for a MAC title.

They also became familiar with the course - every hill and hole, every root and turn. "We know where we're going to have to suck it up and push through the tough spots and where we'll be able to 'rest,'" said senior Mike Chirdon, referring to the fact that the conference meet is held at DeSales.

For the men, Rumery captured 21st place in a time of 27:48 on the hilly 8K course. Close behind was Bailey who finished 23rd. Chirdon ran for a 39th place finish in 28:23.

The Hoover brothers both admitted, "We're nervous [about MACs]. It's what we've been running our butts of for all summer and the entire season."

Eric Hoover said, "It's going to be close between the top few teams, but we know we can't hold back or save anything. We have to leave it all on the course, which I am confident everyone is ready to do psychologically and physically."

The game plan, according to Hoover, is to, "Taper and get plenty of rest the week before, so ideally we'll all feel top notch on the day that matters the most."

Chirdon added, "I think we are always nervous before a big race because something could go wrong. We could just not feel well that day, but the important thing is, if we aren't feeling it that day, we have to suck it up and fight through because this is what we have been training for all season.

On the women's side at DeSales, Amato once again led the pack, with a time of 25:22 for 6K. She took 14th place, right in front of Jones who earned a 17th position with a time of 25:30. Cyphert put up a strong fight taking 23rd,, nine seconds behind her teammate.

"It's [MAC's] all going to come down to who feels good on race day. It's simple really. We just have to trust in our training and our teammates and our abilities," said senior Lauren Gates.

"We have to enjoy ourselves but at the same time race to win. We can't freak ourselves out, because if we do that, we'll lose our focus on our main goal, which is the MAC title," said Gochnauer. (And it is the last MAC championship title since Juniata is moving to the Landmark Conference in 2007).

But it's not all about serious training. At the Friday practice before their home meet, the women's team donned the finest redneck outfits they could find and ran an easy three miles for the traditional "Mullet Run."

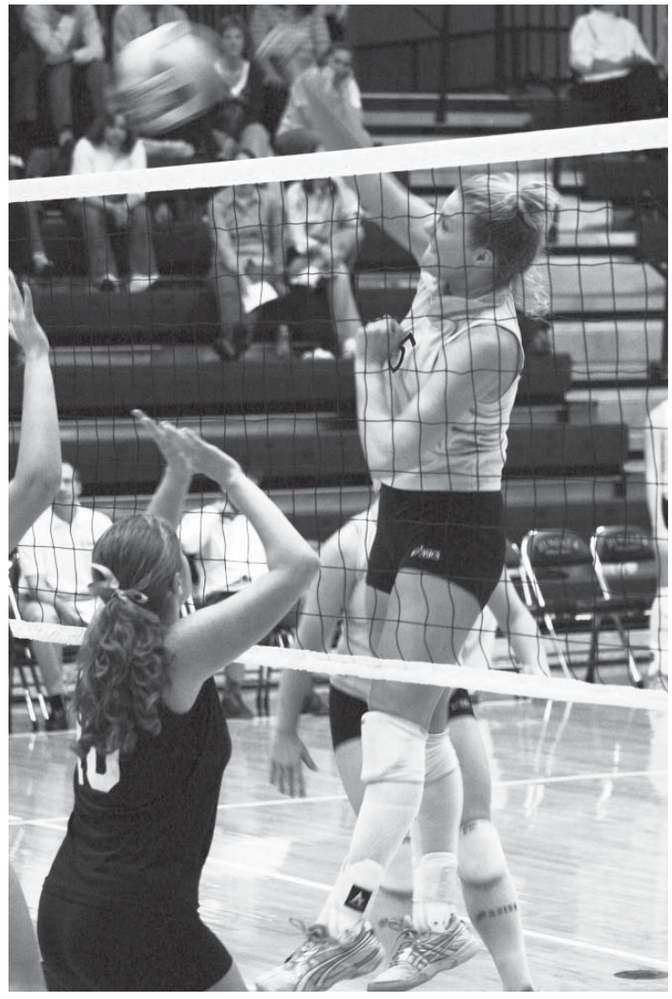
Decked out in flannel shirts, "eye-liner" beard stubble and "t-shirt stuffed beer bellies" they showed that although running is usually given a bad rep, they could spice it up with a little "hick kick" to show that it's never unexciting to run for fun.

Sure, it's about the perfect training regime and going hard when it seems impossible, but the Eagles have proven that they have what it takes, and will not be content until they achieve their goal, because "in a race like this, it's not sweat that gets in their eyes, it's determination."

Christopher Shannon/ Juniatian

Juniata and Penn State-Altoona cross-country runners take off at the start of the men's race. The Eagles eventually sprinted to take five of the top six places in the dual meet.

Volleyball women's opponents continue to get served



continued from page 14

playing different positions helps solidify the lineup and enables the team to take on all challenges.

Sophomore Kristi Fitzsimmons is an example of one of those players. Whether she is playing as a defensive specialist, libero or a serving substitute, she is constantly contributing.

"For being such a young team we needed girls to step up into leadership roles and Kristi became one of those girls. She plays several different positions but never changes her attitude and has stepped up along with the seniors to lead this team," said sophomore setter Jessica Ritchey.

With only two games remaining on the regular season schedule, fans are itching to get the playoffs started. The team, however, is focused on those final matches against Emory and West Georgia (at Emory University in Atlanta, GA) on October 28 as Larry Bock constantly reminds them not to look past tomorrow.

Christopher Shannon/ Juniatian

Senior middle hitter Stephanie Kines spikes the ball during Juniata's match against Franklin and Marshall on Oct. 21.

Field hockey dealt first loss

continued from page 15

the deciding factor. Wagner once again found the back of the cage, helping the team to improve to 4-1 in conference play.

While crushing Frostburg 4-1 on October 10, Meredith Low found herself tallying her 15th assist of the season, solidifying her place atop the leader-board, both amongst the league and in the school record books.

The Eagles' next opponent was Richard Stockton College where Abby Funk recorded her ninth shutout win of the season, once again rewriting the record books.

With this new streak of wins under its belt, the team took on conference foe Messiah on Oct. 19.

The Lady Eagles have been a long time rival of Messiah, ever since the 2003 season when the Greyhounds knocked Juniata out of the Commonwealth Conference Championship.

Despite the fact that Messiah is ranked third in the country, said senior Kat Vera. "We were looking to show them that we aren't number fourteen, we aren't even number three, we're number one."

The game was dominated by strong defensive play, deadlocked at 0-0 through 67 minutes of play. However, Messiah soon prevailed scoring the first goal of the match with 2:50 left to play in regulation.

Although this loss was an upsetting defeat, Juniata, with a record of 14-2, is looking to settle the score in postseason play. The Eagles have three remaining regular season games and while recent losses may be upsetting, Vera feels, that the setbacks "are going to fuel us to defeat whoever stands in our way. The MAC Championship belongs to us and no one else."

Women's Soccer

continued from page 15

But the game would not go to half deadlocked. Dickinson's Lisa Nichols unloaded a tough shot that sneaked its way into the back of the net. This momentum change really showed in the second half when Dickinson let loose the majority of their total 35 shots, an uncharacteristic number to see against a Juniata defense that made its name this season by shutting teams out.

"We need to stop letting our losses get the better of us and continue playing like we were at the beginning of the season," freshman Sarah Ruggiero said.

Going into the non-conference game against Penn State-Altoona, Juniata was looking to resuscitate its morale. In attempting to accomplish this team goal, the Eagles put forth a barrage of offensive shots, trying to break their opponent. Juniata outshot PSU-Altoona by a stunning 26-3 margin. But the majority of those shots came from long range and the keeper was able to save all attempts, keeping the game scoreless throughout regulation and overtime.

Unable to tally another win, Juniata went into its next conference game against Lebanon Valley with its first winless streak of the season. In a game dominated by defense, the Eagles went into the half down 1-0 with only one shot on goal. Although the offense picked up in the second half, firing seven shots, the tying goal stayed out of reach.

Seeing her team's first streak of winless games all season, Howard said that going into the last non-conference game of the season with a full head of steam was a necessity. "We needed to snap that streak and get our heads back to where they need to be."

That is exactly what Juniata was able to accomplish in the offensive clinic that they unleashed on Mt. Aloysius. Within the first six minutes of the game Laura Goodlander scored one of her two goals in the match. Seven players combined for nine goals in the match.

Juniata attempted to carry the momentum from its big win over Mt. Aloysius into its conference match against Elizabethtown.

However, this momentum came to an abrupt halt in the first half when E-town scored its first of three goals in the match. E-town, currently undefeated in conference matches, bettered its record in this 3-0 win by shutting down the Blue and Gold's offense. By limiting the offense to a total of three shots, the possibility of guaranteeing a playoff spot for JC has now become that much harder.

Currently, the women stand one conference win away from a place in playoffs. (*Note: Results from yesterday's match versus Messiah were not available as of press time.) With the last game of its season a conference match at home, Juniata is looking to solidify its place in the postseason race with that final win. Although the possibility still exists of a postseason position without another conference victory, the Eagles are not leaving anything to chance.

By The Numbers

The Most Helpless Moments in Sports

Tommy McConnell

You know why we watch sports? To see greatness. There's some other reasons, sure: to see people get hit really freaking hard; to yell for no good reason at the top of your lungs; to be entertained; to drink heavily; etc. But witnessing greatness is reason No. 1.

If everyone was just OK, you'd never watch. If you wanted to see a bunch of people be average at their jobs, you would go to Randy Moss' juice stand. We need to be awed by people doing things we simply can't do. If everyone could throw a ball 100 miles per hour or jump 15 feet in the air, ticket sales would decline considerably, methinks.

In every game, there's a chance for a "little" greatness - flashes of greatness, if you will (and you will). Things that you don't see coming, but that still make you jump out of your seat and scream "Oh snap, son!" Or, um...something like that.

There's two sides to greatness, though. When someone is being great, there is some poor sap on the receiving end having that greatness shoved down his throat. Remember MJ hitting that foul line J to beat the Cavs? The Bulls win! The Bulls win! Pretty great - unless you're Craig Ehlo. Then you have to duck and cover in the corner of the screen so you don't get a pair of Air Jordan's imprinted on your forehead.

The most helpless situation I can think of is biting on an up and out route in football. Deep down, I always feel bad for those guys. But even deeper down, I'm laughing at them.

Imagine being that cornerback. You're manned up on the fastest guy on the field. Just you and him: fun times. You go into your back pedal and read the receiver's break perfectly, so you make your break, too. You know the ball is coming, you see the quarterback cock his arm to throw, you jump in front of the receiver, it's just too good to be true and then...poof. The receiver is gone. Oh no.

You have no chance in hell of catching him, but you have to chase after him like a moron, anyways. And everyone saw it.

Helpless.

Same thing in hoops. You're all over your man. He dribbles hard to the basket - once, twice - then throws on the breaks to elevate. But its cool; you're with him. You know you shouldn't try to block this, but hey - why not? You're there, aren't you? Just this one time can't hurt. So you leave your feet, only to find that your man hasn't. Oh no. As you rise in the air, you see him waiting for you to start your descent, so that he can rise up.

Helpless.

The things you can think of in that second are amazing. "This is gonna suck...coach is gonna freakin' kill me. I think I'm gonna pretend like I tweaked my ankle when I land, maybe he'll feel bad for me...hey, he has two wristbands on, what a dork...well he faked you out, moron...damnit, I got tricked by a guy with two wristbands on... I can't believe he's down there just waiting for me...I think I'm gonna just jack him on my way down... no way I'm letting him get this shot off...oh, look, there he goes...I wasn't even close…"

Pitchers must experience that 'oh no' feeling all the time. He doesn't get quite the release he wants on a pitch, and in that split second while the ball is traveling to the plate, he's thinking, "Well, that ball is about to get absolutely tattooed. I hope it doesn't crack my skull open. That would be unpleasant." Once the batter actually does tattoo it, the pitcher has to do that thing where he turns around real quick to confirm if the ball actually exploded or not.

Helpless.

The funniest one is when someone muffs a punt. Let it be said, I have the utmost respect for that guy. He's back there all alone, staring at the sky the whole time and for all he knows some 300-pound wedge buster is going to separate him from his helmet the second he looks down.

But when he muffs that punt, the next two seconds are hilarious. The football goes right through his hands, but he still takes that first step to run because he thinks he has it. Once he realizes that he doesn't, he does that thing where he looks nine different ways for the ball in half a second, but of course he can't find it because he has a helmet on, so he hops on the spot once or twice - left, right, no, left! - with his arms outstretched and palms turned up. You can literally see him thinking, "Where the %&@ is that ball! Where is it? I need it!" Then wham! Nine guys obliterate him.

Helpless.

But at least those guys have teammates that they can blame for something. Athletes in individual sports are on islands.

Did you ever see a golfer barely miss a 45-foot putt and then try to casually tap in with one hand to show how mad and good he is at the same time? Did you ever see that guy miss? Man, what a jackass. Imagine how he must feel. Probably like a jackass. Which is appropriate, since he is one.

And tennis players: their opponent rockets a shot that nearly gets by them, but at the last second they salvage some attempt at a return and end up floating a lob shot 50 feet in the air. It must feel like that ball is in the air for half an hour, and the whole time they're thinking: "Why the hell did I even do that? Really, why? Now he's just gonna crush another one by me. And even if I do manage to touch it, I'm gonna have to hit another lob, and another...I'm just delaying the inevitable. This sucks. I have half a mind to just lay down and get this over with right now. Is that thing ever gonna come down?!?!"

The most pointless helpless situation, though, is the penalty kick in soccer. Imagine being a goalie and having this explained to you in the first time.

"OK, listen. The guy on the other team had the ball in the box, and since it's a rule that every soccer player has to be the biggest pansy in the world, he faked an injury. And since it's also a rule that all soccer refs have to be the most gullible people in the world, he fell for it. So now we're going to place the ball like three feet away from you, let the faker-pansy get a running start, and blast it at you from point-blank range. I'm going to be honest with you - you really have no chance. Your only hope is to just guess - randomly dive one way or the other and pray he somehow kicks it off you. But even then you are probably screwed, since he was only three feet from you to start. It's kinda important you stop this though, because usually this is the only way anyone ever scores in soccer. Alright, good luck buddy - we're countin' on ya!"

Yea. Helpless.

Women's tennis hit hard at conference finals

continued from page 16

the conference last week.

"The highlight of the year for me was being selected for the All-Conference Team," said Fontana.

"MACs was exciting but very disappointing for me," said Fontana. "I did not play as well as I hoped to play."

The pressure of being the team's number-one ranked played did not seem to affect her this year. "I love to play tennis and I love to be challenged, so I was ready to step up to the challenge of playing number one as a freshman," she said.

Weisser is already looking to next year.

"If we all continue to work our butts off for next year, we can make major improvements."

Bleil is confident that this year's MACs laid a strong foundation for next season.

"This year was a great experience. We will expect to be there on Sunday next year."

The team finished the 2006 campaign with a 7-5 regular season record which marked the third-highest win total in the program's history.

The team returns seven of eight players in 2007.

The Back Page Brawl

Tommy McConnell **Rebecca DeHass**

A weekend with R. Kelly or Michael Jackson?

R Kelly. I've always wanted to spend a weekend wearing sweat socks and house shoes and sippin' on Hypnotiq, so I think The Pied Piper of R&B is my man. And don't act like you're not curious what he's gotten hidden in his closet. And if Kels needs to take a leak, I'll remind him where the toilet is.

Michael Jackson. If I get stuck with MJ, that's fine by me. After all, we have similarities. We're both white. We've both had nose jobs (long story… I used to have a huge red nose. I know, cute, right? I was a freak at five years old, so I had surgery to attract other little kids. Coincidence?).We both love boys, I just playing with bigger toys.

Would you want to know the day you are going to die?

Hell yeah I would. You'd be Mr. Invincible until that day. You could do the most ludacris thing ever; think about the bets you could win. The day you knew you were going to die would pretty much suck, though, unless you were 112 and just wanted to get it over with. I think that's a small price to pay for decades of doing whatever the hell you please, don't you?

Uh, no. When getting blood work, doesn't it hurt more when the nurse says, "Okay, here's the big pinch!" And then the bruise. Drown me like a puppy in a potato sack. Just make it quick and unexpected.

Fart silently or out loud?

Out loud. Listen, if you're gonna do it, you might as well get your money's worth. All being discreet is going to get you is a headache and a feeling of disappointment. And when you do, you better own up. There's a price to pay for everything, and 'fessin up is the small cost for living luxuriously. Do the right thing, man.

Silently. There are few things that men should fear in this world. Among those things are women who have ingested broccoli or anything having to do with balsamic vinegar. And some men think women should be silent…

Who would win: a shark or a lion?

Shark. A shark would freakin' own a lion. A shark has like nine rows of teeth all as sharp as steak knives. Lions have manes, which is basically what Prince would wear if he were an animal. Fruity. And lions are basically big cats, and cats lick their own butts. No way a butt-licker beats something with knives for teeth. No way.

Lion. Did the shark just show up the in the jungle waterhole? Cats don't like water, and they don't like to exert energy. Obviously, the lion is going to sit on land and laugh in the shade while the shark sniffs out blood. If the lion gets bored, he'll have his mate drag that sorry shark out of the water and watch it flop around like it's having a wet dream.

Get punched in the face or stomach?

The face. At least when you get hit in the face, you know you got hit. It hurts, yea, but once its over, its over (unless you get really jacked... then it doesn't matter where you got hit). When you get hit in the gut, it just goes on and on and on and on…it's like a Q-Tip song. You want to throw up, you're dizzy, it's awful. Plus, odds are pretty good that with a fist to the face, you'll get a black and blue eye, and that means you get to slap a steak on there. Steak is good.

The stomach. Don't mess with this façade of beauty. I spent too much cash on the nose job.

Greatest theme song?

Cheers. Not only is this the greatest theme song of all time, it can easily be considered one of the greatest songs of all time, period. Too bad you had to read this, because now it's going to be stuck in your head for a week straight. No matter how big of a loser you are, this song makes you feel like you have friends. And that's no small feat, is it, you loser?

Captain Planet. Here at Juniata, the soon to be sustainability capital of the world, it's important to note that I recycle because of the Captain (for the mtvU ecoChallenge, some JC kids should dress up as the Planeteers and revive Captain Planet, heck I'll even be the monkey). He may have misinformed me by inferring that heart is one of the five elements (apparently there's only four?!?), but that's okay…I learned that looting and polluting is not the way. Nominate Captain Planet for Mr. Juniata: The power is YOURS.

MRSA infections appearing over campus

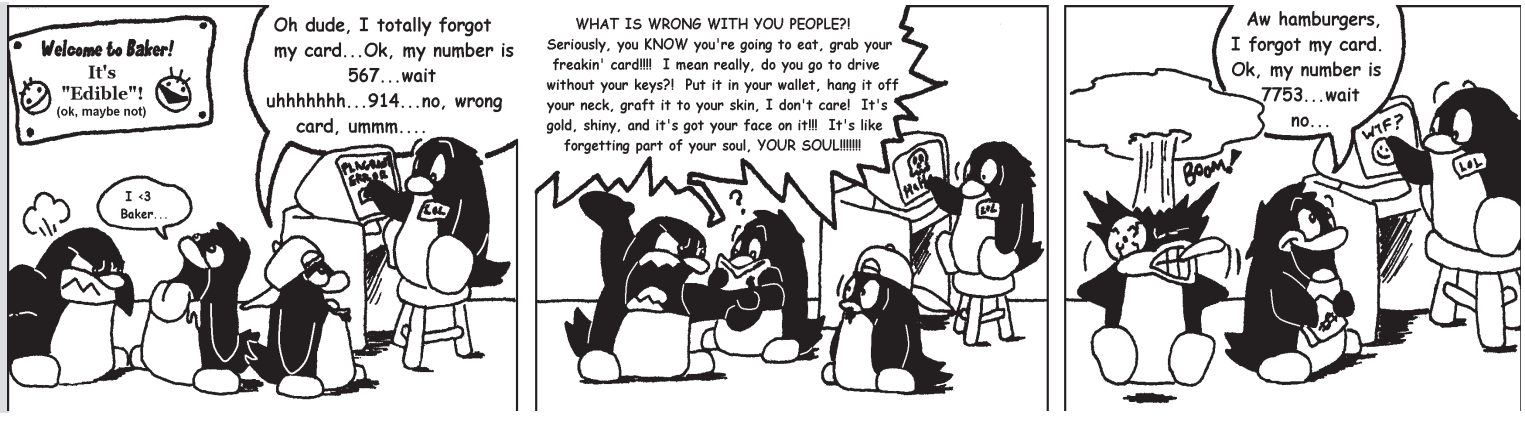
continued from page 3

symptoms: "I noticed a red bump on my back a couple of weeks before I thought anything of it. I did not take any action until it started hurting because I didn't think anything of it." These symptoms prompted Werle to visit the emergency room.

"[The tell-tale signs of MSRA] usually manifest as skin infections, such as pimples, pustules and boils," according to the National Athletic Trainers' Association. "Which present as red, swollen, painful or have pus or other drainage."

Simply phrased by Peters: "It's just nasty."

Since Werle was diagnosed with MRSA, he now takes Bactrim, an oral antibiotic, twice a day, puts hot compresses on his back three times a day for a half hour and always has the infected area covered with a bandage.



According to the Centers for Disease Control and Prevention, around 25-30 percent of the population harbors the Staphylococcus aureus bacteria in their nasal passages already, and about one percent of the population carries antibiotic-resistant strain, specifically. According to Peters, this kind of bacteria is simply everywhere.

In fact, MRSA is one of the most common skin infections in the U.S., usually spread in hospitals and other institutional facilities.

"You treat everyone with the same type of universal precaution," Peters said about dealing with infections. She stressed that Juniata students should act in the same way.

The Rookery

by Brock Eastman

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

NOVEMBER 9, 2006 | JUNIATA COLLEGE | VOLUME 88, ISSUE 4

Hooked on hookahs

Is smoking in high fashion among the Juniata community?

Devin Couillard

A thick stream of smoke tumbles out of a student's mouth, filling the room with the smell of sweet berries. A beautifully decorated glass waterpipe, also called a hookah, narghile, shisha, hubble bubble or goza, is passed on to the next person in the circle, followed by the happy bubbling sound that many Juniatians have come to know and love.

Since the 1990s the popularity of waterpipes has been on the rise. This is especially true among the college student population. When asked, many Juniata students described enjoying the social aspect of hookah sessions. Flavored smoke, with its seemingly infinite number of palatable possibilities, is also an attractive feature.

"It's one of those things where you wanna go back to it," says junior Jared qHamilton. "I love being able to go home to study and smoke. It really makes my day."

Last year though, Hamilton and several other students were keeping their hookahs on campus

continued page 6

Kevin Dundore / Juniatian

The hookah has become a popular recreational device on college campuses, including Juniata. Recent changes in Residential Life policy have placed hookahs on the prohibited items list.

Students live & learn by the lake

Aaron Shotts

Launched this August, Juniata's "Semester at the Field Station: A Sense of Place" program is giving nine students the opportunity to live and learn aside Pennsylvania's beautiful Raystown Lake. Students take courses at the field station's Lake Side Center while using the lake for class and recreation.

"We have a remarkable resource for a college of our size and caliber," said Chuck Yohn, co-director of the field station. "Most field stations out there are associated with universities and museums. There are really none out there that are associated with small schools."

Classes run nearly all day, with a different one each day of the week. There are courses on sustainability, conflict resolution, geographic methods and the natural and human history of the Raystown area.

Yohn said, "Any student can attend this [program], but the core selection is most inductive [sic] to students whose major is environmental studies."

Professors drive out to the field station each day to teach classes, although some instruction is completed through teleconferencing and online discussions. Much time is spent outside collecting data and doing research on the lake and surrounding forestland.

Junior Genna Huston said, "It's

continued page 5

Town vs. gown

Rumored infiltration of townies prove untrue

Maria Piazza

Recent rumors on campus have pointed to an increase in the number of confrontations between the citizens of Huntingdon and Juniata students. These rumors report crimes of a serious nature, involving issues of stalking and even drug selling. But these extreme incidents are not found in any of the records of the Juniata security office.

At the moment, the rumors of occurrences are spread out, a small number of incidents allegedly happening every few months at crowded parties or at night with people looking for trouble. Students give accounts of Huntingdon residents sleeping in dorm room beds without permission or behaving drunkenly.

"Incidents between students and town folk are a major worry of ours," said Director of Campus Safety and Security Rocco Panosetti, Jr. "And when it does happen we take it very seriously, but it rarely happens."

Whenever an episode between students and town people occurs on campus, the security officers issue the offending "townies"

continued page 7

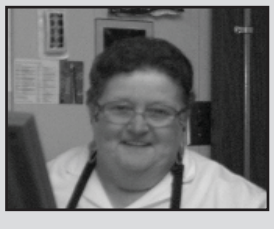
Student Government continues to be proactive on campus

Sara Roby

The Student Government has been working hard lately to make positive changes and decisions on behalf of everyone on campus. It has made amendments to the constitution, amended bylaws and solicited student input.

"The Student Government is a place where students' wants and needs can be focused on," said Provost James Lakso. "They can filter out all of the outside noise and choose the two or three issues to pay the most attention to."

The Student Government has been doing just that this semester. The government leaders took steps this year towards creating increased visibility and communication between students and the organization. This year, a new branch of the Senate called the Common Interest Sector (CIS), was created to do just that.



This new branch is comprised of representatives from different RSOs and acts as a liaison between clubs and Student Government.

The CIS frees up time in Senate meetings normally spent dealing with the budgetary concerns of RSOs, allowing Student Govern-

More than swiping gold cards

Getting to know the real Donna

Kevin Dundore / Juniatian

Sodexho employee Donna Grove is campus's favorite gold card swiper. In her fourteenth year working with Juniata's food services, Donna still greets every student with a smile, and she has earned a following for it. "She is the reason I go to Baker," said sophomore Pam Campanaro.

Ryan Conrad

One lady on campus has an impressive following, as evidenced by a 571-member Facebook group dedicated to her. With all of those faithful followers and many more outside the Facebook realm, one might wonder: what is the real Donna Grove about?

Beyond the black apron and her decorated register, Donna has more to offer other than just swiping student's gold cards.

Sophomore Pam Campanaro said, "She is the reason I go to Baker."

To really understand Donna, it might be good to look to her sense of humor. During my interview with her, a food services employee walked by and asked if she was trying to get a date with me, commenting that I was too young. Donna smiled and retorted, "Nevermind that, Frank."

"There isn't a day when Donna is not smiling. She is the sunshine in our lives," said sophomore and Mr. Juniata winner Casey Chew.

Donna agreed to take part in Chew's talent portion of Mr. Juniata. "He was awesome. I was scared to death, but really enjoyed it," she said.

Beforehand, Donna was scared that she would have to dance. But in the end, she stole the show.

"I went to the Mr. Juniata contest, and I thought she was gonna cry up there, with all the kids hollering for her," said Linda Grove, Donna's daughter. "She just loves those kids."

A little known fact is Linda also works for Sodexho at Juniata. Linda can be found running Cafe a la Carte in Brumbaugh Academic Center.

"Oh, that explains a lot!" said sophomore Peter McLean when he found out about their relation. "Donna's awesomeness must be genetic."

Donna was married for over 35 years before her husband passed away. When he did, Linda moved in with her mom to keep her company. The two still live together in a home in Alexandria.

When asked what she does for fun, Donna answered, "I go and see my granddaughter." She especially enjoys watching her granddaughter's soccer games.

When Linda was a girl, Donna was the mother figure to Linda's friends. "She was the mom that would always take us to the 4H club and Girl Scouts meetings," said Linda. "She was team mother for my brother's peewee football in elementary school, through president of the sports boosters in high school. Football players always came and had supper. She was mom to a lot of people."

And now, Donna has assumed that role in the JC family. "Students tell me I can't leave until they graduate," she said.

Linda provided some insight into why Donna is a Juniata campus celebrity.

"She's easygoing. She's a people-person. She's Mom!" she said.

To get to know Donna's interests, ask her about Disney World, country music or sports.

She traveled to Disney World and fell in love with the Animal Kingdom. She recalled that during one roller coaster ride, "I thought my heart flew out, but I am still living."

She enjoys country music and has seen concerts in Nashville and Missouri. She also enjoys sports and keeps up with the JC sports action.

Before her food services days, Donna worked in a sewing factory for 32 years. When the factory moved its operation overseas, Donna, guided by the factory's career service's director, decided to work at Juniata. "They will not be sending JC overseas like the factory," she said.

She began work at Juniata in 1993. Before she became a cashier, Donna spent time preparing pizza, subs and pastas.

Hal McLaughlin, food service director, said of Donna, "What a nice person and great employee."

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Res. Life to inspect rooms

Hookahs, candles prohibited

James Trent

This Thanksgiving Break while students are away, resident directors and resident assistants will perform routine inspections of students' dormitory rooms.

"Room inspections are not a big deal," Director of Residential Life Tim Launtz said. "The RDs don't open drawers. They don't open desks. They don't look under beds."

During room inspections, residential life staff are directed to find hazards that are plainly visible. They look for prohibited items like candles, halogen lamps, exposed extension cords and, as of this summer, hookahs.

"We do this for students' safety," said Launtz, adding that anything that appears to be dangerous will be written up.

Hookahs are classified as "smoking paraphernalia," according to Launtz, and smoking has always been prohibited in residence halls. This summer, however, there were rising concerns about the popularity of the tobacco-smoking device. Launtz explained how hookahs have become very popular and are a deep concern among residence directors nationwide (see "Hooked on Hookahs, page 1).

This concern over hookahs is due to the device's use of open, unprotected hot coals, Launtz said, which present a considerable fire hazard.

"As long as nothing looks like it will catch on fire or will explode, it's cool," said Mark Holbert, the RD of Tussey and Terrace. He said that the inspection takes ten to fifteen seconds for each room.

Holbert said that he keeps an eye out for prohibited items that are in plain sight. "Candles and hookahs are an automatic fine of 100 dollars," he added.

Juniata has been particularly concerned about the use of any type of open flames in residence halls since a fire in 1996 in South Hall caused considerable damage. The fire was started by an unattended candle. Launtz was the Huntingdon fire marshal at the time.

Students who would like more information about inspections or about the list of items prohibited in residence halls should contact the Residential Life office.

Student Government recognizing the needs of student body

continued from page 1

ment to tackle other issues that matter to students.

Student Government has also recently created the RSO Approval Board, which exclusively deals in the approval of new student clubs and organizations, freeing up even more time.

Unlike some governmental bodies that appear above the mass of people and unattainable to the "common students," Juniata's Student Government prides itself on being visible on campus to maintain accountability. President Demetri Patitsas encourages students to come to Senate meetings and bring their issues and needs. He stressed that the agenda should mold to what students want to see happen and what students feel is most important.

One student-born idea that the organization has recently proposed to the administration is the possibility of Juniata requiring physical education credits in its curriculum.

The idea was first born at the dinner table in Baker and was eventually pitched before the Board of Trustees. Sophomore Jimmy Voland led a discussion among his friends about how positive it would be if credits were offered for courses in physical activities. It would not only promote a healthy and active lifestyle but would also teach leadership and teamwork skills, according to Voland.

One of the members of this casual conversation, Jigar Patel, the officer of technology on the Student Government Executive Board, took the idea to the Student Senate. It received a favorable response from students and the officers, which led to its presentation at a trustees' committee meeting.

Lakso doesn't expect this proposed requirement to be approved by faculty and the curriculum committee, the two groups who determine what courses are implemented. He cited concerns over needing to hire new faculty to implement the proposal. But many people on campus still support the idea.

Professor of economics and business administration Jim Donaldson said that he supported such an idea, only with "a whole lot of caveats."

"[Physical education would have to be] a matter of introducing students to something new and developing some level of capability that meets set goals," said Donaldson. He added that the program shouldn't be implemented exclusively for the sake of making Juniatians more physically active, but should instill the values and teamwork that go along with sports.

Lakso said that, although Juniata recognizes the need for students to be active and have the opportunity to participate in healthy activities, the attitude of the student body has been that students enjoy working out and taking care of their bodies in their own ways. Facilities, such as the Kennedy Sports and Recreation Center (KSRC), encourage and allow students to be as active as they want to be.

Greg Curley, assistant director of athletics, said that the KSRC "could definitely handle a few" physical education courses.

"The process would not be without difficulty, but our facilities would have the ability to offer them," he said. Curley feels that encouraging students to be active benefits their overall college experience.

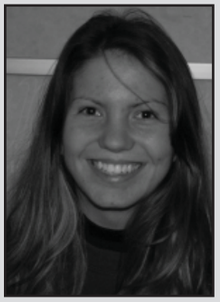
"Physical Education courses would serve as a good social way to meet people that are outside of [classes in your] POE," said Junior Pat Haskins. "And if the courses were mandatory, it would force students to take time away from their strict academic schedule and have some fun."

Roving Reporter

Would you take Physical Education if it were offered at JC?

"Yes, colleges are notorious for having cool P.E. classes."
- Caitlin Stormont, '10

"Yeah, sports are more fun than learning."
- Mike Jack, '09



"I'd love it as long as it had the cool P.E. sports like high school."
- Pete McLean, '09

"Sure, as long as there 's team sports that everyone can do."
- Brianna O' Malley,

"No, P.E. was always lame."
- Sebastian Brown, '09

"No, because I don't have time."
- Dina London, '07

TnT Resident Director Mark Holbert participates in a Habitat for Humanity fundraiser on Nov. 1. Participants paid $1 to help duct-tape Academic Support Services Director Sarah May Clarkson and Dean of Students Kris Clarkson to a wall in the gym.

Shutting Down the Myth that JC Blair Hospital is Closing

Caroline Weisser

When asked about the possibility of JC Blair Memorial Hospital closing for financial reasons, "shock" and "surprise" might be the best words to describe Christine Gildea's reaction. Gildea is the director of marketing and public relations at JC Blair. She said, "The hospital is stable[financially]."

She explained that the hospital did have financial issues in the past, but recent administrative changes have redirected the hospital's interests.

"There are still challenges, but the hospital is on the right track," said Nancy Glidden, the vice president of finance and chief financial officer at JC Blair. Glidden is a new addition to JC Blair and has been at the hospital for only six weeks. Other additions include the new President and Chief Executive Officer Kevin Calhoun.

Debra Kirchhof-Glazier, professor of biology and director of Juniata's Health Professions Program, described the new CEO as a person, "who is both visionary and competent."

Finding physicians, not finances, is JC Blair's primary challenge. At the moment, the hospital is looking for physicians specifically in urology and orthopedic surgery. These positions are currently understaffed.

Glidden explained, "We are trying to meet the needs of the community…but [recruiting physicians] is very difficult in a relatively isolated area."

The Pennsylvania Medical Society, a non-partisan organization, detailed the problem in its annual report in 2005.

"In 2004, only 7.8 percent (down from 50.5 percent in 1994) of residents remained in the commonwealth to practice permanently," reads the report.

The report also states that, "In order to attract young physicians to Pennsylvania, the medical liability situation must be resolved."

Given such financial and insurance burdens, hospitals continue to struggle. For example, Tyrone Hospital, which is about twenty miles from Juniata College, filed for bankruptcy in the past month. Glidden explained her thoughts on why Tyrone and other rural hospitals have financial difficulties.

"We have more Medicare and Medicaid patients and the federal reimbursement rate is very low," she said. Additionally, Glidden explained that there are "fewer patients with good insurance."

For this reason, smaller hospitals experience a greater financial burden. According to JC Blair's most recent annual report, it lost over $18.1 million in revenue not reimbursed from Medicare, when the hospital's total revenue for its healthcare services was just under $76.5 million. That's a 23.72 percent loss from Medicare alone.

The next issue of the Juniatian will explore medical malpractice and its associated insurance costs, how it is leading to a decline in Pennsylvania's healthcare, and what Juniata's chapter of Health Occupations Students of America are doing in response to the crisis.

Life at RFS

continued from page 1

really nice to go outside for your classes all day, instead of just one day a week for a lab."

Besides promoting environmental education, the semester is also a social experiment to see how the students live and interact in this unique environment.

Lynn Cockett, assistant professor of communication, co-teaches the living communities course at the field station. She said that living at the field station gives the students a unique academic and social experience.

"They're always in interaction with people who study what they do. Everyone out there is really interested academically and personally in the same things," said Cockett. "It's like a whole semester immersion in their POE."

Celia Cook-Huffman, professor of conflict resolution, also co-teaches the living communities class. She said that living together and having the same schedule gives the students "a natural kind of study group and study environment to work in."

In addition to having classes together, students work on research and have built a recreation area by the lake including a fire ring, horseshoe pit and volleyball net.

Huston said that they spend a lot of their free time together in the evenings.

"There've been a lot of group movies," said Huston. "When it was warmer we took canoes out and some people brought their personal kayaks. We would just all hang out down by the lake and go swimming."

Alfarate

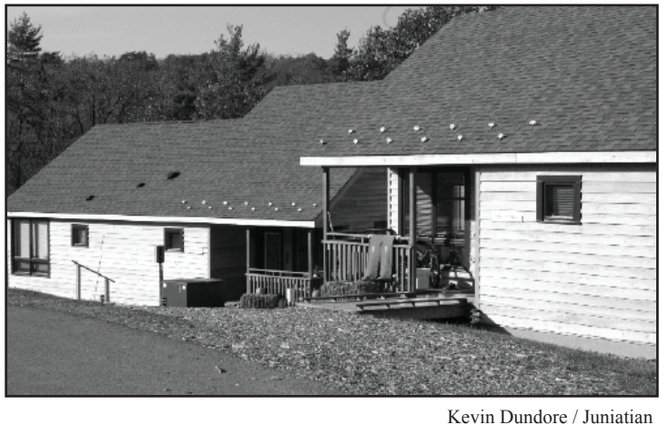
Led by Biology professor John Matter, Juniata students take data from a stream at the Field Station. Below, the two new lakeside student lodges.

Despite rumors, Huston said that they go to campus at least once a week, and some spend the entire weekends on campus. People also come to the station to visit them.

"We've been hearing rumors from people on campus that they think that we're not allowed to leave, and that we have curfews and crazy things like that," said Huston. "We're not just secluded from everything."

The nine students and Resident Director Joe Wills (Class of '06) live in Davis and Robison lodges, which include bedrooms, bathrooms, a kitchen, a living room and a laundry room. Wireless and cable Internet access is available in every building.

Yohn said that the lodges were a much-needed addition to the Lake Side Center.



"We have some really nice academic space out there with Shuster Hall, but until we got housing out there, [it] was keeping us from meeting our potential for utilization of the facility," said Yohn. "I think it's really going to explode in terms of all the kinds of activities that can go on out there."

It's like a whole semester immersion in their POE.

Both the Lake Side Center and Grove Farm, formerly the field station's main area, are used by Juniata for research projects and conservation programs, such as an osprey introduction project. Several classes, such as conservation biology and general ecology, use the field station. There are also outreach programs for middle and high school students and teachers and public projects, such as maple sugaring and apple butter making.

Central to the Lake Side Center's activities is Shuster Hall is a Leed certified green building made entirely of recycled material. The building is used as a classroom, lab and dining area.

Shuster Hall also provides full food service from a Sodexho chef five days a week and partial food service on the weekends.

Kevin Dundore / Juniatian

Interested in spending a semester at the field station?

Assistant Provost Dr. Paula Martin provided the Juniatian with information about the application process.

Who can apply?

Junior-Senior standing is required, though students should apply earlier (even Freshman can apply: this will increase their chances of having a space).

Must I have a certain POE?

A Sense of Place would be appropriate for many POEs. Obviously environmental science and studies students, but also geology, biology (ecology) and even beyond: those with interests in sustainability or GIS would be well served too.

The semester is required for any student wishing to complete the Environmental Education Certification at Juniata. ESS100 (offered every semester) is the pre-requisite which opens the door to the Sense of Place Sem@RFS.

Where do I pick up an application? Are they online?

They will be online soon (off the RFS Webpage). However, anyone can pick up an application from outside of Dr. Martin's office, B209 or from Susan Lavere (B200A) or from the field station office (B211).

When are the applications due?

Applications are accepted continuously.

Who can a student talk to for more information?

Dr. Dennis Johnson is the Academic Program Director of A Sense of Place. He could tell you about it, as could either of the Co-Directors, Chuck and Sharon Yohn, or myself.

Any other tips?

Talk to your advisor to see if the semester could be right for you! And, yes, it is possible to do a semester aboard either before or after the Sem@RFS.

Thumbs Up, Thumbs Down

to the CTS administration for dodging the Juniatian in its efforts to gather information for a story about the recent server issues on campus. A few days after the final blow off the CTS' main power supply blew up. Faulty copper wiring? No. That's fast-acting karma.

the new Giant. It has fancy aisles, free samples and phenomenal selection. It is the most super of markets.

to "The OC" obsessors. Summer graduated high school, moved on to college and got a life. Maybe you should too.

to the democratic process. As someone's wise Nana said on election Tuesday, "What a wonderful country we live in to be able to vote and not be afraid for our lives."

to Daylight Savings Time. Why does it have to get dark at five o'clock? We can make the sun set whenever we want, can't we? How 'bout a few more hours of daylight?

Hookah popularity

continued from page 1

and had them confiscated by security. Because of their cooperation and the newness of the matter, the fine was waived, but new Residential Life policies are now in place to address the popularity of hookahs.

JC hookah cans and cannots

Director of Residential Life Tim Launtz reports that this has been a very new concern for Juniata and many other colleges. Last year, three hookahs were removed from College grounds. It was the first time Residential Life had encountered them, and it decided that hookahs should be removed from residence halls because of their potential as a fire hazard.

Hookahs are officially now not allowed to be stored in residence halls or other campus buildings, just like candles aren't.

When asked why hookahs can't just be stored inside dormitories and only smoked outside, Launtz said, "We wanted to make the policy black and white. It's just easier for enforcement to say that hookahs are prohibited in College buildings."

This doesn't prevent hookahs from being smoked outside, however. Like cigarettes, students are allowed to smoke 20 feet away from the entrance of a building or in designated smoking areas. This policy reduces the fire safety concerns.

Hookah Health: Fact and Fiction

Hookahs are typically used to smoke tobamel (or shisha), a 1:2 mix of tobacco and a sweet substance like molasses, honey, or fruit flavoring.

The hookah's popularity can be attributed to the belief that it is less harmful than cigarettes. The smoke is less harsh than that of a cigarette, making a hookah seemingly safer to smoke.

Senior Reid Smith doesn't smoke cigarettes but does enjoy hookah smoking. He feels smoking a hookah is less harmful. Smith said, "I don't pick up the distinctive taste of rat poison in hookah smoke… or any poison in general for that matter."

Many health professionals view hookah smoking as just as harmful, or more harmful, than cigarette smoking given the durations for which hookahs are smoked. A typical smoker smokes a cigarette in five to seven minutes, while a single hookah session can last anywhere from 20 to 80 minutes. Because of the increased time and larger volumes of inhaled smoke, the World Health Organization (WHO) claims that one hookah smoking session is equivalent to the amount of smoked inhaled in 100 or more cigarettes.

According to a Sept. 2006 Georgetown Medical Center news release, accessories intended to reduce the exposure to toxins, such as modified mouthpieces, chemical additives for the water and plastic mesh to create smaller bubbles of smoke, have not actually been shown to increase the safety of hookah smoking.

The smoke from a hookah still contains toxins such as carbon monoxide and nicotine, meaning that with more frequent use, one can become addicted to nicotine. Because of this, hookah smokers still are at greater risk than non-smokers for cancer, heart disease, respiratory disease and adverse effects during pregnancy.

In the WHO's 2005 Study Group on Tobacco Product Regulation (available online at http://www.who.int/tobacco/global_interaction/tobreg/Waterpipe%20recommendation_Final.pdf), the organization warned that hookahs may carry additional health risks. The charcoal typically used to heat the tobamel may introduce other toxins from the combusting fuels used in charcoal. The mouthpieces are typically shared and thus may be instrumental in the spread of Tuberculosis (TB), Hepatitis and Mononucleosis. The WHO warns that waterpipe smoking should not be considered a safe alternative to cigarette smoking.

River Rats return to championship

photo by Barry Hill

The Juniata River Rats men's rugby team played in the Allegheny Rugby Union championship on Oct. 28 for the second consecutive year. The team battled horrible weather conditions and questionable calls by referees before falling to Allegheny College 17-0. The championship marked only the second time that the River Rats posted a loss on the year. Both setbacks came at the hands of Allegheny. The River Rats won the championship last year by defeating UPJ.

Vote today for Juniata's EcoChallenge ideas

The EcoChallenge planning committee wants student body input on what ideas Juniata will pursue for the national competition. Vote electronically in the campus-wide election today. Voting kiosks will be set up in Ellis during lunch and dinner for student convenience.

Ideas to be voted on are: sustainability course/P.O.E.; incentives for recycling and reducing waste; biodiesel in transportation/building use; organic garden and compost; sustainability Monopoly; green residence halls; compact fluorescents; and enhanced blue bin recycling.

The top three to five ideas chosen by campus will be written into the $25,000 grant proposal for the competition.

Are JC students being good neighbors?

continued from page 1

with a notice that bans them from returning. If they do return, they are arrested and charged with trespassing in addition to the crime they allegedly committed in the first place. The Juniata College Police Department is responsible for any property owned by the College, and any incident that is reported is looked into seriously, according to the security office.

"I personally know of two local non-Juniata students who were asked never to come to campus again. Compared to other schools in the middle of a town, I don't think that we see local non-students at parties very much at all," said senior Seth Robertson.

Townspeople also often complain about students who allegedly cause disturbances during off-campus outings.

Dean of Students Kris Clarkson believes that negative comments about students misbehaving in town come most often from those living along the route between Memories, a popular bar, and campus. The trash and debris left behind after a weekend of students walking back leaves a mess that the citizens have to clean up, according to Clarkson, who has neighbors who live along this route.

"We have had incidents where Juniata students have stolen things like for-sale signs or Steelers flags, but more often than not, trouble off-campus comes from non-students," said Clarkson.

At the moment however, the majority of citizens have a positive view of Juniata students.

One Huntingdon resident, who did not wish to be identified, said, "I live right down the street from a house of students. They're nice, generally. Every once in awhile there might be some loud music or some loud cars, but they never curse or talk inappropriately in front of my kids, so I'm alright with them."

According to a study completed by professor of economics and business administration James Donaldson, the more interaction the citizens of Huntingdon have with students on a regular basis, the more likely it is for the town-gown relationship to remain unstrained. His study showed that the problem lies in the fact that many residents do not have frequent interactions with students. This suggests then that implies that students should seek more interaction with their neighbors in order to improve community relations.

This study and others like it relate to community projects like The Good Neighbor Initiative, a project run by the College that encourages residents of town to interact with off-campus Juniata residents.

Off-campus students are reminded by Clarkson that they are still required to follow the Student Code of Conduct and are still subject to the student handbook's Principle of Community.

The Principle of Community, located in the "Pathfinder," Juniata's student handbook, states, "The basic principle of community at Juniata holds that any behavior which infringes upon the rights, safety, privileges or property of any individual, or impedes the educational process, is unacceptable."

Fossil Fest 2006

Christopher Shannon / Juniatian

On Oct. 29 the geology department sponsored its fourth annual Fossil Fest. The event drew over 100 children and parents from the area. Geology students led the participants in a search for Paleozoic fossils in two different areas in Huntingdon.

When should an RA take action?

Lack of instruction during training leads to inconsistency amongst RAs

EDITORIAL

Becoming a Resident Assistant (RA) is a long and grueling process of interviews, paperwork and role-playing. The Residential Life staff wants to ensure that responsible, hardworking and reliable students are occupying the demanding positions. While maintaining a social and academic life of their own, these students have the responsibility of monitoring almost 40 other student's lives. With all of this responsibility, more often than not, something has to give. And, usually, it is maintaining a strict level of discipline on the floors.

The 30 students who were chosen as RAs have one week of intensive training before the fall semester begins. It covers everything from extinguishing fires to learning one's personal conflict resolution style.

However, one thing RAs do not learn is the exact grounds for disciplining a resident. RAs are taught how to deal with problems that may arise, like shutting down a large party, but they are not instructed on what constitutes a write-up and what can be ignored. Therefore, unfair inconsistencies arise amongst the disciplinary action of RAs, since they haven't been told exactly when and when not to take action.

"General instructions are given to 'use our own judgment,' but that's easier said than done," one RA said. "It's really hard to gauge when something needs to be done and when it's okay to let it go."

Most of the gray areas for RAs revolve around drinking. Writing up everyone who is underage and drinking might be logistically impossible, especially for an RA in East. Therefore, it is up to the individual who is on duty to make the call whether a student's behavior is out of hand or permissible.

Factors such as frequency of consumption, amount of alcohol consumed, level of drunkenness and the appropriateness of behavior all need to be considered. However, each of the preceding conditions is arbitrary and involves other aspects that need to be considered. One student may have downed a twelve pack of beer and be fine, while the person beside them is stumbling after drinking two.

General instructions are given to use your own judgment, but that's easier said than done

The question RAs have to answer is: who is the bigger offender? Most RAs decide it is neither and will let these small incidents go, even if students are blatantly breaking the College's rules of conduct. Some will even allow large offenses to slide—each weekend there are intoxicated underage students who end their nights vomiting in dorm bathrooms. And each weekend, RAs make sure that these people are safe, thencontinue on their rounds without taking disciplinary action.

While recently on duty, one RA admitted to socializing with a group of intoxicated students for over 30 minutes. "I knew they were drunk, but I also knew that they were safe and not causing any trouble. So, I let it go."

However, this laissez-faire attitude does not apply to every Resident Assistant who patrols the halls. A few RAs abide by the College's rules instead of using their own personal judgment. In an academic year, these RAs will submit a high numbers of referrals, notices of concern and write-ups, while other RAs won't write up a single student. The discrepancy illustrates the variation in the RAs' interpretation of their disciplinary role.

"There should be a more standardized form of discipline," said another RA. "We are mostly supposed to use our own judgment, but then you run across problems of consistency."

To some RAs, taking disciplinary action helps to keep residents under control. It can foster an environment of respect, ideally minimizing future problematic behavior. As Residential Life officials preaches to the RA staff, "It is easier to loosen up than to tighten up."

For the average student who likes to party and be rowdy, it is the luck of the draw when it comes to who is patrolling the halls. You may get a warning, or you could be written up. It doesn't matter which rule you are breaking or to what degree you are breaking it. What it really comes down to is the personal philosophy of the RA on duty.

This is not fair, considering that you could get written up for something that dozens of other students get away with every day. Until the Resident Assistants are clearly told what actions constitute disciplinary action, the system will not be legitimate.

If Residential Life wanted RAs to write up every offender who walked down the hall, they would tell them to do so during training. In order to establish a fairer system of discipline, RAs should be told exactly what constitutes disciplinary action. This would allow them to handle sticky situations fairly, without question sof whether or not they are making the right decisions.

Here comes the tuition bill

Getting the debt monkey off my back is hard

Mary Gardiner

Congratulations. Those of you who are reading this have made the right decisions: you're in college; you've taken the risks—or, in perhaps too many cases, your parents have—and if you spend your time right, you'll get your compensation quickly.

How much? We're talking about a *lot* of compensation here. According to a study performed by CNNmoney.com, a college degree could bring an extra $20,000 home to your bank account after graduation.

In a perfect world, that would mean that for your years of excruciatingly hard work at Juniata, you'll be rewarded with an annual (used) BMW. Unfortunately, in our world, the real world, that "extra" twenty grand will instead repay the debt that you've incurred by the time you graduate.

So what? Capitalism is based on the premise that investments are crucial, right? We invest money and effort into our education in order to get a hefty return back after graduation day. That's the way our country and economy works, right?

Maybe not. Given the fact that I have personally spent or borrowed more than $80,000 over the past four years, it will take over four *more* years before I will see a return on my investment, given the CNN study. Over half of that figure is committed to loans, which means that it will be even longer before I begin to enjoy the fruits of my labor. Further, the highly competitive job market, in addition to inflation, indicates that it will take more than a decade or two before I get the debt monkey off my back.

Of course, we could complain about that forever. I care about my wallet just as much as the next person. What I'm worried about, however, is the crowd of people who aren't at Juniata to complain.

I'll explain: as there are four doctoral degrees held on my dad's side of the family, I entered kindergarten knowing I would someday go to college. It's been a given all of my life.

But several of my best friends, with equally reasonable GPAs and

continued page 9

Powerpoint: Causing more drowsiness than Nyquil

Jason Najarian

PowerPoint manages to be simultaneously one of the most used and most reviled technologies in education. Typically the program's benefits tend to get lost in a sea of complaints.

PowerPoint is not inherently bad. It can be put to very good use as a visual aid. The main problem is that too many people use the program incorrectly. There are traps that even the most diligent presenter can fall into.

The most common trap is reading directly from the slides. What the audience could have read in eight seconds is drawn out over several minutes. The presenter talks on while brains in the audience shut down.

"The problem is that too many people just put everything they want to say on a slide and turn their backs to the class and read. It completely ruins the point of the presentation," sophomore Joe Maher said.

Few realize the difference between using the program as a visual aid versus a textual presentation. Too many texty presentations end up detracting from lectures rather than enhancing them. The sheer amount of material in some presentations can be a problem.

Sophomore Jeremy Weaver said, "Professors that use PowerPoint often don't know how much is too much for one class period. They use the PowerPoint to cram as much as possible into 55 minutes, and even if they can't cover it all in class, they feel as though the material is covered and they are justified to ask about it on tests,"

Many professionals study the problematic issues with PowerPoint use, including Clearly Presented, a presentation company based in the UK. Jonty Pearce, director of the company, wrote an article which included, "The Seven Deadly Sins of Visual Pre-

continued page 9

Presidential Perspective

President Kepple wants to hear from you! He uses his column to answer any college-related question. Simply e-mail questions to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

"Given Juniata's current focus on sustainability, what is the College planning to do to save energy/heat during the upcoming winter?"

Our facilities staff looks for opportunities to minimize our utility usage throughout the year, not just in the winter. Significant investments have been made, from the boiler room to new windows in buildings, to optimize our processes. Our boilers are tuned annually to ensure that they are operating at peak efficiencies. Steam distribution systems are monitored daily, looking for leaks or other problems that could result in higher fuel or water consumption. We are looking to take many of these same steps during Thanksgiving break and the winter break.

You will see an announcement outlining these details in the next week.

The key for us this year and every year is to reduce demand. All of us can help with that by turning off lights, computers and other electronics when not in use. In East houses, students can control usage by setting their thermostats at 68 degrees or lower.

"There's a rumor that the library houses a book that is made completely of human skin. Allegedly the book was donated to the school a long time ago. Is there any truth to this rumor? If so, which book is it?"

Coincidentally, the book bound in human skin is now in a glass case in the library lobby as part of our Halloween display. The book is entitled, "Bibliotheca Politica," 1692. We think the human skin claim is authentic because it was not an uncommon practice back then, and the book contains several references from that time-period explaining that it is bound in human skin. As awful as it sounds, it also looks like human skin, if you ask me.

Powerpoint confusion

continued from page 8

sentations," Pearce lists many common presentation errors. The "sins" include things such as bullet points, Clip Art, grainy pictures and corny images. That sums up most negative PowerPoint experiences.

With all these problems, why is PowerPoint used so much? It boils down to convenience. It is an easy way of organizing a lecture, and it takes pressure off remembering details.

"There is a sense of easiness about it. It feels like a useful tool, but sometimes serves as a sort of crutch for the speaker," said communication instructor Sarah Worley.

The presenter's convenience can demean the content and audience.

"This ease of use, speed and efficiency come at the cost of learning and attention," said Worley.

Students in the education department spend some time on this very issue. Kathleen Jones, professor of education, emphasizes to her students that PowerPoint "is a tool, not a teacher."

Jones said, "Used judiciously, it can be a very effective presentation tool. Unfortunately too many think that every note possible should be included and the worst offenders are those that read straight off the PowerPoint slides."

It is one of the best visual tools available for presentations, but that doesn't account for PowerPoint's rampant misuse. More people need to realize that PowerPoint is quickly becoming synonymous with boredom, and can damage a speaker's credibility. A presenter's goal is not to kill interest in the subject, but many times their methods have that effect.

Letter to the Editor

'airstonewater': a piece to build a dream on

Dear Editor,

Trying to describe "airstonewater" to someone who didn't attend is likely to be frustrating: "Well, piles of stones appear to mark the territory before the cast of ten appears…and there's dreamy, sort of spacey music throughout…several trapezes keep appearing and disappearing, and people swing on them, sometimes singly, sometimes as a couple…there's a pool of water some people splash in and around in and around in…and now and then they seem to be speaking poetic lines…" and about then the listener's eyes will betray a hope their cell will ring or an urgent bladder-related text-message will send them off apologetically to the nearest restroom. You would have had to be there, not, "…like, really," but "REALLY!"

Three performances were not enough for this audience member. It would take several more, at least, to exhaust the intensity of imaginative participation the piece delivered. Here was a "Gravity Project" involving anti-gravity, or what it an enlarged aspect of gravity keeping those people aloft and moving? What is implied, symbolically, by having one's feet off the ground? It is a metaphor for dreaming? For exercising the imagination? For the separateness that can come from being over-educated? For becoming a pendulum, and experiencing a rhythmical, shifting perspective on a familiar setting…on the world…on a new or lost love…on being literally high…on the moments after death, when one's karma is said to linger in proximity to the ground? (All those phrases beginning with *on*, pertaining to being *off* ground.)

The relationship of the performers to one another was frequently subtle and understated, even when one provided locomotion for the other; they often seemed separated by an emotion scrim between themselves and a partner, even in situations bringing one another into close contact. Their gazes at times did not intersect, creating a sense of zombie-like displacement, or a sleepwalking aspect.

The pool of water, about eight feet-square and several inches deep, created an unexpected, dynamic setting for both narcissistic and interpersonal encounters. In marked contrast to events of more profound emotion intensity was a scene of rhythmical slapping/splashing, using the full potential of wetness as an instrument of joyful, uninhibited self-expression we all must have experienced in our first baths. One unforgettable image is that of a young man hanging upside down from a trapeze, revolving slowly, while tracing a subtle circle around his partner with his finger in the water, as if personifying allure, safety from another's desire, hesitancy to act out one's feelings, or the way in which orbits of habit separate potential friends, lovers or partners.

Light, dark and shadow took leading non-human roles in the production—from the very first scene spotlighting two men spinning effortlessly in fixed positions on trapezes—and were later used to maximum effect in stroboscopic highlighting of two performers changing positions rapidly in the dark, appearing momentarily in various poses.

"airstonewater" enlivens our memories and imaginations because of its extraordinary kinetic powers. Ballet, gymnastics, yoga moves…none of these terms capture quite what the performance was "about," yet all were successfully synthesized, becoming the means by which the craft of expression through body movement was realized.

We come away realizing how rarely in adult culture the whole body is used for expressive purposes; how natural it is for children to demonstrate gesturally when words alone don't cut it; how deafness or lack of language skills demand acting out what we "mean to say."

Then we realize: "Right! This is a theatre. That makes it special. That's what we've come to see."

The lifetime investment of having tuition bills

continued from page 8

equally low family incomes, did not have the same expectation or support from their families. Many of them ended up in local community colleges, unable to pay or borrow money for college bills.

I almost joined them, on the brink of dropping out several times, after ripping my hair out over tuition bills topping $35,000. As a matter of fact, that is the number one reason that students drop out of Juniata. It's a depressing reality.

While abroad, I found that this fact contributed to the gross confusion between Americans and non-Americans. How, the latter would ask the former, could one of the richest countries in the world allow intelligent people to go without education? Franziska, a close friend of mine from Nuremberg, Germany, would often join the debate, citing her yearly tuition of about 100 Euros—about U.S. $79—which really only go toward transportation costs, she would note.

When it comes down to it, colleges are businesses.

How? This is how: America is really, in essence, a conglomeration of businesses. When it comes down to it, colleges are businesses. And Americans, essentially, are required to be businessmen and women.

But there's a reason that we're not all business majors. Some people cannot assess the prospects of investment, or make the risky decisions that may reward them in the end. Others just don't have the capital, and in turn, the freedom to make those decisions.

When that group of "others" includes gifted or intelligent people, something is wrong. Those voices cannot go unheard. Those minds cannot go uneducated.

'The Farthest Wave' crashes at JC

Singer Cathie Ryan brings Irish and Celtic Music

Sarah Kotora

The audience was washed away by Cathie Ryan's performance in Rosenberger Auditorium, Nov. 3, where she sang many songs from her newest album, "The Farthest Wave."

The Cathie Ryan Band, which plays Irish and Celtic music, consists of its namesake, who acts as singer, songwriter and bodhrán drum player; Sara Milonovich, fiddle player; and Donal Clancy, guitarist. Cathie's songs of the heart have captivated audiences throughout North America and Europe.

Although born in Detroit, Michigan, her parents emigrated from Ireland in 1957. In the summers, Ryan would visit her grandparents in Ireland. Throughout her performance, Ryan made references to her grandmother, who taught Ryan about Irish culture and traditional Irish songs. Ryan recently moved back to Ireland to be closer to her heritage. She has a strong personal connection to Ireland that her listeners can feel in her music.

Ryan began the show by sharing her feelings about Huntingdon. She said, "Juniata must be Irish at the core."

"Home by Bearna," a favorite song of the audience, was about a woman who goes to church every Sunday and then goes to the pub. Towards the end of the show, Ryan sang "So Here's To You," meant to express emotions related to friends parting. She encouraged audience members to sing along during this song.

"I don't have a very thick skin." Ryan confessed, in Raleigh, North Carolina's "News and Observer." The audience becomes aware of this, because she writes and sings from her soul. Her songs evoke feelings of emotional intimacy and hope in her listeners, portraying values of love, home, family, memory and spirit.

However, Cathie Ryan did more than sing; she educated the audience about Irish traditions and Irish culture. She spoke about strange Irish traditions, Irish family dynamics and sad Irish love songs, among other things.

Chad Herzog, director of performing arts, decided that the Cathie Ryan Band would be a good choice for Juniata Presents. In the past, followers of the program have shown strong interest in folk music.

Herzog was confident that the band's performance would affect the Juniata audience in positive ways. "I think everyone who [attended] will walk away feeling good about what they just heard, but also [with] an education about Irish music." He was certainly correct.

Paul Carrol

Cathie Ryan brought Irish culture and tradition to campus by performing Irish folk music in a Juniata Presents event on Nov. 3.

The Naked Truth

The sexcuses

Rebecca

Most men have encountered an "I don't want to have sex right now because…" excuse at some (probably several) points in their lives. The male population has heard some of the most overused and absurd reasons to avoid sex. Reasons that could only be crafted by the female mind. Excuses are like recipes. They're passed down from generation to generation, each woman has her own special way of making them, and most importantly her way never fails.

I'm not saying these excuses are right. I'm not saying these excuses are wrong. I'm just saying it's every woman's right to use them. And it's every man's right to fight those excuses to no avail. But to the valiant, the persistent and the desperate who can't accept defeat…here are some of the most popular "sexcuses" and tips for how to respond to them.

"I'm too stressed." If her life is always about stress, then it must be managed. So check the list! Simply have her make a list of things that she needs to do that day and add your name to the list when she isn't looking. She'll check off her daily (maybe weekly) duties and hopefully, she'll be whistling while she works. (Just make sure that you're the only person on the list. Too much whistling might make her tired. This is bad. See next sexcuse.)

"I'm tired." Saying that she's too tired is about as lame as you saying, "Well I know how to wake you up." Just give up on this one because women love this excuse far too much to ever admit it's not always the truth. Take a muscle relaxer to stop your spasms and call it a night.

The flood. I'll explain this as best as I can without being graphic. Unless you think you're another Moses, just let Mother Nature have her way. Your mighty staff will only part the Red Sea when God (or your woman) says it's time to proceed.

"My head is killing me." Funny. Yours is killing you, too. Commiserate and help her to realize that sexual healing can reduce the pain for both people involved.

"Someone might hear." Yes, yes they might. So either promise to make it a good performance or smother your mouths with a pillow. Explain that trying not to get caught can be fun.

"I'm not in the mood." Of course, no female wants to say, "I just don't like you." That's mean. It's never easy to say, "Well, it's futile when I can't feel anything anyway." It's about as polite as, "No, it hurts just to think about it." Just take "I'm not in the mood" as a compliment and say goodnight.

"I'm dirty." I realize you want to jump her, but she really just needs a shower. You're thinking, 'Dirty? FANTASTIC." Since she wants to exfoliate, offer your help to invigorate by joining her on the quest for cleanliness. Unless, your friend really likes to do it alone… then let her have "me time." You know you like a little solo suds action too. All is fair in scrubbing up and getting down.

The best part of waking up. If she says it's too early in the morning, she obviously doesn't understand your joy of rising with the sun. Some days we all need something a little more exhilarating than Folgers in our cups.

It's Thursday at 9 p.m. "Not now, I'm watching TV" is acceptable when she's watching "Grey's Anatomy." It is just as acceptable as you telling your girlfriend that she can't talk until the game goes to a commercial break. If you can't miss a defensive stand on Sunday, be ready for one on Thursday.

"I have a splinter." This is my favorite random excuse of the century….This excuse is just a prick to the self-esteem. One woman actually refused her man because she had a splinter…in her thumb. The poor man probably felt the life had just been sucked out of him, and not in a pleasant fashion.

If the splinter was located further South, I'd suggest helping your partner dislodge it, but I mean, she can deal without a thumb. Maybe, if you help her wrap it up (to avoid infection obviously) she'll give you two thumbs up for tending to her needs AND for being responsible.

No to MTWTHF. She thinks it's a weekend activity. Your feelings toward this excuse will best be expressed in song: "Feels so right, it can't be wrong. Rockin' and rollin' all week long. Sunday, Monday, Happy Days. Tuesday, Wednesday, Happy Days. Thursday, Friday, Happy Days. Saturday, what a day. Groovin' all week with you." These days are ALL happy days.

So excuses happen and they will continue to do so. Let's just be thankful that we haven't reached an age where "I just changed the sheets" stage is acceptable. Even later in life, women will use: "We already had sex, don't you remember?" or "The doctor said this might happen" or even worse, "I'm not getting any younger while waiting for you to get up" as excuses.

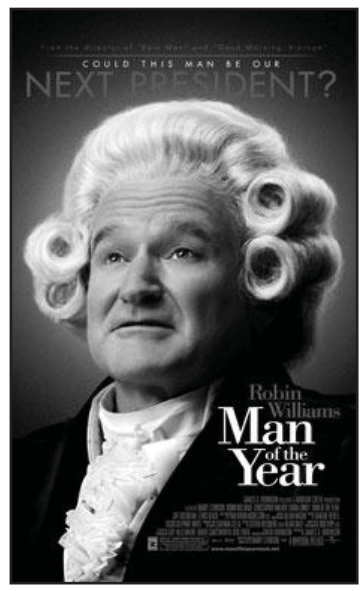
My final words go out to those who complain that no excuse is good enough: Be thankful that you aren't getting turned down because of crustaceans and baking bread. Trust me; you don't want this cooking lesson just as much as you don't want a bun in the oven.

"Man of the Year" Makes Audiences Cheer For A Regime Change. . . I Wish

E. LaBrecque

Jon Stewart for President in 2008? Why not Tom Dobbs instead? Regardless of what the trailers show you, "Man of the Year" isn't just fake news dressed up in a fancy suit. It explores the seriousness of big-game politics, despite the presence of a comedian in the White House.

Robin Williams sets the campaign trail, and the silver screen, ablaze in his portrayal of late-night TV funny man, Tom Dobbs. After a fan of Dobbs suggests that he run for president, Dobbs takes the plunge. At first, he approaches the whole affair very seriously, a little too seriously. His focus is straight-talk on the issues American people care about, but he neglects the jokester side that initially won over his fan base.



His manager, Jack (Christopher Walken), advises him to return to his comedic roots. After delivering a particularly flat speech, Jack tells Dobbs that, "Lincoln got more laughs at the Gettysburg Address." Dobbs adjusts his act and picks up a stronger following.

Dobbs wins the election. However, he is the independent candidate. When was the last time an independent candidate won the United States presidential election? As soon as they announced that Dobbs had won Virginia, the notoriously red state from whence I hail, I knew there was trouble in Washington. Surely they had miscounted the votes; there were hanging chads or some other error that occurs at election time.

Enter Laura Linney as Elenor Green, the disastrously attentive employee of Delacroy Voting Systems. Elenor discovers a glitch, which favors one candidate over another, in the new electronic voting system. Like a good employee, Elenor reports the problem to her boss, who quietly blows her off. Once it's clear that nothing was done to fix the glitch, Elenor becomes a thorn in the side of Delacroy. The company, under the legal guidance of Jeff Goldblum's character, uses scare tactics and physical abuse to hush Elenor.

A huge corporation that is willing to harm employees to save face is no laughing matter. I wasn't expecting such drama from Williams and Lewis Black. There were jokes incorporated into the film, but they didn't detract from the plot's darker core. And everything tied up nicely in the end.

In case you weren't feeling this way already, this film will leave you feeling that we've had the wrong kind of fool in office for far too long.

LOST IN THE RECORD STORE

Shut Up and Sing: do politics and music hit a wrong note?

Kevin Warner

NBC recently announced that it will not air ads for the new documentary "Shut Up and Sing" because of a policy that does not allow advertisements that deal with "public controversy" to be played on the air. "Shut Up and Sing" follows the Dixie Chicks, a pop country group, showing how the musicians dealt with political controversy caused by comments made by a member of the group in 2003. Besides the irony of a commercial advertising a documentary about political controversy being banned because it is politically controversial, this incident raises the argument that musicians should stay away from politics.

Asking musicians to avoid politics is like asking college students not to drink.

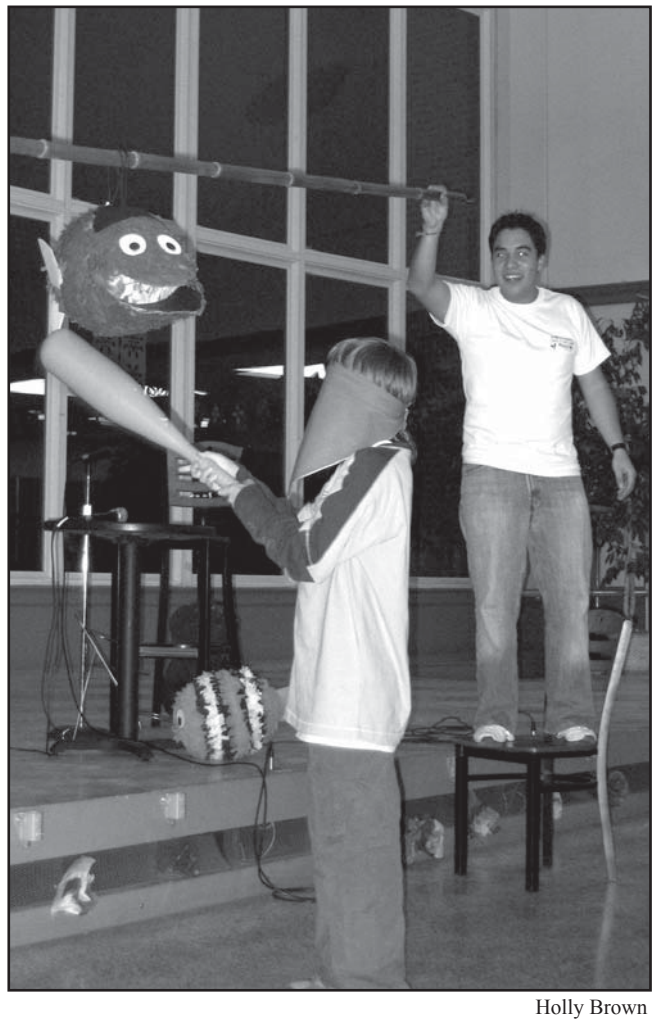
For those who don't remember, the controversy started during a 2003 performance in London, when Dixie Chicks' singer Natalie Maines said that she was "ashamed" to be from the same state as President George W. Bush. In the aftermath of her comment, an enormous debate emerged about whether or not celebrities, specifically musicians, should use their positions to espouse political opinions. At the time, conservative Americans were in an uproar about the Dixie Chick's view of the president.

Country radio stations boycotted playing the Dixie Chicks' music. Angry country music fans disavowed the band and stopped buying their CDs. Conservative pundits touted about "liberal Hollywood" and celebrities abusing their positions to force their political beliefs on Americans.

The discourse about this debate avoided the obvious. Country music fans never seemed to mind politics in their music until it was liberal (Toby Keith anyone?). And, asking musicians to keep politics out of their music is ridiculous.

Music is an expression of ideas, emotions and feelings. I don't exactly know the complete history of music, but I'm sure the first Cro-Magnon man to beat a stick on the skull of a boar had a particular emotion or thought he was expressing at the moment.

Asking musicians to avoid politics is like asking college students not to drink. Expression is a central tenet of music, and the moment when politics goes outside the realm of acceptable speech for musicians is the moment when music loses something that is at its heart and soul.



Besides it being a right under the First Amendment, whether you agree with it or not, Maines' comment is good for the discourse of American public life and for music. Disagreeing with the comment is fine, and expressing that through boycotts is good, but it is not fine to say that musicians shouldn't talk about politics.

Luckily, our culture is not often consumed with these types of debates. The Dixie Chicks have bounced back, with their latest record going to the top of the charts. While I have not seen "Shut Up and Sing," I'm sure it's an interesting look at how the group handled the uproar, and I'm sure they'd agree when I say it is impossible to take politics out of music.

Fiesta Latina on Saturday

Holly Brown

Club International will hold the 7th Annual Fiesta Latina, Saturday, Nov. 11 at 6:30 p.m. in Baker. Dishes from Latin American countries and Spain will be served. Kris Diaz and The Latin Sound Band will perform during the celebration. Tickets are on sale at the information desk in Ellis Hall. However, sales are limited. The cost is $5 for students, $7 for non-students, and $2 for children under 12. Contact Gabriel Lopez for more information.

'Juniata Noise' music magazine on the stands

Ashley R. Appleman

You may not know it, but Juniata has a new literary, and musical, outlet on campus. "Juniata Noise," a music magazine, made its debut this fall. Disappearing off the racks within two days, the publication is a hit.

Megan White, creator and editor in chief, allows her staff to write about topics that interest them. The last issue featured articles ranging from "5 Rules of Pit Etiquette" to a commentary on the cultural impact of 60s and 70s music. White said, "I like to keep it pretty open for what people want to talk about, but there are album reviews and opinion articles."

The first issue of the magazine included a contest to win a free iPod. The rules only required applicants to participate in a music video, using music of their choice. The staff plans to include similar contests in future editions.

The idea for publishing a music magazine came to White one day last year while she was sitting in class. She considered the straightforward styles of Juniata's current publications and wanted to create a magazine centered on music. "This project wasn't for any class; it was only because I wanted to do something creative and fun."

White did not charge anything for the magazine's first issue because she wanted "to make it readily available for anyone." However, she is considering charging for future issues because she personally funded the initial press run. She paid $238 to print 100 copies of the magazine at the College's print shop.

White and her team of writers would like to publish another issue before the semester comes to a close. However, White would like more students to volunteer as writers for the second edition, stating "I would love for more people with various different music tastes to get involved."

If you are interested in writing for "Juniata Noise," contact Megan White at whiteme04@juniata.edu.

Classic Juniatian

Printed on Dec. 14, 1978

EDITORIAL: Candy machine brutally beaten

It occurred very late Saturday night or in the wee hours of the morning on Sunday. Someone got a craving for sweets in Tussey-Terrace Dorm. However, this individual was fortunate because a vending machine which sells a vast array of chocolate bars and other candies is located for the residents' convenience on the first floor. Unfortunately for this craving individual their economic funds could not fully satisfy their hunger. So they robbed the machine.

But they did not only loot the machine. When other residents of the dorm wandered down to the machine on Sunday, they saw the following: candy wrappers strewn from one end of the hall to the next, broken glass, splintered plastic and twisted metal.

Most residents were astounded when they witnessed the physical damage done to the machine. This machine was not merely looted of its candy, it was physically molested. Damage like this seems to be, if not morally accepted to many students, acceptable to few.

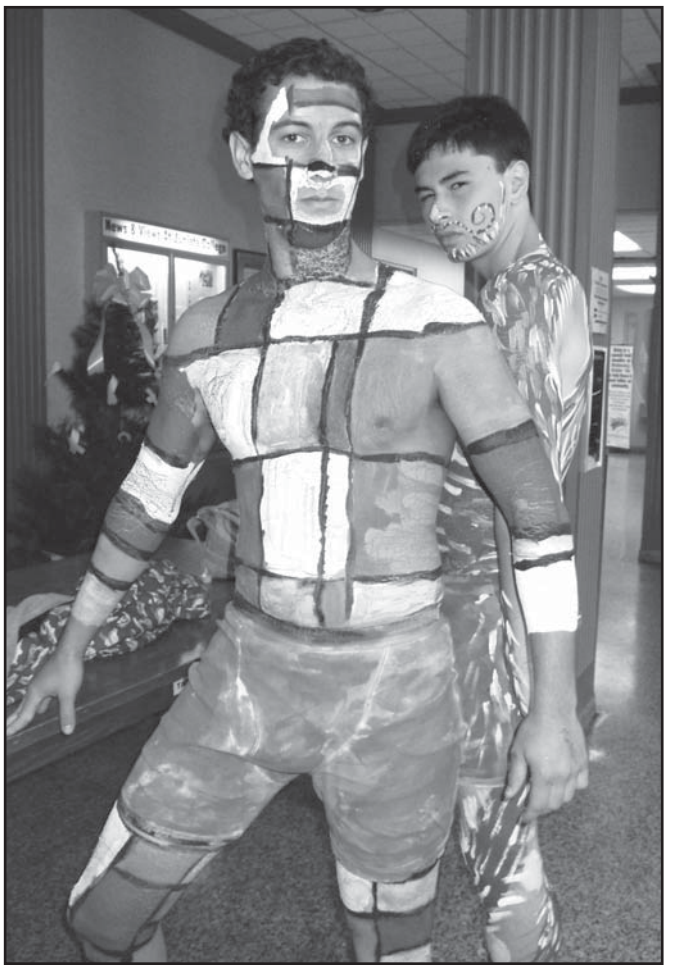
Action was taken by the Student Activities Committee (SAC) last year when a damage policy was formulated in an attempt to curb malicious damage. It is obvious that what occurred in Tussey-Terrace this past weekend could be classified as malicious. An act as such could never be justified. If the individual or group who did the aforementioned damage is ever uncovered, they should be prosecuted to the fullest.

Juniata to set Monopoly record

Life-size game expected to make Guinness Book

Brittany Moyer

Nineteen years ago, Juniata students threw large foam dice from the roof of Founders to the ground below, signaling the start of a record-setting life-size Monopoly game.



On April 21 of this coming spring, a new group of JC students will play the game on an even larger scale, this time aiming for a spot in the Guinness Book of World Records.

The current record sitting in Guinness is a 939 square-foot game. Juniata's gameboard's expected to topple this record. The board will run down 17th Street, across Scott Street in front of Ellis Hall, down 19th Street and across Moore Street. There will be six playing pieces, one for each current class, one for alumni and one for faculty/staff.

To join in the effort, contact senior Kathleen Candado at candakm3@juniata.edu. Indicate a committee of interest: technology, marketing, fundraising, game design, finance and/or volunteer coordination.

Sign-ups to play will be opened next semester, closer to the event.

Body Art exhibit

Christopher Shannon / Juniatian

As part of the Art Alliance's second annual Body Art exhibit, sophomores Evan Heisman and Jordan Aoyama pose their painted bodies. This year's exhibit theme was "Famous Paintings," for which each artist painted a recognizable piece of art on a model's body. The Art Alliance's goal was to promote discussion about art. "Painting nearly nude bodies and sending those people out into Ellis hopefully raises questions about art. Seeing painted people, in a way, is more shocking than paintings hanging on a wall in a museum."

Twenty-Six.

Women's volleyball team captures conference title and conference honors

Derek Stanley

On November 4, two events occurred at the Kennedy Sports & Recreation Center that will go down in the record book. The Juniata women's volleyball team played its final game in the Commonwealth Conference and also won its 26th consecutive conference championship, giving the team a bid to the NCAA Division III tournament.

The women, now 35-1 on the year, entered the conference in 1981 and have not relinquished the title once. To put this into perspective, most of the students on this campus were not born the last time the women did not win the conference and advance to the NCAA tournament.

Not only have they never lost the title, they have not lost a conference match since that inaugural year on November 8, 1981. That puts their match winning streak at 279 consecutive Commonwealth Conference wins as they walk off into the sunset and into to the Landmark Conference in 2007.

When asked about the end of the streak, senior Rachael Schatz said, "An untarnished record is a good way to leave the conference. I've never heard of anyone else doing that. It is a legacy we are proud to leave behind."

Head coach Larry Bock had a different perspective. He said, "It's a pretty big non-issue. After a while you stop thinking about conference championships because the focus has been on the national championship for so long. It is nice to have been successful in that conference, but we don't put a lot of emotional energy into the conference anymore. [It] might be really healthy and good [that] we are leaving. It is a good, wonderful conference, but the team has outgrown it."

The women got off to a slow start in the championship match against the Elizabethtown Blue Jays, but rallied to win the match in three games, 30-23, 30-18, and 30-23.

The Eagles were led by sophomore and tournament MVP Amber Thomas as she totaled 14 kills on the night. Fellow sophomore Erin Albert chimed in with 12 kills herself, while freshman Megan Lamens stepped up on the big stage to lead the team in blocks with two solos and four assists.

Conference championships are not the only honors being raked in by the women lately. Seniors Schatz and Stephanie Kines, along with Thomas, received first team All-Conference honors. Thomas was also included in "Sports Illustrated's" 'Faces in the Crowd' feature, while Kines received the Commonwealth Conference Player of the Year Award for the second consecutive year.

"Volleyball is such a team oriented sport that it takes an entire team to earn individual recognition. This is basically a team award and shows how much we have dominated the conference. I would not succeed if we didn't have someone passing the ball on the tape and a setter putting the ball on the money," said Kines.

Freshman Paige Johnston joined in on the awards party, receiving the Commonwealth Conference Rookie of the Year award.

"It was totally unexpected and was a pleasant surprise. Working hard everyday in practice and in games paid off," said Johnston.

The next step in the quest for a second national championship begins tonight in the NCAA Regionals here on College Hill. The Eagles will be without Kines, however, as she sprained an ankle at practice prior to the Conference Championship. With a recovery time of approximately 10 days, her season is not necessarily over.

"At first I was devastated because I feared the worst, but both I and the team will be fine. When it comes down to it, I will be out there. We have had one goal all year, and even if I had to play on a bloody stump I would take the court," she said.

That one goal is now in sight as the women make their final charge to capture the title Nov. 18, in Salem, Virginia.

SI recognizes women's volleyball Amber Thomas

Sophomore women's volleyball player Amber Thomas is featured in the Faces of the Crowd section of the Oct. 30 edition of "Sports Illustrated."

SI recognized Thomas for her second Commonwealth Conference volleyball player of the week honor this season and her instrumental role in Juniata's 32-1 record.

Thomas has her fingerprints all over the Eagle's success this season. She has crushed 337 kills so far this season, good for the team lead. She is also one of Juniata's most well-rounded and versatile players, ranking second on the team in hitting percentage, fourth in blocks and digs and fifth in service aces.

Her .336 hitting percentage ranks her second in the conference behind teammate Steph Kines, the Conference Player of the Year. Thomas' 3.83 kills per game has her ranks her fourth in the MAC.

She racked up a career-best 29 kills against Muskingum earlier this season and has reached double-digit kills in over half her games.

Thomas and the Eagles will enter in their 26th straight NCAA Division Tournament tonight as the top-ranked team in the tournament. Juniata faces eighth-seeded Mary Baldwin at 8 p.m.

Field hockey season not done yet

Dan Rapp

The field hockey team concluded its regular season with a program record setting 16 wins and only three losses. However, that is not the only record this team has set this season.

Upon opening their season, the Eagles set a new winning streak record by beating the first nine teams they faced.

After compiling an astonishing 64 total goals, the team also set a record by averaging 3.37 goals per game. They also averaged less than one goal against per game, helping to achieve a goal differential of +48.

Another team record that was rewritten can be found in the section of the record books containing shutouts. After amassing a record 10 shutouts, the team had obviously made a name for itself in the department of defense.

Those were only the team records. The Eagles also set six individual program records, four coming from junior Kim Wagner in the form of goals in a season [31], goals in a career [41], points in a season [68] and points in a career [123].

The other two records were set by Abby Funk for shutouts in a season [10] and Meredith Low for assists in a season [16].

Along with all these records, Juniata also earned five spots - out of a possible 13 - on the All-Conference team. Corinne Hamblet, Bobbi Rickenbaugh and Kim Wagner earned their places on the first team while Michelle Campbell and Abby Funk earned places on the second team. Kim Wagner was also honored as the Commonwealth Conference Player of the Year.

After such an illustrious season, the Blue and Gold went on to the MAC playoffs. As the third seed, the Eagles were forced to play second-seeded Messiah, a

Sink or swim?

Cross country battles the elements at championship

Corinne Barabas

Cross country is a sport dominated by numbers. Here, then, are some of the more significant numbers the Juniata cross country team has racked up this season.

The "healthy" Juniata cross country runner recorded approximately 460 total miles.

On a hard workout day, a Juniata runner will run between 10 and 15 laps around the track.

A typical runner will go through two or three pairs of sneakers each year for training purposes.

Five and a half (plus-or-minus two) is the number of visits to the bathroom or port-a-potty many runners make before a race. The 0.5 is for false alarms.

Juniata runners down hundreds of calories of carbohydrates and ounces of water on a daily basis, hence the reason for the previous statement

Many runners have to wake up before 6:15 a.m. to complete their three-mile-long morning run three days a week.

Also three times a week, the team will have two practices in one day.

Juniata runners have run in temperatures ranging from five degrees to 105 degrees. Regardless of the weather, the team runs outside. Because running six miles around the mezzanine would be, well…there are no words to describe something that torturous.

All those numbers culminated on October 28.

Every weather report showed the same thing: the dreaded satellite image of a green blob covering the entire east coast, including DeSales University, the location of the 2006 Cross Country MAC championship meet. The forecast for that week equaled rain, rain and more rain. The runners planned on getting wet, but it was not prepared to battle the ruthless reenactment of Noah's Flood that Mother Nature had in store for them.

Running through puddles that rivaled the Great Lakes and forging "rivers" two feet deep, the Eagles were not only challenging the competition, but nature's finest obstacles.

Someone jokingly asked if the runners were scared of drowning and if to be on the safe side, they should wear swimmies. And everyone thought cross country was just about running.

Despite the less than desirable weather, the women took home a third place team trophy, beating out 11 other teams.

Running her first MAC meet in the three years she has participated in the cross country program at Juniata (her junior year she was abroad), senior Elena Amato set the pace for the team and finished the 6K course in a time of 26:24, good enough for 11th place and Second Team All-Conference recognition.

Coming in second for the women was sophomore Megan Jones, who placed 18th with a time of 26:51. She also received All-Conference acknowledgement.

Seniors Lia Bella and Kristen Gochnauer were next in the lineup, taking 26th and 29th places, respectively. Sophomore Aubrey Cyphert earned the 32nd spot overall.

"Of course Coach [Cutright] wanted us to be MAC champs, but something dependent on so many individual performances that no one has any control over can't be pre-determined, because any day, at any time, anything good or bad could happen," Amato said.

"I think that we had a solid showing at MACs. You can never complain about a third place finish," said Jones.

> **"We've got great team dynamics, these girls are not only my teammates but my best friends."**
> **– Megan Jones**

The women know that they ran their best, considering the conditions, and that the unity and support system that has been formed will continue long after the season ends.

"We've got great team dynamics, these girls are not only my teammates but my best friends" Jones said. "Every time we go for a run, whether it's a long run, a workout or a race, we all push each other. None of us could have accomplished what we did this season without our teammates."

Bella agreed. "Team unity is so important especially in cross country," she said. "Knowing that a team that you care about is counting on you, [it] makes you push a little harder when you think you have nothing left. Our team was heavily weighted on the freshman and senior ends but it didn't hurt our unity at all. We're runners: we stick together, we do the pack thing."

The men executed their season and race strategy expertly. They packed it up early and ran as a group, and were able to produce solid results that would also earn them a third place finish among the 14 teams they competed against.

Sophomore Tripp Rudolph said, "we could have placed anywhere from third to eight overall. We surprised a lot of teams."

Shawn Rumery was able to put the team's accomplishment in its appropriate historical context. "The Middle Atlantic Conference was established in 1951," he said. "The men's team

Women's soccer falls short of playoffs

Team still makes mark in the Juniata record books

Dan Rapp

Coming into the season with only five returning starters, no one knew what to expect of the Juniata women's soccer team. Last season, Juniata finished 6-12-1 and with new players being thrown into the mix, expectations around campus for a winning season did not seem promising.

However, only halfway through the season, the Eagles had shown not only that they are good enough to put together a winning record, but they could set a few school records in the process.

One such record was set in victories with 10, helping the Eagles put together a winning season with a record of 10-8-1. Until this year, the program record for wins was seven.

Playing against great competition all year, the Blue and Gold was also able to put together four-game and five-game winning streaks, setting yet another program record. In the process of winning all these games, the team was also able to tie a season-high record of six shutouts.

To do all this in one season alone is impressive, but to do it with a young group of players, many of whom will be return-

Kevin Dundore/ Juniatian

Sarah Stebbins, a freshman midfielder for the Eagles, played in all 19 games this season. She ranked 5th on the team for points scored and first in shots taken.

Juniata swimming off to a tough start

After losing some fast swimmers, can Juniata bounce back?

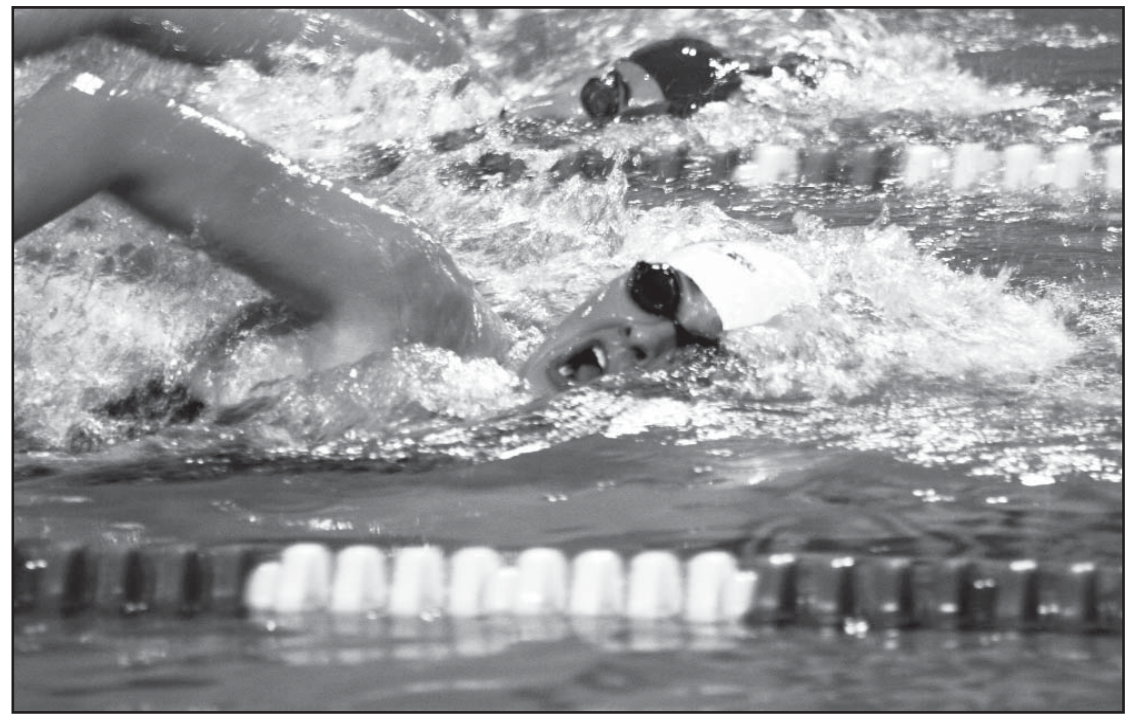
Emily J. Koop

The Juniata women's swim team, now 1-2, lost a few key swimmers from last year, including sprinter Amy Hanson and distance swimmer Kim Dierolf. With two of their highest-scoring swimmers gone, Juniata needs to have a few swimmers step up if the Eagles are to repeat last season's success.

"The freshmen are showing great potential. I think that by mid-season they will be great. We are all working hard to replace the lost talent. As with every year it is tough in the beginning but we always end up pulling it out when it matters," said junior Kasey Brough.

With a small team of only twelve swimmers - half of whom are rookies - the Eagles are looking forward to a tough season, especially with a rocky start in the beginning.

"Our main goals are to best each one of our times every meet, show these bigger teams that while they may win due to numbers, that we are faster and stronger than they are," said Brough.



In order to make up for the loss of its strongest swimmers and having a small team, "[Head coach] Brian McGrath pushes us very hard in practice and makes us work for our accomplishments. The past two weeks have been pretty brutal," said senior Rachel Almy.

Unfortunately, Juniata's first meet of the season did not go its way. On October 28, Juniata lost to conference rival Widener, 113-79.

But this team loss did not mean that there weren't any solid efforts in the water. Brough had a first place finish in both the 800m and 400m freestyle, as well as a third place time in the 200 IM.

Junior Carlie Zoubek also finished with a first place win in the 200m breaststroke.

On November 3, Juniata bounced back and annihilated Goucher, 127-76. It was a great effort by all swimmers, each contributing to the final score.

Christopher Shannon/ Juniatian

Junior Kasey Brough swims her distance race in Juniata's season opening meet against Widener on October 28.

It was an especially good day for senior Rachel Almy, who had three first place wins. These were in the 1000m freestyle, 200 m freestyle, and the 500m freestyle.

"On Friday I swam really well and took off some time to make my time very good for the beginning of the season," Almy said.

But this past Saturday, the Eagles once again added a loss to their record, this time falling to Randolph-Macon, 113-79. In this meet, Carlie Zoubek had a first place finish in the 200m breakstroke, and the team won a relay.

In order for the team to start winning, Almy said that, "We just need to train. We need to come to practice everyday willing to give everything you got and give 100% at practice. We need to work on technique and make every arm stroke and kick perfect. This will help us move faster and smoother through the water."

The Eagles hope that practice will pay off with team wins and individual swimmers making qualifying times for the MACs. Another team goal is to finish higher than third place this year.

Their next meet is on November 10 at Albright College.

Eagles Grow Up as Season Winds Down

Jess Winemiller

Maturity is a characteristic that is often unseen in the competitive atmosphere of athletics, especially on a team that doesn't experience a lot of strokes in the win column. It is just easier to place the blame on other teammates or the coaching staff or the officials for those losses.

Now 1-8 overall after falling to Widener University, 35-13, and Delaware Valley, 21-0, along with no chance for a playoff appearance, the Eagles take full responsibility for their misfortunes.

"I like to call it growing up," said sophomore Josh Roy. "We had a lot of guys grow up this season."

Coming off a two week preparation, the Blue and Gold returned to Knox Stadium planning to build a home game winning streak. The Pride, on the other hand, entered the field wanting to damage Juniata's pride.

"It was a dog fight to the end, until the last few minutes," said junior David Nicklaus.

Nicklaus has been one of the most consistent wide receivers for the Eagles this season, and this game was no different. He recorded six catches on the day for a total of 87 yards.

"A lot of times it is mental with me. I go out there…and execute," he said. "When Jay throws a pass, I want to receive it. I want to be on the other end of that. I want to score that touchdown."

Yet, despite the passing success of the Eagles' offense which included quarterback Jay Leonard throwing for 256 yards and a pair of touchdowns, his two interceptions as the clock was winding down proved to be the difference in the game.

"They ended up making more big plays then we did," said freshman Matthew Dunker.

"It was a dog fight to the end, until the last few minutes"
– Dave Nicklaus

Dunker was moved from the slot to the outside and led the offense with 103 yards receiving, the highest single-game total for an Eagles receiver this season.

Although Dunker is one of the rookies, he showed the maturity of a senior, taking the responsibility for the last interception of the game. "I blame it on myself actually. I didn't run a good enough route, and he [Widener defender] made a good break on the ball." Widener ended up running back the interception for a touchdown finalizing the score. "That was the last nail in the coffin," said Dunker.

The contributions of the younger players have not gone unnoticed. According to Roy, "The freshmen have really stepped it up. I don't have to worry about anyone in any position. I am just worried about what I need to do."

Roy accomplished what he needed to do against the Pride, recording seven tackles as well as a pass break-up. Continuing the trend, Roy was able to put up the same number of tackles against Delaware Valley while also forcing and recovering a fumble.

Freshman defender Brandon Spayd set the pace for the Eagles against Delaware Valley, however, with nine tackles. The defensive effort nonetheless was not enough to capture the victory.

Though the season is soon coming to an end, Juniata's focus remains the same, if not stronger. "There is almost more concentration in these two weeks because we have to wait so long to play again," said Roy.

Not only do the young players have to wait until next season to put the pads back on, let's not forget the seniors who will be wearing those pads for the last time.

With no hope for a playoff run, the seniors are what's keeping the motivation alive. Roy said, "We only have two games left for the seniors. For many of them, it is the last games of their careers."

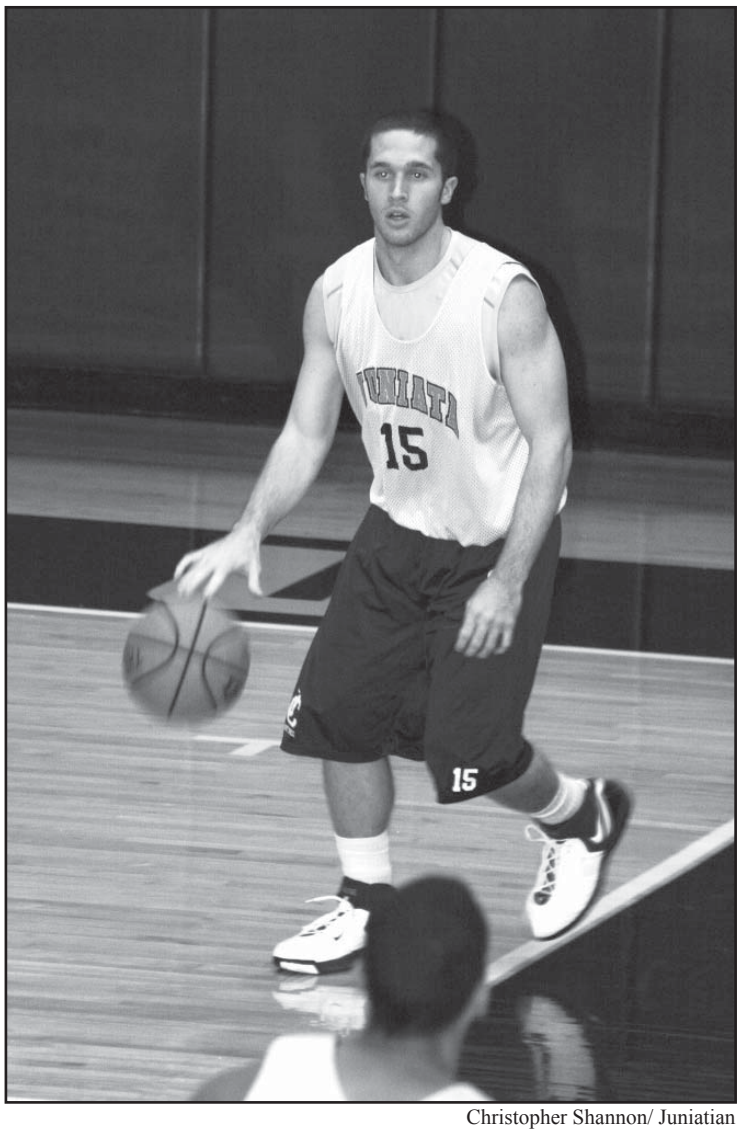
Men's basketball looking to make history in the MAC

Team balances solid veterans with fresh talent

Mike Chirdon

In its last season as part of the Mid Atlantic Conference, the Juniata men's basketball team is looking to make history. The Eagles hope to not only make the conference playoffs, but also to win the MAC Championships. Head coach Greg Curley believes that this year's team has a strong chance of being able to accomplish this goal.

According to Curley, the league is very balanced. Last season, many of the Eagle's conference matches went into overtime. Curley expects to see some very close games again this season. "Many of our opportunities for success will come in tight games," he said. "It will come down to making key plays at key times."



Though he expects the games to be close, Curley is confident in the team's ability to pull through in a tight situation. "There's not a team on our schedule that I don't think we can beat," he said.

Elizabethtown and Albright have proven to be strong rivals for Juniata in the past. Curley said that the team is anxious to compete with them this season. Seniors Aaron Chamberlain, Nick Hager, Neil Holloway and Chris Jasiota will be key players for the Eagles this season. "These players have an understanding of what it takes to be a successful player in this league," Curley said.

The team is also counting on Kyle Opitz, Brian Cannon and Brent Ferko, key contributors on last year's squad, to have a strong impact of the team's offense this season.

In addition to the returnees, the Eagles added three solid freshmen to the backcourt. Jeff Berkey, of Shanksville Stony-Creek, Andrew Keserich of Independence (OH) and Sean McConnell of Bishop Guilfoyle will all compete for playing time. Sophomore transfer Eric Muesler (Latrobe) rounds out Curley's very deep roster.

Before the Eagles play any of the teams in their conference, they will have a chance to face some strong competition with Division I and II opponents in preseason scrimmages against IUP and St. Francis University. "This will be an opportunity for us to see where we are as a program," said Curley.

Christopher Shannon/ Juniatian

Senior guard Aaron Chamberlain will be a big factor on both sides of the ball this season for the men's basketball team.

Cross country battles the elements at MAC championship

continued from page 14

has never placed better than third three times - twice in the past two years. This year, [our] finish, in terms of total points, was the second best in the history of the program."

To accomplish this historic feat, the Eagles secured places 18-21 with Rumery leading the group, crossing the finish line in 28:39.

Only a mere six seconds separated him and teammate Eric Hoover, who was the fourth runner to stop the clock in 28:45 on the 8K course.

Senior Mike Chirdon ran a 28:40 and freshman Matt Bailey was one second behind. Rounding out the top five was freshman Sam Williams who earned 28th place and finished in 29:15.

Rumery, Bailey and Chirdon all earned Second Team All-Conference honors at the meet for taking top 20 finishes.

Running in his final MAC meet, Chirdon said that he was "very proud of the way we ran as a team. We put ourselves in a good position early in the race and even when it got tough, we gutted it out."

Rudolph said, "Everyone came together as a team and put forth a great effort despite the terrible conditions. It was the perfect end to a hard fought for season."

"Everyone came together as a team and put forth a great effort despite the terrible conditions. It was the perfect end to a hard fought for season"
– Tripp Rudolph

As the season comes to an end, the runners look back on the hard days, the easy days, the good days and the bad days.

"Participation in any collegiate sport changes a lot about your college experience. It demands a lot of time and dedication. It's not easy. But I couldn't imagine my college experience without it. Having the privilege to be on a team with such gifted athletes and being coached an extremely talented and competent coach has made my experience at Juniata all the more fulfilling," said Bella.

The teams will travel west to Waynesburg on Nov. 11, where the top seven runners from both teams will compete in the Regional Meet.

Depending on how the Eagles runners race in Waynesburg, possibilities exist for top finishers to qualify for the NCAA Division III National Championship races held on Nov. 18 at Wilmington.

continued page 16

Women's soccer falls just short

continued from page 14

ing next year, is remarkable. Of the 25 players on the roster, more than half of them were first year players. Head coach Scott McKenzie somehow managed to integrate 13 new players into the line-up.

"It was tough, but we had key people step into leadership roles early to help bring younger players up to speed," he said.

One of the leaders on the team is senior captain Alicia Walsh, who just kicked her way into third place in Juniata history in both goals with 26 and points with 57. While the personal achievements are nice, Walsh has her sights set elsewhere.

"Taking third in the record books was a great achievement, but not the most important thing to happen to my senior year. I was more proud to be on a team that set a new record for wins in a season. The scoring record was just a bonus," Walsh said.

Although the team did finish with a remarkable record, only two of their 10 wins came in conference matches, leaving the team with an overall record of 2-5 in conference play. With many of these losses coming late in the season, many people try to attribute it to the lack of experience. Although some of this may be true, the actuality is that this team played 19 games in less than a two month span.

Senior captain Kelly Howard acknowledged that the long season took a toll.

"It's a very demanding season. It's just a matter of time before it catches up to you," she said.

Juniata women look to shake up the conference this season

Mike Chirdon

Juniata women's basketball is heading into this season with confidence after a successful 2006 season. The team placed fourth in the MAC in 2006, but failed to make the playoffs due to a tie breaker. Head coach Danny Young believes that things will work out differently this year.

"We look to shake up the conference a bit this season," said Young. "Last year we gave a name for ourselves. This year teams know what we're all about. We have higher expectations for this season; we expect ourselves to get better and better."

Young said that making playoffs is always a goal for the team, and she is very confident that this year's team will see postseason action.

"This year, we will make post season play," she said. "Anything is possible with this crew."

Jess Winemiller, Ali Meckey and Jill Walsh are three returning starters from last season. Young said, "They are big time players for us that need to step up yet again."

Other important returning players include Mindy Werner, Kelly Ashcraft and Courtney Callas.

There are three new faces on the team this season. Kelly Rotan and Emily McKenna are freshmen, and Claudia McDowell is a transfer student. Young expects these players to make big contributions.

Juniata started practicing in early October. Ashcraft said, "Practices are tough, but they are going well overall."

In addition to a lot of conditioning during preseason practices, Ashcraft says that the team is working on communication skills. "Any successful team has to be good communicators, so that is something we are working on every day."

The team has had to face some challenges already this season with injuries and losing players, but Young has maintained a positive outlook. "I think with all the obstacles we're overcoming it will benefit us in the long run," she said. "We're going to play some exciting basketball this year."

"We're going to play some exciting basketball this year."
– Head coach Danny Young

Christopher Shannon/ Juniatian

Mindy Werner, is one of six juniors on a senior-less Eagles team that looks to break out of the pack in the MAC this season.

Field hockey earns at-large bid

continued from page 14

long-time conference rival. Due to the lower seed, Juniata found themselves playing on Messiah's turf field for the second time this season. The Eagles proved early in the season that playing on turf is not an issue, shutting out the first three teams they played on fake grass, and scoring 13 goals in the process. This particular match, however, wouldn't see the same goal differential.

As the match began, both teams saw zeros on the scoreboard through the first 25, defense-dominated minutes of the game. At the 25-minute mark, though, Messiah took a 1-0 lead after a controversial goal. Many players felt the ball went off of the foot of a player.

Senior Sarah Bender acknowledged that Juniata's slow start was costly.

"It hurt us," she said. "It was a big shift of momentum and it's harder to rebound off of a bad call."

Ten minutes later, Messiah scored another goal off of a corner, helping to increase its lead to 2-0 before the half.

In the first half, the Eagles only managed two shots on their opponent. "It was a stat we knew would have to change drastically if we wanted to get the win," Bender said.

After coming out of the half, Juniata began to pick up its offensive play drastically, tallying 11 more shots. However, this effort fell short at the hands of Messiah's goaltender, who came up with nine saves on the match to keep the Blue and Gold off the scoreboard.

Messiah soon padded their lead to 3-0 in the 55th minute off of another corner attack and eventually went on to win the contest.

The difference from the tight regular season loss to this postseason loss was felt early on.

"They executed their corner attacks very well and they got the momentum early. From that point on it was an uphill struggle," senior Sierra Dickman said.

Although this loss takes them out of MAC championship play, Juniata was still able to wrap up an at-large bid to the NCAA Tournament for only the second time in the program's history. The Eagles will take on Kenyon College – at Kenyon – in the first round of the tournament.

By The Numbers

103

Receiving yards for freshman Matthew Dunker, a personal best and the highest total by an Eagles receiver this year.

4

All Conference selections for the women's volleyball team: Kines, Rachael Shatz and Amber Thomas were all first-team nominees. Paige Johnston took home the Rookie of the Year award..

6

Individual school records set by the field hockey team this season, which is probably a record. Kim Wagner (4), Meredith Low (1) and Abby Funk all found their way into the record books.

26,57

Career goals and points for women's soccer player Alicia Walsh. Both tallies are good for third place all-time in Juniata history.

I love this game

29 reasons to be excited for the NBA this season

Tommy McConnell

I have never been as excited for an NBA season to start as I am for this one. Why? Because we're on the brink of a New Golden Age, that's why. We're talking Bird-Magic-MJ level Golden Age. There's so much interesting, unique young talent right now; we're in good hands for the next 15 years – at least.

With that in mind, here's why you should be excited about every team in the L - even the Knicks. Actually, *especially* the Knicks.

Philly. Who will AI get traded to? Philly has no shot of ever contending in the next five years; shipping Iverson needs to happen. Can The Answer lead the Bulls to the NBA title? Oh, and can Billy King top Dennis Green's rant?

New Jersey. Hey, Vince is going to try this year! I'll pay more attention in two years when Jay-Z moves them to Brooklyn and LeBron takes them to the Finals. I am now throwing up the ROC.

Toronto. FC Barcelona..er, the Raptors are going to try to play like the Suns. Their PG is the odds-on favorite to have the most gruesome on-court injury in league history. That should play out nicely.

New York. If you enjoy "Faces of Death" or that video where the kick boxer gets his shin snapped in half, follow NY this season: completely enjoyable, but in a horrific, peek-through-your fingers kind of way.

Boston. Welcome to the 21st century, Boston! The Celts have dancers this year, the last team in the NBA to do so. And Sebastian Telfair may or may not have had Fabolus shot after one of Fabolus's cronies snatched a $50,000 chain off the point guard' neck. We need Detective Lennie Briscoe on the case. I miss Lennie.

Milwaukee. The league banned the full-body tights, and in the case of Andrew Bogut: thank God. He looked like a goth chick; I read somewhere he looked like Ashley Simpson, and then I laughed. They really botched the new uni's, too: I want to throw some tinsel on them.

Indiana. The Pacers are openly cheering for their second-best player, Stephen Jackson, to go to prison after firing five "warning shots" outside a strip club. Jackson is already paranoid; now he has proof the Pacers hate him. The Malice at the Palace was just an appetizer.

Detroit. With the "Sheed Rule" now in effect – no complaining after a call or it's the gate – how many Ts can Sheed rack up? I don't think 50 is asking too much. Man, I hate the Pistons.

Cleveland. Can the Cavs start lil' LeBron at point guard instead of Eric Snow and his enormous head? Cannonball!

Chicago. How sweet would KG look in a throw back Bulls jersey? I'll tell you in January. Until then, enjoy Ben Wallace setting basketball back 25 years.

Washington. Gilbert Arenas has a vendetta against virtually the entire league, so that will be fun to watch. And how will he respond to his choke job against the Cavs last season? I'm praying he's not a modern day Nick Anderson. Really, really praying. But, hey – he's not quirky!

Orlando. Over/under on Grant Hill's ankle exploding: January 12. Even Fred Taylor and Ken Griffey Jr. think Hill needs to call it quits. Plus: Dwight Howard is the new Shaq.

Atlanta. OK, even I can't make the Hawks interesting. The Hawks are stupider than daylight savings time. Can we kick them out?

Miami. Predicting when the Heat is going to actually try is like trying to guess what's going to happen on "Lost." You really have no chance, but its kinda fun to try. Shaq's free throw percentage is bad, but his percentage on breaking up child pornography rings is even worse: 0-1.

Charlotte. I bet Gerald Wallace and Adam Morrison have lots in common.

Utah. Do you think Kirelinko take's his wife up on her one-groupie per year offer? The All-Star game is in Vegas this year…something is telling me AK47 has the best 41 games of his life.

Minnesota. Randy Foye's heart is on the right side of his body and all his other major organs are on the wrong side, too. Sounds like a great episode of "House." Speaking of the good doctor, House could have done a better job surrounding KG with talent than Kevin McHale.

Portland. A few years ago, Portland sucked, but their players were getting busted for smuggling weed into airports and fighting pitbulls. Sadly, they made a concerted effort to clean up their image, so now they suck *and* they are boring. Shame, really. They do have the ROY, though: Brandon R-o-y.

Denver. Earl Boykins is barely five feet tall – why doesn't he get posted up every single time? I really don't get this. And K-Mart is the worst nickname in the NBA. He might as well call himself Value City or Payless. Plus, they have the Cookie Monster, Reggie Evans. He grabbed someone's cookies! How is he still on a team?

Seattle. Danny Fortson wears huge pig-tails, so if you flick on the game real fast, you think Seattle is starting a fat girl at center. And there aren't too many more things aesthetically pleasing than watching Ray Allen shoot. He should be in a movie or something. Ownership wants nothing more than to move them to OK City, though, so on the off-chance an owner shows up for a game, there will be three straight hours of booing.

Lakers. Kobe changed his number to 24 for no real good reason and I'm pretty sure no one has ever done that before. Watching the Lakers is enjoyable just to see Kobe try to act like he's "one of the guys" with his teammates as they all awkwardly laugh. And their rookie PG looks like Mr. Tumnus and backs up a guy called Smush.

Clippers. They have a legit shot at winning the NBA title, which is more jarring than the events at Eagle, CO. There's just so much here: Shaun Livingston vs. Quinton Ross for skinniest player in the L. Chris Kamaan vs. a pair of scissors. Sam Cassell phone home. Cuttino Mobley breaking up with Steve Francis and getting married. Tim Thomas blowing out his fingers 200 times a year. So, so much.

Golden State. Don Nelson, a 6'10" point-forward, a center who just wants to shoot threes and write REDRUM on his shoes, and the league-leader in dribbles per minute - all playing no defense. Aren't the Warriors kooky?

Sacramento. Ron Artest. Pretty much sums that one up. Oh, and the Maloof Bros. (doesn't it sound like they should be running a circus?) want nothing more than to screw over Sactown and move to Vegas. Not that you can blame them, but it makes for an interesting dynamic. Who hates their owners more: Sacramento or Seattle?

Phoenix. They're just fun to watch. Even though Steve Nash looks like a 14-year-old with his new haircut. Do you think Nash and Colt McCoy could get into an R rated movie together? I doubt it.

New Orleans. You get to

continued page 19

29 reasons

continued from page 18

scream NOOCH! about 45 times a game if you watch them, which is really fun for some reason. Plus, there's always the off chance that Chris Paul will try to punch someone in the cookies en route to becoming the best PG in the league.

San Antonio. Bruce Bowen is easily – *easily* – the dirtiest player in the league. He slides his foot underneath jump shooters regularly. I don't know if players hate him or Reggie Evans more. I bet it's close. I wish they'd trade Bowens to the Pistons so I could focus all my hate in one place.

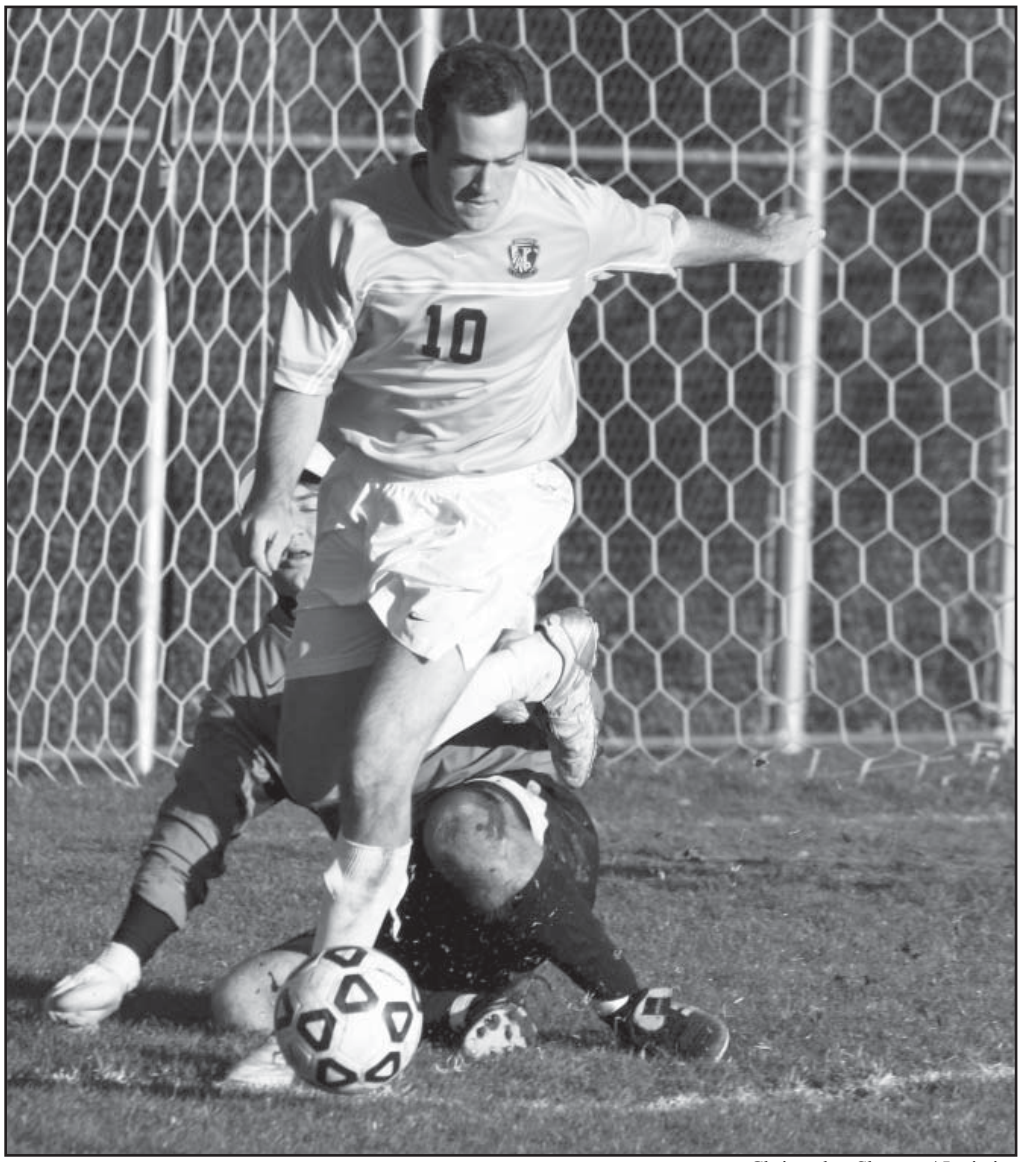
Houston. Houston decided that the best point guard for its three all-stars and Olympian is a guy who spends his summer dribbling through the legs of 14-year old white kids and eating Frito's on the back seat of a cloudy luxury bus. There are like 30 good point guards out there – Houston can't get ONE?!?!

Memphis. Their best player is Gay. Not that there's anything wrong with that.

Dallas. Mark Cuban is now a disciple of "David Stern University." Cuban is like that funny kid in high school who pisses off the teachers and the principal, but he's not really breaking any rules, so they can't give him detention. They all hate him, and the other kids admire him. Cuban rules. He's a nerd, but he rules.

There it is: why you should be amped for every team (except the Hawks), and I didn't even mention "Our Family" – LeBron, D Wade and Melo – the triumvirate that will have you glued to your screen come playoff time. Might as well get on the bandwagon now because I'm driving and if you come crawling around in February, I just might decide not to let you on.

As great as last season's playoffs were, this seasons will top them. Here's how: The Cavs will knock off the Pacers when Stephen Jacksion is arrested in the lay-ups lines of Game 7; the Spurs will bore the Clippers to death in the West (Bowen snapped his spine; I care.). Then The LeBrons begins their dynasty: three years in Cleveland, then off to New Jersey. Hov!



Upcoming athletic events

Men's soccer finishes season

Christopher Shannon/ Juniatian

Josh Cady (10) and the men's soccer team finished up their season with a 5-13 record. Returning 23 players in '07, the Eagles will look to change their fortune in a new conference.

The Back Page Brawl

Tommy McConnell **Rebecca DeHass**

Which is worse: The Circus or the Zoo

Zoo. I'll admit it: I don't get the zoo. You walk around all day, staring at animals from a hundred yards away, and they don't even do anything cool. Well, except the monkeys; I didn't know they could drain so much bodily fluid so quickly. When a monkey actually spanking the monkey is your main draw, I think it's time to call it a day.

Circus. One of my earliest memories involves my one and only trip to the circus. The clown gave all the kids in the audience coloring books, EXCEPT me. And if that were not traumatizing enough, while carrying his huge stack of coloring books past me, he stepped on my foot with his ginormous polka dot shoes. I blame this on the fact that I still had my big red nose (Homangeoma, look it up) and he was jealous because mine was real.

Biggest Trick-or-Treat rip off

Apples. This is pure bulls---. There's no other way to say it. A freakin' apple? Are you kidding me? First of all, there's a good chance there's a razor in it, so of course I'm not eating it. Second, if you don't think that apple is going through your living room window 15 seconds after you close your door, well…that's probably why you're giving out apples in the first place.

Nickels and dimes. It's Halloween, not Christmas. If I wanted to jingle all the way home, I would have dressed up like Santa Claus, not the Pink Power Ranger. I wanted to get cavities, not start a saving account for when I need to fill 'em.

Which is worse: a tie-it-yourself bow tie or a clip-on bow tie

Clip-ons. Fifteen years of Catholic school taught me one thing: Never, under any circumstance, get caught wearing a clip-on tie. Never, ever, ever, ever. Any little smart aleck can run by and rip it off and the nickname you got just sucked: Captain Clippie. There's no comeback to Capt. Clippie. None. It really drained your will to live.

Tie yourself. If you can tie your own bow tie, I'm convinced that you should get a degree from Harvard for doing so. The steps are like a long mathematical sequence. There are slopes and parabolas…if you get one tangent wrong…your polka dots won't line up across the stripes on your shirt.

Tattle-tale vs. Bed-wetter

Tattle-tale. When you pee the bed, only you know. When you're a tattletale, everyone in the whole world knows you suck. And make no mistake: you do suck. I don't care if you are eight years old. If you tattle, you suck. These are the people who grow up to ref summer sports leagues or check stubs in the middle of a movie. We get it, man. And you know what? Everybody hates you. Even your mom. Actually, especially your mom.

Bed wetter. This is when you learn psychological self-destruction. There's no one to blame for it but yourself. Your self-esteem condenses into a warm little puddle. And it becomes a cold, cold world with no one but your soggy diaper to comfort you.

GUTS vs. Legends of the Hidden Temple

GUTS. Not only is this the greatest Nick show of all time, it may be the greatest show of all time, period. I loved The Rick interviewing 11-year olds like it was the Olympics. I loved the Styrofoam boulders obliterating kids on the Aggro Crag. But mostly, I loved Mo. *Let's go to Mo with the official time – Mo!* I really, really loved Mo.

Hidden Temple. With show themes like "The Belly Button of Buddha," all you had to do was dodge a few guards, put together a silver monkey and find Buddha's belly button in under three minutes. And then you were swimming to the Bahamas with the rest of the Blue Barracudas or flying to Cancun with the Purple Parrots.

Which computer program sucks more: Maple.....or Maple

Maple. You know who Maple is like? Alex Trebek. Oh, you're so smart, aren't you, you arrogant, condescending know-it-all? I bet if you didn't have that card in front of you, you wouldn't be so damn smug. It's the same thing with Maple: you type in a function that takes up two lines, hit enter, and its gives you some smarmy answer which basically says ,"Wrong, idiot. Try again." You know the answer, Maple. Just tell me. Jerk.

Maple. The law of Maple is clearly stated in Hammurabi's Code, where it says that a judge (the student) would try a case (the problem) and then present the case in writing (everything in sentence form). However, if you have an error (most likely in the first question) then you pay for it 12 times (as in, everything is based off the first question, and then you're done if you're wrong to begin with). Just pluck out my eyes so I can't see the computer screen, OK?

Juniata crowned NCAA champs

Photo courtesy of NCAA

Juniata women's volleyball beat George Washington University on Nov. 18, crowning them NCAA Division III champions.

Professor evaluations: Are they really used?

Jason Najarian

With the semester coming to a close, course evaluation e-mails will be arriving in students' inboxes. The evaluations, an integral part of improving education at Juniata, have a low response rate, averaging around 60 percent last year. This apathy is surprising to many faculty members, considering that evaluations play such an important role in Juniata's tenure and promotion process.

Many students simply delete evaluation requests, often because of how easy it is to miss the evaluation deadlines, or because of a commonly-held belief that the evaluations are not taken seriously by faculty. Whatever their individual reasons may be, many students are passing up opportunities to give feedback on their classes.

Donna Weimer, chair of the communication department, doesn't know why some students do not take evaluations seriously. Weimer's position as a member of the Personnel Evaluation Committee (PEC) has her constantly working with evaluations to determine faculty promotion and tenure.

"It's shocking to me when students say 'we don't care about them' or that 'they don't seem to make a difference,'" said Weimer.

Weimer said, "Student evaluations are central to the process. We tell you, but you don't believe it."

Many other colleges hold back grades or registration until evaluations are filled out. The importance of the process has led Juniata to consider similar options, but according to the PEC it is not likely to be implemented.

Evaluations are used by the PEC as the central information source when reviewing a professor. Loren Rhodes, chair of information technology and head of the PEC,

Facelift for Good

Many upset over plan's lack of elevator

M. Piazza

Over the summers of 2007 and 2008, a long-awaited series of Good Hall refurbishments will take place. While President Thomas Kepple and the Board of Trustees approved the plan to give the building a variety of new features, one notable element is missing: an elevator. This omission has angered many people across campus.

Good Hall currently has limited accessibility. Due to the ramp and the handicapped doors, the ground floor is considered accessible. The addition of an elevator in Good could make the entire building that way.

On October 21, the Board of Trustees voted down a proposition to add an elevator to the building. Instead of the elevator, the trustees decided to refurbish Good Hall.

The refurbishments will include new floors, ceilings, lights, furniture, walls and windows. The refurbishments will focus on making the appearance of Good more appealing, as well as making it more energy efficient.

The addition of new lights will conserve energy while making each classroom brighter. Proposed changes made to the furniture, floors, ceilings and paint will make each room seem more interesting, according to Kepple.

"Our slogan for the refurbishment of Good is raise a million, borrow a million," Kepple said about the limited $2 million budget of the project. "The cost of just installing the elevator would be $500,000 extra. To bring the building up to code would cost an additional $500,000. There are just too many other projects that require our funds. As it is, we are improving the appearance of Good to show prospective and current students that we are as interested in the arts as we are in the sciences"

Some professors suggest that it would be better to take the $2 million and use it towards the elevator. That way, even though Good

HPV: The silent epidemic

STD is common among college-aged adults

Devin Couillard

Where only first names are used, names have been changed to protect the identity of sources.

It can attack almost any person in any area.

The Human Papillomavirus (HPV) is the cause of 70 percent of cervical cancer cases and 90 percent of genital wart outbreaks. According to the Centers for Disease Control and Prevention (CDC), the virus afflicts 80 percent of sexually active women before they reach age 50 and over 50 percent of sexually active men. Despite this, HPV is still hidden and too often misunderstood. HPV is everywhere, including Juniata College.

Michelle, a senior at Juniata, was recently diagnosed with HPV during a routine exam. Michelle said she was upset and panicked when she first found out. "At the time I didn't really have much information on it. I just knew that it was the virus that caused cancer. I'd seen the commercials on TV."

Her doctor did the test without asking, although at most health facilities a patient needs to request an HPV test.

College students are particularly at risk for becoming infected with HPV. Merck researchers have suggested that many people become infected with HPV two to

Power outages throw College through hoops; power eventually restored

Sarah Kotora

During the Oct. 31 power outage, students played pong in the halls. They complained about missing "Nip/Tuck" and about not being able to do their homework. Facilities Services and Campus Technology Services (CTS) worked through the entire night, trying to restore power and network services to the College. The next day, students and professors were able to go about their days as normal.

"I was watching 'Nip/Tuck,' and someone was about to lose a kidney and then the power went out. But we were like okay, they play another episode of 'Nip/Tuck' at eleven. But the power still wasn't on….I was pissed…. and we couldn't do work, so we went to sleep," said junior Kazia Eastep, a Lesher resident.

Earlier that day, Facilities recognized a potential problem with one of the transformers in the substation behind Brumbaugh Academic Center (BAC).

"We were seeing some signs during that day. If you went out back here, there's a small substation [that] sounded odd," explained David Fusco, associate vice president and chief information officer.

Because of its suspicion, Facilities notified the students, staff, faculty and administration that it would be turning off the power at approximately 5 p.m. The power was then shut off so that Facilities could test and evaluate the transformer. Most of campus lost and regained power by about 5:30 p.m. According to Tristan delGiudice, director of facilities services, Facilities expected to get the test results back the next day.

That night, at approximately 10:45 p.m., power went off in BAC, Enrollment, Good Hall, Carnegie, Humanities, Baker, Beeghly, Founders, Knox Stadium, Ellis, Lesher, South and East Houses. This was due to an electrical fault in the underground cable that serves BAC's transformer. According to delGiudice, this caused the west feed to trip offline.

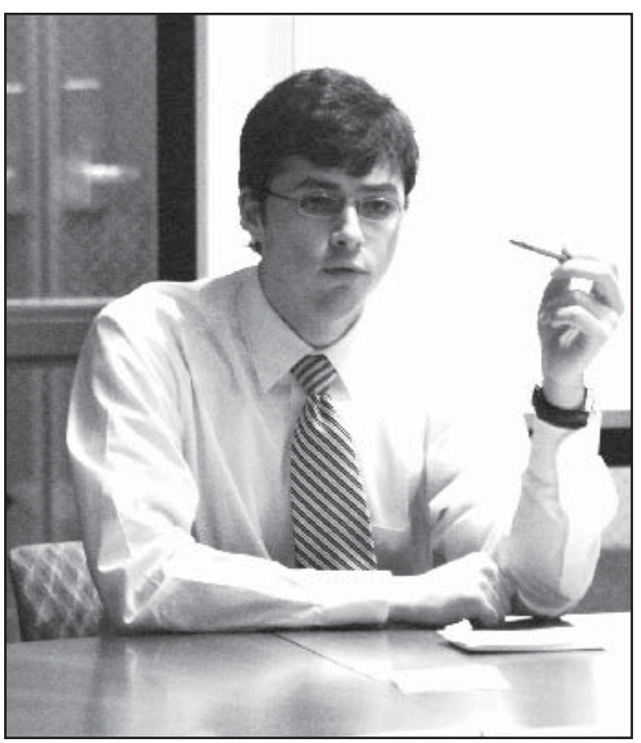
At 11:20 p.m., the College's portable generator was put into service to ensure that the campus would not lose phone service.

After that was taken care of, Facilities identified where the fault was located and isolated BAC from the west feeder.

At 12:40 a.m., power was restored to all of the buildings besides BAC. Then the portable emergency generator was relocated to BAC to feed the server room, at 1:15 a.m.

Once the server room was hooked up to the generator, the job was handed over to CTS. It was CTS' responsibility to restore campus network services.

"We worked from 2:47 a.m. on Wednesday, through till 8 o' clock that morning. We had people here working getting services back up, so that all the critical services would be available for 8 o'clock," Fusco said.



As far as the students and professors could tell, everything was back to normal by 8 a.m. on Wednesday, Nov. 1. Juniata ran on generator power, while little repairs were made and all other non-critical services were restored. Between 5 p.m. and 7:15 p.m. on Wednesday, BAC was switched back to the campus grid, but for the majority of this time, network services remained up and running.

When reflecting on the whole process, Fusco said, "Facilities did an outstanding job with making sure that we had generators that we needed to have [and] they did a great job communicating with us on making sure we had what we needed."

In the future, both Facilities and CTS are looking into ways to prevent large scale power outages from recurring. According to delGiudice, Facilities has a planned maintenance program that includes monthly inspections of all transformers. Also, it intends to take yearly oil samples from the transformers to determine if there are any potential problems developing.

CTS is working with Facilities to tie the server room into the existing generator for emergency lights in BAC's basement. If the power goes out in the future, the network servers will keep running.

Model U.N.

Christopher Shannon / Juniatian

Sophomore Brock Swartz leads a group of high school students during the Model United Nations summit hosted by Juniata on November 13. Over 200 area high schoolers came to campus to participate in the event. The high schoolers played diplomats from the U.N., European Union, U.S. Senate and U.S. National Security Council. As one of the participating Juniata students, Swartz acted as the moderator of the model U.S. Senate Foreign Relations Committee, which particularly discussed diplomacy with Iraq.

Observing enviro-conservation in Guatemala

Ibada "Bobby" Wadud

Juniata's buzzword of late is "sustainability." The new concern for the fitness of the ecosystem has triggered global awareness and attracted mainstream attention, especially in academia.

Heather Dean, onsite coordinator for the College's sustainability program in Copal AA, Guatemala, recently visited Juniata to share her sense of concern and commitment to the construction of sustainable communities abroad. This new approach is proactive, and Juniata students are a few of many advocates at the forefront of this undertaking.

The unique feature of the program was that this wasn't a community service project; the objective was to observe the lifestyles of the Guatemalan people and the economical and political conflicts that they face in their daily lives.

Six students traveled to Copal AA in May 2006 for a two-week cultural learning tour sponsored by the Offices of Diversity Inclusion and Community Service. Rosalie Rodriquez, special assistant to the president for diversity & inclusion, and Shauna Morin, community service and service learning coordinator, served as the staff advisors for the trip to this tiny village in which Spanish and three Mayan languages are spoken.

"The study of indigenous languages is not included in public education [in Guatemala]," Dean explained. "Their languages are disappearing little by little. Some students don't speak their native language as a result of institutional discrimination." Combinations of social, political and environmental differences are directly impacting this population, according to Dean.

The program was a chance for Juniata students to brainstorm solutions to serious environmental disadvantages

"We went to hear the stories of people that had been affected by war and environmental policy, such as the building of dams. Our job is to tell people about it. It was about listening," said senior Sara Lombardi, one of the program's participants.

During her lecture, Dean described some of the obstacles faced by Guatemalans. In a system that values the education of girls less than that of boys and provides few ways to combat illiteracy, making conscious efforts to promote learning in a practical way in order to foster youth leadership is key, said Dean.

"Education needed to be practical [because] it is not valued like it is in the U.S.," Dean said. The young students of the village learned various skills, such as candle making, organic gardening and hammock weaving. They even learned how to make herbal shampoo, which was later sold in the U.S. as a way to finance their educations.

The program was a chance for Juniata students to brainstorm solutions to serious environmental disadvantages, such as limited water sources.

In Copal AA, one stream supplies water for the entire village. Dean explained that the genetic modification of corn, a recently developed technology that modifies the biological traits of crops, is affecting the diversity of seeds. If a disease spreads, the crop could potentially be wiped out entirely because biodiversity is jeopardized, Dean said. This in turn affects the local economy.

"We went into the community

Language In Motion: Bringing cultural experiences to local classrooms

Aaron Shotts

Thousands of local middle and high school students have been introduced to cultures and languages from over a dozen countries worldwide through Juniata's Language in Motion program. Established in 2000, Language in Motion exposes local students to both native speakers and students fluent in a second language. International students, students returning from studying abroad, upper-level language students and visiting language instructors share their cultures and languages through interactive presentations.

"It's opening the students' minds to the world," said senior Albert Bado, a presenter for Language in Motion.

Bado has given presentations on various aspects of his home country of Burkina Faso in West Africa. Presentations included family structures and his native language and culture.

Bado said, "The kids were very interested in it and I was amazed at how they learn things so quickly."

He also said that being a presenter for Language in Motion is a learning experience for him as well.

"It's an opportunity for me to learn about American culture," said Bado. "The students ask me questions. I ask them questions too."

The program's impact on school students is spreading to other colleges and universities as the result of a $150,000 grant from the Arthur Vining Davis Foundations. Received this September, the grant will be used to continue funding the program for the next two years and to expand professional development opportunities offered to teachers.

Additionally, Deborah Roney, director of Language in Motion and assistant professor of English, said that "a huge part of the grant is to replicate this program at other colleges."

Representatives from eight colleges and universities from several states including Iowa, South Carolina, Oregon and Texas attended a conference at Juniata on Sept. 14. These schools have joined with Juniata to begin building a national Language in Motion consortium. Roney said that some of the schools will have language programs up and running by the spring semester and all should be going by fall 2007.

The program is also expanding internationally. Juniors Britta Jureckson and Elizabeth Cushman are currently studying abroad in Marburg, Germany, where they are working with Juniata alumnus Sebastian Wolff to begin a program there.

Linda Reilly, a twelfth grade English teacher at Huntingdon Area High School, has been involved with Language in Motion since its inception. She said that Language in Motion presentations can be incorporated into all classes.

"It doesn't matter what subject it is. It's cross-curricular," said Reilly.

Roney said that teachers often help the students develop presentations that coincide with their lessons.

"We try to match up the curricular needs of the teacher with the students' strengths," said Roney.

Presentations expose students to many aspects of different cultures including dance, clothing, food, family, language and world views.

"I use the students in Language in Motion as much as possible because our students have a very limited exposure to people of other cultures," said Reilly.

Reilly said that the program also introduces students to various religions such as Islam and Hinduism. Student presenters dispel myths and misconceptions regarding their religions and cultures, while sharing their own traditions.

"I encourage them to do what they feel most comfortable doing," said Reilly.

In addition to student presentations, Language in Motion hosts events on campus for upper level high school language students. These activities include learning about the campus in a foreign language and cooking food using recipes in foreign languages.

The Teachers Abroad program provides scholarships for middle and high school teachers to study at universities in Guatemala, France and Germany during the summer. Also, summer professional development workshops at Juniata provide teachers with training for teaching language and culture in their classrooms.

Language in Motion is offered as a one-credit service learning class or on a volunteer basis.

Kevin Dundore / Juniatian

Sophomore Bouchra Kachoub, an international student from Morocco, gives her Language in Motion presentation about Moroccan history and culture to ninth-graders at Huntingdon Area High School on November 9.

The effects of medical liability in Pennsylvania

Caroline Weisser

With a majority of Pennsylvania's medical students leaving the state after their residency, it has become obvious to many health professions students that they need to incite a change within our state system to help our struggling rural hospitals who are losing more and more doctors each year.

"Twenty percent of American doctors come through Pennsylvania (medical) schools and we keep seven percent," says the Daily Local News Online.

Freshman Derek Dye and Health Occupations Students of America (HOSA) president, senior Tanner Bartholow, will begin an initiative in the spring to support the enactment of laws in Pennsylvania to restrict the frivolous lawsuits and the associated malpractice insurance that cost every physician and every hospital millions of dollars each year.

Bartholow said, "We are trying to restart something that was started a couple of years ago by John Enterline, [a 2005 Juniata graduate]."

Professor of biology and director of the health professions program, Debra Kirchhof-Glazier said, "The idea was to develop a network that could rapidly respond to action alerts." Kirchhof-Glazier continued, "We need to mobilize different community groups."

Dye said, "We want to get alumni involved in writing to politicians."

This initiative began at the Health Professions affinity gathering during Homecoming weekend when Randy Kochel, M.D. ('79) mentioned the staggering prices he pays for malpractice insurance even as a family practice physician who has never been sued.

According to Public Citizen, a national non-profit public interest organization, "The real crisis in [PA] is the quality of medical care being given; 4.7 percent of doctors are responsible for 51.4 percent for all malpractice payments." The problem extends beyond insurance companies.

HOSA member sophomore Aggie Kwon believes the issue needs to be addressed by our generation. "The baby boomer generation is getting old, and you hear, even in Huntingdon, about all the doctors retiring and losing the younger doctors," she said.

The shortage of physicians in the Huntingdon area impacts the College, according to Dr. Kirchhof-Glazier. "The two things prospective faculty ask about are the local healthcare and the schools," he said.

Kwon explained that she is not planning to practice medicine in Pennsylvania. "Pennsylvania is not very attractive for primary care doctors, which is my focus; it's a well-known fact. My family doctor said [malpractice insurance] was pretty bad. He said because he grew up here, and that was the only reason he was staying."

On the other hand, one Juniata alumna, Amy Mullen '03, a fourth-year medical student Penn State Milton S. Hershey Medical Center, hopes to practice in her hometown after her residency is over. "My decision about where I work will be based on location, not malpractice insurance costs."

In regard to malpractice insurance costs, Mullen said, "I haven't really thought about it.…I suppose in another three years when I'm about to finish residency it will mean a lot more."

With insurance costs continually rising, Mullen said, "I think it's concerning from the perspective that it affects the quality and quantity of physicians we attract to the state…which in turn affects areas like primary care, especially private practice."

Kirchhof-Glazier said that the primary issue is individual responsibility and that better education concerning nutrition and a healthy lifestyle would optimize everyone's health.

Juniata makes a name for itself at CEO Conference

Three business students place in national competition's final 12

Mike Chirdon

Fifteen Juniata students went to Chicago for the Collegiate Entrepreneurs' Organization's (CEO) conference. Each of them took a business idea with them and returned with countless ways to make their ideas happen. Juniata attended the annual event the last two years as well.

The conference's main goal is to help college entrepreneurs network with each other and with business professionals who are interested in investing in new businesses or in giving advice to young entrepreneurs.

During the conference, students have a chance to compete for $7,500 in prize money to assist in the startup of their businesses.

The competitors presented their business plans in the form of a sixty to ninety second elevator pitch. Successful elevator pitches give a general outline of a business plan.

Sophomore Sarah Roby said, "Elevator pitches are as much about selling yourself as they are about selling your business." This means that competitors must be very confident in themselves as well as their businesses.

After 1,400 entrants participated in the preliminary round of competition, the field was narrowed to twelve competitors for the finals. Three Juniata students made it into the finals: Roby, junior Travis Paul and freshman Cassandra Hale. Roby and Hale were the only two females to make it into the final twelve.

Roby came in fifth place overall and won $500 for her online greeting card company, Digital Greetings. According to Roby, the business is still in the planning stages, and she is working on a timeline for the company's eventual release.

Hale's business idea is for a tanning salon called Sun and Soothe. Like Roby, Hale stressed the importance of the presentation aspect of the elevator pitch. She said, "I believe the delivery of my presentation helped me to be successful in the first round of elevator pitches."

Even students who did not make it into the final round were able to accomplish the major goal of networking and presenting their businesses to potential investors. Junior Ryan Conrad presented Polyphony Clothing, a business which he co-founded with sophomore Tripp Rudolph, in the opening round of the competition.

"Even though I didn't make it to the final, many college students and investors showed interest in Polyphony," said Conrad. "This is good because college students are the target audience for the clothing while the investors can provide funding."

Freshman Dustin Gee also took advantage of the networking opportunities at the conference. "It was a huge networking event," he said. "I made a ton of connections at this conference ranging from students to top, multi-million dollar businessmen and women. I also got a better understanding of what it means to be a successful entrepreneur."

Aside from the competition, there were plenty of opportunities to learn from and network with successful entrepreneurs and business executives during break out sessions. In between these sessions, there were breaks which allowed students a chance to talk to the presenters. JCEL provided each student with fifty business cards to help them trade contact information with potential investors and experts in their fields of interest.

Freshman Will Campbell said, "It was a great opportunity to learn outside of the classroom from instructors who are at the height of their careers."

Senior Demetri Patitsas presented at one of the workshops. "When I applied to the conference, I sent in my résumé to be a presenter, and they got back to me," he said. His workshop, "Student Entrepreneurship, Business Startup, Seed Capital and Yes, Even Dating" is based on his personal experience as a student entrepreneur. It included advice on how to be successful in the business world but was not exclusively limited to business. He also tried to include personal topics into the presentation.

All of the students agreed that Juniata made a name for itself at the conference. Many people were not familiar with Juniata College at the beginning of the meeting, but by the end, that had changed.

"Overall, we left with a strong sense of pride in how well we represented Juniata," said Roby. "Juniata will no longer be a foreign name to the other people who attended the conference."

Gee said, "Juniata definitely stood out at this conference. We created a solid reputation for ourselves. I can only imagine what Juniata will accomplish and achieve in future years with the CEO."

JC students address eco-issues in Guatemala

continued from page 2

and did different studies about plants, water quality and biodiversity," said Dean. "It was very hands-on. It was a chance to express concern."

Junior Dan Bowser said that he feels as though he "gained insight into Guatemala's past and present" and that his "purpose was to bring that information back here to raise awareness about the situation."

"I think that awareness about sustainability is rising because of media outlets," Lombardi added. "Conservation bio is a new field which has been created within the past 15 years. New environmental policies and global headlines report that maybe what we're doing isn't working."

Conservation biology is the science and practice of using principles and concepts from the biological sciences and applying them to the environment in order to protect, manage and preserve biodiversity.

Learning about progressive environmental and biological methods was not the only aspect of the learning tour, however.

Both Lombardi and Bowser added that they feel as though their Spanish conversational skills improved as well. It was the first time Bowser was able to apply his language skills outside the U.S. in a Spanish-speaking country.

Lombardi studied in India, but said the differences between the two countries were more striking than she originally believed they would be. Other novel experiences included learning how to make tamales and watching the young children of the village slaughter ducks for mealtimes.

"Our goal is to help these people value their culture, gain the ability to speak out and to work for change," Dean concluded.

Morin said, "I am certainly open to the possibility of a return trip to Copal AA if there is student interest. The only difficulty at this point is that [Dean and her husband], were our primary contacts on the ground in Guatemala, and since our visit they have returned to the U.S. Therefore, we would need to seek out alternate contacts in order to visit Copal AA again. While it may not be feasible to return to Copal AA, it is very likely that we will coordinate a future program in Guatemala."

An STI that leads to cancer

continued from page 1

three years after becoming sexually active, which could easily fall during the college years. Nearly three quarters of new HPV infections occur in 15-24 year olds and, as of the year 2000, about 9.2 million Americans aged 15-24 were infected with the Human Papillomavirus.

Michelle only had one sex partner three years prior to her diagnosis, but she didn't want to tell many people that she is infected. "A lot of people might get the impression that [I] was sleeping around or having unprotected sex," she said.

Despite the embarrassment she has experienced, Michelle is staying focused on getting properly diagnosed and treated. "I just want to get the next [round of] testing over." The tests will be able to tell her if she is at risk for cervical cancer.

Nurse Michelle Lohr, the community educator for Tapestry Health, the local reproductive and family health center, said that HPV is the sexually transmitted infection (STI) that her organization sees most. She pointed out how easy it is to contract the virus.

"Everyone [who has been sexually active] has probably been exposed to it," Lohr said. "Just most people have immune systems strong enough to fight it off."

Lohr says that often men will carry it without knowing, so they pass it along to women who get symptoms more often and can develop cervical cancer.

According to the CDC, most individuals with HPV are not aware of their infection, as the virus only manifests symptoms in certain cases. The most common symptom is genital warts that appear on the vulva, in or around the vagina, on the cervix, on the scrotum or penis, on or around the anus or on the thighs.

The CDC reports that certain strains of HPV (particularly HPV types 16 and 18) cause over 70 percent of cervical cancer cases. They report that while many people have immune systems strong enough to fight off the infection, some people develop abnormal cervical cells which can multiply and become cancer.

According to Seattle and Kind County Public Health, Pap smears have reduced the number of cervical cancer deaths in the U.S. by about 74 percent between 1955 and 1992 by helping women get diagnosed and treated earlier.

A vaccine called Gardasil is 99 percent effective at preventing the four most common of the 30 sexually transmitted strains of the HPV. It was approved by the Federal Food and Drug Administration (FDA) in June 2006, bringing more hope in the fight against cervical cancer. The FDA approved the vaccine's use on girls and women aged nine to 26. It is given in three injections over a six month period.

Lohr recommended that all girls and women get vaccinated, even if they have already been sexually active. Gardasil is only a preventative tool and is not effective on strains that may already be present in the body. However, Lohr said that since it is unlikely that a woman will be infected with all four types of HPV that Gardasil prevents, she can still be protected against those she does not have by receiving the vaccine.

Gardasil is available on request at J.C. Blair Memorial Hospital but is not yet available at Tapestry Health due to costs. Tapestry Health does offer Pap smears with costs based upon a sliding scale. A woman with an abnormal pap result will automatically be tested for HPV. A free clinic to test for other STIs and to receive treatment for some existing STI's (including HPV lesions) is available from 1-3 p.m. on Tuesdays.

Until Tapestry is able to obtain the vaccine, Lohr suggested that the upcoming holiday break is the perfect time for Juniata women to schedule visit to their family physicians and ask to receive Gardasil.

Lohr said that side effects are minor stating: "Scandinavia has had this vaccine for years and so far there have been no problems. Some side effects may include fatigue, joint pain, arm bruising and some girls get a low grade fever, but nothing that lasts for too long."

"I think everyone should get the vaccine. I've been on a get-Gardasil-*now* kick since June," said Bridget, a junior at Juniata. "I just don't want people to go through what I did." Bridget was diagnosed with HPV at the end of 2005 when she had a bump looked at by a doctor. "I didn't think it was anything, but I thought, eh, might as well get it looked at."

While most people have immune systems strong enough to fight off the virus or not to produce symptoms, Bridget was not so fortunate. Over a period of five months, Bridget had her vulva and perineum (the area between the anus and vaginal opening) burned with trichloroacetic acid. This treatment burns and destroys the warts caused by HPV, but does not cure or treat the virus directly.

"That was pretty stingy and it took a few days to heal, but wasn't that bad I guess—just embarrassing and stingy," said Bridget.

The CDC reports that at any point in time, about one percent of sexually active adults in the U.S. (currently about three million people) are living with visible genital warts. About 25 percent of genital wart cases relapse within three months after they've gone away, whether or not they were treated. Bridget experienced this when her warts continued to come back, multiplied and grew larger. Eventually she chose to have a CO2 laser ablation surgery, which uses a laser to vaporize the effected tissue.

"It was very expensive and hurt a lot, but they are gone. I cannot tell you how good that feels. I felt like I lost that special and very personal part of me. Sex was always very painful for about seven months. Even going to the bathroom hurt so much sometimes that I screamed. I just wanted to have my lady-parts back. I never knew how much I loved them until I felt I didn't have them anymore," Bridget said. "It's been such a long and painful road. I felt so ashamed and hideous for so long. Who wants someone whose genitals look like something out of a horror film?"

HPV isn't limited to affecting women only. Jack had a long-term partner who was diagnosed with HPV during their relationship.

"It was absolutely hard to accept," Jack said. "I think I'm a very careful person and fairly maniacal about health. When I found out [my partner] was infected and that I most likely was too, it was like a stab in the heart."

After doing some research, Jack felt much better about the situation. "I was really upset when I found out [my partner] had it, mostly because I didn't know what it was. I was afraid that my partner had other things, like AIDS." Jack was comforted when he discovered that most healthy people have an undetectable viral load after two years. So far Jack has not experienced symptoms.

All genders, races and sexual orientations are susceptible to contracting HPV. Stuart McHenry, an openly gay freshman, knows he is at risk for becoming infected too. McHenry stated that he feels HPV is "icky," and is afraid of contracting the virus himself. "*Anyone* that you know might have it and not be aware of it at all, and then you have sex with them and bam, you have it… Who knows, *I* might have it."

About 25 percent of genital wart cases relapse within three months after they've gone away, whether or not they were treated

How is HPV related to cervical cancer?

Some types of HPV can infect a woman's cervix and cause the cells to change. Most of the time, HPV goes away on its own. When HPV is gone, the cervix cells go back to normal.

But sometimes HPV does not go away.

Instead, it lingers and continues to change the cells on a woman's cervical.

These cell changes can lead to cancer over time if they are not treated.

Free STI testing

The Huntingdon Tapestry of Health offers free STI tests on Tuesdays from 1-3 p.m.

1231 Warm Springs Avenue, Suite 101
Huntingdon, PA 16652
Phone: (814) 643-5364

Directions from campus:

Head south on Moore St. (0.4 mi)
Turn left at 12th St. (315 ft)
Turn left at Warm Springs Rd. (191 ft)
Arrive at 1231 Warm Springs Rd.

Q&A with Athena Frederick

Chris Burlingame

The Juniatian recently sat down with Registrar Athena Frederick to talk about registration-related issues.

What are your primary roles as Registrar?

"Well, I wear many hats. I am responsible for managing the rules and policies that the faculty vote on that deal with graduate requirements, scheduling, room technology and locating and assigning faculty real estate [on campus].

My other responsibilities encompass the security of academic records, the laws and regulations of full time attendance. I also pull in faculty and come up with schedules so that the students can register. I just want to keep students on time."

What can students do to make the Registrar's job easier?

"Be on time. Everybody does really well. Juniata students are well-adjusted. The Registrar's Office is the administrative office that really sees the whole student body. [Students need to] watch the academic calendar and hit their deadlines as close as they can and communicate with my office and their advisors. And don't ignore e-mails from me, like the FERPA agreement being added in the registration channel on the Arch."

What sets the P.O.E. apart from a typical major?

"Automation. Majors are pretty well-described. Juniata College's P.O.E. is the personality of the dual advising and the opportunity for developing. The P.O.E. is developed like a major, but enough of it can be split down the middle for students who want to take creative license. [The POE] is universally more responsive. [The] Education [P.O.E.] is the most like a major because it's locked into the state's standards."

How many credits make up a P.O.E.?

"Sixty-three credits is the new cut off. Forty-five credits is the minimum that I have seen in a P.O.E. Just remember that your P.O.E. courses are the jewels that make up a major."

Education majors practically have a double major already; how does this credit limit affect the education department?

"What will happen is one of two things. One, the [education] department will be exempt, or the other that the ed. department will have to agree on common core classes and pull together to limit the credits as low as 63."

How do you make your own P.O.E.?

"The best P.O.E.s that I've seen are the exploratory students who come in and really experiment with the different liberal arts content. You should be able to rationalize why you want to do it, but administratively, the P.O.E. is a checklist of requirements."

Can students create and graduate with a dual P.O.E.?

"Yes, but they have to be smart about it because every single course counts. They need to figure in all the credits for both P.O.E.s. It's more of a timing thing and it's expensive. That's what graduate school is for [specialization]. Good time management [when selecting the appropriate courses] is the key with any kind of P.O.E."

When do students need to declare a P.O.E., and what P.O.E. forms must they hand in?

"March 2 is when sophomore P.O.E.s are due, but remember that they are not written in stone. Students can change them anytime. Designated P.O.E.s don't have to worry about it as much. The first semester of senior year is the final P.O.E. form. Our office prefers one copy of the P.O.E. form, and then we make the copies ourselves. I only have to sign one copy then for the sake of my right hand."

Why are FISHN credits such an integral part of Juniata's liberal arts education?

"They are 36 credits that allow students to discover themes and marry departments."

Will the drop/add ever become computerized?

"That's not an option at this point until we can nail down the bugs. Registration is done in three weeks, but drop/add is supposed to be an immediate seven-day process."

How does the grading system at the end of the semester work?

"Grades are due 48 hours after the last exam or the last class. The final exam schedule is tricky. What is the price of getting out of here quickly at the end of the semester? Grades used to be mailed to the house, but I try to get them out quickly. It's both good and bad, because bad news travels very fast online."

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture is located? Send your guess to the Juniatian at juniatian@juniata.edu. Correct answers will go into a random drawing for a random prize. The winner will be named in the Juniatian's next issue on Dec. 14.

Last issue's picture was of the stairs leading down from the Cloister arch toward North Lawn.
Congratulations to last issue's winner, freshman Nikki Evans!

How important are professor evaluations?

continued from page 1

emphasized how much weight evaluations have in the process.

The PEC forms a report for each professor it reviews, focusing on teaching effectiveness, advising, scholarship and service. Teaching effectiveness, the most important criterion for the PEC, is determined primarily from student evaluations.

"Teaching effectiveness is at least half of the report, it's very important," said Rhodes.

In one professor's report, 11 out of the 19 pages were devoted to student feedback, with some quotes lifted directly from evaluations.

"This data is not going into a black hole. Every committee member reads every comment," said Rhodes.

Although the evaluations exist primarily for promotion and tenure, they are still a valuable tool for professors themselves. Full time faculty are only required to evaluate one class of their choosing a year, but many choose to have all their courses evaluated. David Hsiung, professor of history, believes they provide a helpful snapshot of a class.

Hsiung said, "Evaluations are one piece of many used to get feedback. They can provide patterns and reveal issues, and are valuable for redefining a class."

He also mentioned that, while the evaluations are a helpful tool, sometimes faculty have to balance student concerns with maintaining the integrity of the class.

"In education, the customer is not always right. Instructors shouldn't be compelled to follow opinion polls. Teachers should do what's best for the students," said Hsiung.

The PEC currently has a subcommittee devoted to improving the evaluation process. Rhodes noted that the most visible change students may see in the future is rewording of the questions in the evaluations.

One of the changes students will notice this year is that the requests for evaluations are reduced to one or two e-mails. Barbara Williams, faculty services assistant, gave reasons for the new change.

"Each student gets one e-mail for their advisors, and course evaluations are listed in another e-mail. This is to lessen the negative feelings about bombarding in-boxes. We know it's a busy time of year," she said.

Another concern with the process is when the evaluations are given. Because they are sent out near the end of the semester it only captures the class at that moment.

David Reingold, H. George Foster chair of chemistry, said. "People who fail or drop early don't get to evaluate. Students, at the time, might not like a course, but it could be retrospectively helpful. We never get the answer to those things."

Rhodes explained that the system is not perfect. A difficulty in changing the evaluation method is that variations in the procedure need to be balanced so that they remain evenhanded to everyone involved.

"The final decision whether or not to recommend a faculty [for promotion and tenure] is difficult. We want to be as fair as we can in this process. It's an important event in faculties' lives," he said.

Heads up!

This semester's course evaluation requests were sent to you yesterday. If you want to have your voice heard, make sure to complete them.

University Jerky debut

Christopher Shannon / Juniatian

Unviversity Jerky co-owner senior Julia Williams allows a customer to draw for a free University Jerky t-shirt as part of the company's product launch at the campus bookstore on Nov. 17. Williams' partner, senior Brandon Long, looks on. At the event, the co-owners gave our free jerky samples to the first few costumers and University Jerky t-shirts throughout the afternoon. The products will be sold at the Juniata College Bookstore for $5 per three-once bag. The Sodexho stations around campus (Muddy Run, Jitters and Cafe a la Carte), Memories Bar and C@ffeine Coffeeshop will also carry the jerky. Two initial flavors are being sold: the spicy "Enfuego" and the sweet and mild "Hala-Kahiki."

Debate over elevator-less Good Hall

continued from page 1

would not look as pleasant as other buildings like von Liebig, it would make Good more appealing for students with disabilities to come to Juniata.

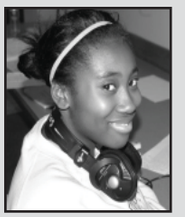
"Juniata has a commitment to create an environment that is conducive to student growth; it's in the mission statement. And that means that Good should be accessible to everyone, even if that means going without a new coat of paint," said professor of politics Jack Barlow, a critic of the current refurbishment plan.

A point of contention between the administration and faculty is the level of accessibility each side views as satisfactory. The administration cites that Juniata complies with the Americans with Disabilities Act. The faculty charges that the College does not uphold the law's spirit.

According to the Americans with Disabilities Act, entities under the umbrella of the federal government cannot discriminate against disabled persons. This means that public places must provide equal access for all people. Even though the law does not apply to private institutions, Juniata is still compliant with it and does provide access to Good Hall.

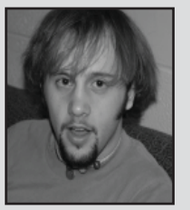
In addition, according to Kepple, Juniata is actually doing quite well on accessibility when compared to other colleges, which means that it is acceptable to wait for more funds before installing an elevator in the building.

According to professors Barlow and Fay Glosenger, in the past students and faculty have rearranged schedules, appointments and classes so that students with disabilities could meet with them. This is done without hesitation, but it often creates inconveniences because there are only six classrooms, two computer labs, one student lounge, and six offices available on Good Hall's only accessible floor..



"In my mind, an elevator that would make all of the classrooms and offices accessible to students and faculty with permanent or temporary disabilities is more important than the refurbishing," said Glosenger. "While we generally talk the talk regarding accessibility on campus, we are not walking the walk."

"It is a dilemma between what we need to raise money for and what we would like to raise money for," said Barlow.



Professor of politics Dennis Plane appreciated what these new refurbishments would do for Good Hall, but said, "Juniata should be meeting the spirit of the law not just the letter of the law. We are omitting students who are disabled from having the same type of access as students without a physical disability."

The legitimacy of Juniata students's internships

Alumni who've made an impact

Senior Kyle Allen's personal training business

A new "Naked Truth," racier than ever

JC's 'sustainability culture' depends on students

EDITORIAL

Juniata College is noticeably becoming a more sustainable place, with the help of a dedicated group of students who're doing all they can to make Juniata green. These students are putting all they have into projects that will actually change the way Juniata works and make it truly friendlier in its treatment of the environment.

They're writing grant proposals to MTVu's EcoChallenge that will go towards projects that could make Juniata a front-runner in the green era. They're working to help the College save thousands of dollars by heating our campus with locally-made biodiesel fuel instead of gas. They're finding ways to make recycling easier and more appealing for students. They're seeking energy savings on campus by encouraging people to turn off lights and electric appliances when they're not in their rooms, and by making drying racks available in campus laundry rooms as an alternative to using the drying machines.

In short, their underlying goal is to create a "culture of sustainability" at Juniata, according to junior Eric Hoover, one of the active eco-conscious students on campus.

"If that's the culture of Juniata, freshmen will come in and do it from the start too," he said. "So when you go to Juniata, you can say, 'Hey, that's what Juniata does, so that's what I'm going to do.'"

This approach can and should work, but only if current students don't let the current efforts falter in the starting blocks.

The birth of an increasingly "green Juniata" in 2007 could become a historic landmark in the history of our institution. The world has reached peak oil consumption, and we can't sustain our current use of fossil fuels and environmentally degrading practices. Juniata students should graduate with knowledge of how to live as a global citizen and exhibit lifelong behaviors that will help communities, our country and the world make better choices about environmental issues. And from a marketing perspective, our efforts could put "centrally inaccessible" Juniata on the map.

President Kepple and his administration have vowed their support to this cause, as has Juniata's Board of Trustees. But we, the students, need to hop on board.

Hoover and his partners in Juniata's go-green campaign are running with their ideas. But in the end, they need our support. If they want "sustainable behavior" to become second nature to Juniata students, then the success of their campaign is up to each of us.

Let's make it happen.

Did you know…

*…that the college spends over **$48,000** a year on hauling campus trash to the landfill.*

***Eighty percent** of that garbage comes not from Sodexho, not from Facilities, but **directly from the students**.*

Driving down the size of our trash piles through sensible and widely used recycling would be a good place for us to start.

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Five things I *would* have been thankful for at JC…

…had gotten my act together sooner

Mary Gardiner

I thought it would be cute to write about things that I am thankful for at Juniata, in keeping with the holiday spirit. As I'm leaving in less than a month now—gasp!—I am increasingly thinking about all of the wonderful things that Juniata offers.

But I realized that, while there's a long list of things I'll miss at Juniata, there's an equally long list of things here that I never got to take advantage of. I decided to share a sampling of that list with the campus. It is both a confession of the things I regret not doing and a bit of advice for those who haven't been at Juniata long enough to screw up yet.

1. Taking elective classes. While I've taken a ton of interdisciplinary courses (mostly because I have flip-flopped so many times in deciding my P.O.E.), I've really missed out on taking elective classes for fun. At this point, I am constantly green with envy at my friends who take an "outlet" class—guitar, poetry, pottery, web design, etc.

It's important to spend some of the college years learning things that are hard to learn later, and to have fun while doing it.

2. Studying a foreign language. Dr. Nagengast made me go to the Czech Republic last year, and I appreciate his resolute decision. It worked well because I learned a little bit of a language while still taking politics and international studies courses in English.

At the same time, I am a little ashamed of the fact that I don't know any languages well besides English. I took five years of Spanish in high school—and was able to use it quite a bit in Spain—but I wasn't persistent enough to reap the fruits of my labor.

The world is getting too small to graduate from college with knowledge of just English. As a friend put it: taking a foreign language is like getting in a cold pool; you really don't want to start it, but once you do, it can end up being a lot of fun!

Don't have a POE that could be a course title. Majors are broad for a reason

3. Having a legitimate P.O.E. Don't get me wrong—the personalized P.O.E. is a great idea… in theory.

When I first came to Juniata, I intended on doing a Philosophy/Religion major, but I didn't stick to it. Then, I decided to do something like a "PPR"—similar to the Politics, Philosophy and Economics major, but with Religion instead of Economics. For some reason, I just didn't like it, so sophomore year I changed it to "Human Rights and Global Justice."

When I went to a grad school interview in August, I talked to the head of the politics department, and when asked what my major was, I replied: "Human Rights." The director was confused; he had never heard of such a major. In fact, that was his area of interest, and so he was quite intrigued by the idea. I got so nervous because of the situation that I'm frankly not sure if I defended the P.O.E. well or not.

Lesson is: don't have a P.O.E. that could be a course title. Majors are broad for a reason. Don't get too specific, and don't BS on your P.O.E. form. This is important stuff.

4. A community of friends with the internationals. I did eventually get my act together and figure out how cool these kids are. (Did you *go* to Fiesta Latina? What could be cooler?) I just wish that I could have hung out with these folks more. It's such a neat thing to be able to sit around a table at Baker with seven other folks who all have different mother tongues.

There's so much to learn from

continued page 9

Thumbs Up, Thumbs Down

to the Juniata women's volleyball team for winning the 2006 Division III national championship. Lots of people think that they're better than everybody else...you have the trophy to prove it.

to the people who thought that the Juniatian layout team made a mistake on the front page's "Inside this Issue" with that black box. It was a joke. And if you still don't get it, the joke's on you.

to Britney Spears for divorcing K-Fed, and telling him about it via a text message. Yep, that's LOL.

to the people who decided to join the Madrigal ticket line on the last night of tenting when the rest of the line slept outside for a week. People like this don't get the tradition. They are also the people who study on Mountain Day and go to Pig Roast for the pig.

to turkey. Way to put your neck out there for a holiday.

-Presidential Perspective-

President Kepple wants to hear from you! He uses his column to answer any college-related question. Simply e-mail questions to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

"Why, for Thanksgiving break, do students need to be out of their dorms at 9:30 a.m. on Wednesday, when the first train doesn't leave Huntingdon until 10:30 a.m. and the second doesn't leave until 3:00 p.m.?"

The Office of Residential Life has found in the past that most to all students are gone by this time. By having the [departure] time set at 9:30 a.m., it allows Residential Life adequate time to conduct checks and secure all residence halls/apartments/houses.

Students who are unable to make their travel connections [until] a later time just need to contact their RDs, explain the situation, exception will be granted and all involved parties will be notified.

Residential Life fully understands that there are legitimate situations that preclude students from leaving at exactly 9:30 a.m., so students should notify the Residential Life staff of their situation in advance. Residential Life will work with students that have unforeseen or legitimate reasons as it relates to break closings.

"When we buy snacks and sodas from the vending machines on campus, what does the revenue go towards?"

For the last few years, vending commissions have been put into the general fund of the College to support our normal operating expenses. In the past, these funds have been used for recycling and improvement in vending services. So far this academic year, we have collected a little over $2,000.

Letters to the Editor

The quality of education in Europe

Dear Editor,

I allowed myself to write a short response to Mary Gardiner's article on education ("Here comes the tuition bill," Commentary, Nov. 9). I strongly believe that those who read Mary's article should know the other side of the coin.

It is true that the Europeans proud [sic] themselves in the quality and price of their institutions. One hundred Euros at Sorbonne, Oxford or Padva University can pay for your books, your room and board and some traditional European entertainment. For an equivalent $130 at Juniata College, or at most colleges in the U.S., you can perhaps buy yourself a Juniata sweatshirt and parade to the local bank to request a loan for your education.

Interestingly, American education seems to be priced at its value. Despite the exorbitant prices, many more students from all over the world give up their priceless education to come to the American colleges and universities. Why is this the case?

While Europe boasts about its education system, it silently ignores the protests of graduates unable to find jobs. Perhaps the high taxes, which sponsor education, tend to kill local businesses. And while labor is supplied to the market by numerous national and private universities, the demand for skilled workers shrinks exponentially. This is, of course, a simplistic hypothesis, but with a big grain of truth to it.

Europe is good at educating people; the U.S. is good at employing them. Since only one of five European diplomas may lead to a job, perhaps there is a reason why the American education is pricy while the European is almost worthless.

Magda Sarnowska '07, international student, Poland

A note from an alumna

Dear Editor,

We received the paper in the mail yesterday, and I really enjoyed reading it over breakfast this morning. It seems that some things at JC never change (the food at Baker) and some things do (assignments over fall break? that blows!).

Keep up the good work and give Tommy McConnell a raise….he is one funny dude.

Sharon (Randolph) Klepfer '82

What I would have been thankful for

continued from page 8

internationals—and it's fun, too. Especially the foreign swear words. (I have a whole repertoire, in four languages.)

5. Friendships with professors. One of Juniata's strong qualities (that the marketing department does not fail to flaunt, nor should it) is our great faculty to student ratio. There are very few colleges in which you can drop by a professor's office at ten at night and have a conversation with him or her over coffee. (Xinli—I'm talking about you!)

While I've built some great relationships with some of our faculty, I think that I should have gotten more involved with them freshman year.

Less than two weeks ago, I attended an international studies seminar and had some of Xinli's homemade spring rolls and Dr. Sowell's delicious taco salad. I found myself wondering why more freshmen weren't there. There was free food! And engaging conversations with some of America's elite erudite!

But as a freshman myself, I never got involved in such things. What is it? Is it a fear of the profs? They don't bite, you know.

And now, something I am really thankful for…

6. **An appreciation for learned lessons.** I realize that I've sounded very much like a crotchety old geezer throughout this whole time of reflection. I do. But, as I finish off my last month at Juniata, I think a lot about all the things that I would have done differently.

After all, college students are known for their most ostensible talent: messing stuff up. We make mistakes unlike any other age group. In a way, I think we're supposed to.

If there's anything that should be clear in this little piece, it's that in spite of all the things I *could have* been thankful for, I am thankful that Juniata has been a place to learn these lessons.

Thanks, faculty and friends, for letting me totally screw up. And for not laughing at me (too hard) when I have.

Juniata's 'Far Away' is far out there

Christopher Shannon / Juniatian

"Far Away" is set in the midst of a war-torn and hatred-filled world that is non-representative of any one place or time in history. Directed by Gravity Project member Andrew Olewine, the piece sends the message that a dark, war-driven world filled with hate can cause separation and lack of trust between even the closest people. Like great art, it moved and challenged the entire audience to delve deeper into their own perception of what they had witnessed.

Sarah Roby

I've often been left speechless after watching the performances that Juniata produces. The raw talent of our actors is undeniable, and the audience always knows they're in for a unique experience. The most recent production to grace the Suzanne von Liebig Theater was "Far Away." It showcased superb performance skills and was, as usual, a unique experience, but it in no way left me speechless. In fact, the wheels in my head were turning and cranking out questions from the moment the lights dimmed.

After the final bow and the lights were turned back on, it took me a moment to comprehend what had just happened. I knew that I was impacted by the hour that had passed, but I couldn't understand why or how. As freshman Alex Miller, the light board director, said before the show began, "[Far Away] is less storytelling and more inspirational."

There is a story though. In its most simple form: Joan (sophomore Megan Monohan) is the niece of Harper (junior Tricia Bitetto). She marries Todd (sophomore Josh Beckel) in the midst of a war-torn and hatred-filled world that is non-representative of any one place or time in history.

It seems simple, but it isn't. Each relationship is complex, and the entire production is only three scenes.

The first scene, in my interpretation, is a flashback to when Joan first moves into her aunt and uncle's home. She is a young, fragile and meek girl who is disturbed after secretly witnessing her uncle beating people. Harper attempts to cover up these acts by justifying that Joan's uncle was simply helping escapees find safety and unfortunately had found a traitor.

The content of this scene was dark and heavy, but the most powerful aspect of the production was the performers's movement. The training given by the Gravity Project members and other visiting performers was extremely evident; their stage presence was incredible. Each movement, whether it was a tilting of the head, brush of the hand or turning of the knee, seemed to be deliberate and purposeful. The char-

continued page 14

LOST IN THE RECORD STORE

The punk band dilemma: 'Sell out' and get rich or remain loyal to your roots?

Kevin Warner

In the punk rock scene, one of the worst things you can be accused of is "selling out."

Like any other subculture, punk rock has a rabid group of purists who constantly attack the scene and the bands. Selling out is one of the worst offenses you can commit. While many people write off these critiques as impossible goals of cultish fans, the overall message from punk rock critics about "selling out" is incredibly valid.

Punk rock, as a music scene, is unusually concerned with ethics. The genre emerged as a protest movement and has maintained a strong social and political message throughout its history. Not only that, but the majority of bands in the genre has been underground and off the radar of pop culture. This history has strongly influenced the attitude of punk rock toward the music industry.

Punk bands pride themselves in their Do-It-Yourself (DIY) ethic. They record, produce, and promote their music by themselves. A large number of small record companies promote this attitude and accommodate DIY oriented bands. Punk bands also pride themselves in selling their records and merchandise for low prices and for playing shows in intimate, cheaply priced venues.

For many punk fans, red flags immediately go up when a band signs to a major label. Major labels, such as Sony, Capitol and Virgin, are part of huge corporations where the bottom line is profit. To fans, signing to a major label is like turning your back on the scene and the people who helped you get where you are.

Their point is extremely valid. While the members of the band themselves (most likely) still hold onto the values of the scene, the corporation that owns the record label (most certainly) does not. The price of a band's merchandise will increase drastically, as will the costs of their live shows. The label will begin to promote the band in the pop music scene and try to get them on MTV and the radio.

For many bands, this would be fantastic, but it presents a large problem for a genre of music that prides itself on its subculture status and its anti-corporate, anti-establishment messages. It is impossible for a band to maintain the same message when allied with a corporate label.

The venues for a band's live shows get bigger, destroying the token intimacy that punk concerts often possess. Instead of tooling about the country in a van and connecting with fans, major label bands tour on planes and buses. Most importantly, the message of their music is likely to be destroyed, as major labels push their artists to adopt more "radio-friendly" songs.

Bands that are concerned with getting rich and famous would have no problem with this. However, for punk bands that are supposed to remain loyal to their scene and its ethic, it is difficult to become rich and famous while remaining true to where you came from.

A punk band signing to a major label is bad for fans as well. It oftentimes makes bands change their sounds and their messages. Fortunately, we are not always subjected to the watered down version of punk pushed by the corporate labels. There are a large number of punk bands who remain true to their roots and continuously put out fantastic music.

WKVR to move to 24-7 programming

James Trent

Beginning Dec. 8, Juniata's WKVR radio station will broadcast music 24 hours a day, seven days a week. The station has also proposed to move its studio from the basement to the second floor of Ellis Hall.

Currently, WKVR airs eight hours of live programming per week and fills the rest of the air time with National Public Radio (NPR) broadcasting. However, WKVR's provider of the NPR feed is dropping that signal, leaving WKVR to fill all air time itself.

WKVR is currently deciding how the 24-7 programming will be filled. Ideally, said junior Megan White, the general manager of WKVR, it will be filled with only Juniata radio shows. However, she expects that to begin with, it will air pre-recorded shows from other local radio stations or music from pre-made playlists.

On Nov. 16, White proposed to Student Government that the WKVR studio be moved next to the new student union, possibly displacing the Kvasir office or the Blue Room, in order to create more visibility for the station.

White and WKVR DJs want to move studios because the current one is "dirty, nasty and right next to the Sodexho equipment," said senior Alison Earnhart, a WKVR deejay.

The current studio was recently damaged by leaks from soda machines in Baker Refectory.

"The ceiling fell through, and it was nasty," said White.

After the leak, White personally showed WKVR's moldy condition to President Thomas Kepple, Dean of Students Kris Clarkson and various Facilities personnel.

Kepple and Clarkson supported the proposal to move the studio, but consider cost to be an issue. WKVR will try to gain broader financial support. Senior Audrey Fry, a three-year veteran of the station, plans to petition alumni for funding.

As of now, WKVR has yet to produce an estimate for the move's cost.

Senior Michael Stefanic, a former DJ and member of the WKVR board, said, "If you think it's going to be as easy as running a wire from the antenna to the second floor, you're wrong." He explained how there might be increased static interference and a weaker signal emitting from the station.

Current DJs emphasized that the move would help WKVR's visibility, and therefore its popularity. "It would create a lot more visibility. More people would be interested; most people don't know that our studio is in the basement."

The proposal would create a lively "student area," said Staci Weber, director of student activities. According to Weber, JAB could stay on the second floor, meaning "WKVR, JAB and Kvasir would surround the student union."

According to White, even if Student Government approves the proposal to move, it will not happen immediately.

Until then, students may tune in to WKVR at FM station 92.3, or find live shows, DJ bios and schedules online at http://clubs.juniata.edu/wkvr.

WKVR DJs and show profiles

Laura Sweltz and Sarah Roby

"Life, Love, and the Pursuit of Happiness"
Sundays, 10 - 12 p.m.
We have a blast when we're together. We can never stop laughing, and we really enjoying talking with people about the typical "girl topics"such as life, shopping, dating, etc. This show is so much fun, but don't think we're only targeting female listeners. We have a lot of love tips that our male audience could definitely use. Our music is mostly alternative/emo with some 80's throwbacks and an 11 o'clock dance break.

Meg White

"Stripsearch"
Thursdays, 10 - 12 p.m.
"Stripsearch" got its name from a Faith No More song from back in the day. It's the opener for my show every week. I play a lot of grunge rock, modern rock and a little heavier stuff. Some bands include Sevendust, Alice in Chains, Tool, STP, Pearl Jam, Silvertide, Candlebox....My roommate Laura Weber is my sidekick and we just like to play music, chat and have a good time.

"Quantum Radio"
Sundays, 8 - 10 p.m.
"Quantum Radio" is all about variety. Just like the infinite possibilities of quantum mechanics, so any song can pop up on our show - but we usually stay within the realm of rock (both classic and modern), punk, jazz, blues, world, latin, and of course - funk! Quantum Radio - "We only exist if you're listening!"

Hootinany Apple-Fest

Christopher Shannon / Juniatian

On Saturday November 18, Juniata students gathered at The Alternatives to Alcohol House for an assortment of autumn related festivities. Along with some country music and square dancing, students were treated to an assortment of apple treats, such as pie and cider, for a hootin' good time!

The Naked Truth:

Look for the signs a girl gives you; they'll add up

Rebecca

In kindergarten, boys used to chase girls around the playground and kiss them. In second grade, there was less hair pulling and a lot more hide-and-go-seek. But by fifth grade, a girl had to twist his ball around a pole to get a second glance (God, I loved tetherball, and really, who didn't love a good wrap around?). And now?

Now the girls have to stalk guys through Facebook, trying to find out what they've got to do to turn heads. But really, no girl wants to be known as a stalker, so she resorts to her old fashioned ways: being subtle.

The thing is… I don't think that guys always notice the little things that girls do that really are big hints. In fact, a girl will try any of these things just to see if it'll get her anywhere, preferably on the target boy, with whom she'd like to hit the bull's eye.

Guys: she might not bake you cookies or do your Calculus homework. But she will do an assortment of little things that eventually add up, and as long as you took QM, you should be able to do the math. If you've got one, two or three of the following going on, I suggest you realize your sum.

Proximity. Remember when your first-grade girlfriend would empty her milk carton and then ask for a sip from your straw? Sure she was thirsty, but she wanted to be on you, and your straw was as close as she could get. Now, she's still invading your personal space and you might not even notice. If you're close enough to brush arms, you're close enough to reconsider what you're bumping up against. And when she's brushes up against you, she'll be eyeing you up as well because the longer she looks at you, the more clothes she can imagine taking off. Now do you understand why she's smiling? She doesn't want to rub you the wrong way, so she might have said she was sorry. But she meant I think my cookies would taste really good with your milk.

This isn't Monopoly kids. Don't worry about your 200 dollars and find a thimble. It'll feel as good as owning all four railroads

Catch your eye. Here's the thing, she's going to dress for "sucsex." That does not necessarily mean she's wearing next to nothing. It just means that what she *is* wearing has a purpose. For example, maybe the guy likes the Texas Longhorns, so she borrows a Texas shirt. She wears it, signifying that although she likes Texas, where everything is bigger, she especially enjoys the Longhorns. And she thinks you might have one long horn too. Touchdownnnn.

You have a show. Let's say the two of you watch "Prison Break" together and she spends more time looking at you than the convicts. (Please keep in mind that it is very hard to avoid drooling in front of the TV from 8 to 9 on Monday nights.) This isn't Monopoly, kids. Basically, she's giving you a get out of jail free card. So you should probably pass Go, forget about your 200 dollars and find a thimble. It'll feel as good as owning all 4 railroads.

Try something new. If she really likes you, she'll do *anything* once. And I'm not talking about just in bed. She'll try to understand your ridiculous love of bowling. She will put on those ugly shoes for you and pretend like she just can't handle the ball until you show her how. Better ball-handling? Stttttrrrrike.

Teach me. She'll ask for help, whether she needs it or not, just to spend a little more time with you. Ah, the door to acceleration. Hey, if she wants to know how to drive a stick shift, you might as well teach her. Then maybe you'll finally get the hint: neutral is not a gear. So quit stalling.

Text message. You might think sending you an instant message is just the same as texting. It isn't. True, a random text message is an *instant* message that she wants you. Although, it doesn't take much to type up something silly to grab your attention like, "Hey you ham, did you know that a pig's orgasm can last up to 30 minutes?" She really just wants you to make her phone vibrate so that she knows you're already squealing in your pen.

Pickup lines. I'm not going to lie, I have used "Let's make like fabric softener and Snuggle" to get what I want. That may not sound sexy, but it will definitely gets a head raise. And it's not sleazy like "Want to fall into my Gap?" You

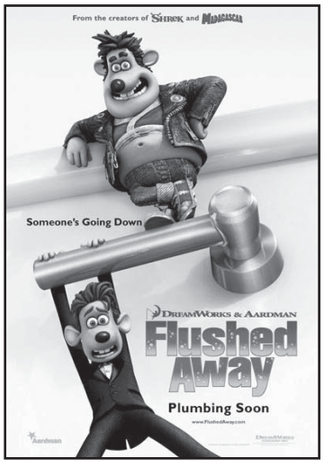
Watch your cares get "Flushed Away"

Comedy film provides toilet humor for all ages

E. LaBrecque

"Flushed Away" is a swirling vortex of plot lines and details which keep the film entertaining for children and grown-ups alike. The latest DreamWorks Animation film tells the story of Roddy (Hugh Jackman), a pet rat from England's Kensington palace, and his trials in rat metropolis (a.k.a. the sewer).

Roddy's troubles begin with him, purposely being flushed down a toilet by a filthy sewer rat named Sid (Shane Richie). His misadventures don't stop there. Roddy is launched into jam--quite literally--number two when he wanders aboard the Jammie Dodger, a boat owned by Rita, a lady rat. If you're thinking that Roddy gets swept up in the seedy world of black market biscuit trading, you're as wrong as I was.



Roddy gets into a scrape over a stolen jewel aboard the Dodger (no biscuits were harmed in the process). However, he does earn an ally, Rita (Kate Winslet), and an enemy, The Toad (Ian McKellen). The next problem Roddy encounters is The Toad's nefarious plan to destroy the rat city.

Of course, as all good heroes do, Roddy battles with his nemesis' toadies, who are actually frogs. The band of ninja/assassin frogs is led by Le Frog (Jean Reno), a French-accented fiend who delivers numerous offensive one-liners. If you're of the mind that there can never be enough jokes which portray the French as beperfumed, surrendering winos, you will be endeared to Le Frog. I tend to find French-slamming "jokes" rather tasteless, no matter what the context. Thankfully, that was the only low-point of the film's humor.

If there is one thing I can say for this animated film, it's that the characters were spectacularly, ahem, animated. No joke, DreamWorks did a phenomenal job of bringing their computer-generated figures to life on the big screen. Considering that this film is brought to you by Aardman Animation, the company responsible for the "Wallace and Gromit" films and "Chicken Run," nothing less than greatness should be expected. Moreover, the vocal variations of the actors behind the characters were superb. If I hadn't read the opening credits, I wouldn't have guessed that Hugh Jackman supplied the voice of Roddy, let alone Ian McKellen as the voice of The Toad.

This is the film to see if you're feeling bogged down and in the mood for some silliness. It's not all childish humor, although the chorus of slugs who sing, "Poor, poor Roddy/Flushed down his own potty," won't let you forget that you're watching a kids movie. There are more than enough subtle homages to older films (i.e. "Bond" and "Star Wars") that parents and older kids will appreciate and enjoy while being "Flushed Away."

Running time for "Flushed Away" is 90 minutes. It is MPAA rated PG for toilet humor and mild language.

Battle of the Bands

Christopher Shannon / Juniatian

Freshman Chris Bender of the band Normsline rocks out at Juniata's Battle of the Bands on Nov. 17. Normsline finished second after The Bleeding Wingnuts, a band from Huntingdon. The event, which brought in at least 250 people, raised over $1000 for the Autism Society of America.

Rainfest '06

Christopher Shannon / Juniatian

Brittany Moyer / Juniatian

The onset of sudden, torrential rains surprised students on their ways to 1 p.m. classes on Nov. 16. Mother Nature created Springfest-like scenes on campus. Above, freshman Michael Lee dumps fellow freshman Rachel Lachat into a "pond" on North Lawn caused by heavy rainfall that came through the area that afternoon. Below, freshman Andy Orr waded in another pond on North Lawn. Many waterways such as these sprung up around campus, some causing minor flooding to TnT and Beeghly Library.

The Naked Truth

continued from page 12

sexy, but it will definitely get a head raise. And it's not sleazy like "Want to fall into my Gap?" You pickin' up what I'm puttin' down?

Downward dog. She doesn't have to do yoga in front of you to try and make your mind bend. But, merely observing as she touches her toes or arches her back will get you nothing but a stiff… uh, neck. In case you've just realized your stupidity, remember that stiffness can be overcome with some yoga moves like "pelvic tilts" and the "seated wide-legged straddle pose."

Competition. It's an uphill battle for your attention and she'll tease you the whole way. I'd bet you anything that she makes fun of the things you do because she secretly thinks they're cute, just like you. BUT, she has to do something to prove she belongs on top. Do you see the win-win scenario? Get your head in the game, even if you think the situation is insurmountable. Trust me, one way or another, it can be mounted.

To sum up the equation, if a guy doesn't start adding up the little things, the girl is going to start subtracting. What he'll get out of it? A nice big *zero*. If guys would add just a little faster, they could probably multiply their possibilities.

Girls don't want math majors for boyfriends. A girl wants nothing more than a boy who will race her to the swings and then argue over who can push harder and go higher.

So go and kiss her before the recess bell rings. You can get a lot of exercise in that 20 minute period. Red rover, red rover, it's time to come over.

Far Away

continued from page 12

acters were more than scripts and costumes—they were alive.

Scene two takes place in a hat manufacturing factory where Joan meets Todd. Their chemistry flares, and they soon grow fond of each other. Their friendship blossoms into a marriage by the end of the performance. This is no surprise; what could be more romantic than making hats? The comedic input from Beckel, as his character Todd attempts to woo Joan, leaves the audience laughing at his pick-up lines, "You'll do a fantastic body of work while you're here;" "You inspire me;" "Use these beads;" and my personal favorite, "I think you're a hat genius!"

The upbeat mood quickly shifts mid-scene when the purpose of the hats is revealed to the audience. A parade of prisoners enters the theater. Their feet are chained, they're marked with numbers and they are wearing the Dr. Seuss-style hats that Joan and Todd have been making. Joan mentions that the hats will be burned along with the bodies. It was at this point that I knew "Far Away" was not a warm and fuzzy production.

Bitetto said that the production was very dark, but the other students helped keep practices from becoming depressing, despite the unpleasant theme.

The closing scene took place in the home of Harper after the marriage of Joan and Todd. There is a heated conversation between Harper and Todd about killing, death, war, crocodiles, birds and so much more than any audience member could comprehend from a single viewing. The message was clear though—a dark, war-driven world filled with hate can cause separation and a lack of trust between even the closest people.

As freshman Allison Strausberg, a prisoner, explained, her interpretation was that "Far Away" represented the world as it could be in the extreme case of war.

Regardless of whose interpretation is correct, the point of "Far Away" is to stir the audience. Each person left the theater taking away something different than what they thought they had experienced. If someone felt like they didn't understand "Far Away," Beckel says, "Any take on it is understanding it. Your mindset cannot be that your interpretation is strange. You understand it."

After giving my brain and senses a chance to recover from my initial reaction of "What just happened?" I can confidently say that "Far Away" was a stage success. Like great art, it moved and challenged the entire audience to delve deeper into their own perception of what they have witnessed.

Mark your calendar!

The next Juniata theatre production is "Enrivo IV," showing Feb. 15-17 and 22-24.

Attempts to showcase artwork thwarted by lack of locations

Sarah Roby

The beginning of the school year brought promises of more student artwork adorning the campus. Student Government, in its enthusiastic movement thus far, is behind this push to showcase more of Juniata's talented artists.

Although no changes can be spotted yet, Officer of Information Technology on the executive board of Student Government, Jigar Patel, said that things are still underway. The only hold up in this project is finding available space to display more student projects and artwork.

"No one seems to want to give up space," said Student Government President Demetri Patitsas. Patitsas explained that the needed materials and funding are already in place. The only step missing in this process is finding the right location. Considered buildings and rooms include the basements of the Unity House and Pink and current storage rooms in South.

Division III National Champions

JCVB women earn its second title in three years after an epic battle

Derek Stanley

Down 2-1 in the match and 22-18 in game four, the Juniata women's volleyball team rallied to capture its second national championship in three years.

Juniata, finishing the year at 41-1, began the NCAA Finals tournament by dismantling the U.S. Coast Guard Academy in the quarterfinals and Wittenberg University in the semifinals, both by match scores of 3-0.

This set the stage for the championship match against Washington University, #1 vs. #2 in the American Volleyball Coaches Association (AVCA) poll and a rematch of the 2004 finals match where Juniata captured its first-ever Division III national championship.

"Going into the match we wanted to line Paige [Johnston] up against their better outside hitter, Spencer. We didn't, however, make match-ups a very big deal. We wanted to serve away from the libero and track their hitters outside in. We knew our defense would be very good," head coach Larry Bock said.

The Eagles came out strong and won the tightly contested first game 30-27 with a kill from sophomore and tournament MOP Amber Thomas followed by an attack error from Wash U.

Games two and three did not go as planned as the Eagles dropped both, 30-20 and 30-22.

Game four appeared to be following suit as the Eagles fell behind, 17-13. However, a kill by sophomore Erin Albert and back-to-back overpass kills by 5'4" sophomore setter Beth Kozak brought the Eagles back to 17-16.

"After that second kill my adrenaline was rushing so much that I knew we had to win that game," Kozak said.

Wash U fought back again, pulling out to a 22-18 lead and forcing Bock to call a timeout.

"Larry told us we just needed to settle down, get things under control and just play one play at a time," Thomas said.

"We were shaking a little but there was no doubt in our minds that we were going to win," senior Rachael Schatz said.

It was after this timeout that the game turned around once again for the Eagles as their determination brought them all the way back. It was a kill by Schatz that sealed the victory for the Eagles in game four, 30-27.

"We got the momentum back after that timeout and just kept siding out. They tightened up a little and we just kept pushing. That is what allowed us to make the comeback," Schatz said.

The women took that momentum into the decisive game five, dominating 15-10 with a kill from Thomas clinching the championship. Thomas finished with 25 kills on the match and 54 for the tournament.

"It is the end of the year and I figured you might as well go out swinging and give it everything you've got," Thomas said.

"I think you may have witnessed the best match in the history of Division III volleyball championships," Wash U head coach Rich Luenemann told ncaasports.com.

Senior Stephanie Kines was named to the All-Tournament Team after racking up a career high 26 kills throughout the match, hitting .412 for the evening. She also had two critical blocks late after the Eagles were struggling to block the ball all evening, tallying only four during the match.

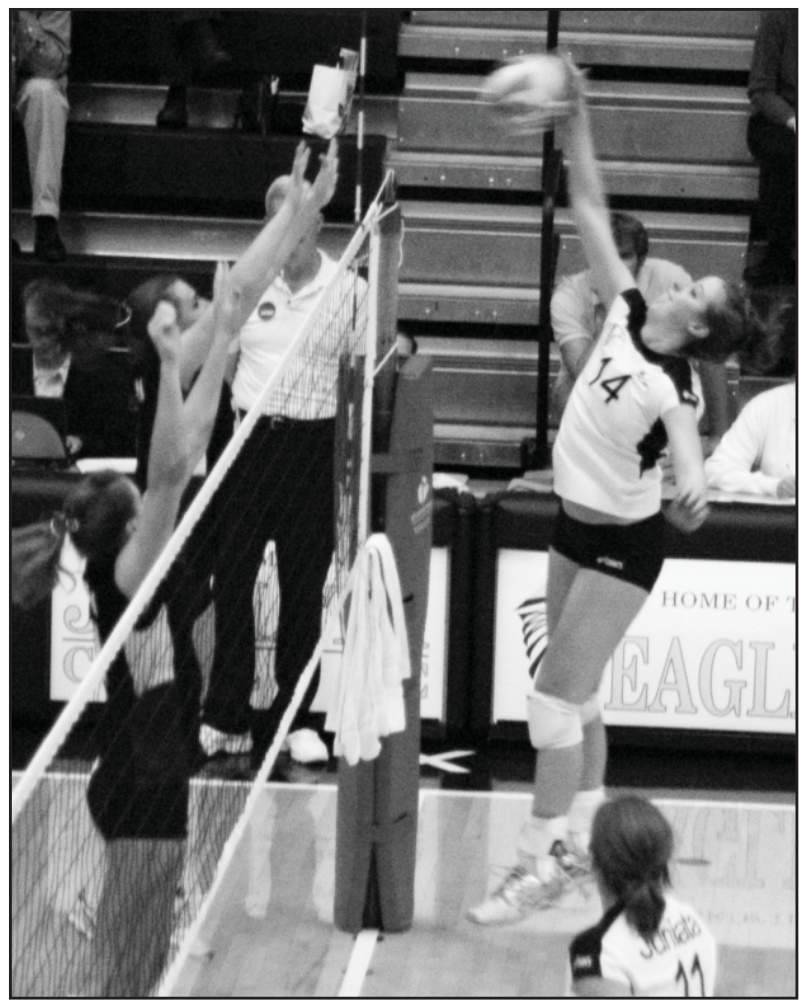
"I honestly felt as though I was blacked out. I don't remember a single kill or play. It was an amazing match to be in and I'm just glad I could come through in the clutch," Kines said.

"Stephanie's block came at a critical time, it was an excellent commit block," Bock said.

Joining Kines on the All-Tournament Team was Kozak and MOP Thomas.

This championship allows Schatz and Kines to be the first Juniata women's volleyball players to graduate with two national championships.

Photo courtesy of NCAA



Above, the Juniata women's volleyball team celebrates its NCAA regional final victory against Gallaudet on November 11. Below, Erin Albert spikes the ball in a recent home game.

"It's amazing we built up this program and it gives you a big sense of accomplishment. The underclassmen have now learned how to win, so hopefully they can carry on the tradition. Without them this year we could not have done it," Schatz said.

Kines expressed similar feelings. "It is the greatest feeling in the world to win a national title for your volleyball program," she said. "The alumni support, parents and Juniata fans are the best."

Looking ahead, the future looks bright for the Lady Eagles as they will return 15 players from this year's championship team, 14 of whom are only freshman or sophomores. This raises the question of how many championships in a row the women might capture. Bock, however, won't speculate quite yet.

"This year we had a very deep team. One through seventeen were very strong," he said. "If everyone does well in classes and we return everyone, Juniata will be awfully good next year and it should be very exciting."

Kevin Dundore/ Juniatian

Christopher Shannon/ Juniatian

Senior guard Nick Hager drives around a Franciscan defender during Juniata's season opener against the Barons on November 17. The Eagles beat Franciscan handily, 88-54 in the opening round of the Doc Greene tournament at the Kennedy Sports and Rec Center.

Juniata starts season strong

Juniata wins Doc Greene Championship in opening weekend

Dan Rapp

Coming off of a 10-15 record last season, the Juniata men's basketball team opened this season with a clean slate looking to earn a spot in the four-team MAC playoff. Last year the Eagles fell short of achieving a post-season berth due to a string of conference losses late in the season. In coming up short of its season goal, Juniata had to sit back and watch conference foe Messiah College go on to win the Commonwealth conference despite receiving two losses from the Blue and Gold.

Senior starter Chris Jasiota believes the experience "has been a motivating factor, forcing us to get better throughout the off-season. Getting into the playoffs has always been a tough hurdle for us to overcome but we are looking to change things this season."

The playoff hurdle isn't the only obstacle the Eagles are going to have to overcome this season. The team also lost two key senior starters, point guard Tommy McConnell and forward Travis Boyd. These players contributed a great deal to the Juniata offense which means that new players are going to have to step into big roles.

Head coach Greg Curley is confident the players can make the transition. "Even though it's a different group that now starts the game, they are all the same players that have always been a part of our offense. Now we're just asking to get a little more minutes out of each of them."

The first test of the new 2006 roster came this past Friday against Franciscan and the Eagles passed with flying colors. With a shooting percentage of 57% and defensive stands providing 27 rebounds and forcing 15 turnovers, the Eagles outscored their opponent in a thrilling 88-54 win. One player in particular who really stepped up his game was Brent Ferko who went 8-11 from the field for a team-high 16 points.

After this impressive performance, the Eagles were looking to carry the momentum into the championship game the next day. But at the start of the game the Eagles came out sluggishly. A few turnovers and missed opportunities left the Juniata trailing at the half, 32-25.

Whatever Curley said to his team at halftime, it worked because the team that came out of that locker room after the half looked like a completely different squad. After about eight minutes of play the Eagles jumped out to a decisive lead and would not look back for the rest of the game. The team wound up winning both the game (76-64) and the Doc Greene Tournament Championship.

Its turns out Curley didn't have to say too much to his squad during the intermission.

"[I said] nothing," he said. "We all knew what we were doing wrong and what we needed to change. We came out in the second half, got some more rebounds and finished plays."

The team had three players named to the all-tournament team including the tournament MVP, Brent Ferko. Chris Jasiota and Brian Cannon were also on the all-tourney team.

Juniata looks to take its momentum into their next game Saturday, home against Franklin and Marshall at 7 p.m.

Juniata women open season 2-0

Lady Eagles earn back-to-back wins and claim Coaches vs. Cancer championship

Dan Rapp

Before the season had even started, the Juniata women's basketball team had already faced more than its fair share of hardships. Starting its preseason with a 15-person roster, the team has since seen two players forfeit their rights to beat up on teams in the conference. The Eagles have also seen one more player sidelined due to a plaguing issue of injuries that seems to haunt the program.

However, despite walking into their first game of the year three players shy of their initial intentions, the Eagles held nothing back. Opening the season against McDaniel, the Blue and Gold put forth a serious display of talent where three of the five starters scored in the double digits.

The opening game of the tournament was a close one, seeing the score tied 10 times. Tied at 51 with less than four minutes remaining in the game, the Eagles stepped it up with a series of big defensive stands including a steal from junior Jill Walsh with 36 seconds left in regulation and a block on a McDaniel three point attempt from junior Ali Meckey.

The offense helped seal the victory with clutch free throws from both junior Jess Winemiller and sophomore Claudia McDowell.

Winemiller loved her team's effort. "The match was real tight, but we deserved that game and that's exactly how we played."

These efforts helped them to hold the lead for the remainder of the contest for a 57-53 win.

With the momentum from this late-game victory, Juniata geared up to face SUNY-New Paltz. Looking to alter the way leads had changed the night before, the Eagles' defense came out strong. In the last ten minutes of the half, the Blue and Gold flat out dominated, outscoring their opponent 19-2, giving them a 32-12 lead at the half.

"The match was real tight, but we deserved that game and that's exactly how we played."
– Jess Winemiller

McDowell also added to her already impressive performance from the night before, scoring 17 of her 22 points in the first half.

Of the transfer from Division I Hofstra, teammate Meckey said, "She's nasty. She's already averaging more than 20 points a game and she is only a sophomore. And with how deep our offense already is, it is going to make us a real threat this season."

In the second half, the Eagles did not dominate as they did in the first and they saw their lead slip to as little as six points. Winemiller reignited the flame of the offensive fire and dropped a three pointer to extend the lead to nine late in the second. Juniata never looked back, finishing the contest with a 59-48 victory, earning them a 2-0 record and the tournament championship.

The Eagles will look to extend their impressive start on the Nov. 21 against Penn State-Altoona, this time on their home court. The game begins at 6 p.m.

Low on numbers, not on talent

The Juniata swim team is making progress one stroke at a time

Corinne Barabas

Throughout this entire season the Juniata swim team has every intention of pursuing its motto: "No one trains for second." So far this season they have pulled off a 2-3 record against some tough Mid-Atlantic Conference competition.

One of the biggest challenges the team faces during the season is filling lanes. Each swimmer is only allowed to race three events during a meet. Competing with just a 12-person roster is a distinct disadvantage. "Whenever we swim against a bigger team, they are able to fill all of their possible lanes, automatically giving them points just for finishing," senior Collin Thompson said.

So even if a decent percentage of a larger team swims like fish without fins, they could still end up beating the talented and speedy Eagles.

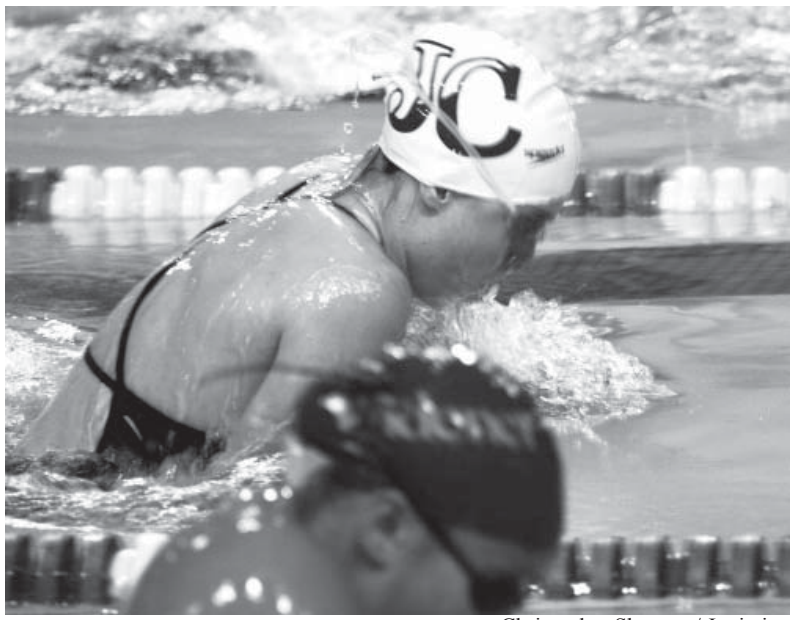
"Sometimes we struggle during the regular season, but the championship is so spread out, team size doesn't matter. It is quality not quantity," said head coach Brian McGrath.

Juniata may be small in numbers, but by no means does this team lack talent.

"We have eleven dual meets this season to practice racing before the championship meet," said junior Kasey Brough.

The Eagles will use those 11 meets to move themselves towards their ultimate goal.

"[We will] work hard, push ourselves in practice and in meets and reap the rewards of our efforts at MACs," Brough said.



Their dedication and effort in and out of the pool has the Eagles sitting pretty in terms of overall performance against other teams. "Our girls have the ability to be the top four swimmers in every event, minus fly, at MACs," McGrath said.

And with that conviction, talent and ambition, third place could be a distant memory. Juniata may just hold the right key to unlock a first place victory.

On November 18, the Juniata women took on Scranton at home. Despite being unable to produce a team win, according to McGrath the meet was "close from the first event to the last event. Time wise, there were many solid performances."

"At first glance it looks like we got slaughtered [the score was 112-87], but in my opinion, as far as times, support and techniques go, it was our best meet of the season so far," McGrath said.

Senior Amy Sutherland finished the 200 backstroke in 2:15, which is the fastest time anyone has completed that particular event in the conference this season. Sutherland "swam over" her biggest backstroke competitor in the conference, a swimmer from Scranton.

Christopher Shannon/ Juniatian

Junior Carlie Zoubek swims her breaststroke race in a meet earlier this season.

"I just need to keep working hard, working on the little things. There are a couple quick girls from other teams, but my main goal is to go after the girl from Scranton," Sutherland said.

"Sometimes we have to work extra hard to compensate for the areas where we may be lacking," said Musselman.

On November 11, at a tri-meet held at Lebanon Valley, the Eagles made a big splash against the host team and Drew, defeating both soundly. Juniata boasted the top finisher in eight of 15 individual events.

Sutherland took gold in the 200 individual medley and 400 freestyle. And Thompson claimed three first place finishes in the 800 freestyle, 100 backstroke and 200 backstroke.

Sophomore Kristen Musselman won the 50 freestyle and Brough picked up points with her first place finish in the 200 butterfly.

Freshman Paige Black won the 100 freestyle. The cumulative team effort allowed Juniata to roll over Lebanon Valley, 74-48 and rough up Drew, 85-37.

The team travels to the Franklin and Marshall Invitational on December 2.

By The Numbers

Kills for Tournament MVP Amber Thomas during the six-game tournament

Lighting Strikes Twice

Jess Winemiller

It is said lightning never strikes the same place twice. Knox Stadium became an exception to this phenomenon on Saturday, Nov. 11, as Juniata beat FDU–Florham, 39-31, in its season finale.

"There is not a better way to go out," said senior captain T.J. Hardesty.

Lightning was a factor that delayed, but did not prevent, the Eagles from capturing their second victory of the season. They finish with a record of 2-8 overall, and 2-7 in their last Mid-Atlantic Conference campaign.

Juniata will be competing as a member of the Centennial Conference starting next season. Other members of the conference include Dickinson and Gettysburg, schools that set the same academic standards as Juniata.

Not fast-forwarding to next fall, the Eagle's balanced offensive effort against the Devils proved to be the main weapon on the playing field.

"We completed passes and didn't drop the ball," said wide receiver Tippett. "We were able to establish a running game, which opened up our passing."

Tippett was the top receiver of the day with a career-high 154 yards on six catches, including the last Juniata touchdown.

Christopher Shannon/ Juniatian

The Juniata football enters Knox Stadium through the new 1950s Gate before their 39-31 victory over FDU-Florham on November 11.

It's bittersweet. My body is glad it's done, but my mind wants to play forever."

– T.J. Hardesty

Even though the Eagles have not racked up a ton of wins in the MAC over the past few years, they leave one of the top conferences in Division III on a positive note.

"We are on a winning streak going into the Centennial Conference," said junior Lance Tippett.

The gutsy play call on third-and-seven, with barely seven minutes left in the game and FDU-Florham threatening a comeback, resulted in Tippett catching a 72-yard touchdown pass from quarterback Jay Leonard.

"It was a sense of relief because it had sealed the deal and gave us the win," said Tippett.

That bomb was one of four touchdown passes thrown by Leonard, which marked a career high. Leonard finished 16-23 through the air and recorded 293 yards passing.

"I was really confident in the pocket. The offensive line was amazing. I had all the time in the world back there," said Leonard. "We kept the defense honest. They didn't know what to do or what to expect. We were able to move the ball every time."

Senior Kiel G. Knisely led the running game rushing for a career-high 154 yards.

The Eagles' offense did find its rhythm early, but the defense was right there with them, only allowing the Devils to score one touchdown in the first half.

Five Juniata defensive players recorded eight tackles or more. Hardesty was one of those five. He finished with nine tackles, which included a sack. "It was one of the best games I had as a football player," said Hardesty. "It's bittersweet. My body is glad it's done, but my mind wants to play forever."

Record breaking season comes to an end

Three players selected All-Region

Ryan Conrad

The women's field hockey team made its second NCAA Division III Tournament appearance on November 8, but fell, 1-0, in overtime to Kenyon College.

The Eagles' first round elimination was the one sour note in a season highlighted with record-breaking performances. The 2006 campaign was the most successful in school history as the team finished the regular season with a record of 16-5. The loss to Kenyon was Juniata's first overtime setback of the year. And it marked just the third time in the 2006 season that Eagles were held without a goal in regulation.

The Eagles were happy to be given an at-large bid to play in the tournament. "I was so stoked to find out that we were selected as one of the top 24 teams in Division III field hockey," said senior Bobbi Rickenbaugh.

Despite making two key saves in overtime, Juniata was unable to contain Kenyon a third time. With less than two minutes remaining in the extra period, Kenyon found the back of the goal.

"It was kind of devastating knowing you worked so hard and in a single second it's over," said junior Meredith Low.

Juniata outplayed its opponent, but its offense struggled to capitalize on 13 shots on goal. The Eagles out shot Kenyon 8-3 in the first half of play alone. "We were passing, shooting, blocking and running really, really fast. We just couldn't get the ball in the cage," Low said.

JC's defense played especially well in the second half as it held Kenyon to just one shot to force overtime. "When that goal was scored in overtime, my heart stopped. I wanted this win so bad. We all did," junior Michelle Campbell said.

Rickenbaugh echoed Low's words, saying, "It was a heartbreaking loss because I felt like we were the better team, but no matter what we knew we couldn't hang our heads."

"I know sometimes defense can be overlooked ...but it's a huge honor to know that I was a stand out among so many athletes."

– Bobbi Rickenbaugh

Juniata had three players honored for their efforts during Juniata's stellar 2006 campaign.

Seniors Corinne Hamblet and Rickenbaugh, as well as junior Kim Wagner, earned spots on the NFHCA Division III South-Atlantic All-Region Team. Hamblet and Rickenbaugh picked up second team honors while Wagner was awarded first team honors.

Wagner dominated opposing defensives throughout 2006 as she established new school records with 31 goals and 68 points, both of which ranked number one in all of Division III. Wagner was also selected as the Commonwealth Conference Player of the Year.

"It was an honor to receive first team All-Region," said Wagner. "To have Juniata place three on the regional team is a big honor in itself for the entire team."

Hamblet was a huge part of a defense that recorded 10 shutouts and allowed just 21 goals during the season. She earned All-Conference recognition for the second time in her career. The senior played in 82 games for Juniata, 21 of which she started this fall.

Rickenbaugh was another defensive weapon for a stellar Eagles defense. "As a defender it's a very rewarding feeling to be a part of the All-Region team," she said. Rickenbaugh helped to limit opponents to fewer than nine shots per game. The first time All-Region selection and All-Conference performer helped Juniata outshoot their foes 336-187.

"I know sometimes defense can be overlooked because we don't always put up the stats that the offense does, but it's a huge honor to know that I was a stand out among so many athletes," Rickenbaugh said.

With numerous program records, three players earning All-Region honors, and yet another berth into NCAA Tournament play, the Eagles enjoyed a tremendous season. JCFH loses five seniors from this year's team but will return eight of 11 starters and will look to use the momentum from this season's success to move beyond the NCAA first round in 2007.

"Our 2006 season was a great ride and I am proud to say that I was a part of this team," said Campbell.

I want a rematch

I'm pretty sure I do, anyways.

Tommy McConnell

I'll be honest with you: before Saturday's Ohio State-Michigan game, I was completely against any type of rematch from the regular season being played in the BCS Championship Game.

My thought process was pretty simple: hey, the two teams played already, why play it again with the national title on the line?

This is the scenario I envisioned: Ohio State beats Michigan in the regular season, and then Michigan bounces back 50 days later in the title game and beats Ohio State. Each team now has a 1-1 record against the other, but since Michigan won the second time around, it would be crowned as the national champ. How is that fair? Why should Ohio State have to beat Michigan a second time? And why does Michigan even deserve a second bite at the apple in the first place?

But after watching The Ohio State University barely hang on to beat Michigan, 39-42 – at Ohio State, mind you – I have firmly changed my mind. I want a rematch. I think.

Listen, I am very aware of why Michigan and Ohio State shouldn't play each other again this season. Really, I am – remember, I was driving the No Rematch Bandwagon for months now.

There are plenty of reasons: Michigan had its shot, it lessens the importance of the regular season match-up between the two rivals, and there are a handful of other one-loss teams who haven't lost to Ohio State – why not give one of those teams a chance?

But the game last Saturday at The Horse Shoe changed all of that.

First of all, this notion that a rematch would cheapen the regular season match-up is ludicrous. The game had to play out exactly the way it did for a rematch to even be considered. While the game wasn't exactly a classic (full disclosure here: I missed the second quarter, but the thing has been shown so many times, I feel like I was there, anyways), it was definitely the most entertaining game of the college football season and probably the most entertaining football game played this year, period.

If Michigan wins that game outright, then Ohio State can't claim a rematch. If you can't win on your home field, you certainly don't get a chance to win that same game on a neutral field.

It had to be a competitive, close game with Michigan barely losing, and that's exactly what happened. When Vegas is setting the lines for a game, if the two teams are evenly matched, they give the visitors three points. Guess how many the visitors lost by?

This was the most important game of the college football season, with all due respect to the upcoming Notre Dame-USC game - a match up between two significantly flawed teams - and the Arkansas-Florida SEC title game – wow, two more teams who aren't as good as Michigan – yet to be played. A rematch in the title game would only increase the significance of the close regular season game.

If you really believe that a rematch in the national title game would cheapen the regular season match-up, don't you think an OSU-Michigan tilt in the BCS title game – The Greatest Game Ever in College Football's Greatest Rivalry – more than make up for it? 50 years from now, are people going to remember another entertaining Wolverines-Buckeyes showdown, or will they remember the day that rivalry was played out on college football's biggest stage?

And yeah, Michigan did have its shot to beat the No. 1 team in the country – but it was at Ohio State. That's really important. And they only lost by three. For all intents and purposes, Ohio State got the host the National Championship game. That's a bit of an advantage, no? If you think that game doesn't play out differently at Michigan, with an emotional fan base going nuts for its team in remembrance of its defining coach who sadly passed away the night before the game, well, then…you're wrong. Simple as that.

Clearly, undefeated Ohio State is the best team in the country. After that, though, it gets a little murky. With every team that is ranked in the top 10 having played at least one other team ranked in the top 10, it becomes impossible to rank the teams based solely on record. You get into a circular logic trap that Stephen Hawking couldn't make sense of. You just have to look at all those one-loss teams and ask yourself: Who is the best team out there? Michigan is just better than every other team out there.

The BCS is a flawed system, but it's the system we have in place, and it mandates that the two best teams play for the national title, regardless of whether or not they already played during the regular season. Those two teams are Ohio State and Michigan. Let's play it again.

Of course, there is a better way to do decide who plays in the title game: a playoff. But that will never happen because it would make way too much sense.

I'm aware that I am beating a dead horse, but college football keeps finding ways to make the BCS look ridiculous. It reminds me of "Jurassic Park": the scientists are all cocky that there is no way the dinosaurs can mate since they made them all girl dinosaurs, but then somehow half the girls turn into boys and then the power goes out and someone gets eaten off of a toilet seat. They think they came up with unbeatable system, but the dinosaurs end up eating everyone anyways.

This is what college football does to the BCS each year. One year, there will be three undefeated teams. The next year, there will be no undefeated teams, and then the year after there will be one undefeated team and 19 one-loss teams (this is my personal favorite, because roughly half the NCAA thinks it got screwed over).

(And this has been asked ad nauseam, but can someone smarter than I am explain just how the NCAA would make less money with a playoff? Why would this cause anyone to lose money? Someone just make something up; it doesn't even have to make sense – I just want a reason.)

Even if a playoff was somehow instituted this year – actually, especially if a playoff were instituted – it would still come down to Michigan vs. Ohio State in the end. So let's just save ourselves the time.

Oh: If Notre Dame somehow weasels its way into the BCS Championship Game – where it will get absolutely routed – just because it has the "sentimental vote" and doesn't play in a real conference, don't bother looking for me. I'll be in the bath tub. And don't bother looking for the toaster either.

The Perfect Playoff

(1) Ohio St. vs. (8) Boise St.
(4) Arkansas vs. (5) WVU
(3) USC vs. (6) Wisconsin
(2) Michigan vs. (7) Auburn
Round 1: Ohio St routes Boise; Arkansas wins a shootout vs. WVU; USC sneaks by Wisconsin; Michigan handles Auburn
*Semis:*OSU knocks off Arkansas; Michigan crushes USC
Nat'l Championship: Michigan wins The Greatest Championship Game Ever on a last second TD grab from Mario Manningham.

The Back Page Brawl

Tommy McConnell Rebecca DeHass

Who got the better deal: Britney or K-Fed?

K-Fed. Basically, K-Fed hit the lottery. How can he complain? Before he got married to Miss Spears, he was a white trash back-up dancer whose best shirt was a wifebeater. Now? He's a millionaire with a record deal, he's rolling in velour jump suits and he gets to brag to anyone who will listen that he got to have sex with Britney Spears for years – before she got fat. Plus he's so oblivious to…well, everything that he doesn't even realize he's a national punch line. And he might get $65 mil for a sex tape? What's the down side again?

Britney.Yes, y'all, she made a mistake by committing her life to white trash. Let's look at it this way… bless her little southern heart, at least she knows how to separate the garbage. Recyclables: her person. (She's right up there with Madonna when it comes to reinventing herself). The trash: a good 200 pounds shed after baby #2 (yes, K-Fed counts as extra baby fat). She's only paying a minimal fee ($30,000 a month for a mere year is pocket change to Brit) to get the trash picked up and then watch out: Brit can go back to doing important things, like promoting the joy of Pepsi.

Who got the worst Thansgiving deal: the turkeys or the indians?

The turkey. Being one of the turkeys killed for Thanksgiving would suck, but it's probably pretty quick – snap! – and you're done. But imagine being one of the two turkeys that survived? You'd have no idea what was going on – think of your conversation with the only other turkey left: "Um, Stuart? What the hell happened? Where is everyone?!?! Last night, we were all just sleeping, right, and then I heard some gobbling, but I just thought it was in my dream, you know? Now, everyone is gone…seriously, man, what the hell happened last night?!?! I'm losin' my freakin' mind, man! Do something!"

Indians. Sure the turkeys got a raw deal. They are the symbol of Thanksgiving. But let's just remember that those turkeys would not be the center of attention had the Native Americans felt sorry for the stupid pilgrims and saved their lives. They showed the Pilgrim's a good turkey dinner and how to give thanks. Then the Pilgrims took all the land and everything the Native Americans believed in and then tried to 'give' it back at a price. Stupid Pilgrims, isn't that what you call being an "Indian giver?"

Which is scarier: escalators or elevators?

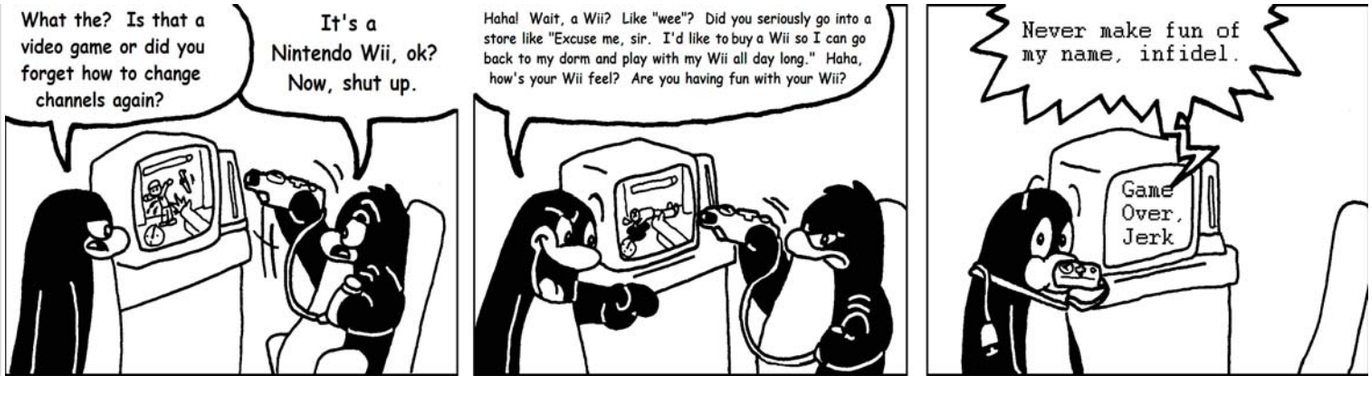
Escalators. I can't believe escalators are legal. Ever since I saw the episode of "Rescue! 911" where the guy got his thigh shredded by an escalator, I have had an irrational fear of them. All it takes is one dangling shoe lace and you're caught – and then what? First it's the lace, then it gobbles up your shoe, then your jeans, and before you know it, it's ripping apart your thigh while an entire mall looks on absolutely horrified. Getting on is pretty scary, but getting off? You better jump from like the third step; otherwise you are risking the most horrific injury ever on reality TV. Ever.

Elevators. Have you ever seen a scary movie about escalators? No, you haven't. You know why that is? Because an escalator doesn't make your make your intestines hit the back of your teeth when the cable snaps and you drop like a Kennywood ride into the eternal fires of Hell. Learn to tie your shoes, 'fraidy cat.

Worst game ever: Monopoly or Candyland?

Monopoly. Has anyone ever finished a game of Monopoly? Does Monopoly even end? Can't you just keep mortgaging your houses and selling off your properties forever? I can't see that game ever ending well – you got one person with all the loot and 12 hotels being a smug jerk and charging exorbitant prices for landing on Vermont Avenue while some poor sap has three white one dollar bills and a Get Out of Jail Free card they refuse to sell for no good reason. That board is either getting flipped or someone is getting a fat lip. Probably both.

Candyland. It made me hungry and there was no candy prize. Goody, goody gumdrops…it took 5 minutes to skip, hop, and step my colored way to Candy Mountain and I still don't have any peanut brittle. Aw, nuts.



What's funnier: a bird hitting a window or a cat falling in a pool?

Cat in a pool. Why are cats so scared of water? Is there a real reason, or is it like me being scared of escalators? I love when cats fall in water just for the look on their face. They are such pompous jerks most of the time that you can't help but enjoy that pissed off look tattooed on squashed faces once they fall in. First they look like idiots far actually falling, then they look like idiots for being soaking wet. I don't know why, but a soaking wet cat is the funniest thing this side of the Holiday Hawk.

Bird in a window. I wish life were like a cartoon. Why is it that once they hit the window they don't say "Cuckoo, cuckoo"? I think that scenario would just take the cake.

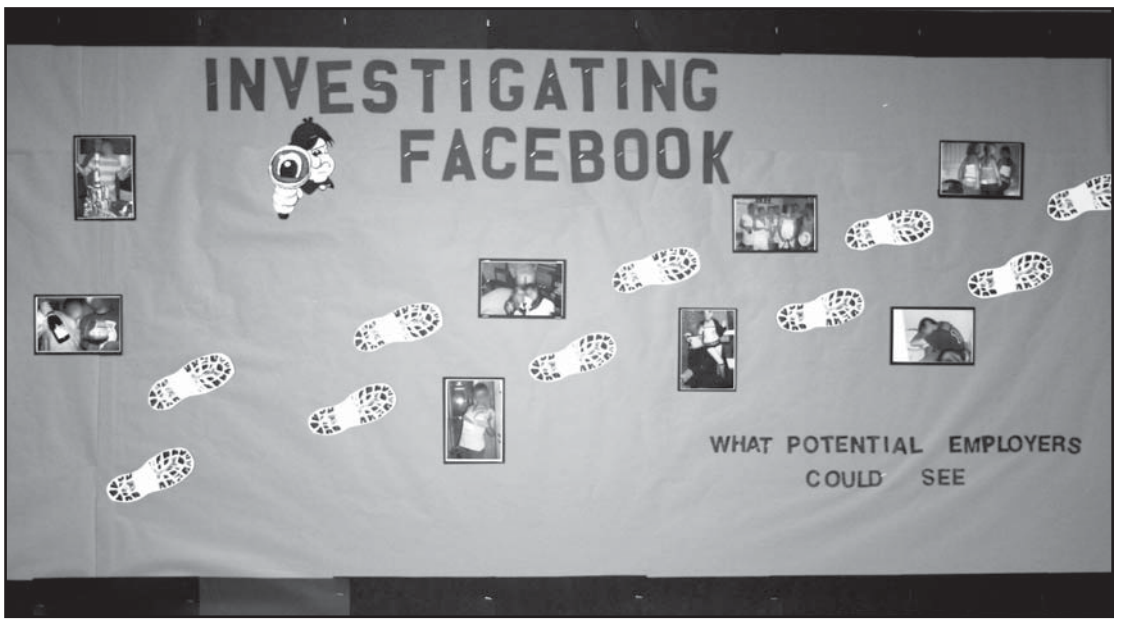
Facebook board sparks controversy

Sarah Roby



A few weeks ago, students were shocked to find a new bulletin board display in the basement of Ellis featuring Facebook pictures of Juniata students. The faces in the photos had been blurred, but the expressions on students seeing this new board for the first time were clearly filled with astonishment.

The board was the creation of the Office of Career Services, under the supervision of its director, Darwin Kysor.

Kysor has recently attended several conferences focusing on Facebook and the appropriate and inappropriate uses of its services. Colleges nationwide are addressing the dangerous misconceptions that Facebook is a "private" Web site. They want to show students trust that those scandalous weekend photos and derogatory wall postings could fall into the hands or eyes of the wrong people.

They want students to realize that since its creation in 2004, Facebook has taken on over 12

Recent spike in vandalism

Mike Chirdon

Broken glass in the doors of South. Broken windows in various dorms. Mirrors ripped off of bathroom walls. A railing torn off the side of Cloister,.Damaged ceiling tiles in a bathroom in South. Broken eggs in the stairwells of East. These are just a few of the examples of vandalism that the Residential Life staff has recorded over the course of this semester.

According to Director of Residential Life Tim Launtz, these incidents represent a slight increase in vandalism on campus compared to a normal year.

"In comparison to other schools, we have always noticed that Juniata has a fairly low number of incidents of vandalism, and this is something we have always taken pride in," said Launtz. "We would like to see Juniata continue in this trend."

"I have noticed some damages in my dorm, but I think that those are isolated incidents," said Shawn Rumery, a junior and resident of East. "In general, Juniata is a safe place. I hope it can continue to stay that way because that is one of Juniata's best qualities. I know that it was one of the reasons I liked Juniata so much as a perspective student, and it is always something that I talk about when I give tours."

Launtz hoped that bringing these issues of vandalism to students' attention early would help to prevent the problem from get-

The nitty-gritty of JC's 'down-'n-dirty

Sexual behaviors and attitudes of students examined

Devin Couillard

Does Juniata's micro-culture reflect the sexual behaviors and attitudes of America as a whole? The Juniatian recently conducted an online survey using zoomerang.com to investigate the nature of sexuality within Juniata's student population.

Two-hundred eighty-seven current students completed the 22-question survey. Thirty-one percent identified as male, 68 percent as female and one percent identified as "other." The Juniatian survey had a higher ratio of women to men than the ratio of female to male students at Juniata (about 53 percent of the student body is female).

Participation in the survey was fairly equally distributed across all four classes. The sexual orientation of participants was 89 percent heterosexual and 12 percent gay, lesbian, bisexual, pansexual, asexual and/or questioning. Seventy-two percent of participants reported having had sexual intercourse at some point in their lives. This number is lower than that found in research done by the Kaiser Family Foundation. In that study, 89 percent of men and 92 percent of women falling in the college-age group had sexual intercourse.

Among those aged 20 to 24 in the Kaiser Family Foundation's research, males claimed a higher average number of partners (3.8) than females (2.8). In the Juniata survey, the term "sexual partners" was defined as anyone with whom the participant had any manual, oral, vaginal or anal sexual contact. Juniata reflected Kaiser's national findings.

Thirty percent of men reported having three or four sexual partners so far in their lives, followed by five to ten partners (27 percent) and one or two partners (25 percent). Women said they had one or two partners (38 percent), followed by three or four

Student body increasingly affluent

Higher tuitions changing the campus dynamics

Caroline Weisser

Many students across campus have taken notice of the rising number of high-end automobiles parked in the student lots, the seemingly sudden proliferation of iPods, RAZRs and PDAs, and the designer threads that seem to have become the norm. All of these seem to point to an increasingly affluent student body, a departure from Juniata's historic norm.

Junior Jenn Kendall remarked on the changes she has noticed in the student population.

"I remember coming here as a freshman, and it was a whole different sect of people," said Kendall. "[There are] no more hippies on campus."

Junior Anita Desai disagreed.

"I haven't noticed a difference in the students here, but the tuition has gone up so much, obviously there must be wealthier students," she said.

Last year, the board of trustees voted to raise tuition to an all-time high of $35,220 a year including room and board.

This year, 32 percent of Juniata's new, incoming students fell into the "no-need" category for financial assistance. This number is up from just 20 percent last year, according to Randy Rennell, director of student financial planning.

The compiled data showed that this year there was a 21 percent average increase for the total parent income of the freshman class. In the past five years, the greatest increase of that number was in 2004 at six percent. The average student in the class of 2010 has parents who earn $101,256 a year.

"There is an effort to recruit a few more students than in the recent past that have the capacity to pay Juniata's costs," said Rennell.

According to Rennell, Juniata is not trying to make a drastic change to the student economic profile, but is trying instead to stabilize the rise in the number of "very high need" students that has occurred in the past decade. In 1994, only 27 percent of students qualified in that category, compared to nearly 40 percent in 2004.

"We've seen a relatively constant pattern of about 75 percent of our students who have financial need," explained Rennell. "But if we were able to consistently make even a small shift in that percentage, say to 70 percent (which would represent about 20 students), that would significantly help our efforts to provide necessary services….[In addition,] the money can go in several different directions: to maintain sufficient salaries and benefits for professors, better technology for the students and better financial aid packages."

Compared to other schools, Juniata provides a larger amount of aid to a broader range of students. Among similar schools, Juniata provided the largest amount of average institutional aid given to students at $12,597 in 2004, according to Rennell's research, and ranks fourth overall looking at nearly all the private colleges in Pennsylvania.

Rennell classified Allegheny, Dickinson, Elizabethtown, Gettysburg, Lycoming, Lebanon Valley, St. Francis, Ursinus and Washington and Jefferson College as schools similar to Juniata.

"The changes that have occurred over the past generation are probably more related to the shifting dynamics of American society at large," said Rennell. "There have been pretty dramatic shifts throughout Juniata's history."

Looking back at the history of Juniata College, there have been many noticeable changes in campus culture due to the economy.

"For example, it is likely that a greater percentage of students who attended Juniata in the 40s and 50s came from professional or white collar backgrounds, since working class families generally tended to send their children straight to the mills and mines during that period," said Rennell.

Juniata College, in its Brethren roots, was traditionally a "working class college" with different values compared to the average Juniata student today.

In fact, significant changes occurred in the latter half of the last century.

"Back in 1958…there was a no smoking policy on campus and required chapel," according to John Mumford, the Beeghly Library director.

Today, Juniata is much more secular and independent, and with greater and greater tuition costs, not everyone can afford Juniata anymore. However, there is an effort to help those who want to stay at Juniata and are struggling financially.

"We have to hope that we can help the two-fifths of very high need students who increasingly need more money. [But] we have limitations," Rennell said.

Dealing with concerns in the classroom

What students can do when problems are immediate

Jason Najarian

At one time or another, many students will have issues or problems with a class ranging from grading to class structure. To address these problems, students fill out course evaluations every semester, which are reviewed by professors, department chairs and in some cases involving tenure, the Personnel Evaluation Committee. But if the problem is urgent, Juniata's current evaluation system may be too long-term to help.

According to James Lakso, provost and vice-president for student development, there is a three-step process that a student can take if he or she is in an urgent situation.

"Students are expected to talk directly to the faculty first. If students don't get a satisfactory response, go to the faculty chair. The next step is to go to the provost," Lakso said. "Policy, grades, and lots of things can be resolved at one of these levels."

Although the faculty agrees with and supports this process, there is some confusion from students with the first step.

Five out of six students interviewed said they felt uncomfortable going to the professor first.

"It's hard to go to the person who your grades are dependent on for problems," said sophomore Steve Biesecker.

Instead, many students go directly to the provost. Lakso explained that if a student is uncomfortable talking with his or her professor, he or she should discuss it with the department chair. Lakso said, "I would never want students to bypass the department chair."

Peter Goldstein, chair of the English department, said, "Students will at least get a hearing. The first choice should be always be to see the professor....In most cases things can be handled without a strict procedure, but it is helpful in unusual cases."

Another option available is for students to talk to their advisors. Jill Keeney, chair of the biology department, said, "Talk to the instructor first. If the nature is such, look for an advisor or someone you trust to help….Advisors can be a mediator and get both sides of the story." When seeking outside advice, she emphasized that students need to be very specific about their issues.

Some disconnect exists between teachers and students on what

continued on backpage

Advisor evaluations

Aaron Shotts

Toward the end of each fall, many things remind Juniatians that the semester is drawing to a close: the frigid walks to class, the mad scramble to complete final papers and projects, studying for exams and requests for course and advisor evaluations.

Advisor evaluations allow students to comment anonymously on how helpful their advisors are, particularly on how familiar they are with POE and FISHN requirements. Students also comment on characteristics such as advisors' kindness and availability.

Unlike course evaluations, which feature a series of specific questions, advisor evaluations consist only of a space for students to write comments. This allows advisees to give personal responses.

"I like the idea that it's a narrative," said Michael Byron, associate professor of education. "I think that the relationship you have with an advisee is on a more personal level than in a classroom. […And the advisor] evaluation form can reflect that."

The anonymous evaluations are reviewed by faculty members of the Personnel Evaluation Committee (PEC). All advisors are evaluated, and every evaluation for professors in the tenure pipeline is read by each member of the committee. The committee then composes a summative report for each advisor. This report, along with recommendations for tenure or promotion, is then sent to the advisor and, eventually, to the provost.

"After teaching, advising is considered one of the most important things that you have here on campus," said Donna Weimer, professor of communication and PEC member. "It's the second major category that we look at."

"It is crucial to know how advisors are perceived by the students, and our only way to know that is through advising evaluations," said Loren Rhodes, chair of both the information technology department and the PEC.

Although the e-mails requesting advisor evaluations are sent to all students, last year only 53 percent of the student body completed them.

"We sometimes worry that students don't realize how important their feedback is," said Weimer.

In addition to being used by the PEC, the anonymous evaluations can be viewed by advisors after grades are submitted at the end of each semester. Advisors can use the comments to gain a sense of how well they are meeting the needs of their advisees.

"Constructive feedback absolutely helps us do our jobs better," said Sarah Clarkson, director of Academic Support Services and lecturer in English.

Because advisors have students for several years, they have the opportunity to make changes and

Juniata's most distinguished alumni

This could be you someday! *Part I.*

Maria Piazza

Especially at this time of the school year, it is easy to ask oneself, "Is this work worth all of the stress?" Several Juniata alumni prove that it is. In the first of this two-part series, the Juniatian talked to three of the College's notable alumni to find out how they made the transition from JC to the real word and left their marks along the way. Look for part two in the first Juniatian of the spring semester.

Dr. William Phillips, '70: *Awarded the Nobel Prize for Physics*

According to Phillips, Juniata instilled a love of science and an understanding of what it means to be a human. It also gave him foundation in research. He based his later work experience on this foundation and has used much of his physics knowledge to design a system of lasers that cools gases down to less than a micro-Kelvin and slows them to less than 1km/hr or 25cm/sec. This method was used to develop sophisticated atomic clocks and earned him the Nobel Prize.

"When you become a researcher, you realize how the goal of winning the Nobel Prize is a child's dream. The point of research is not to win something but to learn something."

While at Juniata, he began researching electron spin resonance in solids with professor Wilfred Norris. According to Phillips, classes like "Great Epochs of Mankind" brought him together with other students and allowed him to see the world outside of science and understand how to approach science in a human way.

"Much of what I am like today is because of Juniata; when I came to Juniata I was much less sensitive to social concerns and the importance of being a good man and I left Juniata with a grasp on the big picture and an understanding of other fields."

Kristen Holloway, '97: *Created Operation Troop Appreciation*

Holloway deserves recognition for her efforts to support our soldiers overseas with the organization Operation Troop Appreciation (OTA). She had no intention of setting up a non-profit organization when she graduated from Juniata with a degree was in international business and German. Instead, she traveled all over the world and worked as a translator in Taiwan before a doing her friend a favor in 2004. Her friend's brother was serving as a specialist in Iraq who wanted Under armor apparel. Holloway managed to raise enough money for his entire company to have Under Armor.

After completing her friend's favor, Holloway established the non-profit organization OTA. Rather than sending general supplies, the OTA tries to fill the soldiers' specialized wish lists. Holloway believes that Juniata opened her up to the idea that a person needs to go beyond just owning things, and to use her passion to fuel her life. President Bush rewarded Holloway's efforts with the volunteer service award in March 2006.

"I'm flattered that I'm on the list [of Juniata's distinguished alumni], but that's not why I'm doing this. I would rather have the satisfaction that a letter from a thankful solider brings," Holloway said.

Bruce Davis, '65: *Executive Director of the Academy of Motion Picture Arts and Sciences*

Davis began his career at Juniata as a pre-med student, but realized it was not for him and switched over to an English POE. When he graduated, he had no clear plan for a career, he went to graduate school to earn his masters in literature at the University of Maryland in 1968. Davis returned to Juniata that same year as a faculty member and taught a combination of theater, English and interdisciplinary courses. Through his work at Juniata, Davis became interested in film, and he tried to have several scripts published in Los Angeles.

After leaving Juniata's faculty, he attained his first job in the film industry at the Academy of Motion Picture Arts and Sciences after making contacts with people in the movie business. He worked his way up to his current position, which he has held since 1989.

"Juniata helped me to learn to deal with smart people who don't often agree in a way that didn't involve using a hammer to force people to go along with me," he said. "It has helped me manage all of the pressures that this job brings with it."

Photos courtesy of Juniata's Office of Alumni Relations

Sexuality at Juniata

continued from page 1

reported having sexual contact with a fellow Juniatian. For comparison, 71 percent of students attending Juniata for three to four years (mainly seniors) reported having sexual contact with at least one current student.

There was a broad range of the overall numbers of sexual partners within the survey participants.

This example of the wide variety of sexual behavior was anticipated by professor of psychology Ron McLaughlin, who teaches the Juniata's only course on human sexuality.

"As far as I can tell, there are people who will sleep with anything that walks by, and there are people who are into waiting for sex until marriage," McLaughlin said. "For the most part, [Juniata is] pretty mainstream for a college."

Safety and health

Higher numbers of partners increase the risk of contracting a sexually transmitted infection (STI). Based on current infection rates, the Kaiser Family Foundation estimates that by age 24, at least one in three sexually active people will have contracted an STI. The foundation reports that the most common STIs found among youth are the Human Papillomavirus (HPV), the parasitic infection Trichomoniasis and the bacterial infection Chlamydia.

Only three percent of respondents in the Juniatian survey admitted to having an STI, and five percent said they were not sure. Ninety-three percent of respondents said they were not aware of having an STI. This percentage is much lower than the national norm, which could indicate a few possibilities.

A probable explanation for the disparity between Juniata students and the national norm is that individuals could be unaware of an STI because they have not yet been tested, and, according to the Centers for Disease Control and Prevention, many STIs (such as HPV, HIV, and Chlamydia) often have no symptoms. When asked how often they are tested, 59 percent of those who took the Junia-

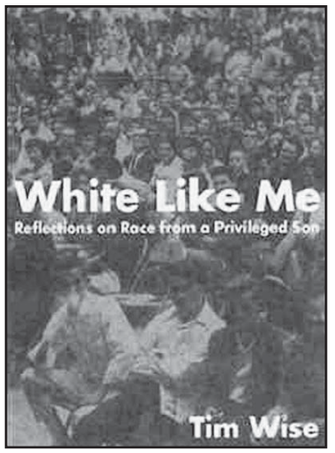
Dealing with diverity: end the silence, change the world



Sarah Katora

To celebrate Martin Luther King, Jr., Day on Jan. 15, 2007, the Office of Diversity and Inclusion is bringing Tim Wise, the author of the book, "White Like Me," to speak at Juniata.

In his book, Wise discusses the ways in which the phenomena of white privilege can harm both people of color and white people themselves. White privilege is defined as the advantages, exemptions or immunities enjoyed by white-skinned people, beyond what is commonly experienced by non-white people.

Wise also describes the ways in which racial privilege shapes the lives of most white Americans, overtly racist or not. The book discusses the issues of white privilege and describes how it happens in institutions connected to education, employment, housing, criminal justice and healthcare. He critically assesses the magnitude of racial privilege and its costs to everyone in society.

Wise uses personal stories told in a narrative to support the arguments made in his book rather than using statistics. One of the main points of interest for many readers is the background of the author. Wise has been described as one of the most prominent anti-racism writers and activists in the U.S., who also happens to be white. He is the director of the Association for White Anti-racist Education in Nashville. He lectures across the country and has spoken in 46 states and at over 300 colleges.

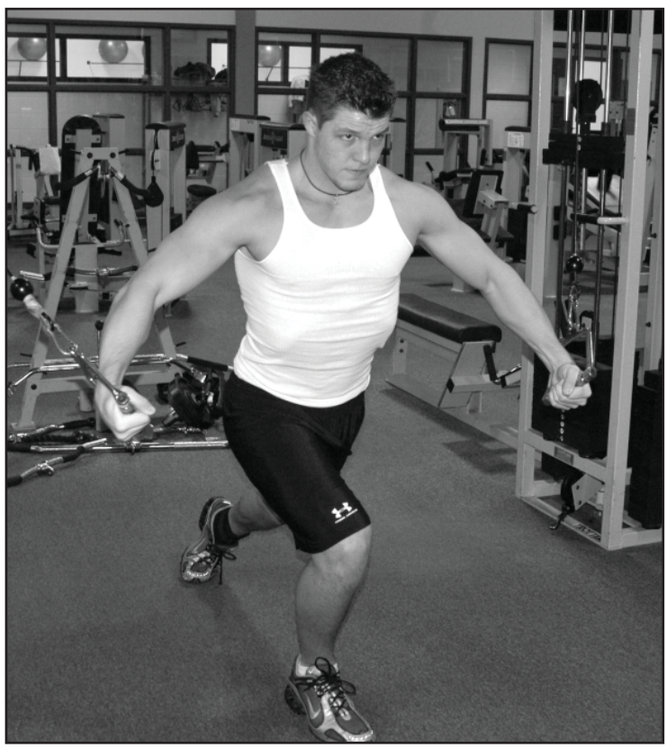
"It's good to see that there are people out there who are in the majority, who are not members of minority groups, who are going out there and are trying to spread the word that racism, classism, [and] sexism are not acceptable and they are trying to change the society that we live in—the country—the world," said Eric Simeon, programs coordinator for Unity House.

Simeon believes that the benefits of hearing Tim Wise speak extend beyond Juniata.

"The book relates to life....If you want to make it in the world today, you have to learn how to get along with people of all races and cultures," said Simeon.

In order to try to spark peoples' interest in reading "White Like Me" on campus, the African American Student Alliance (AASA) held an open forum to discuss some of the issues brought up in the book on Nov. 29.

"The purpose of the forum was to allow students to discuss race in an environment where they can feel comfortable to discuss it," explained Michael Johnson, president of AASA. "In today's world, discussion about race has become taboo, and, perhaps, allowing people to speak freely about race, in a way that they cannot feel like they are under the microscope, will be the first step in solving many of the issues of race," he said.



During the forum, issues such as white privilege and black privilege were discussed. Prejudice against Africans in the African American community, issues surrounding African American identity and its differences from white American identity were also discussed.

Although many of those attending the forum were initially hesitant to speak, by the discussion's conclusion there were so many who wanted to contribute that the time allotted expired before everyone had a chance to speak.

Reiterating the well-known Ghandi quote, freshman Ivelisse Melendez said, "We must all be the change we would like to see in the world." She said, "I live by these words. This is just one of the many catalysts [sic] that everyone should live by. Although the forum was long, this racial dialogue needs to transpire between students, [but it] cannot be done with [just] one forum."

Although initially disappointed by the small number of people who attended the forum and their initial hesitation to speak, Johnson said: "All in all, the event went well, and, at [the] very least, it started to accomplish its goal. People were asking and answering questions that, at [the] very least, started a dialogue and sparked a curiosity that many people are afraid to address. This not only will get people thinking about how race affects them in their lives, but will also promote insightful thought about many of the issues of privilege that Tim Wise presents in his book."

"It really opened my eyes to a lot of interesting and challenging questions about race and stereotypes," said sophomore Gina Piccolini after the event's conclusion. "I would definitely be interested in reading the book and seeing what the author has to say, because the discussion was real [sic] interesting."

Kevin Dundore / Juniatian

Senior Kyle Allen, a certified fitness trainer, works out in the Kennedy Fitness Center. He is accepting clients for his JCEL-funded personal training business, which specializes in helping people excercise and weight-train effectively, eat nutritionally and use vitamin supplements properly.

JC student becomes certified personal trainer

Ryan Conrad

Looking to lose those few extra pounds or achieve just the right amount of body tone? One JC student might have the solution. Senior Kyle Allen became a certified personal fitness trainer in the summer of 2006. Allen's interest in weight training landed him an opportunity to start a business through the Juniata College Center for Entrepreneurial Leadership (JCEL).

"His business is a good idea for someone who wants to improve their work outs, stay in shape or learn new techniques and work outs," said sophomore Josh Smethers, who has had experience lifting with Allen.

"I realized it was a good way to make money and help people," said Allen.

Sophomore Lance Joseph said, "Kyle has helped in the past when I needed advice….His new business will allow others to understand how much he knows in regards to lifting." Joseph is a potential client once Allen's business is started.

JCEL approved Allen's business plan in November. Allen hopes that the client base will grow once the Juniata community returns from winter break.

"There really is not much competition around campus other than Weight Watchers," said Allen.

Allen's goal is to attract a wide range of clients, including students and faculty. Clients are able to have one-on-one time with Allen in the gym and can also learn about nutrition and supplements.

Before starting with Allen, clients are asked to fill out a questionnaire that examines physical condition, personal goals and other categories such as body fat count. Prior clients of Allen's have seen a 2-3% body fat count drop each month, which they attributed to his personalized workout plans.

Furthermore, Allen can provide nutritional information to his clients. He asks them to keep a week-long journal of everything they eat, which allows a client who would like to lose weight set the appropriate goals.

He also deals with supplements. "I can tell them what is a waste of time and what can help."

Allen's customized training consists of both a cardiovascular workout and weight training. He is able to adapt to the customer's wants and needs. "Personal training is just that--personal help," said Allen.

"Kyle's advice is beneficial by demonstrating proper techniques for certain lifting workouts. This allows me to lift more with less strain on my body with little worry of injury," said Smethers.

Sessions can range from 45 minutes to two hours. The cost for one session is a flat rate of 20 dollars. "They can be in and out of the gym in less than an hour if needed," said Allen. "It is very helpful for busy people like students."

During his sophomore year Allen became dedicated to strength training. During his time in the gym Allen sought the advice of the Strength and Conditioning

continued page 6

Juniata student documents a revolution

James Trent

During the summer, senior John Parajuli interviewed officials from the U.S. State Department, the U.S. Congress and the United Nations for his documentary covering Nepal's April Revolution. Parajuli acted not only as a Juniata student, but as a journalist for the Nepali service of the British Broadcasting Corporation (BBC).

Parajuli decided to begin the documentary after Nepal, his home country, descended into revolution. For over a decade, Nepal was in a civil war between two factions, the Nepalese monarch and communist rebels known as the Maoists. In April of 2006, the Maoists led a nonviolent protest and general strike, which began a peaceful revolt against the authoritarian government. The result was a reinstitution of Parliament and a reduction of the monarch's power.

The goal of his 38-minute documentary, said Parajuli, was to give an international overview of the events.

The documentary premiered at Juniata in Neff Hall on Nov. 20. It focused on interviews and included firsthand footage of the revolution from Nepal. Students saw Maoist soldiers training in secret jungle camps, protests and heated skirmishes with Nepali riot police.

For the documentary, Parajuli said, "I interviewed people that had firsthand knowledge of the April Revolution." Those interviews ranged from an assistant Secretary-General of the United Nations to friends who had firsthand contact with Maoist rebels. Parajuli conducted interviews in New York, Washington, D.C., and Boston during his summer break.

Aside from personally conducted interviews, most of the footage came from Parajuli's contacts in Nepal. "The most difficult part [for the camera operators] was taking footage of the riots," he said. "Some police destroyed cameras and arrested reporters," he added.

In order to obtain footage of the Maoists, Parajuli explained how photographers ventured into hidden parts of the Nepalese jungle. "They had to walk two or three days to just to film the Maoists," he said. The Maoist strongholds shown in the documentary were fortified with armed soldiers and machine guns.

Junior Marion Wohlers, who narrated the documentary, thought that the demonstration of "the democratic, peaceful change" was the most moving part of the work.

Parajuli said "the police's brothers, sisters and [families] were protesting," which forced the government to be peaceful. "The police were authorized to shoot protestors on sight, and the army was ordered to attack them," he explained. The documentary shows that police disobeyed these orders.

Interviews with U.S. officials explain how "peace-keeping forces" lived up to their name and ensured minimal injuries and casualties throughout the revolt, despite orders.

A question and answer session followed the debut of the documentary. Many students praised the work. Sophomore Brock Swartz said, "It was a good portrayal of how differently Nepal's society works."

Professor David Sowell said that it "was a very impressive project for a first time work," and that "the product was excellent."

Parajuli is considering having another showing of the documentary this spring. In addition, he is planning to submit the documentary to East Coast film competitions.

Christopher Shannon / Juniatian

Senior John Parajuli, an exchange student from Nepal, recently released a documentary about Nepal's April Revolution, which includes interviews with officials from the U.S. State Department, the U.S. Congress and United Nations.

Oh, Donna knows your number? Well, tough luck.

Sodexho, Juniata insist students present ID cards

Nick Carney

Forgetful Juniatians will need to be mindful of just where they've put their elusive Gold Cards come next semester, as a new "no-card-no-food" policy will be officially implemented come January.

"[The policy] was basically born out of necessity," said Hal McLaughlin, director of food services. "The school is cracking down on security and it's not just in Baker. Everywhere, starting in January, people will have to show their cards."

Regardless of just how well the Sodexho staff has memorized a student's ID number, the Gold Card will need to be presented to credit a meal exchange or use DCB.

Even if a student's card is non-functional and the ID number must be inputted manually, cashiers will still need to have the card presented to them to confirm the student's identity.

The College implemented the new campus-wide policy citing rising concerns over identity theft.

Additionally, with talks of expanding the umbrella of services covered by the Gold Card (like laundry accounts), the security of students' identification is being taken more seriously, according to McLaughlin.

Despite the irritation many students may feel due to the new rule, there is, according to McLaughlin, a fringe benefit.

"It really does make the lines go faster," he said. "Besides, you don't go to a restaurant without your [identification] card."

Vandalism on campus

continued from page 1

ting any worse.

"There are things that students do not realize about the effects of vandalism on their community," Launtz added. "These damages have an effect on the cost of higher education. It costs money to repair these things and maintain the same quality of life."

After a recent incident in a bathroom in South's basement, the residents of that dorm were sent an e-mail that warned them that any further damage would be deemed "community damage." This means that in the future, vandalism of this type that is committed by an unknown individual will result in all residents of the affected building being charged for the damages.

Senior Lisa Detweiler believes that if students took responsibility for their own actions, policies like this would be unnecessary.

"We are all old enough to be responsible for our own actions. If you damage something, it is your responsibility to pay for the damages, not everyone else's," said Detweiler.

Launtz said that the last place he wanted to see the money come from was students' pockets.

"I am not a big proponent of the community damage policy. I see it as a last resort," said Launtz. "It blanketley indicts everyone and penalizes the innocent, but it can also serve as a tool to find out who is committing the senseless acts of vandalism."

Launtz says that he would much rather see the guilty person or persons punished, particularly if they would come forward themselves.

The College has yet to charge anyone for the damages that have occurred on campus so far this year.

In fact, the last time the community damage policy was put into effect was seven years ago. A vending machine in Cloister was overturned, resulting in its complete destruction. No one would step forward to admit to causing the damage, even though Residential Life waited for a significant period of time before taking action. In the end, Residential Life allowed the residents of Cloister to decide how to handle the situation themselves. The residents decided to each pay five dollars to replace the vending machine.

Such resolutions could become more prevalent if instances of campus vandalism continue.

Launtz said that he has faith in the students of Juniata College to act now to keep this problem under control, reminding students that "civility is a form of goodness…gracious goodness."

JC student certified as personal trainer

continued from page 4

Coach Doug Smith.

"He will have access to all the facilities; it will be a good fit," said Smith. "It will be a beneficial service for the students and faculty."

Smith explained that while the weight room is open to all students, with Allen's new business the weight room can be personalized.

This past summer Allen dedicated himself to personal training. He worked up to 55 hours a week at LA Fitness. Over the last break, he was able to provide personal training to 78 individuals.

He became certified through the American Aerobic Association International and International Sports Medicine Association. Personal training certification requires a six-hour course in which an individual will learn about nutrition and demonstrate how to use weights properly. Allen scored an impressive 100 percent on the certification test.

Upon returning to Juniata, Allen looked into starting a business through JCEL. Since being approved, Allen will be given $500 to help start his business. The money will help for gym rental time along with paying insurance for helping to training people.

With his business on the rise, Allen is always accepting new clients. Interested parties can contact him at allenkd3@juniata.edu.

Blurred Facebook

continued from page 1

million registered users. According to comScore, "Facebook is the seventh-most trafficked site on the web and is the number one photo-sharing site." With 12 million users, no one can assume privacy.

At Juniata, concern has been raised in articles and flyers, but the recent bulletin board best caught the student body's attention. The board featured Facebook photos that contain students participating in actions that have the potential to be degrading and/or embarrassing. However, some students felt the photos simply represented college fun.

"Everyone [in the photos] looked like they were having fun," said sophomore Sacha Potter, "except for the guy throwing up." Potter feels that if the actions caught on Facebook don't affect what a student could bring to a company, then employers shouldn't use it against that person.

According to Allison Ghaner, the career services assistant, all photos were selected by doing a random Juniata search. This allowed access to many profiles of Juniata students, since many of them are not blocked or guarded by privacy settings.

In the "Privacy" section of Facebook, users have the option to guard their profiles and photo albums from certain viewers, but most people do not take advantage of these settings.

The faces on the board were blurred to protect identities. However, some students were still upset when they walked by the board and thought, "Hey! That sort of looks like me…."

Sophomore Casey Chew quickly recognized his own image on the bulletin board but wasn't upset with Career Services. He said, "I'm a sophomore, and not exactly concerned with potential employers yet, and I don't know if I want to work for an employer who is that ignorant to the fact that college students indulge in alcoholic beverages."

Junior Jenn Kendall said she could identify several of the students in the photos. "I think it's a good idea to raise awareness of what future employers can see. But I think the board is a bit invasive, seeing how the faces weren't covered up as well as they should have been."

According to the Web site, "Facebook wants you to share your information with exactly the people you want to see it." But what about one's future employer, basketball coach and mom? Yes, even moms can be on Facebook.

Career Services hopes to communicate to students that Facebook needs to be considered public knowledge. Even though it's easy to feel like one's account is private and only being viewed by "friended" people, it's really not. Students need to be careful and be active in cleaning up their profiles. Simply un-tagging one's name from a photo doesn't delete that photo's existence. The best way for one to be safe is to ask friends to remove inappropriate pictures completely, and if it's vital to life that those crazy weekend photos are posted, remove them after a few days.

Advisor evaluations

continued from page 2

address students' concerns.

According to Byron, "If you get periodic feedback from them, you are able to improve the experience for that student."

A common comment made by students on evaluations is that advisors are not available when needed. Rhodes said such feedback has helped him to become more accessible to students.

"One of the things I've done is conscientiously scatter my office hours around throughout the week so that there should be a time that they can get to me," said Rhodes.

Clarkson said that "it's hard to offer feedback in person," but because students can do so anonymously they are more likely to be honest. However, she also expresses her concern that students may abuse this anonymity with unfair criticisms.

"When you have a chance to respond or evaluate something or someone, your motivation to respond is driven by great unhappiness or effusive success," Clarkson said. "Students can, because they're anonymous…lash out in frustration."

Weimer said that the committee takes this into consideration when reviewing the evaluations.

"PEC looks for patterns. It can't just be one person saying, 'I can't find them,'" said Weimer.

According to Barb Williams, faculty assistant to the PEC, although feedback is helpful to all advisors, it is especially important for newer faculty as they get accustomed to Juniata's dual-advisor system.

Sexual attitudes and action at JC

continued from page 3

tian survey responded "never."

Nationally, the Kaiser Family Foundation researchers found that approximately 53 percent of sexually active adults aged 18 to 24 say they have been tested for an STI. Forty-one percent of Juniata survey respondents said that they are tested more than "never." Of those being tested less than once a year (including never), 63 percent reported having had intercourse.

Condoms offer fairly reliable protection against most STIs when used correctly, but of those who have had intercourse and are not tested regularly, less than a third of Juniatians reported using condoms "always."

There are a significant number of people engaging in unprotected sex with more than one person without being tested regularly for STIs at Juniata. This could be due to many factors, including an "it-won't-happen-to-me" attitude, inaccessibility to testing, dislike or fear of the STI tests or sex occurring exclusively with virgins or recently negatively tested people.

Another health question asked those respondents with cervixes if they receive a yearly Papanicolaou (Pap) smear, as recommended by the American Cancer Society for women under 30. This test can detect pre-cancerous or cancerous cells in the cervix, often caused by the HPV. An article from the Society of General Internal Medicine reports that among women with no history of abnormal Pap smear results, 55 percent have annual Pap smears.

Over 60 percent of female Juniata student respondents said they receive annual Pap tests, in line with the national average.

Interestingly, several men who took the Juniatian survey said that they get annual Pap smears.

Inter-orientation relations and attitudes

The Juniatian survey asked participants to rate their discomfort, anxiety/nervousness, annoyance and feelings of aggressiveness towards non-heterosexual or cisgendered (non-transgendered) individuals. More than half (58 percent) of the cisgendered and heterosexual respondents reported feeling some level of discomfort around those who are not cisgendered and/or heterosexual. Eighty-three percent of straight respondents reported not feeling aggressive at all towards lesbian, gay, bisexual, transgendered, asexual, intersexed and questioning individuals (LGBTQIA). Most respondents reported not feeling annoyed or "nervous/anxious" around LGBTQIA people, reporting 63 and 76 percent respectively.

The LGBTQIA-attitude questions showed significant differences in the responses depending on the gender of the respondent. Seventy percent of heterosexual male respondents said that they feel between "a little" and "very much" uncomfortable around LGBTQIA people, compared to 53 percent of heterosexual female respondents.

Eleven percent of straight male respondents reported feeling "somewhat," "quite a bit" or "very much" aggressive towards non-heterosexual and/or non-cisgendered individuals. Only 2 percent of straight females responded with those answers. A fifth of all male heterosexual respondents said they feel "very much" or "quite a bit" annoyed around LGBTQIA individuals, compared to only three percent for females.

Jessica Ocampo, a senior, was not surprised by the gendered response differences.

"I would expect straight males to be more uncomfortable around gay people than straight females," said Ocampo. "Maybe it's because straight guys don't like to be seen as effeminate, and if they are seen around gay people, their masculinity may be somehow challenged. Accepting something in another guy that isn't considered manly is seen as weak on their part."

Freshman Nicholas Sepulveda was asked how he would handle interacting with someone who disliked him based only on his homosexual orientation.

"The best you can do for people is give them the resources and information and let them decide from there. The logical arguments that homosexuality [is normal] are overwhelmingly strong," said Sepulveda. "I'd let somebody know the facts and let them see that I'm a normal guy and a good person and hope they would make the right choice... I honestly would prefer someone dislike me for a legitimate reason, i.e. our musical tastes differ, than something so minute as sexual orientation."

The number of years that participants had attended Juniata made a difference in responses as well. In general, the longer the tenure at Juniata, the less discomfort, anxiety/fear, aggression and annoyance people reported feeling towards LGBTQIA individuals.

Where on campus?

Christopher Shannon / Juniatian

Do you know where the above picture is located? Send your guess to the Juniatian at juniatian@juniata.edu. Correct answers will go into a random drawing for a random prize. The winner will be named in the Juniatian's next issue.

Last issue's picture was of a pocket in the Student Union's pool table. Congratulations to winner Morgan Riebel!

Demonstrate your scholarship

Apply for next April's Liberal Arts Symposium

On April 18, 2007 classes will be cancelled for Juniata to hold its second-annual Liberal Arts Symposium. During the event, students will present their scholarly pursuits to campus via research projects, theatrical presentations, movies and more.

"We are donating a day of class time for students to give public presentations on their work to show other students what they're doing," said Assistant Provost Paula Martin, who is planning the event. Furthermore, freshman and sophomore students can gain ideas about research and projects they can conduct as upperclassmen.

Presenters can choose to participate in the competitive or exhibition categories. The 20-minute competitive presentations will be judged by at least three faculty members, and prizes will be awarded to the best presentation in each topic subcategory. Exhibition presentations are directed toward a more general audience and will be reviewed by both faculty and students.

Student musicians will also perform in the afternoon performance portion of the Symposium.

To apply to present your work in the Symposium, fill out the brief online application found at http://services.juniata.edu/studentresearch/symposium.html. Submissions are due March 14. Presentations can be on research conducted during summer and fall 2006 and spring 2007. Each project must have a faculty advisor.

To assist in organizing the event or to help out on the day of the Symposium, e-mail Martin at martin@juniata.edu.

The Naked Truth:
The "Twelve Days of SeX-mas"

Rebecca

I believe the Chipmunks sang it best: "We've been good, but we can't last. Hurry Christmas, hurry fast." I know we're all busy writing papers and studying for finals at the start of this holiday season, so I've decided to write this column in a new-old fashioned way. A way that will save everyone a little time by making a SeX-mas gift list for all Juniatians who are busy crossing off their to-do lists.

You already know that no one wants a lump (of coal) in his or her stocking. We want candy canes to suck on, the biggest Christmas tree and of course a ride in a one-horse open sleigh. So rock out with this list to the tune of "The Twelve Days of Christmas."

On the first day of Christmas, you should put beneath the tree…

A present from on one's knees. I just thought we should start the first night off with a bright light to guide our way this season. "Fall on your knees. O hear the angels' voices! Oh night divine!" You'll go down in history, for sure.

Two dainty dice. Sometimes the best treats do come in small packages. For example, if he rolls a three, you have to stripe his candy cane (remember, this is the season of goodwill toward men). For a five, you have to jingle some bells. If you do not enjoy giving such gifts, your heart is just as small as the Grinch's. Now jingle bell, jingle bell, jingle bell rock before someone has a "Blue Christmas."

Three French maids. Who doesn't want three French maids? I realize that in the original song, there were eight maids a milking; however, I have a different version of the eighth day. Therefore, we should simply keep in mind that heedless of the wind and weather, they are still quite skilled with their hands. Fa-la-la-la-la, la-la la-la.

Four soundproof walls. Please don't "Go Tell It on the Mountain." We like to hear Santa scream, "Ho ho ho!" from the rooftops, but we don't want to hear you. Some of us would like to give the impression that not a creature is stirring, not even a mouse… Let there be peace on Earth, okay?

Five jingling rings. You can always use vibrating spares, right? It's as good as figgy pudding: "we won't go until we get some, so bring some right here!" Now that's how you spread holiday cheer.

Six kinds of sugar. Start with whipped cream. You can pretend that it is icing and decorate your snowman or woman with five more sugars of your choice. I suggest chocolate icing, Hershey's kisses, gummies, peppermints and a cherry for the top. Later, you can melt Parson Brown's sugary-goodness by the fireside.

Seven sultry strip-downs. We can only hope that you're getting a daily dose of sugar and spice. 'Tis the season to be giving, so glide along with a song of a wintry fairyland and make those cheeks nice and rosy so that you can get comfy and cozy. "Giddy-up giddy-up giddy-up, let's go!"

Eight Energizers. Please refer back to night number five. This brand is apparently good for when you want to keep going and going….Well, does anyone else find it amusing that the Energizer's mascot is a pink rabbit? It'll keep the vibrations long-lasting and if you enjoy banging the drum as much as the bunny does, then "pa rum pum pum pum" to you, too.

Nine 69s. Snuggled up together like two birds of a feather would be...or whatever other little twist you'd like. Frolic and play the Eskimo way or just go for a good old fashioned sleigh ride. If you can't agree, go conspire by the fire (it's sure to melt your cares away).

Ten tantalizing teasers. It can't hurt to hide in the bushes naked, even if it leads to freezing. It worked well in "It's a Wonderful Life," and really who doesn't love a good tease to warm up with when you're running low on steam for your cocoa? This plan has additional benefits: I've heard the best way to gain heat when you're extremely cold is to get naked with someone and huddle. Of course, movement is also helpful, so find a stick and start creating some friction to get a fire going. Begin with Jack Frost nipping at your nose and work your way toward roasting chestnuts on an open fire. You will definitely hear a pop!

Eleven stocking stuffers. Inside your stocking amongst the Chapstick and Hershey's candies, you'll find a ribbon attached to a little note that reads, "put this on and meet me under the tree. I promise I'll unwrap you." If there are ten other surprises like that ribbon, I know I'll be home for Christmas! That's better than a Fundip and a pack of candy cigarettes.

A Twelve pack of Trojans. Hopefully, one multi-pack will be enough to keep you rockin' around the Christmas tree longer than the electric train set. It's sure to deck your halls with boughs of holly.

Now, everyone please join in chorus with me: "On the twelfth day of SeX-mas my true love gave to me, a twelve pack of Trojans, eleven stocking stuffers, ten tantalizing teasers, nine 69s, eight Energizers, seven sultry strip-downs, six kinds of sugar, five vibrating rings, four soundproof walls, three French maids, two dainty dice and a present from on one's knees!"

I love Christmas; really who doesn't? I'm off to sing my favorite carol, "Oh come, oh come Emmanuel!" I hope that everyone gets something special slipped down their chimney this year, AND I pray that everyone remembers to make a resolution to "work-out" more in the coming year. Merry Christmas, JC!

JC celebrates Kwanzaa

Christopher Shannon / Juniatian

Sociology professor Cynthia Merriwether-de Vries lights the Mishumaa Saba, Swahili for "the Seven Candles," at the Kwanzaa Celebration Dinner held by the African American Student Alliance in the Ellis Ballroom on Dec. 2. In addition to learning about the tradition of Kwanzaa, attendees enjoyed a home-cooked meal, African folk music and a performance by a Penn State University step team.

LOST IN THE RECORD STORE

I hated MySpace, until…

Kevin Warner

Everyone has seen or at least knows about the popular social networking Web site MySpace. While my personal image of MySpace is one of annoyingly bright web pages featuring obnoxious teenage girls and acronyms I don't understand, it does serve a better cause: music promotion.

A majority of bands have a MySpace page. These pages usually contain pictures, live clips, music videos and the band's music. Bands post their touring schedules, release dates and, of course, a link to an online store where you can purchase their merchandise. Individual band members can write diaries visible to everyone about life on the road or their latest album.

The most important aspect for MySpace, however, is that it allows band members to interact with their fans. MySpace users can add bands and artists as their friends and write personal messages to them. They can read the band's blogs and learn more about the members' personalities.

As a music fan, I love this aspect. The fact that your favorite band could read a message from you is enough to make a music columnist cry. Even more exciting is reading about a band's life on the road or about the creative process of their latest album. It can provide fascinating new insights into their music, such as lyric explanations or why they chose particular instrumentation in certain songs.

MySpace has been especially useful for small independent artists, oftentimes helping spread their music cheaply and easily. Fans can share the gospel of their favorite group by sending their friends links to their MySpace

continued page 9

Man Market

Christopher Shannon / Juniatian

Freshman Mike Pitts struts his stuff down the catwalk during the men's rugby team's first-annual Man Market on Dec. 1. The River Rats' fundraising event brought in nearly $700 for new team uniforms by "selling off" over 30 men to giddy and cheering spectators. The highest bid was $55 for a date with sophomore Zachary Stoll.

"The Nativity Story" more aptly named "The Pre-Nativity Story"

E. LaBrecque

It's a story line we're all familiar with: boy meets girl; boy marries girl; girl conceives God's baby.

"The Nativity Story" is a satisfactory tale of Mary and Joseph's pre-nativity trials, complete with a near-death experience.

If you don't know anything about Jesus, that's okay. You don't have to be a Christian or have read the Bible to enjoy this film. If you haven't read the Bible, though, you might feel as if there are a few loose ends here. Elizabeth's husband, for example, takes a vow of silence, but why he does is never explained.

Anytime a book is turned into a movie, problems arise. Fans of the book, and in this case there is an extensive fan base, tend to get nit-picky. If you know you tend to nit-pick, please resist the urge--it will ruin your movie-going experience. Admittedly, the baby Jesus looks more Irish than middle-eastern, but so what? In this film Jesus' role is a short one, and he is physically tiny, so the discrepancy is likewise very small.

The film featured an excellent cast, in theory, but some of the performances were pretty flat. The character of Elizabeth (Shohreh Aghdashloo of "House of Sand and Fog") was one that I found to be as arid as the desert surrounding her. Mary (Keisha Castle-Hughes of "Whale Rider") remained stoic throughout. When the story called for emotional variation, she gave very little. I know that both Aghdashloo and Castle-Hughes can act well, so why didn't they this time around? Joseph (Oscar Isaac), on the other hand, was the standout performer. In fact, I defy you to leave the theater and not wish that Joseph was your dad.

I wasn't expecting an abundance of comedy in "The Nativity Story," so I wasn't let down. The three wise men did, however, bring more than just gold, frankincense and myrrh to baby Jesus; they brought a little levity to the film. I'd liken their brand of humor to that of an old-married couple (with the obvious exception that there were three of them). Who knew that Magi banter could be amusing?

"The Nativity Story" is really the story of a journey, both tangibly and spiritually. There is a large amount of ground covered, and it is simply beautiful. However, I really wish the director, Catherine Hardwicke, had taken better advantage of the landscape by showing more of it. For those of you who prefer sentimental cinematography, there are also a few well-placed sleeping baby money shots. The film is filled with many rich details--from the costumes to the script (a mix of Biblical quotes and modern dialogue). It's the little things that really bring life to the story.

Despite the few lackluster performances, "The Nativity Story" remained a film worth its weight in Magi gifts. At this time of year, it's great to be able to come in from the cold and leave with the warm-fuzzies.

Lost in the Record Store

continued from page9

page, helping to build support for bands from their earliest stages.

While many bands deny that MySpace is solely responsible for their rise to stardom, it is undoubtedly a tool for expansion of a group's fan base. The media has noted the popularity of MySpace for bands such as the Arctic Monkeys, a UK rock group that skyrocketed in popularity last spring. The band denies involvement with MySpace. Whether this is an attempt by the band to deny self-promotion is up for debate.

The artists who get the best use of MySpace are those who use it to connect with fans and build a following. Not only is it a great way to build popularity, but it's a good way for bands to get feedback on their actions. It's also a way to make bands responsible to their fans.

MySpace is only one of the tools that are available on the Internet for bands to promote themselves. There are now sites, such as purevolume.com, devoted specifically to bands posting their music, often in a free downloadable format. The increasingly popular Panic! At the Disco got their start on purevolume.com.

While MySpace can be annoying to navigate, it can provide a useful service of connecting with bands you like and finding new ones to listen to. I love the communal aspect of sites like this, and bands and fans alike can reap the benefits.

Wind Symphony Winter Concert

Christopher Shannon / Juniatian

Juniata's wind symphony performs during its winter concert on Dec. 1 in Rosenberger Auditorium in the Halbritter Center for Performing Arts. Under conductor James Latten, professor of music, the ensemble performed Christmas classics, including "Sleigh Ride," "Greensleeves" and "The Twelve Days of Christmas." ESS professor Sharon Yohn also conducted several songs by the Stone Church Handbell Choir.

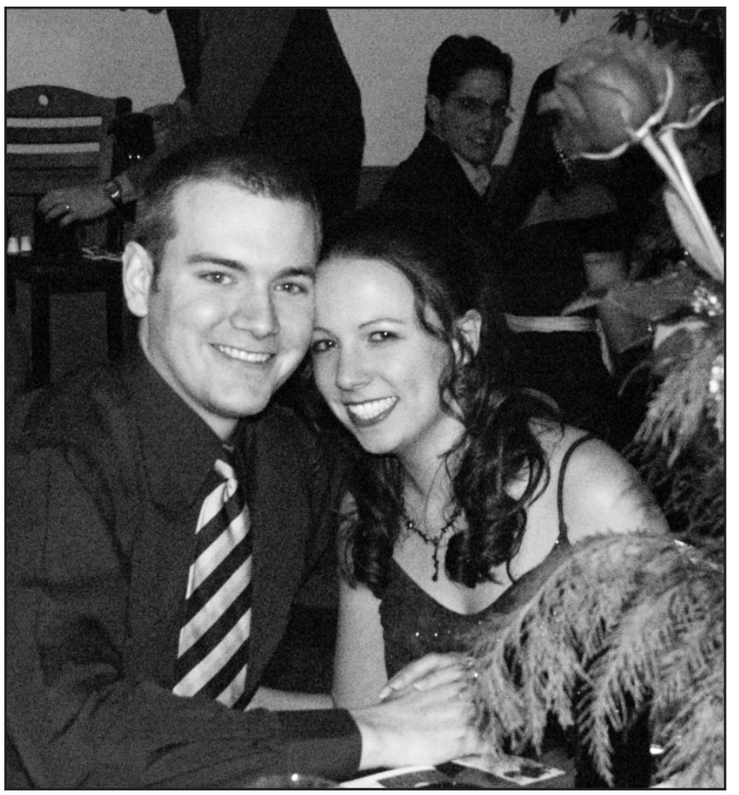
or two couples, juniors Dwight Bard and Allison Estright and seniors Nick ta's most popular winter event, these two couples became engaged to be the proposals from the men.

anovich

The proposal scenario

Dwight & Allison: As dessert was being served, a server brought Allison roses and a card saying "I have something to ask you." Dwight then proposed.
Nick & Courtney: Just as "The Twelve Days of Christmas" ended, professor Henry Thurston-Griswald told everyone that table three, where Nick and Courtney were sitting, had one more verse to sing. Their friends at the table sang, "On the ninth day of December my true love asked of me…" Nick then got down on one knee and said "Will you marry me?" to Courtney.

What was going through your head at the big moment?



Dwight: "When are the roses going to come out?"
Nick: "I was planning on saying a lot more than I did. I was just glad I was able to choke out what I did. I thought that I had never heard 'The Twelve Days of Christmas' sung that fast."

How did you get everything set up?

Dwight: "I have to thank JAB for helping coordinate things with me, like bringing out the roses and keeping everything secret, especially Stacy [Weber] and Jesse [Leonard]."
Nick: "I talked to the students setting [Madrigal] up. Jesse [Leonard] helped a lot. First, I went to the dinner run-through and Jesse talked to Thurston-Griswald and made sure Josh [Lingenfelter, who was sitting at the table,] got the microphone so that I could ask her."

Why did you choose Madrigal to propose?

Dwight: "I wanted a night that we could relate back to as something we had in common."
Nick: "I was tyring to think of some romantic way to ask her in front of a lot of people because ladies love that sort of thing."

Dwight Bard & Allison Estright

Did your girlfriend have any idea?

Dwight: "No, she thought I was going to wait until I took her to Disney World for her birthday in March. She was totally clueless."
Nick: "She had no idea at all. That was the best part because she was expecting it around graduation time."

Journalism & Juniata: we're here, get used to it

EDITORIAL

It's that time of year again. Every Juniatian from freshman to senior, professor to administrator and staff person to department head is buzzing about, tying up those ever-so-troublesome loose ends that manifest themselves in the concluding weeks of the semester. Students are writing semester-long papers inside of long, caffeinated hours, professors are grading said papers and CTS workers are staying up all hours of the night trying to keep the servers running.

The Juniatian staff has not been exempt from end-of-semester business. Here are another 20 pages of brand-new content for the sixth time this semester. Our mantra as of late has been, "Give them something amazing to read on the train ride home, and entice them to read issue seven." So we've been running around campus getting those last interviews, snapping those final photographs and laying the whole thing out in our own caffeinated marathon—all the while trying to tie up our own individual loose ends.

The number of hours put into creating the newspaper you are holding is rather astronomical. A good estimate for the number of man-hours put into each issue is somewhere on the order of 400 hours per issue. Each article can take about eight hours from cradle to grave, research to final edits. And that process only accounts for about half of work needed to complete an issue. The time spent laying out the issue, taking the pictures and running the paper through final edits brings the total hours to well over 400.

When all is said and done and ink has bonded with paper, the vast majority of those pages are either thrown out or circulated amongst bathroom stalls until the next issue is published (nothing bothers a Juniatian staffer more than seeing his article laying in a men's room pile of sick the Saturday morning after it comes out).

So why bother doing it at all when in the end staffers are left only with growing sleep debts and overly-caffeinated circulatory systems? Because this paper means something.

It means something grander, something larger than all of us.

In between the widely-read material like the wittily written sex column that jingles all of our bells, the comic strip about penguins who have the inexplicable ability to talk and the "Classic Juniatian" features that serve no purpose beyond filling up the otherwise empty space, there is a whole other newspaper that gets all-too-frequently overlooked; the paper that records Juniata and sometimes makes it more like those glossy-pamphlet dreams that brought us here in the first place.

In between, we've informed readers about sustainability and the plethora of issues that follow it. In between, we've fought for the rights of every minority group represented at Juniata. In between, we've exposed issues and conflicts that affect everyone. In between, we've hailed great victories and spread much-needed cheer after bitter defeats.

In between, we've moved, we've affected and we've changed Juniata, whether the reader was aware of it or not.

And that has been our never-ending burden: to see the world within this tiny bubble as it is, to report it and to make it better.

We don't always complete that mission. The issues that pass by without an angry e-mail, letter to the editor or long-winded, anger-filled meeting are considered failures on our part, not because we seek to create artificial controversy, but because we seek to remind Juniatians that their world is far from perfect, and they can do something about it.

Those failed issues are best left to the men's room piles of sick.

So as this is read in carpools to various parts of the country, during long flights and on long train rides, we hope we get under your skin just a little bit. We expect plenty of e-mails in January.

If not, we will brush ourselves off from the dust of failure and keep moving.

We will still record Juniata as it is, and not as people wish it to appear. We will still be a platform for student voices. We will still try to analyze everything on our campus to the finest detail. We will never bow to the wishes of any administrator or anyone else who dares impose on us their own agenda. We will still consider everyone and everything fair game.

We will still be here.

We will still fight.

Make the Juniatian what you want it to be.

The Juniatian is looking for fresh minds and perspectives for the spring semester.

The staff has openings for:

- a movie review columnist
- a music review columnist
- news reporters
- sports reporters
OR
- pose a new kind of column.

Contact Amy Mathur at mathura@juniata.edu if you are interested.

Adieu, adieu, to you...and you and you!

Mary Gardiner

Warning: The following may contain cheese, honesty and/or your name.

There's a John Mayer song that I can't get out of my head called "Stop This Train." Half-mournfully, Mayer sings about his life speeding away, like a runaway train.

"Stop this train!" he wails. "I want to get off and go home again. I can't take the speed it's moving in. I know I can't, but honestly, won't someone stop this train?"

I can't help but commiserate.

After all, it's been 1,208 days since I found myself in this god-forsaken town, but it feels more like three. I remember lugging my 19" TV up two flights of steps in Sherwood—which, we would later boast, had five ambulance visits during our year there. After finally finding a livable furniture arrangement and unloading my extensive collection of clothing, I was ready to start growing.

And boy, have I grown. From breaking off an engagement to relinquishing my staunch conservativism—looking back, I can't decide which shocks me more, that I was engaged or that I was a Republican—things were changing quickly. And that was just the first semester.

It's with this kind of nostalgic reflection that now, three years the wiser, I bike (I started the trend, I swear!) across our campus. A quick glimpse at the library incites feelings of horror as I hearken back to that ridiculous international politics paper. Then, a smile runs across my face as ghosts of volleyball and frisbee players in the quad appear faintly in my mind. And there stands Cloister, once my glorious abode, and the lawn before it, where I slept for four hours after a bit too much fun at Pigroast.

The whole campus, really, has been my glorious abode. Oh, these years! Kevin: remember when, even as a freshman in college, I had no idea when the French Revolution started? (Shameful!) Amie: remember those (distractingly) hot West Point guys at the Model UN conference? Denise: remember the drunk guy who smashed my guitar and our $1 gumball machine?

Somewhere, amidst the disgrace and the distraction and the debauchery, Juniata became my home.

Now, I have just seven days left before I am officially a Juniata alumna. Unbelievable. As I head to Illinois for my Masters Degree and Peace Corps program, I'll trade in beer pong for leases, lectures for seminars and sweatpants for suits. When the reality and imminence of this fact begins to close in on me, I start begging: "I swear, I'll write another research paper for Sowell if I could just have another few nights with my housemates! I'll take another Stats exam for another toga party! I'll even take another semester of CWS just to be with these people, just a little longer!"

Alas, time doesn't bargain. *We'll never stop this train*.

Sorrowfully packing my bags, though, I realize that the beautiful "Juanita" has taught me one last lesson before I go. This time has been so valuable only because it was so fleeting. (Puke.) Thereby, I come to understand John Mayer's advice: "Don't stop this train; don't for a minute change the place you're in…"

Before I do go, I want to say thanks to the newspaper for letting me share a taste of my own experience of Juniata life with everyone.

And, of course, to all of my fellow Juniatians: you have shared such beautiful moments with me—both immeasurably joyful and excruciatingly painful—and for that, I thank you infinitely.

Catch you on the flip side.

Adieu, Mary!

The Juniatian wishes to congratulate its own Mary Gardiner on her graduation this December and to thank her for the contributions she has made to this paper during her three and half years on campus...and abroad.

Mary, you are graduating a semester early to save some money and time. We wish you all the best as you now go forth to save the world.

Letters to the Editor

Faculty, administration continue debate over elevator in Good Hall

To the Editor:

Below is an open letter to President Kepple from Fay Glosenger, Dennis Plane and me. As of Dec. 11, 52 other faculty members have agreed to add their names to the letter. I would be grateful if you could publish this in your next issue.

Sincerely,
Jack Barlow, professor of politics

November 20, 2006
Dear Dr. Kepple:

As members of the Juniata faculty, we support making the campus more accessible to individuals with disabilities. While we acknowledge that the college has improved accessibility on campus, we are concerned about the incremental nature of this progress. We believe that providing a fully accessible campus is consistent with Juniata's role as a learning community, and with our Mission Statement's commitment to provide "the environment necessary to foster individual growth."

Because the facilities in Good Hall are used by such a significant portion of the students and faculty on campus, we believe that including an elevator in the refurbishment plans for the building should be a top priority. Good Hall houses 32 offices, 18 classrooms, one seminar room, two student lounges and five labs. Currently, only six faculty offices, two computer labs, three classrooms and the seminar room are accessible spaces. To incorporate an elevator into the renovation will not only make the building more usable by those who cannot navigate stairs, but it will also send a critically important message, to students, prospective students, faculty and the wider public about Juniata's commitment to living up to its own ideals.

While we are aware of the competing priorities for limited funds, we encourage the administration to reconsider the position of the Good Hall elevator on the list. At this point it is clear that we simply do not know how much adding an elevator (and whatever other work might be needed) would cost – the estimates have varied and are still vague. Thus, we ask the administration at least to investigate and obtain firm figures on the total cost of adding the elevator and any required changes that would follow to bring the building up to code. We believe speculations about changes and possible costs that might follow the addition of an elevator do not provide the information faculty, administrators, and trustees need to make (or accept) an informed decision about such an important issue. We encourage you to obtain precise information on costs and share it with the faculty.

President Kepple responded privately to Dr. Barlow, Fay Glosenger and Dennis Plane's letter. concerning the elevator in Good Hall. Below is the public response he provided to the Juniatian.

To the Editor:

First, we are moving the Good Hall project forward from some future uncertain date to construction in the summers of 2007 and 2008. Prior to our discussion with the Board of Trustees in July 2006 and its approval of a $2 million project, there was no specific plan or date for a refurbishing.

Second, the reason we looked at a design for the elevator in the first place is that we definitely do want to add one in the future, and we wanted to be sure that the current project would not interfere with this future addition. The current plan of painting, replacing furniture and changing lights etc. does not require a change of code for the building, while adding an elevator (because it is a significant physical change to the structure of the building) would require us to completely upgrade the building to all current codes.

In order to get more exact estimates beyond the architect's initial estimate of $450,000 for the elevator and an additional $500,000 for other code requirements, we would have to do a full architectural and engineering plan for the building to submit to the various code agencies. That alone would cost at least another $100,000. Then the project would be bid and we would then know the real cost.

Since we already have a professional's educated guess on the cost of the elevator and other code changes its construction would require, it does not seem like a very good idea to invest another $100,000 to learn that the cost might be only $800,000 or perhaps over $1 million, both of which are beyond our current budget.

Jack is correct that this is a marketing decision. It is my responsibility to be sure that Juniata has the right number of students in various departments to financially support our educational programs. Clearly, as our faculty and students have pointed out, Good Hall's condition is a negative to both prospective students and our faculty and current students who spend a great deal of time there.

Sincerely,
President Thomas Kepple

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

To a chemist, with love: Thank you, Dr. Schettler

Ibada 'Bobby' Wadud

We've all heard the question, the debates and even the whining. The humanities versus the sciences: which is better?

As a humanities student, I can tell you, it seems that things at Juniata just aren't fair. We compare von Liebig and its state-of-the-art equipment, leather couches, glass flooring and coffee shop to ramshackle Good Hall and the Humanities Center. (By the way, how does a building that's the size of a house cram six departments-worth of classes inside?)

Let's establish an important fact. I abandoned the sciences and am glad I did so. Studying social justice makes one feel a lot less self-centered. There's more time crying for "the other" than for oneself; more time spent fighting against widespread inequalities than against the author of one's o-chem text.

So when I found out that a chemistry professor was in charge of founding Juniata's study abroad program, I had my doubts.

But sure enough, according to chemistry professor Ruth Reed, it was her colleague, Dr. Paul Schettler, a fellow professor of Chemistry, who began Juniata College Exchange Programs Abroad (JCEX) between 1976 and 1977.

So, yes, it's true. A scientist valued international exchange at a time when it wasn't as trendy to be cosmopolitan and certainly during the years when Huntingdon belonged even less to the world.

The story goes: Around 1960, Schettler was earning his Ph.D. from Yale, where he met Gerard Lepoutre, a French catholic priest also studying there. Lepoutre returned to France after his studies in the U.S. and other extensive cross-continental travel. He worked at Université Catholique de Lille, achieving impressive titles and setting the remarkable requirement that all chemistry professors were required to obtain a degree outside of France.

Schettler explained that Lepoutre believed that "exchange on an educational basis would be a solution to a lot of the world's political problems. This was a road to peace. That's what drove Gerard."

Is it possible that a scientist

continued page 14

Presidential Perspective

President Kepple wants to hear from you! He uses his column to answer any college-related question. Simply e-mail questions to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

"Do course enrollment caps really mean anything? I've had some professors who will register students over the cap and some who won't, and there doesn't seem to be any consistent reasoning behind their decisions. If there is a waitlist, how do professors decide who gets in and who doesn't? It doesn't seem fair the way things go now."

To answer this multi-faceted question, President Kepple asked Registrar Athena Frederick and Provost James Lakso for their input.

The caps are in place on different courses for different reasons. Caps are sometimes based on teaching pedagogy for many subjects. Safety is also a concern; we must respect room capacities and we cannot block aisle ways or emergency exits. If the room size is the issue, the faculty member will agree to add students if a larger room can be found. In some cases, if there are only two or three on the waitlist, the faculty member will agree to add students because it won't prompt 20 other students also trying to get in. In some cases it is an issue of equipment or technology. In other cases, departments offer multiple sections of courses to encourage discussion or because the course is writing or speaking intensive (CW or CS). If they simply fill up one section when other sections still have space, they are defeating the purpose of having multiple sections.

At Juniata, we only use the waitlist for students to "lodge" their interest in the class. Some faculty will look at the waitlist to discern which students need a class for the P.O.E., to find those who need it to absolutely graduate and to determine planning for next year or even next semester if possible.

Institutionally, we do try to respond where we can by adding sections, either over time or immediately if we are able. For next semester, for example, we added a section of Intro to Business and a section of Financial Accounting due to enrollment pressure. In the past we have added sections of other courses including Calculus, Spanish and Intro to Communication. In other cases, students simply have to wait until the following semester. This is an issue in all of higher education, not just at Juniata. No system can guarantee that any student will be able to get into every section of every course in every semester, but we manage this pretty well.

So it has to do with scheduling, room capacity, programmatic needs and safety. It's not a fairness issue against students, it is just the way things work.

"The U.S. Post Office runs on Saturday, but our campus post office branch doesn't. Why isn't it open on Saturdays to accommodate for Saturday mail traffic?"

Years ago, the post office was open on Saturday morning. The U.S. Postal Service decided there wasn't enough use to justify being open on Saturdays. Also, due to the fact that Post Office Supervisor Lori Hughes is the only full time person, she is not able to carry the extra time to be open on Saturday.

Thumbs Up, Thumbs Down

The first snowfall last Thursday. Just when we thought we were going to lose our eyesight from staring at PowerPoint presentations, Nature sent a million bits of hope and distraction falling just outside our classroom windows.

Saturday and Sunday finals. You've taken our mornings, our afternoons and our evenings. Now you have taken our weekends. What's next? Our will to live?

Rocky. It ain't over 'til it's over. Go see Rocky Balboa in between the Christmas goodies and gifts. Calcium deposits on Sylvester Stallone's bones ain't no thang. At 60, he's still eating lightning and crapping thunder!

Gold card identity theft. There's a new policy at the Sodexho check-in counter at Baker. Bring your student gold card to chow time or "no soup for you." Why the change when keying in your number without a card has always been an option? Apparently this practice has opened the door for degenerates to steal your meals. Some people steal identities for money. Juniatians steal them for chicken patties.

A month of ZZZs. Your papers are packed in your folders with care; a month's worth of laundry's piled up on your chair. You're finally all nestled snug in your bed, while visions of home-cooked meals dance in your head. But you have finals this week, so grab your thinking cap…then bust out of this joint for a long winter's nap.

To a chemist, with love

continued from page 13

can be as committed to peace as an unbathed hippie? Better believe it.

And resolving conflict wasn't out of their realm either. The initial exchange program arrangement attempted to provide a solution to the bureaucratic complications that students were encountering with Brethren Colleges Abroad (BCA).

The first exchange was between Juniata and Lille, and JCEX continues to expand thanks to people like chemistry professor and department chair David Reingold, retired chemistry professor Bill Russey, Ruth Reed, French professor Michael Henderson, education professor Kim Richardson, history professor David Sowell and Director of Study Abroad Jarmila Polte.

von Liebig may be big and the Humanities Center may be cramped, but both Dr. Reingold and Dr. Schettler say that we've all won.

"The [science] departments were actually downsized," Schettler said. "We have less lab space." Although he admits that von Liebig is a beautiful building, such factors cannot be ignored when rushing to make comparisons. "The real winners are IT, communications and business." (For all those scratching your heads, they gained BAC).

So the argument will surely continue, but keep in mind that William J. von Liebig allocated the money, as a scientist, to the science departments. So spoiled as they may be, the science kids aren't spoiled based on their own merit. They got lucky. And we who hail from the humanities are not banned from walking in the building and getting hopped up on Starbucks coffee.

Bottom line? If you're a history and French P.O.E. who's studied in Lille, France, an international studies P.O.E. who's studied in Puebla, Mexico or a social justice and Spanish P.O.E. who's studied in Seville, Spain (yours truly), then consider why you're holding your grudges. After all, the programs that originated in the axis of scientific evil are now sending all of us all over the bleeping world so that we may change our lives and find ourselves. (As we insist on being sappy and expanding our clichéd horizons in foreign lands). Marburg, Lincoln, York, Volgograd, Bocholt and Münster—all JCEX locations.

So the final word? Stop bitching. Go abroad. Remembering all the while that it was a scientist who cared enough to make sure that Juniata students would be considered as well-rounded and polished as the rest of the world.

It takes 40

Eagles need energetic play from start to finish

Jess Winemiller

Men's basketball in the Mid-Atlantic Conference is no cake walk. Regardless if a team is ranked first or last, the team that shows up to play a full 40 minutes of basketball is the team that is going to leave the court with a win. Juniata, now 4-3, has lost its first two conference games against Messiah and Widener, while posting wavering success in non-conference play.

"We feel we let down our fans at our last game [home conference opener against Widener University] and viewed Monday [Dec. 4] against Grove City as a chance to prove to them that we are a good team and have the potential to win a lot of games," said junior guard Brent Ferko, who has made consistent contributions offensively and on the boards.

Ferko had nine points to accompany his nine rebounds as the Eagles claimed a 61-51 victory over the Grove City Wolverines. Senior Nick Hager went 4-6 from the floor and led the team with 12 points, a season high for him.

"All factors that as the season progresses and we become more experienced will become non-factors."

– Brent Ferko

The main factor on the court, however, was the Eagles' explosive team defensive effort.

"We had really good movement with our defense," said Ferko. "The energy level was high and for the first time in a while we looked fast on the defensive side, challenging shots and running through passing lanes."

This showed as Juniata held GC to 34% shooting from floor and forced 19 turnovers.

The Eagles intense level of play, however, faltered as they lost a recent game against Waynesburg, 69-66. A lull at the end of the game decided the outcome. Waynesburg went on a 16-4 run in the final seven minutes to seal the deal and hand the Eagles their third lost of the season.

continued page 18

Women's basketball off to a strong start

Eagles on pace for record setting season

Dan Rapp

The Juniata women's basketball team, sits at 7-1, matching the program's best start since the 1992-1993 season. The Eagles are looking to make a statement across the MAC that they are a force to be reckoned with.

Last year the team averaged 55.1 points per game. So far this season the Eagles are averaging 63.4 points per outing. The improved offense has the Eagles off to a 6-1 start, 1-1 in the MAC.

With offensive threats in the paint coming from junior Jess Winemiller and sophomore Kelly Ashcraft, rainbow three pointers constantly being dropped from junior Ali Meckey and players like sophomore transfer Claudia McDowell supplying additional firepower, the team has already proved that knocking them off will not be an easy feat. Juniata has beaten its opponents by an average of 15.6 points per game.

This number was much higher in Juniata's game against Penn-State Altoona where the Eagles handed out a beating, leaving a bruise on its opponents in the form of a 40-point loss. "Our offense was just on [its] game," Winemiller said. The junior forward put up 16 points in the win. "We just didn't make any mistakes and even when we had a comfortable lead, we still pushed on."

The Eagles saw four other players in double digits, including a 25-point performance from Meckey, who earned 21 of those points by going 7-9 from three-point range.

The team's next challenge was against Pitt-Greensburg in a much tighter contest. After seeing the lead change hands six times in the opening half, Juniata pulled ahead with five minutes remaining before the break on a three-pointer from Mindy Werner. The junior also added another three points with 25 seconds left before intermission, helping the Eagles take a five-point lead to the locker room.

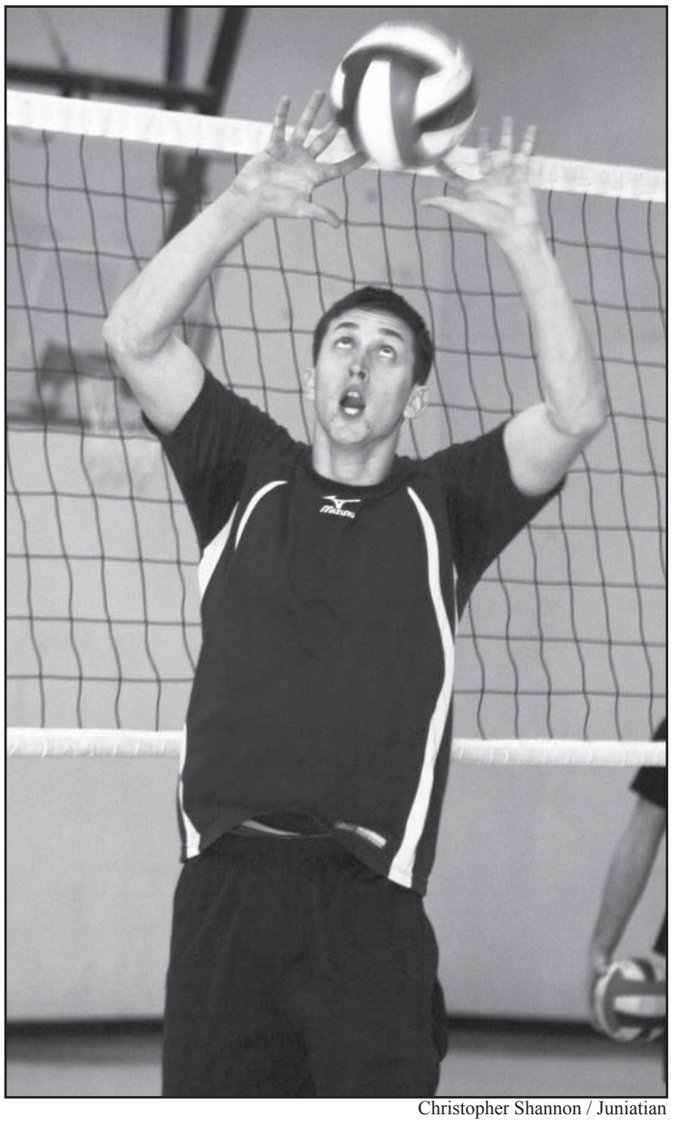
From that point, the Eagles never looked back, earning a 77-62 victory.

Juniata's first conference game against rival Messiah College would be a different story. In a game where it seemed like nothing could go right, Juniata saw its undefeated record disappear in a 75-41 loss.

Juniata shot just 30.2% from the field and was out rebounded by 21 - a skill the team normally, "pride ourselves on doing," according to Meckey. Juniata knew something had to change quickly.

In an attempt to correct their mistakes and even their conference record, the Eagles made it a point to get an early lead in their next game against Widener. After jumping out to a six-point lead ten minutes into the game, the Blue and Gold never had to deal with a lead of less than four for the remainder of the contest. They eventually knocked off Widener by a score of 66-44.

In its next meeting, Juniata faced Grove City on the road. It was a close game, with the score knotted four times. It wasn't until late in the second half that Juniata was able to find a little breathing room, building itself an 11-point cushion with 6:55 left to play. The Eagles saw that lead disappear when it allowed Grove City to go on a quick 10-0 run. But Juniata kept its composure and was able to hang on to earn its sixth win, 55-53.



The Eagles closed out the fall semester with a 59-38 victory at La Roche.

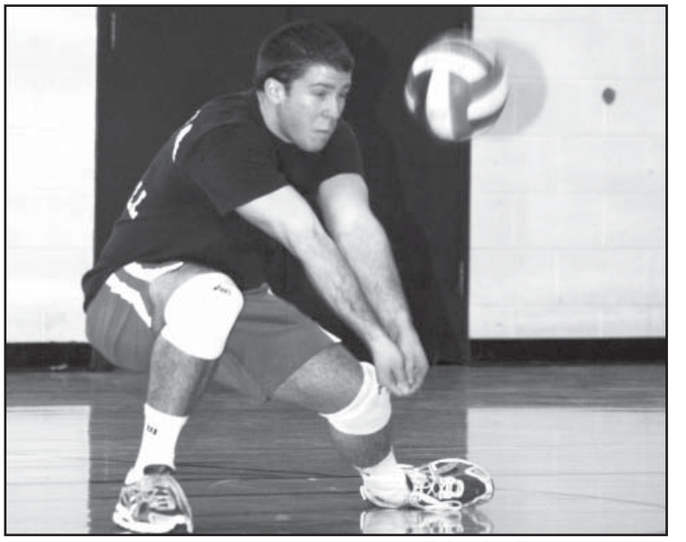
Defending Molten champs ready to repeat

Six seniors looking to go out with fourth title in as many years

Dan Rapp

The Juniata men's volleyball team has won the Molten Division III Men's Invitational Volleyball Championship the past three seasons. As the 2007 campaign gets underway, the Eagles are looking to win of a fourth consecutive title – a feat unheard of in Division III volleyball.

If Juniata can pull of a "four-peat," the outgoing group of seniors will have set a new standard for Division III volleyball teams across the nation. The task will not be an easy one, as Juniata has a demanding schedule filled with teams such as Division I Princeton, Penn State and George Mason.



Throughout the past three seasons, Juniata has set its sights beyond a Division III championship. According to senior Glenn DeHaven, winning the Molten title "has been a tremendous honor to hold for the last three years, but we don't hold ourselves to the same standard as most DIII teams. We practice harder than most DI teams and are going to show them that we can compete and win on their level."

The team has always had its eyes on the biggest prize: the Division I National Title. For as far back as the team can remember, more importance has been placed on games against DI rivals and its valiant efforts against that type of competition have made a name for the small school.

Ken Shibuya oversaw Juniata's title run over the past three seasons, but even though he is no longer a part of the organization, the team has still taken on the responsibility of holding themselves to that same standard.

So far, first year head coach Jeremy Price has presided over a smooth transition. "This group has such great determination and focus that receiving a new head coach has not held them back in the least," he said. "They are so motivated to win that it drives them to work harder toward what they want to achieve, and they want to achieve it all."

The team kicks off its season on the road against Ball State on January 27. The Eagles are looking for home crowd support on February 2 when the Eagles return to the Kennedy Sports and Recreation Center for the first time in the 2006-07 season to take on New York University.

Christopher Shannon / Juniatian

Senior defensive specialist Casey Dale digs a ball during a recent men's volleyball practice. The Eagles open their season on Jan. 27, 2007.

Upcoming Men's Volleyball matches

TBA

Feb. 2 vs New York,
7 p.m.

Feb. 3 vs Springfield,
7 p.m.

Feb. 6 at Penn State,
7 p.m.

Feb. 9 vs Princton,
7 p.m.

Juniata swimmers continue rigorous pace

Pack up that ice. Destination: Florida and it's not for a luxury cruise.

Corinne Barabas

The Juniata women are almost two-thirds of the way though their season. As they endure sore shoulders and nagging injuries, they continue to remain faithful to their training and in turn are enjoying strong performances and times in individual and relay events.

"Practice isn't getting any harder, but it isn't getting easier," junior Kasey Bough said. "We're tired. The season is taking its toll on us."

Despite a 112-85 loss, the Juniata women proved to be fierce competition for Division II Lock Haven on December 9. The Eagles put up a tough fight coming off an intense two-day meet the weekend before while their opponents had the luxury of being well-rested and had tapered for the meet. "What we do in February, to prepare for MACs is what they did yesterday against us," said head coach Brian McGrath.

Senior Amy Sutherland paced the Eagles with a win in the 400m freestyle, an event which she normally does not swim.

A solid team effort from sophomore Kristen Musselman, Brough, Sutherland and senior Collin Thompson allowed Juniata to claim a victory in the 400m freestyle relay. All four swimmers recorded exceptional times.

Junior Carlie Zoubek earned a second place finish in the 200 IM, where she swam an in-season personal best time.

Sutherland also hit the wall fast enough to place second in the 100m butterfly event.

The weekend before, the women competed in the Franklin and Marshall Invitational. At the end of the two-day meet, the Eagles had demonstrated their ability to challenge their opponents.

"It was a big meet, with most of the teams being from the Centennial Conference, which has faster qualifying times than our conference, meaning they were a little bit better. Also, in terms of roster size, our team is considerably smaller than most of the teams we raced against," Brough said.

In the 200m freestyle relay, the team composed of Musselman, freshman Kelly McErlean, Sutherland and Thompson swam to a 12th place finish.

In the individual events, Sutherland and Brough claimed 13th and 16th places, respectively, in the 500m freestyle. Sutherland also took the highest place of the day for the team, coming in 11th in the 200m freestyle.

> **"It's perfect because we get away from all the distractions of school,"**
>
> **– head coach Brian McGrath**

"We are right on pace with where we should be at this point in the season," McGrath said. "The freshmen are a lot further along than I anticipated and the girl's attitudes are great. They are able to come in, forget about school and just focus on swimming hard at practice."

The team will be headed to Florida for the first week of January to enjoy seven days of intense training and pain in and out of the pool for at least five hours a day. "It's perfect because we get away from all the distractions of school," McGrath said.

Giving a different view than Coach McGrath, Brough said, "It's pretty much like the week from hell. The pool that we train in is twice as long as the one at Juniata, which means we have to swim longer before that momentary bit of rest during a flip turn, and every little bit of rest is huge. On the plus side, when we're out of the pool, it will hopefully be somewhat relaxing."

The women return to competition on January 13 to swim against California (PA) here on College Hill.

Effective evaluations?

Athletes debate whether there voice is heard

Emily Koop

Now that an entire season of sports is complete, how does the season officially come to an end? As explained by Juniata's athletic director Larry Bock, at the end of every season, the seniors and captains of each sport will fill out an evaluation of their coaches, facilities, schedules, training staff and any other aspects of their athletic career they feel should be brought up.

Every team is supposed to have a captains meeting before the survey is issued. All team members can tell the captains how they feel about the season and may relay any complaints they may have through them.

After the team meeting, the captains and seniors fill out an evaluation on all the things that come into play and affect athletics at Juniata. This written survey is copied and sent out to the coaches and Bock also keeps a copy on file. This allows the coaches to know what their players think and get feedback on what their players would like to see changed or kept the same for the upcoming season.

But there is yet another step. Each team's captains meet with Bock in a group interview and discuss in person anything they wish to bring up about their past four years in Juniata athletics. These interviews are also written on paper and given to the coaches for future reference.

"I thought the process was very worthwhile," soccer player Nicole McKellan said. "I know I spent about an hour filling out the questionnaire just because I knew that it would be important for the coach to receive feedback from us so he could make any necessary changes for the next year. I took the questionnaire seriously because I had a lot of pride in Juniata athletics and wanted to help the future Juniatians progress past where I was my four years as a student athlete."

If an athlete is having a problem with a coach in-season that he or she is struggling to work out, the athletic department has steps in place. Bock emphasized that the athlete should first go though his or her captain. If this fails and the problem persists, the student-athlete should see Bock directly. According to Bock, "anybody should come in and talk with me." In this case, Bock states that "what is behind these doors stays behind these doors."

Bock also felt strongly about the school's code of conduct and the way that the coaches follow it. He says that if any coach violates the code of conduct and it can be proved, that coach will be fired immediately. It is a serious matter, and has happened before. For instance, the men's volleyball coach was removed in 2005 for violating the policy.

> **"Be honest and tell it like it is, This is the only way player-coach evaluations can be effective."**
>
> **– Ryan Calabrese**

But some of the Juniata athletes do not believe that they have that much power or their voices are heard. "I think the process is worthwhile for feedback, but at the same time, there are many intangibles that go into coaching and team structure that players are not always privy to so their opinions may be ignorantly skewed, thus rendering their comments impertinent," says Eric Wisor, a 2005 graduate who played volleyball.

Other athletes believe that their particular coach will listen to them and take their opinions seriously. "Coach Cutright has a closing interview with everyone on the team where he asks for feedback on the season and his coaching. He listens to everything we have to say and really makes changes accordingly," says cross country runner Lia Bella.

Even with mixed opinions on the matter, the seniors all agree on one thing and that is to be honest. "The best thing you can do with these evaluations is to be completely honest. If you want change, this is a great way to start the ball rolling," soccer player Kelly Howard said.

Ryan Calabrese, who plays on Juniata's football team, agrees. "Be honest and tell it like it is," he said. "This is the only way player-coach evaluations can be effective."

Past stars take the next step

Juniata graduates join professional volleyball leagues in Europe

Derek Stanley

After Juniata's recent success on the volleyball court in recent years, three men's volleyball players have taken their talents a step further by crossing that big pond we call the Atlantic Ocean. Currently, Ryan Genova, ('04) Ricky Ziegler ('05) and Cordt Withum ('06) are playing professionally in the Czech Republic, Netherlands and Germany, respectively.

While professional volleyball has yet to explode onto the American scene, the European leagues are very popular and attract the best volleyball players in the world, including Olympic national team players from various countries.

The three Juniata grads began their European quests like many other American hopefuls: by joining the European Exposure Tour. During this tour European coaches are able to watch unsigned prospects and can make contract offers.

Ziegler is overseas for the second consecutive year playing in Zwolle, Netherlands for VC Zwolle. He is currently under a year-long contract with Zwolle. This contract pays him 1500 euros a month and includes a free car, apartment, hair cuts, clothes and language lessons.

Withum is currently in his inaugural year overseas in Bocholt, Germany playing for TUB Bocholt. He is also under a one-year contract where he is issued the use of a car, all meals, a cell phone and a monthly stipend.

"I'm making enough to pay off college loans and do some traveling, but all in all it's not that much," Withum said. "Your first year is difficult; you really have to prove yourself on the European market in order to land a good contract."

Genova was unavailable for an interview.

Both Ziegler and Withum, however, share similar expectations. They both plan to work their ways up in the European market and ultimately play in the champion's league. A typical pro in the champion's league is in his late twenties or early thirties, so both players have plenty of time to accomplish their goals.

Withum believes the work ethic that he learned at Juniata will propel him to this next level.

"Most players [in Europe] start playing between 10 and 12 years old. They are tall and very athletic but because of this they have not had to work as hard to excel and to achieve recognition," he said. "I think that is one unique quality that we have at Juniata. We are stubborn to the point that we are able to beat major teams no one expects us to compete with."

Given the recent success of Juniata players abroad, the prospect of going pro is more realistic than ever.

Basketball is no cakewalk

continued from page 15

"I think that we came out strong, but didn't play with a high energy level throughout the whole game," Ferko said.

"Waynesburg made the big plays down the stretch and we didn't," junior forward Brian Cannon said. "We made a run at them and it looked like we were going to be able to push the lead but they responded really well and made a run back at us."

Cannon has been a consistent offensive threat for the Eagles so far this season. He contributed 20 points against Waynesburg, the second time this season he hit 20 points.

"I feel like I let everyone down last year with my performance, especially in the conference when it mattered most," he said. "I don't want that to happen again. I have been so successful because those same people have continued to believe in me and put me in good situations that allow me to produce."

Senior center Chris Jasiota added to the offensive attack with 18 points and junior point guard Kyle Opitz dished out five assists in the close loss.

The impressive individual statistics, however, were overshadowed by the loss.

"We let certain things take away our energy, whether it was the long bus ride, the foreign gym, or perceived bad officiating," said Ferko. "All factors that as the season progresses and we become more experienced will become non-factors."

Hannah Rakertus / Juniatian

The Juniatian bids a fond farewell to Tommy McConnell. After three and a half years as sports columnist and editor, Tommy leads the league in Juniatian articles written... and parantheses used.

He's asked the important questions like, "do you think that Kobe could average 50 points per game in the MAC?" (Incidentally, Tommy, yes, we do.) And he's covered the important sports moments, like when Carolina won its last national title, putting the Heels one ahead of Duke in that all-important category. (Yeah, we loved that one.) Most of all, he's made sports commentary what it should be--a perfect blend of enthusiasm, wit and entertainment.

The sports world may forever be searching for its next Michael Jordan. The Juniatian may be looking just as long for its next Tommy McConnell.

Landmark Conference logo contest underway

New league looking for student submissions and handing out cash prizes

Emily Koop

Starting in 2007-2008 Juniata will join the newly formed Landmark Conference for its inaugural season.

With the new conference comes the need for a new, recognizable logo. As such, the Landmark Conference committee is holding a contest to create its first ever logo and is looking to students from member schools for idea submissions.

The design should be inspired by the physical landmarks of the Mid-Atlantic Region and can be made by students only. One logo from each of the eight institutions that comprise the new league will be accepted for final selection by the Chief Executive Officers.

Juniata College will award its on-campus first place winner with 250 dollars, the second place winner with 100 dollars and the third place winner with 50 dollars. The winner of the entire contest will also win 500 dollars from the conference.

There are a few requirements for submission. Each entry must be in black and white. It should be saved on the P: Drive in the folder labeled "Logo Design Landmark Contest" and saved in the format: lastname_firstnameBW.tif.

Students are encouraged to submit a narrative piece (five sentences or less) to describe its inspiration.

The deadline for submission is January 16, 2007, with no exceptions.

For further information contact Rosann Brown at extension 3133 or e-mail her at brownr@juniata.edu.

The other institutions involved in the logo competition include: Catholic University, Drew University, Goucher College, Moravian College, Susquehanna University, US Merchant Marine Academy and the University of Scranton.

Submit now!

The NFL's Christmas List

What each playoff contender wants to see under the tree

Tommy McConnell

You know when you are trying to figure out something simple, like how to turn on an overhead projector, but you can't get it to work and some idiot snatches it away from you saying something like, "C'mon man, you don't have to be a rocket scientist to figure this out" and you just wanna jack him in his smug little face?

(Quick aside: has anyone ever been in a class where the teacher got the projector to work on the very first try? Ever? I'm 0 for my Juniata career. It's like the Loch Ness Monster: I've heard about it, but no one has actual proof it ever happened. Whenever I see a prof pick up that little remote, I prop my feet up on the desk in front of me because it's at least five minutes of free time before he finally admits defeat and begs someone to fix it. Then he still has to find the tallest person to reach up and turn it on. That always makes me laugh for some reason. But I digress.)

Anyway, those heckling jerks have two professions to choose from: rocket scientist or brain surgeon. Apparently, those are the two toughest jobs in the world and it isn't even close. No other job even gets passing consideration.

Well, I have a third job I'd like to nominate for that category: the guy who sets lines for NFL games in Vegas. (Random: another job I don't think gets enough credit is the guy working the seven-second delay button for live TV. That has to be a nerve racking gig, doesn't it? Like being a left tackle: it only takes one mistake for you to have a really, really bad day.)

The guy who sets the lines for Vegas is phenomenal. I think he's better at his job than anyone else in the country is at his, except maybe that kid who's always high at McDonald's and gives you free food on accident. Man, I love that kid.

Here's how I know. Me and three of my buddies had a contest this season picking every NFL game against the spread. And we sucked. We were awful. It was a complete train wreck. I think the best anyone did one week was break even, and I'm not even sure that happened. We routinely got three and four games right a week – and were thrilled with ourselves.

It got so bad at one point that my one buddy Kilcs pulled a George Costanza (you know, "Hi, my name is George…I'm unemployed and I live with my parents") and picked the exact opposite of who he thought would win. You know what happened? He had a banner week! Of course he did. He won something like 10 out of 14 games just by saying "You know what, Vegas? You clearly know what you are doing and I do not. You are very, very good at this and I am very, very bad. I give up." (Full disclosure: I think Kilcs was the first to point out how good the guys setting the lines are – so full props to him. He's also the same guy raving about parlays, though, and having a three-team parlay this season is about as much fun as the dry heaves, so we'll just say he broke even.)

My point is, no one knows what the hell they are talking about when it comes to the NFL. No one. Don't trust a single soul you hear talking about anything, because the fact of the matter is that it is a complete crap shoot.

You'll hear things like "Oh, this team is the odds on favorite to win the Super Bowl" and "This team will be lucky to make the playoffs." You're better off picking the team that looks like it's not even going to make the playoffs. Every team has at least one flaw so glaring that you can never feel completely comfortable picking them to win the Super Bowl.

Here, then, in the holiday spirit, is a Christmas wish list (can I say Christmas, or will the people who run Madrigal beat me over the head with a non-denominational candle stick?) for each team that has any real shot left at making the playoffs (and the way things are going right now, some team I leave off this list will improbably get into the playoffs due to a third tie-breaker and go on a magical run to the Super Bowl).

Dear Santa,

The Giants would like their best player to announce his retirement halfway through both the season and his prime and then their best defender to wig out on a reporter while cramming an entire Cinnabon down his throat. The Eagles would like their quarterback to look like anyone other than one of the Sisters from Shawshank. The Cowboys would like an overrated quarterback who everyone thinks is Jesus reincarnated and a safety who is only known because of horse collar tackles and the other girl from Destiny's Child. Oh, wait, they all already have those things. They are all set.

The Bears would like a quarterback who can crack 2.0 on the QB rating scale. (Come to think of it, can you think of a scale where 2.0 can't be cracked? I really can't think of one. Hmm.)

The Saints appreciate the entire nation cheering for them and the NFL forcing to Texans to draft Mario Williams so that they could draft Reggie Bush, but they would really enjoy getting Marques Colston back.

Speaking of receivers, the Falcons would like one or two of them that aren't scared of the football.

Carolina just wants put out of its misery.

New England would like one of those vibrating massage chairs for Tom Brady. Dude seems just a little too stressed these days, eh?

The Jets would enjoy a new set of smoke and mirrors; they're running a little low.

Miami and Buffalo want some closure.

The Ravens would like…well, Baltimore, Santa hates the Ravens, just like everyone else. Blame Brian Billick.

The Bengals want one of those things that takes your blood-alcohol level before you can turn on your car. It's like these guys are having a contest to see who can get arrested the most.

The Steelers wouldn't mind Ben Roethlisberger getting his depth perception back. (Oh, and a new motorcycle. Damnit. I tried, really I did. You have to believe me.)

The Colts would like to see a new run defense under the tree (and I would like to see Peyton Manning cast in a full-length feature film).

The Jaguars would like to see the Colts under the tree.

Out west, Kansas City is asking for every game to be played at home.

Denver is praying to Peter Coors that Jay Cutler doesn't suck any worse than Jake Plummer (and fantasy owners are asking for something big and heavy to fall on Mike Shanahan).

San Diego has the greatest Christmas present this side of New Orleans' fan base in LT, so they feel guilty asking for anything. So I'll ask for them: let them wear the powder blue every game!

So, if every team gets its wish, who will be taking home the 41st Lombardi trophy? I said Colts over Bears in the beginning of the season, so I'll stick with that now. But what do I know? I can't even beat George Costanza in a pick 'em pool.

The Back Page Brawl

Tommy McConnell **Rebecca DeHass**

Which is worse: Slipping on ice or a snowball to the face?

Slipping on ice. At least when you get hit in the face with the snowball, there's a shot at redemption. When you slip on the ice, you have no one to blame but yourself, plus it takes about half an hour to actually fall: there is the initial slip where your heart flies into your throat, followed by the half-second where you think you caught yourself but that just makes the eventual fall that much worse. Then you have to do the thing where you look around like a jackass trying to see if anyone saw you, which they did. Bad times.

Hit in the face with a snowball. In the twenty-first century, if you're getting hit with a ball of condensation, it's not snow. The rules of winter have changed. He who has the ice makes the rules. Unless you've got a wrench to throw, run for cover. Or buy a steak.

Dry vs. Wet Q-tips

Wet Q-tips. This can't really be described unless you've done it, and it sounds questionable if you haven't, but you just need to trust me on this one. Run a q-tip briefly under some warm water and then have at it. Oddly satisfying; that's the best way I can put it. Once you go wet, you'll never go dry again. Just trust me.

Dry Q-tips. If I wet my q-tips, I feel like my brain is swimming. My ear works like a seashell. Get close enough to me and the ocean will whisper from my ear to yours.

Worst Christmas song ever?

The Little Drummer Boy. Look, I got nothing against the kid, but he needs to pick a better go-to phrase than ra-pa-pa-pum. I mean, anything will work here. That doesn't even sound like a drum. Ra-pa-pa-pum. Cripes, kid, you traveled the whole way to the manger, at least make an effort with something creative. And you are now screwed, because that song will be in your head for the rest of the day. Enjoy.

"Last Christmas" by George Michael. Seriously, maybe he shouldn't have given up a valuable organ. You run that risk. That's why you give girlfriends things you won't miss, like tonsils and pinkie toes. If I hear that song one more freaking time, it will be Georgie's last Christmas fo' real yo.

Best Christmas special?

Rudolph the Red Nose Reindeer. With apologies to Jimmy Stewart, nothing is touching the claymation version of Rudolph. So much to choose from here: Herme the elf who wants to be a dentist, the Island of the Misfit Toys and the strange desire to cheer for Rudolph and want to kick his ass at the same time. But the quotes make this movie. "Eat, papa, eat!" is a classic, but nothing is topping "Bumbles bounce!" Yukon Cornelius: underrated comedic genius.

Charlie Brown Christmas. This special taught me that it is not who has the biggest tree that is most important. Little trees are really not that bad at all, all they need is just a little love. I feel this has been a monumental in my journalism career, as it was the first sexual innuendo I can remember hearing. I think after all the caroling I did this week, I should be the Christmas Queen. Move over, Lucy Van Pelt.

Random 11 vs. Backpage Brawl

Random 11. You know how they say the sequel is never as good as the original, but every once in a while the sequel blows away the original? Yea…this wasn't one of those times. I bow to the master.

Random 11. Matt Russell was my everyday, real-life version of Gregory House. He has sarcasm instead of plasma running through his blood. Hey, we tried to live up to the good doctor of Juniata randomness. But as the great philosopher Jagger once said, "You can't always get what you want."

Classroom concerns

continued from page 2

to do. Celia Cook-Huffman, professor of conflict resolution, explained some of the underlying issues behind student reluctance.

"There is a perception that faculty members have all the power," she said. "There are fears about how to approach, and whether [students] have any influence over a professor." Professors do have authority, but Cook-Huffman said, "Students underestimate the power they have."

In some cases, students may even have a fear of retribution, either socially or with grading. Emil Nagengast, chair of the politics department, made it clear that students have the right to question professors and have inconsistencies explained. He disagreed with the notion that students could be punished for speaking up.

"Students have no right to say, 'I can't go talk or I'll be punished.' You can't condemn something because of perception," he said.

Many professors compare the situation to the students' future workplace atmosphere. Patricia Weaver, chair of the accounting, business and economics department, said, "This system is how it works in the business world. Nobody likes it when people go above you."

The faculty at Juniata emphasizes that communication with professors is key. "One of the great things here is the interaction between students and faculty. I would hate to think there would be repercussions if students talked. By in large, most faculty are anxious to help students," said Weaver.

Lakso said the best advice he could give to students is to "take advantage of Juniata interaction, where students can speak their minds."

Bailey contestants tackle sustainability

Mike Chirdon

The sustainability topic of this year's annual Bailey Oratorical Contest has created a stir on the Arch's discussion boards. Some students are glad that the topic ties into the College's wider sustainability efforts, while others question the fairness of such a specialized issue.

The question asks students to suggest innovative solutions to the local and global challenges of sustainability.

According to Donna Weimer, communication professor, this topic was suggested by the administration in order to fit in with the College's ongoing efforts to promote sustainability. The communication faculty was responsible for the exact wording of the question. Weimer said that SPEAK, Lambda Pi Eta and students in communication classes were asked for their input. Ten to fifteen different questions were proposed before the final decision was made.

Students expressing discontent with the topic say that it is too narrow and not interesting enough to create compelling speeches. Also, some students feel that the topic gives students with a background in environmental science research a significant advantage in the competition.

"Traditionally, the topics have been general enough that most students wouldn't have a huge advantage over others because of their background," said Seth Robertson, a senior with a POE in philosophy, politics and economics. "Furthermore, the topics allowed for general creativity such that a person could make an interesting speech out of a neutral topic."

The winner of last year's competition, senior Magda Sarnowska, expressed similar concerns.

"This year's topic is a little more specific than last years," she said. "It is difficult to get really excited about it unless you are an environmental studies major. I am glad we are discussing sustainability, but I think the topic demands greater research from those with less background on the issues."

Senior Lisa Detweiler, second runner up in last year's contest, said that she preferred the openness of last year's topic, but she also feels

continued page 3

Spam on the rise

High-sodium product bloating JC inboxes

Jason Najarian

An informal survey of faculty conducted by the Juniatian showed that the average number of spam e-mails they receive daily is around 200. In some cases, over 400 junk e-mails are received in a single day.

This problem is not restricted solely to Juniata. Experts say spam comprises 70 to 80 percent of all e-mail traffic worldwide, not counting the spam that slips through security filters. Because spam is almost impossible to prevent, management becomes key.

The primary problem the College faces is spam volume. David Fusco, associate president and chief information officer, said, "Overall spam has increased in volume and intelligence."

The increased spam, along with regular e-mail traffic, has prompted the College to look to upgrade the mail servers. The extent to which the servers will be upgraded is not yet certain, but there will be changes.

"There are no finalized plans, but we will be upgrading the servers to some degree this summer," said Fusco.

Jason Mickel, senior business systems analyst, said that Juniata is currently investigating alternative spam and virus protection programs, particularly a program called Sophos. Sophos offers software similar to the Symantec software currently used by the College.

However, the danger of a false positive—a legitimate e-mail mistaken as spam—hampers most solutions. One possible solution is to transfer potential spam into a side repository that gets wiped clean every week. Students and faculty would have a week to check for e-mail accidentally mislabeled as spam before this prescheduled removal.

"We realize it's a problem. We realize it's growing. We provide several tools for self-management and are evaluating equipment for future management," said Fusco.

The number one thing students

The lowdown on the bookstore

Publishers and professors dictate book prices

Sara Marie Cieslewicz

Despite sky-high prices and horror stories of book shortages in the beginning of the semester, the Juniata College bookstore is in actuality a victim of both publishing companies' prices and the book industry itself.

Jeremy Santos, manager and task manager of the eFollett bookstore at Juniata, is conscious of students' feelings about prices and the amount of money students receive when trying to sell back their books. He wishes students would be more aware of the policies of the bookstore before complaining about rip-offs.

Pricing and buyback: Who is in charge?

The pricing policy at the bookstore is just like it is at any other bookstore, even mainstream corporate bookstores like Borders. Books are priced by what price the publisher tells the store to administer, either the suggested list price or the net price.

The bookstore does not decide how much each book is going to cost. Santos knows that college bookstores have a bad reputation for high prices, but the price established by the publisher cannot be changed.

Many students are disappointed when participating in the Buyback Program at the bookstore. The store is looking for books that are in "good condition." This means that the books must have little damage such as pen marks, highlighting, rips, tears or water damage. The amounts of money students are eligible to receive when participating in Buyback is judged by the severity of those criteria.

A student can try to sell back his books any time. The database on the computer gives the teller the percentage of the price that can be awarded for a specific book. Few books can be sold back to the bookstore for more than half of their original retail prices.

Juniata's bookstore has a better chance to buy books back at higher prices when the books are used in classes during both the spring and fall semesters. The value will increase if a professor re-ordered the book for next term.

If the book is not being used in the next semester, then the book-

New parking regulation raises questions

Mindy Bozick

At the start of the spring semester, Juniata students met a new and surprising parking regulation: vehicles are no longer permitted to park in the Kennedy Sports and Recreation Center parking lot from 12 a.m. to 6 a.m. The new rule was put in place to stop long-term parking in that lot.

The new parking restriction left students with many questions and much confusion concerning the motive for this new rule.

According to students interviewed, the 41 parking spaces available in the KSRC lot are essential to the parking situation at Juniata. Students claim that without these spaces, there is no place to park, and they are now forced to find parking spaces along the roads in Huntingdon.

The Juniata Safety and Security Department disagrees.

Juniata College Campus Safety and Security Director Rocco Panosetti said that there is a very obvious and equally easy solution to the current parking discrepancy. He encourages students who usually park their cars in the KSRC lot to park in the lot opposite the tennis courts on College Avenue.

Panosetti said that there are very few cars parked in the College Ave. lot at any given time. He does not understand why students cite a parking problem when there are so many parking spaces open to Juniata drivers in that lot.

Panosetti added that he knows that students do not park in that the College Ave. lot because it is not as accessible as the KSRC lot.

But Panosetti cited, "I've timed the walk from the unused lot and it's only a two minute walk from there to Ellis." He said that the real issue here for students is not a "parking problem" but a "walking problem."

There are many important reasons for the restrictions placed on parking in the KSRC lot, Panosetti elaborated. By restricting vehicles from being allowed to park there overnight, it keeps vehicles from being left there, without moving, for days or even weeks at a time. It allows a "free flow of traffic to a highly in-demand lot."

The rule also keeps the lot free of the stationary cars during athletic events, activities at Ellis and for the Huntingdon residents who pay to use the gym. Also, during inclement snowy weather, the new restrictions allow for snow removal teams to have easy access in this highly trafficked part of campus.

Panosetti and other security and school personnel felt that this new change is essential and that students should understand that this needed to be done.

But students cite safety concerns over other lots' locations. Freshman Amanda Bair, a Sherwood resident, said that she "would be slightly afraid to walk from the College Ave. lot at night because it's kind of off by itself and it's very dark at night."

Panosetti understands the safety concerns about the lot's location and reminds students that there is a blue emergency phone near the lot that can be used if needed. The blue phone connects directly to the Office of Safety and Security.

Violators of this new regulation will be ticketed. Parking laws and regulations can be found on the College Web site under "Student Life," or in the blue parking manual posted outside the Office of Safety and Security in the basement of Ellis Hall.

Students, staff or visitors with any further questions regarding the new regulation can stop by the security office Monday through Friday 8:30 a.m. until 4:30 p.m.

Georgetown economist visits Juniata

Kendall Markel

Before hopping a plane to Japan to deliver another lecture, Georgetown business professor Pietra Rivoli talked about her book, "The Travels of a t-Shirt in the Global Economy" in Juniata's Sill Board Room on Jan. 22. In the lecture, Rivoli discussed how she traced the life of a $5 T-shirt bought in Florida to help "illuminate truths" about international trade and globalization.

A student-led anti-globalization movement at Georgetown in the late 1990s inspired the book. Walking by the demonstration, Rivoli overheard a protesting student yelling, "Who made your t-shirt?" Hearing this, she hypothesized that a t-shirt's biography would tell the globalization story quite well, so she set out to investigate and write on this topic.

Creative Well, Inc.

On Jan. 22, Georgetown business professor Pietra Rivoli came to campus to discuss her book "The Travels of a T-shirt in a Global Economy" with students and faculty.

Rivoli's book is featured on the syllabi of two Juniata classes, International Economic Issues and Politics and Culture of Modernization. Brad Andrew, professor or economics, cites it as a source of "history of the cotton textile industry in the U.S. and Europe for the last 200 years."

Sophomores Rachel Edelstein and Jess Kline, who read the book for class and attended the lecture, enjoyed Rivoli's discussion.

"For people who hadn't read the book, the lecture was very informative. I learned a lot about being a conscientious consumer," Edelstein said.

Kline worried that the lecture would only summarize and promote Rivoli's book. But after the lecture, she said, "Rivoli did take some of the characters from the book and elaborated on them. She gave world trade a face and showed how each person was connected."

Not all student reaction was positive. Sophomore Matt Werrach said that the lecture was a summary of the novel. "I think [Rivoli] is a good public speaker, but I don't feel like I learned anything new."

During her lecture, Rivoli described the people involved in making her t-shirt. After meeting these individuals – the Texan cotton farmers, the Chinese factory workers, the Tanzanian merchants and the heads of the textile associations – she concluded that while each entity pursued its own interest, there are "no bad guys" in global trade. She also noted that national governments and education systems play huge roles in achieving success in the global economy.

After the lecture, Andrew, who teaches the International Economic Issues class, emphasized that Rivoli's "no bad guys" comment sprung from her personal experience, since Rivoli met the groups and knew that were simply trying to make their way.

Rivoli also discussed problems with control of international market activities, highlighting the U.S. government's subsidies for cotton farmers as an example. If U.S. farmers continue to receive tax breaks, farmers in poorer countries will have to lower their prices below the subsistence level to compete. She highlighted how the Chinese government influences public policies and prevents journalists from ensuring systems of checks and balances. Countries where such liberties are restricted, cautioned Rivoli, are the places most susceptible to sweatshop-like conditions.

Closing the lecture, Rivoli stressed the need for the reduction of U.S. subsidies and the advancement of awareness and appreciation for the global community. She also recommended that consumers who want to avoid sweatshop products to buy from "big-name" American and European apparel companies and look into fair trade products, as they have become brand names in themselves.

When asked how one could learn more about globalization, Rivoli advised people to conduct their own investigation.

"People usually get involved with the issue of globalization when they are directly affected or someone they know is directly affected," she said.

She urged people to look at their communities and see what jobs are secure or at risk when they compete on a global scale. By understanding how a community's businesses fit onto a global scale, people can better understand theirs role in supporting trade. Start the investigation with what people are wearing.

Professor Rivoli's visit to Juniata was sponsored by the Department of Accounting, Business and Economics.

The t-shirt's world travels

Geoffrey Gaudreault / NPR

Rivoli's $5 t-shirt began in Lubbock, Texas—the center of cotton's global trade—where the cotton was cultivated. The cotton was then shipped to Shanghai, China, where the t-shirt was made in a Chinese garment factory. Then the shirt was sent to Washington D.C., where it went through the political machinations of international trade. Clothing like this t-shirt eventually ends up as part of the world's trade in the second-hand clothing market. This shirt probably would have ended up in Tanzania, Africa, where second-hand clothing is the top import.

Beyond Tolerance

A new CA class that reaches past just acceptance

M. Piazza

A new Cultural Analysis (CA) course on campus this semester is raising questions about often-taboo issues. This class, entitled Beyond Tolerance: American Cultural Identification, delves into issues of gender, minority groups, ethnicity, religion, politics and Americanization.

Held in the evening on Mondays and Wednesdays, this class is concerned with confronting prejudices and examining beliefs in order to encourage understanding and friendships between different social groups. Beyond Tolerance moves the discussion beyond mere acceptance to a field where conversation and argument can lead to genuine understanding.

Even as a member of the minority, there are still a lot of things I can learn about others who are being oppressed

Rosalie Rodriguez, the special assistant to the president for diversity and inclusion, is one of the course's instructors. She said, "I developed this class to move people past tolerance and into understanding so that bridging between the different majority and minority groups can be done."

Through her position, Rodriguez is able to address the problems faced on campus by a lack of communication between groups. With the help of the Diversity Board, Rodriguez developed this class from the Beyond Tolerance workshops that were offered last semester. These workshops covered a wide range of issues and involved students in questioning and perhaps changing the preconceived notions about these issues. The workshops had attendance numbers from 15 to 100, but at the end of each the students involved wished that the discussions could continue.

The Beyond Tolerance class has evolved from these workshops and to respond to the desire for further discussion.

"I always liked the Beyond Tolerance seminars last semester, and I thought it would be a good way to continue to experience diverse cultures in this class," said student Elise Buckley.

The class invites guest lecturers to speak, and then students discuss the questions raised by the speakers.

Guided by Dr. Neil Pelkey of the environmental sciences department and Rodriguez, the class discusses where they stand on an issue and how each side of an argument has value.

"Even as a member of a minority group, there are still a lot of things I can learn about others who are being oppressed and the incredible dynamics of this class allow me to do that," said Han Ngyuen.

Recently the class has examined the issue of minority and majority groups, specifically speaking about gender and racial identity such as being African American or Caucasian. Tim Wise, this year's MLK Convocation speaker, spoke to their class as a white man who receives "white privilege" every day just because of his skin color.

The class then discussed the issues of majority and minority. With a class that has Europeans, Muslims, mid-Westerners and people from Pennsylvania, the discussion was dynamic.

"The class is not politically correct in any way because it is supposed to allow for open discussion," said. Pelkey. "Without it, the discussion is just not as honest, and we need honesty to get to the understanding."

Pelkey is hoping that this class leads to better understanding of the different groups on campus. The class will bring students out of their comfort zones to discuss things like whether or not sexuality is genetically determined, or how being of Chinese descent can affect a person's American experience.

The class hopes to explore these hard-hitting issues while beginning to embrace an understanding of what it means to be different and how that actually connects people.

Kevin Dundore / Juniatian

Students Iman Tounsi, Subhi AbuAbbas, Bouchra Kachoub and Cecelia Shertz discuss the recent comment by Senator Joseph Biden that Senator Barak Obama is "the first mainstream African-American who is articulate and bright and clean and a nice-looking guy" in the Beyond Tolerance class on the evening of Feb. 5.

2007 Bailey Oratorical

continued from page 1

that sustainability is a topic that deserves the campus's attention.

"I have to admit I am not as excited about this year's topic as I would like to be," she said. "I think once I start learning more I will feel attached to it. I think some amazing speeches will be created. We have some very informed people on campus about sustainability, and this is definitely a necessary topic to discuss."

Weimer and professor Grace Fala, also of the communication department, said that it is not unusual to have some complaints about the topic.

"Every year some students love the topic and other students hate the topic," said Fala. "I know there are several students with POEs in environmental studies who are very excited about this topic."

Weimer said, "More so than complaints, I have had students ask me questions about the topic because they don't feel like they know enough about sustainability. If I have had questions, it is because people are thinking about the topic too narrowly when in fact this topic offers a tremendous amount of flexibility."

Weimer encourages students to think about sustainability in their own fields. For example, a student could write a speech about sustainability as it relates to the health care system or the educational system. A speech about a person who is a role model for how to live in a sustainable way could also make a good speech, according to Weimer.

Though students are encouraged to be creative with the topic, Fala and Sarnowska stressed the importance of following the guidelines in order to be successful.

"We've had some great speeches that included poetry and drama, but the Bailey speeches are expected to be persuasive speeches," said Fala.

"I think the hardest part is fitting the guidelines," said Sarnowska. "When one is passionate about the topic, it is difficult to remember that the speech should have a defined structure. It took me a long time to work through all my thoughts and to convert them to a coherent oratory."

In addition to structure, Fala said that good speeches should have style, substance and supporting data. Fala also said that students should be charismatic in their presentation and try to engage their audience.

"Students should try to be a role model and represent and reflect their message," said Fala.

Detweiler stressed the importance of preparation in making a successful speech. "It takes effort to be successful. It takes a willingness to research," said Detweiler.

Fala and Weimer said that the most important part of the Bailey Speeches is that they contribute to community-building.

Fala said, "It is my hope that students will enter the Bailey's to make an impact on the larger community."

Students can register for the preliminary round by contacting Pat Musselman by Feb. 13. The preliminaries will be held on Feb. 17. After that round, seven students will be selected to compete in the finals on Feb. 27 for a chance to win one of three cash prizes totaling $1,8000. The final speeches will be broadcast on WKVR and streamed over the Internet.

St. Paul's Fellowship of Labor

Juniata seniors' mission takes them to monasteries around the nation

Julia Williams

St. Paul's Fellowship of Labor (SPFL) is the brainchild of social entrepreneur and Juniata senior, Peter Patitsas. Started in 2005, SPFL is a nonprofit organization serving monasteries and convents around the globe through labor projects.

Over spring break, SPFL will facilitate service trips to San Francisco, California and Tucson, Arizona. Both trips will span from March 3 to 11 and cost $100 plus airfare. Peter Patitsas will take a group of males to a monastery in California to landscape, hang drywall and insulate buildings. In the Arizona journey, SPFL co-founder senior Demetri Patitsas will take a co-ed group to renovate a monastery.

No prior experience in landscaping or construction is required for either trip, just the willingness to work. In addition to living and enjoying fellowship with the monks, both groups will take time to relax and enjoy some sightseeing.

Peter Patitsas said SPFL provides "an opportunity to meet interesting people, do a lot of good, and see the world."

The idea began during Peter Patitsas's high school years. There was once a small monastery near his Greek Orthodox Church in Carlisle, PA, but due to a lack of support, the monks left the area.

He remembers thinking, "What a loss," and realizing that the monks "had a lot of things going against them." Since then, he has coordinated service trips year-round with groups of 11-12 with participants generally ranging from 18-25 years old.

Anyone interested in pursing a SPFL trip for spring break should contact Peter Patitsas as soon as possible.

There are also summer trips scheduled. Additional information can be found at the organization's Web site, www.thespfl.com.

Photo courtesy of Peter Patitsas

During his 2006 spring break, Peter Patitsas and eleven volunteers of the St. Paul's Fellowship of Labor travelled to west coast, where they stayed and helped as much as possible for one week. Pictured above is the Fellowship with some monks at the St. Gregory Mount Sinai Monastery in the mountains of California.

Bookstore policies and pricing-- it's not what you think

continued from page 1

store can only offer wholesale prices for buyback, or roughly ten to 35 percent of the original price. Texts from small publishers, usually not typical textbooks, are generally sold back for amounts in this range.

There are situations in which books are ineligible for Buyback. If a book changes editions between semesters, it will be worth nothing to the bookstore, which has no control over this. Once a textbook is outdated, it is worthless to a wholesaler or distributor; they will not buy them or stock them.

"It's a big Catch 22. Pallets and pallets of books everyday are being thrown out because of this," explained Santos. "Major texts have a life of two to three years."

Santos believes that it would be helpful for college students if publishers analyzed this phenomenon, used cheaper paper and made more paperbound books.

From the publishers to the bookstore: The process

The process to get books on the shelves begins with professors sending in their "book adoptions," the order for the specific books the professors want for each course. This year, these book adoptions must be submitted to Santos by April 15 in order for books to be stocked for the fall 2007 semester.

However, few professors submit the adoptions on time, and Santos is forced to delay his search for the cheapest books. According to Santos, the earlier professors submit their orders, the more likely he can find a larger quantity of used books, saving both the bookstore and students money.

Three hundred and thirty institutions in Pennsylvania are all going after the same books, in all the same warehouses, each semester. The largest task of the bookstore is to purchase as many used books from wholesalers and distributors before other schools have the chance to do so.

Santos e-mails three used book distributors per day, three times a day until he finds the books he needs. If one company only has three, then the bookstore goes to the next company. Once the store has all the used books it can find, it orders the rest from publishers. All colleges want the same books, so it is not the bookstore's fault that can only locate a certain amount of used books.

After receiving professors' orders, Santos compares the book lists of the current semester to the next semester's list and decides what books are to be purchased back from students and wholesale companies.

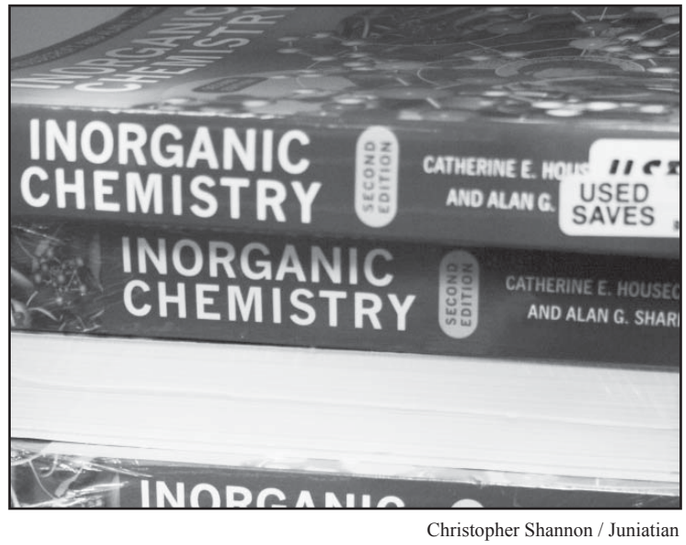
Santos also checks how many students are enrolled in future classes through the Registrar to plan for further demand.

Computers keep history of a book's popularity for each course, helping to judge how many more should be ordered if any at all.

The Internet factor

Junior Caitlin Hinson experienced frustration when the bookstore didn't meet demand.

For her Comparative Psychology course, she needed to purchase the text "Wild Minds." She went to the bookstore the first day of classes to pick up her book, and it wasn't there. After waiting a week to see if more came in, the bookstore, realizing that the book had not been ordered, had to make a special order. However, this special order would take up to two or three weeks. The professor had to hold off readings until everyone could buy their books.



Hinson ordered the text from Amazon.com and purchased it for nine dollars, two dollars less than the bookstore's price for the same used book.

Students often sell their used books on the Internet and receive back more of their initial investments.

To tap that market, sophomores Matt Sullivan and Keenan Drenning and freshmen Anthony Martini and Greg Farabaugh created "JC Cheap Text." Based as a group on Facebook, its goal is to serve as a common ground for students to post what books they have and allow them to either sell to or exchange them with other students for reasonable prices.

Online purchasing has impacted the bookstore's business, but a majority of students still do purchase books on campus, according to Santos.

Students cannot, however, expect the same deals in the bookstore as they receive on online, Santos said. The bookstore's contract with eFollett says the bookstore must have individualized accounts with each vendor from whom they buy books. The store cannot order from random individuals listed online, no matter for how inexpensive sellers may be offering books.

Christopher Shannon / Juniatian

Science textbooks tend to be some of the most expensive books offered by the College bookstore. The Inorganic Chemistry textbook shown above retailed for $140 new and $105 used in the spring of 2007.

Reward draws attention to repeated vandalism

$150 offered to anyone with information

Julia Bogue

On Jan. 20 at 2:00 a.m., the glass in the entrance door to East Hall's Tower 6 was broken for the fifth time this academic year.

"It would take forceful means to have the glass shatter like it did," said Tim Launtz, director of Residential Life, indicating that the glass was intentionally broken.

Juniata students were made aware of the vandalism through an e-mail sent to them by the Office of Residential Life two days later. It informed them of a $150 reward for anyone who could provide information leading to the individual responsible for the damage.

The reward is being used as a "last resort," according to Launtz, in order to stop this recurring crime.

If no one comes forward, the 93 residents of the Tower will each be held personally responsible for the cost of the repairs. This is in accordance with the College's community damage policy as outlined in the "Pathfinder."

The cost to repair the door will be $175, with each resident being required to pay $1.88. According to Launtz, however, the students will not be required to pay the fine unless such an incident occurs again.

The cost of repairing the door is also only $25 more than the reward.

Residents of Tower 6 expressed differing opinions regarding both the reward money and the resulting costs for the damage. Junior Travis Sumner believed that the reward was a good idea, but believed it would be ineffective in coercing students to provide information regarding the crime. It most likely occurred while someone was intoxicated, Sumner said, and residents do not want to get themselves or their friends in trouble.

Shawn McDonald, also a junior, disagreed, feeling that the reward was likely to prompt students to offer information. Instead, he took issue with the community damage policy.

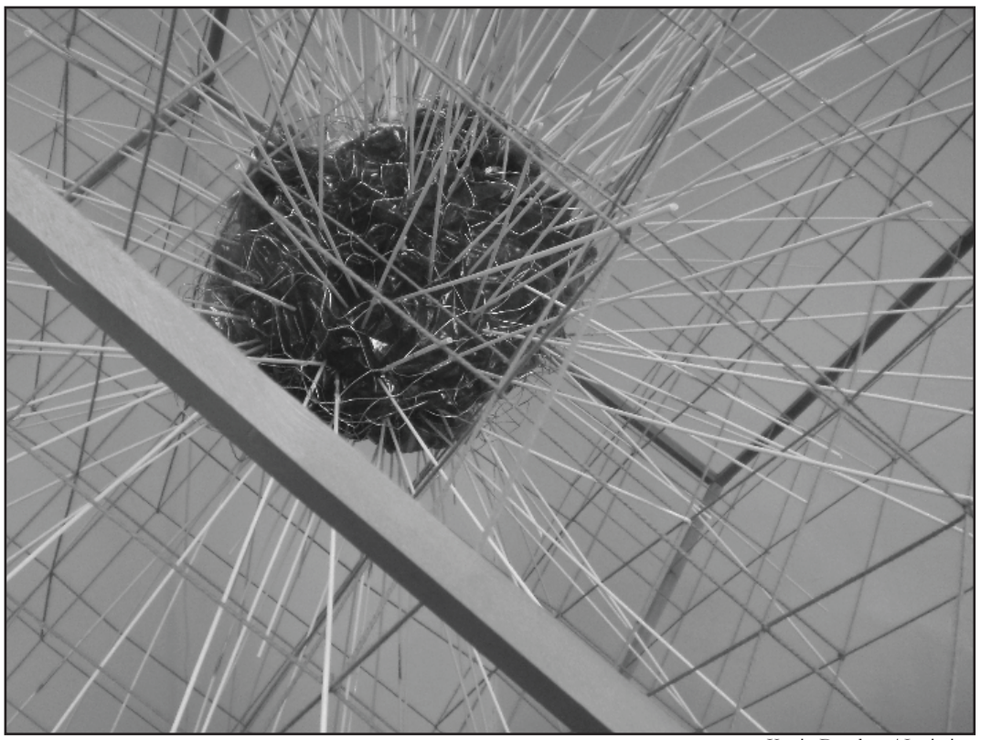
"I don't feel like it's our responsibility if none of us had anything to do with it," said McDonald.

As of press time, no one has come forward to incriminate the perpetrator.

Pizza motivates RSOs to update Web pages

Julia Bogue

In hopes of providing current and prospective students with a more realistic idea of Juniata's registered student organizations (RSOs) and increasing current RSO attendance and engagement, an RSO Web page contest has been developed.



Through the contest, RSO leaders are "given motivation to become interested in their club Web pages," according to Staci Weber, director of student activities. Both CNS and the Office of Enrollment encouraged the formation of the contest.

RSO leaders were encouraged to attend one of four information sessions designed to instruct RSO leaders on how to create, update and upload their Web pages.

RSO leaders have until Feb. 28 to finish creating their entries. A panel of five judges, composed of students and administrators, will then judge the Web pages. Based on the page's content and creativity, the RSO with the best Web page will be awarded a pizza party paid for by the Office of Student Activities.

Social Dancing Club, one of the participating RSOs, hopes that creating its Web page "will make it easier for people to figure out where we are, and get more people to come in," said to Karisa Hunt, an active member of the Club.

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture is located? Send your guess to the Juniatian at juniatian@juniata.edu. Correct answers will go into a random drawing for a random prize. The winner will be named in the Juniatian's next issue.

Last issue's picture was of the sculpture outside of Tussey-Terrace dormitory. Congratulations to winner Jessica Maxon!

Employment opportunities come to campus

Eagle Expo Job & Internship Fair

Friday, February 9, 2007

Ballroom, Ellis Hall, 11:00 a.m. - 2:00 p.m.

What is it? Over 50 employers will be on campus in search of students to fill internship and full-time employment positions. Dress **BUSINESS CASUAL** and bring your resume!

Student Alumni Career Connection

Saturday, February 10, 2007

Ballroom, Ellis Hall, 1:00 – 3:00 p.m.

What is it? Event where students can **network** with alumni from a wide cross section of professions/careers and get advice on career preparation and paths, and learn about internships and career opportunities.

For more details, go to http://www.juniata.edu/alumni/events/connections.html

JCRC seeks indoor climbing experience on campus

Location for wall still unsure

Julia Williams

As treasurer of Juniata College Rock Climbing (JCRC), senior Jason Weeden is working toward installing an indoor bouldering wall on campus.

When asked about a deadline for the project, Weeden said, "Open by Easter, however, that may be an arbitrary date. At the latest I'd like to see this open by the time I graduate."

There's still one key piece missing though: there isn't a room in which to build the wall. Weeden has been working diligently with Tim Launtz, director of Residential Life, to find a place for it on campus. There are two locations being considered: the old movie room in Sherwood and a back room in the basement of Pink.

Launtz points out that Residential Life must keep in mind code considerations, the structural integrity of the room and the upkeep necessary by the Juniata Facilities staff. Launtz is excited about the project and notes that it fits with Residential Life's campaign to add more recreational facilities to residence halls.

Photo courtesy of Erica Kross

Freshman Zach Page is pictured climbs at Hunter's Rocks last semester. Page is a member of the Juniata College Rock Climbing club.

JCRC plans to petition Student Government for a loan to cover the funds needed to complete the project. The equipment is estimated at $3,000, which includes the physical structure, climbing holds and two crash pads (40 square-feet mats to catch a falling climber). JCRC plans to charge a low monthly membership to use the climbing wall in order to repay Student Government.

Members of JCRC, approximately 140 recreational and ten competitive climbers, would staff the room to check memberships, ensure forms were signed and most importantly to help others experience the joy of climbing.

"I can't wait for this thing to become a reality. I'll save so much time and money," said sophomore John Dawes, an avid climber.

A bouldering wall is different from the typical climbing wall because its focus is on short distance climbing and does not involve ropes. Weeden said the wall would, "facilitate beginner to advanced level climbers."

Spam causes concern on campus

continued from page 1

and faculty can do to protect their e-mail accounts is to be careful about where they place their addresses. If an e-mail address is public, spammers are bound to target it.

One method to help manage junk e-mail is to use an alternate e-mail account in situations where an e-mail address must be listed.

"Don't use e-mail for newsletters and other automated sources. …Once harvested, an address can be sold and used against you," said Fusco.

Another safety tip is never to respond to a junk e-mail once it's been received. Even if it is just to unsubscribe to the spammers mailing list. This, in fact, just confirms the e-mail address as a valid target, and could make the problem even worse.

"It's better to not respond to spam. [Spammers] are just guessing that e-mail address still works," added Fusco.

The rise in spam can be attributed primarily to a general increase in e-mail accounts and online purchases. Fusco explained that the spam volume is purely a marketing strategy. Out of the countless e-mails sent by a spammer, a few sales make it worthwhile.

Another reason for the increase is that spammers are redesigning their methods. In an effort to bypass security filters, spammers have turned to something called "image spam." The software used by Juniata, Symantec's Brightmail, tags e-mail and adds spam headings. As most spam filters work by identifying text and keywords, spam enclosed in an image is much harder to recognize as spam.

According to Mickel, "There are lots of programs that catch spam, but spammers are a moving target. They know how to get around the rules."

Mickel noted that e-mail addresses ending in ".edu" are prime targets for spammers because most of the addresses are still active. He added, "The best thing to do is start with yourself and watch where you put your e-mail address."

African-American Read-In

Christopher Shannon / Juniatian

On Feb. 5, Juniata participated in the 18th Annual National African-American Read-In. Both students and faculty read quotes, pieces of literature and poems at the Cyber Café in Ellis as part of the event. Here, freshman Krystal Hope reads from the works of Malcolm X.

Did you know?

There were:

2000 total changes involving **728** students for the Spring 07 Drop/Add period

2780 total changes involving **914** students were made during the Fall 06 Drop/Add period

9,648 grades given at the end of the Fall 06 semester

10,888 grades given at the end of the Spring 06 semester

Letters to the Editor

Juniatians debate about the War in Iraq

War vet speaks against protest

Dear Editor,

As a 100 percent disabled veteran of O.I.F. (Operation Iraqi Freedom) who spent a year in Iraq and survived when some didn't, I would like to know why [Juniata anti-war protesters] disagree with this war. Is it the loss of life on the part of our men and women? Is it the financial cost of this war? Another?

If there is a good reason this war should be protested, since no one has a time machine and can go back to stop the war before it happened, what do you propose to do about the situation we are currently in? Do we cut-bait and run to empower the Muslim extremists and international terrorists just as pulling out of Vietnam did all those years ago? Then we showed we didn't have the heart to follow through, and some of Washington would have us show that again by withdrawing or setting a timetable for withdrawing from Iraq.

There is more to think of than the bad taste this war and any war leaves in our mouths. When a soldier in the field hears that the country is heavily protesting the war he is fighting and dieing [sic] for, you take away form his moral and his ability to do his job.

I may not agree with political explanations for the why, but the outcome was just

Let me tell you that I, along with no other soldier, ever want a war. Sometimes a war is a necessary evil. When it's started, it needs to have an end. The end must be a goal or accomplishment worth the cost. After my time served and time spent deployed in time of conflict, I agree with what we did. I may not agree with political explanations for the why, but the outcome was just. The people of Iraq will not ever have to fear for their families' lives or their own to their own government. They will all share the wealth of their natural resources instead of the men in power. The majority of children will eat and not starve. This has had good outcomes.

Something we need to take a step back to examine is why do some people have the feelings we need to abandon this effort? The media's job is to sell us a story. A happy story of schools being rebuilt and lives saved is not as covered a story because it is not a selling conflict. The media has empowered the terrorist to get a national stage for his crazed actions.

Take this as ramblings of a right-wing extremist or brainwashed soldier, or maybe see this as something to think about before you blindly protest something you know little about.

Brian Nevel
Class of 2006

Photo courtesy of Brittany Moyer

A group of nearly 50 Juniata students and affiliates, mostly members of PAX-O, traveled to Washington, D.C. to participate in the anti-Iraq War protest on Jan. 27, 2006. Here the protesters pose before the Capitol.

A protester's response

Dear Editor,

There are many reasons why I felt the need to attend the anti-Iraq War protest last weekend and why I disagree with the war in general. I write this as an explanation for my choice to attend the protest and as a response to Brian Nevel's question of "a good reason why this war should be protested."

First and foremost, the ever increasing Iraqi and American death tolls, as well as the damage to Iraq's infrastructure, are both significant causes for my opposition to the war. I realize that Iraq was in terrible shape prior to Operation Iraqi Freedom, but it seems to me that the invasion has not helped. It has led to a civil war fought among the Iraqi civilian population, meaning that Iraqi civilians are not safer. Based on Nevel's letter, it seems that he feels the media over-blows such reports, but I think they accurately reflect a large part of the reality in Iraq, though I would certainly be interested in accounts of Nevel's personal experiences there.

Another reason to protest is the dishonest way this nation was led to war. I think that the American people and the world were lied to many times over to begin this war, and it makes me very angry. Just because we can't go back to stop the war before it happened, doesn't mean we can't still be angry that it did happen. The protest last weekend was an expression of that anger.

It is true that such anger alone is not necessarily constructive, but I also was protesting the surge in troops proposed by President Bush. I think that our invasion of Iraq and the continuing occupation of the country have recruited the same violent extremist organizations we claim to be opposing. I firmly believe this, so I can't see how increasing our military presence there will do anything but increase hatred for the U.S. within Iraq and throughout Middle East in general. Still, I certainly would not advocate abandoning Iraq. After invading the country and destroying so much of its infrastructure, as a nation we have a responsibility to provide support and to work for peace however possible. But I don't think that increasing our military presence will help Iraq or make us safer.

Nevel's question of how soldiers in Iraq should take war protests in a difficult one. But let me respond by asking this:

If what I believe is true—if President Bush lied to take us to war and if the war has not improved Iraq or made the United States any safer—then who is responsible for the low morale of our soldiers? If the war is not just, then anger should be towards those who led the invasion, not those who stand in protest.

If the war is not just, then anger should be towards those who led the invasion, not those who stand in protest

Take this as ramblings of a left-wing activist, brainwashed peace-studies student or maybe as something to consider when you think about those who protest the war.

Sincerely,
J.P. Melle

Realpolitik: A surge to save face

James Trent

The twenty-something thousand troops that our Commander-in-Chief is sending overseas are not about military dominance. They aren't about killing insurgents, and they definitely won't be the final step in solving the problems in Iraq.

This increase is a way for the U.S. to save face, like extra credit after a failed test. As I learned at a conference in D.C. over winter break, hearing lectures from policymakers and ex-officials, this move will show the world that the U.S. is committed to the Middle East. No matter how badly we messed things up or how badly the public wants to leave it to the Iraqis, we're there.

The Korean and Vietnam wars show us how well the American public can impact America's long-term military commitments. Now, it seems like the public is ready to throw in the towel in Iraq.

This is why an increase, in spite of this public resentment, is such an effective way for the Bush administration to show the international community that the U.S. means business. This action is meant to satisfy U.S. foreign policy, not the American people.

The fear that the U.S. will suddenly leave, or eventually leave, Iraq in a state of disrepair, is a huge concern in the broader Middle East. Iran's president, Mahmoud Ahmadinejad, has used this as a stepping-stone to increase his authority in the region. Iran has offered to take part in rebuilding Iraq and has met stiff resistance from the Bush administration.

Operation Iraqi Freedom may have removed one dictator from the region, but it has empowered another. The leadership in Iran is wielding more influence in the Middle East each day. First and foremost, Iran continues to antagonize Israel, which is a bastion of U.S. interests in the area. In addition, Iran is cozying up to oil exporting nations far and wide, creating a serious threat to U.S. energy security. Of course, Iran's nuclear program doesn't help either.

Within hours of Bush's speech announcing the troop increase, a raid was conducted on an Iranian diplomatic office in Iraq. As Washington delved into debate about the "surge," American aircraft carriers were deployed to the region and Patriot antimissile batteries were packaged to be shipped within a few weeks. After a provocative speech caught the attention of the world's public, much more serious actions silently showed the world's leaders that the U.S. wasn't bluffing.

The "surge" is less of a military maneuver than a political one. "There is no military term for surge," Paul Hughes, an analyst at the U.S. Institute of Peace, said to me. As a matter of fact, he said, most generals in Iraq believe that the increase is insufficient, and that much more needs to be committed in order to obtain stability in Iraq.

While the Bush administration may not be able to commit the estimated few hundred thousand troops required to control Iraq, it can back the Iraq effort with a highly publicized political gesture like the troop increase. If the Bush administration pulls this off, it will mean a great deal to the region's residents and to the broader international community.

What we are seeing now from Secretary of State Condoleezza Rice's campaign throughout Washington and the Middle East is a rallying for the cause. When I sat in on a Congressional hearing with Rice, I realized that she wasn't really there to explain the plan's details. She was there to put her career on the line, as Secretary of State, and back this policy. In a way, the specifics of the plan were about as irrelevant as the number of troops chosen.

The Iraq War has moved far beyond a test of military strength and into a test of will and determination.

With or without the "surge," Iraq will unquestionably fail without sustained U.S. support. Removing U.S. assistance would allow Iran to gain unprecedented sway in the region, including the region's oil.

Even worse, Saudi Arabia just declared that it might send troops into Iraq to "protect" Sunni areas. Considering Iran's ties to rival Shiite militias, such an ominous move could widen tensions into a regional war.

Unfortunately, the only benefit gained from supporting Iraq is the prevention of these possible costs.

In typical fashion, the Bush administration has already decided what is in the public's best interest. The question for the American public is if domestic support for Iraq is worth avoiding international costs, which are greater now than ever.

Thumbs Up, Thumbs Down

Thumb's up: The new Harry Potter is now available for pre-order. Who will die this year? Voldemort? Harry? We cast our vote for Hermione. Stop being so stuck up! Just make out with Ron already!

Thumb's down: Harry's swansong is going to retail for $35...Come on, J.K. Rowling, you already have more cash than the Queen...isn't that enough?

Thumb's up: Sodexho is trying to give away a Valentine's Day dinner in Baker, but can't get any takers. We know, we know--Baker isn't Tavern on the Green, but we do love an underdog. You go get 'em, Hal McLaughlin. You've got Moxie, and we love it!

Thumb's down: The Mooninites and the *Aqua Teen Hunger Force*. Forget Boston, come to Huntingdon and shut down Moore Street for a couple of hours. We'd be glad to have you, bomb or no bomb. In fact, while you're here, you can visit the beautiful Lake Raystown, shop in our lovely boutiques, and dine in our fine restaurant (just the one). ***This Thumbs up is dedicated to the Huntingdon County Chamber of Commerce. Remember the HCC motto: Whatever you do, don't take the Rt. 26 exit off Rt. 22, for the love of God don't take that exit!

Thumb's down: To the athletic department's choice of music during time-outs and halftimes of games in the Kennedy Sports and Recreation Center. "Jessie's Girl"? "867-5309"? Listen up, music man: Gettin' pumped up by those songs is like trying to inflate a tire with a whistle.

Thumb's down: Frigid weather, no snow. If you're not properly bundled up, you could easily lose a teat. Come on, global warming…we want to get a tan in February.

Thumb's up: To Kevin Federline for his recent Super Bowl commercial debut. Way to bag fries instead of Britney, K-Fed.

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

From the desk of the Registrar, Athena Frederick

What is Drop/Add? It is the first seven days of the beginning of the semester. Juniata's tradition, like most school's, was basically a paper process with a set date of when students could line up outside the door to get their classes with an administrative assistant plugging the choices in the system by card stock during the late 70s to the early 80s where data entry was a primary function.

At Juniata, the Web-based registration rolled out in the summer 2004 and we have been incorporating the new integrated software to create a one-stop shop as a channel in the Arch. The registration became real time and if a faculty member saw a name on his roster, you bet the student had the course in her schedule.

Juniata's academic calendar provides an opportunity for students to register in advance for a whole year in March. This planning assists the departments in identifying what students want, to decide to open new sections, and determine for the Provost's office the need for adjunct visiting faculty. This year, starting March 19, as in the past, students will have a month with full access to Web register and fine-tune their schedules until both advisors Web approve with the sign-off on the Arch.

Waitlists are used as a way to demonstrate your interest in the class. Once a class has a waitlist, the course will appear closed on the Web, and this should clue the faculty member to manage the waitlist to allow students in by the course exception form, as students drop.

What we have found with this past spring registration is that students were holding onto their forms until the last day of drop/add which is a big problem for those faculty who are working with near capacity and closed courses.

My recommendation is that for the next Drop/Add (the first seven days of the semester of Fall 07) students would be able to Drop courses only via the Web. But they would only be able to add courses by paper so that faculty could review what is being added and can approve the choices without the computer.

Pros: Faculty can make quicker decisions because students have dropped themselves from courses and dropped themselves from waitlists.

Cons: Students will have to be extra careful that they do not drop a required class and if so, that it is caught in time to avoid problems with your graduation degree audit.

What are your thoughts? Please e-mail the Registrar at registrar@juniata.edu.

ATTENTION:

Dear readers,

The Juniatian would like to inform you that beginning next issue, we will run two new columns in the Commentary section.

The first is "From the President's Desk," a space for Dr. Tom Kepple to update the campus community on a topic of his choice or a topic recommended by the Juniatian Editorial Board. Possible topics include an update on the plans to renovate Founders Hall or details on the new Landmark sports conference. This column will run in place of "Presidential Perspective."

The second new column is "Ask the Administration." For this feature, the Juniatian will ask your campus-related questions to the appropriate administrator(s)—like Registrar Athena Frederick, Director of Residential Life Tim Launtz or Provost Jim Lakso—and then we'll print their responses. The Juniatian encourages you to write in with questions. Please send your questions for any Juniata administrator to Juniatian@juniata.edu or via campus mail to Box 667.

Look for these two new features in next issue, distributed Feb. 22. We hope you enjoy them, and as always, we encourage your feedback!

Sincerely,
The Juniatian Editorial Board

Juniata alum brings music to Juniata

A cappella groups come to campus

Elaina Clark

On Sat. Jan. 27 voices resonated in Rosenberger Auditorium once again. This time it was by two a cappella groups from the University of Georgia, the Accidentals and Noteworthy. These two groups were brought to Huntingdon by Juniata alumnus, Shane Fuhrman, who was once a part of the popular campus group, "Those Guys."

Fuhrman, a 2006 graduate, currently attends the University of Georgia where he is pursuing a doctorate in Applied Psychology. When asked why he wanted to come back to Juniata to perform, Fuhrman simply said, "My love of music. This is my new family that I wanted to bring back to my old family."

The Accidentals are comprised of 15 male students, and Noteworthy has 13 female students. Every member, except Fuhrman, is an undergraduate at the University of Georgia. The groups are coordinated by students under a faculty advisor. Most of their music is composed by their advisor or themselves. The students also produce their own vocal percussion to accompany the songs.

The concert featured popular music from the last 50 years and was attended by students, alumni, faculty and members of the community. The crowd seemed to wait anxiously for the music to begin and greeted the groups enthusiastically. The audience responded well to the music by giving both groups standing ovations.

The stylish and animated Noteworthy began the concert. Their repertoire included a variety of songs from artists such as Ace of Base, Carrie Underwood and The Jackson Five. The group not only sang but danced to accompany their music. With their talent and enthusiasm, Noteworthy created an exciting atmosphere while maintaining an air of professionalism and experience.

The Accidentals performed after Noteworthy with a selection of songs from artists like Incubus, Jason Mraz, Keane and Vertical Horizon. The group was harmonious and fun. The Accidentals ended the concert by performing songs that they will use in competition when the University of Georgia co-hosts the International College Championship of a cappella. The last song of the evening, "Lullaby" by Josh Groban, left the audience touched and inspired.

Proceeds from the concert totalled near $1200. The money went to The United Way and the Keep Music in Our Schools foundations.

Two Juniata alumni, Zack Coble and Heidi Shoemaker from the class of '06, were among many that came to the concert to support Fuhrman. Coble, Shoemaker and Fuhrman were all members in the Juniata Concert Choir. Coble said about the performance, "It was a great concert overall. There's a lot of talent here. I'm really glad I came."
Shoemaker said, "I thought they were fantastic, and I'm in love with all the guys!"

Both the Accidentals and Noteworthy have CDs for sale. They can be bought online at www.uga-accidentals.com and www.myspace.com/noteworthyislife.

Christopher Shannon / Juniatian

The two University of Georgia a capella groups, the Accidentals and Noteworthy pose for a group photo during a dress rehearsal on Jan. 27. Shane Furman (far left in third row from top), a 2006 graduate of Juniata and one time member of "Those Guys," is a current member of the Accidentals.

MY TAKE

'Children of Men' stuns audiences

Christopher Burlingame

Explosions, chase scenes, moments of levity and a deep underlying message make "Children of Men" universally accessible and worthy of praise.

Based on P.D. James' 1992 novel, "Children of Men" creates a dystopia that has been stricken with an 18-year infertility epidemic. The cause of the epidemic is uncertain, but the movie hints that it may have been gamma rays or pollution.

It is the year 2027, when the youngest person on the planet is killed. As a result, the world goes into mourning for its last son. This brings instant reality to the peril and the inevitable end of the human race.

The director, Alfonso Cuaron, has made a movie that is not to be taken lightly. The film paints a grim vision of the future and human nature. Set in Britain, "Children of Men" suggests that it is human nature to resort to violence and anarchy.

Characters live in a world where immigrants are hunted down and deported, groups launch coups to free the immigrants and the government issues suicide kits labeled "Quietus: You Choose When."

The film revolves around a former activist and drunken bureaucrat, Theo (Clive Owen of "Closer" and "Sin City"), who has been drawn into a plot to

Juniata to host Comedy Central's Jade Esteban Estrada

Singer/actor will perform one-man show, "Tortilla Heaven"

Charlie Allison

Juniata College will host noted comedian, singer and actor Jade Esteban Estrada's new one-man show, "Tortilla Heaven" on Sunday, Feb. 11 at 7:30 p.m. in Rosenberger Auditorium.

Written by his sister Celeste Angela Estrada, and directed by his brother David Miguel Estrada (formerly a member of "Saturday Night Live"), the performance will feature themes that deal with race and cultural integration.

In this performance, Estrada plays three generations of Mexican immigrants, each trying to communicate with the other on a meaningful level. However, like many families, this proves to be a harder task than it appears.

Professor of Spanish, Henry Thurston-Griswold said, "He's [Estrada] trying to show how three generations try to assimilate into American culture. The first generation presses their kids to work hard and speak English, the second raises their kids differently. Each generation has its own set of challenges to meet and has some trouble understanding and communicating with the other generations."

Internationally recognized for his skills as a comedian and actor, Estrada is an outspoken advocate for the gay community. His most famous one-man shows, "Icons: The Gay and Lesbian History of the World Volumes 1-3," have received positive reviews and earned him many awards, including the Columbus National Gay and Lesbian Award for Best Solo Performance. However, many students are most likely to recognize him from Comedy Central's show, "The Graham Norton Effect." Jade has also had an extensive career in popular music, although he now focuses on his Estrada and acting career.

According to Thurston-Griswold, the College received an announcement that Estrada would be touring the area and decided to book him. Student government donated $1500 toward the event, with the Spanish club contributing extra for hosting fees. When asked why Estrada was booked, Thurston-Griswold said, "The topic he's dealing with is relevant, especially today, especially with immigration being such a major issue."

Estrada will conduct a question and answer session after his performance.
Admission is free for all Juniata students and employees; general admission is $5 for the public.

The Naked Truth: Derailing fear

Rebecca

Fear is crippling.

I know that some of you are a little afraid of sending your train down the wrong track, and that's completely normal. But instead of shriveling under pressure, you should power up and spit that fear right out of your smokestack! Think of "The Little Engine That Could." He didn't stop 'til he hit the top because he was optimistic! So "all aboard!" We're going full steam ahead while making a few pit stops to dump a few common reasons for fear. By the end, you, too, can start chanting, "I think I can, I think I can!"

Shopping. Getting protection is not a big deal, but there is a big selection. I don't know if you've visited the Protection Selection Headquarters of the United States (PSH), i.e. the condom aisle at the Huntingdon Wal-Mart, but it's the latex version of the Taj Mahal. This experience can be a little overwhelming for some folks, even for my family. The other day while visiting me, my brother spotted a little box of something he hadn't seen before. He yelled down the aisle, "Hey Mom! Did you know they make vibrating condoms?"

"What do they charge for that?" my mother replied.

There was another woman in the aisle with her small child, and I know she was silently asking that same question.

You could be like that woman, staring at the Vagisil collection for 15 minutes while trying to steal glances over her shoulder at the PSH. Or you could grab your hats and go before my family walks in and asks you if Trojan has ever twisted your pleasure. Can you say "self checkout?"

He's watching. Yes, I'm sure God is watching, but he can't catch everything…unless he has TiVo. But I'm pretty sure that service isn't available at such altitudes.

It's gross. One of my friends is not comfortable talking about the deed, let alone the act of signing that deed. That's okay; I'm sure Jesus felt awkward when the disciples were talking about their sins too. Fortunately, I have found a solution in my handy-dandy "Little Black Book of Sex." Although it may not make you fear the bedroom less, I do think it will help you laugh (not in a nervous way) at the subject of getting down. Please repeat the following until comfortable: Carolina. Aunt Jemima. Hands off that's mine-ah. Vagina.

Inexperience. We're all afraid of the unknown, but let me tell you…it's like ridin' a bike...in more ways than one. Just make sure that head is covered! Wear a helmet because if your bike chain slips, you don't want to leave some unwanted grease on the pavement.

Everyone will know. If you lose your virginity while at Juniata, you do not have to add it to the Daily Announcements. Pop a Xanex, kids. It's gonna be alright. The P:drive will crash before your Virgin Mary image does, and we'll have an announcement about that instead.

Saving yourself. You're afraid to break your promise of waiting until you marriage. Waiting until your wedding night sounds like a lovely moment to treasure, but weddings are tiring. Recently, I read a very tragic statistic: At least one in three of you will be hitting the wrong sack that night. Yup, 33% of you are gonna be having a siesta instead of a fiesta… and that means no one's whacking your piñata.

It should be special. I'm only going to say this once, so listen carefully: your first time will be no more special than your Kindergarten graduation. The whole thing lasts about as long as it takes to recite the alphabet.

I'm not suggesting you do anything you are adamantly against. I am suggesting that if fear is the only thing keeping you from getting off at the next sexit, then maybe you should consider some of the above before you continue to derail.

Regardless of when you do decide to start revving that engine, make sure to wear your conductor's hat before getting on the caboose. Soon enough you'll be rolling along like a well oiled machine. Chugga chugga choo choo!

'Children of Men'

continued from page 11

help a refugee escape from Britain to a mythical group known as "The Human Project."

The movie hinges on the twist that the refugee, Kee (Claire-Hope Ashitey, "Shooting Dogs"), is pregnant. Both literally and figuratively, Kee's pregnancy represents the future of the human race. As they try to escape, they fight to outsmart activist groups, who wish to use Kee's baby as a symbol in the resistance, and the British government, which wants to eradicate all immigrants from England.

During their travels, Theo and Kee meet Jasper (Michael Caine of "Cider House Rules" and "The Prestige"), a weed-growing activist who lives in seclusion. Jasper plays a significant role, leading Theo and Kee to their final destination.

Owen and Caine, playing off each other well, give outstanding performances. Ashitey holds her own with the more-seasoned actors and brings freshness to the film with her youth and inexperience.

The movie functions on various levels. It is simultaneously a futuristic sci-fi flick, a gritty study of human nature, an explosive action movie and an inspiringly literary comment on hope. "Children of Men's" layers are woven together flawlessly. The action relies upon the characters that are enhanced by the symbolism.

The violence and action do not detract from the film's overall comment on human nature. Although the subject matter and the images in "Children of Men" are disturbing, disheartening and violent, the writers successfully insert quick one-liners that lighten the mood and make the most torturous scenes bearable.

"Children of Men" is up for three Academy Awards including "Best Writing, Screenplay Based on Material Previously Produced or Published."

Rated R for strong violence, language, some drug use and brief nudity. Running Time: 109 minutes.

Final Take:

★★★★

Bold storytelling, exciting plot twists, explosive action sequences and brilliant acting promise to establish "Children of Men" as one of the year's most important films.

Freshman Casino Night

Photo courtesy of Anna Elias

In an effort to introduce the freshman class to the Juniata Alumni Association, freshmen students play poker at the Freshman First Night event on Jan. 16 to kick off the semester. Faculty and staff played the house in casino games such as toulette, black jack and craps. Seniors were there serving "mocktails." Door prizes were awarded at the end of the night, including an iPod, a TV/DVD player and a Sheetz gift card.

In the Name of Fashion

Getting dressed for class

Kelly Popernik

Who doesn't love sweatpants? They are comfy, fast to throw on and may even be a designer pair. But are they the best piece of apparel to make you concentrate?

Do you ever feel that if you get dressed up for your pre-calc class you might pay more attention and focus on the numbers, instead of the hundreds of hearts and stars you drew on your notebook the day before? Does getting dressed for class make you feel more productive?

As college students, it is hard for us to wake up an extra hour early to hop in the shower and put a great outfit together. This does not even include the time we need to prepare everything for class. Most of us, myself included, truly need that extra sleep, even if it's fifteen minutes, and we'll settle with sweats and sneakers rather than give up that time in bed.

Typically, though, sweatpants are associated with laziness. As hard-working students, we all know that we are far from lazy, but maybe we aren't dressing for productivity either.

Whether we like it or not, looking great for class can send a certain message. We look more professional, like someone who not only has an apparent polished look but a polished personality as well. I not only feel more prepared for class, but I also feel well put-together, ready to learn and confident. Another perk of getting dressed for class is that looking good also makes us feel good. We feel more self-assured and are willing to do, or say, things that we might not have felt comfortable doing before.

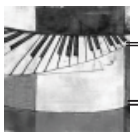
Once we enter a foreign place called "the real world," looking put-together can help us be perceived as competent and professional people who care about their images and jobs. There are also rules of dress in the real world. However, as college students, it is now the time when we can look trendy and create our own unique sense of style without those rules.

The truth is that our appearance can do us wonders. Women know that when we wear that new top, we can feel sexy. For you guys out there, you may feel as if you can get any chick without using a cheesy pickup line when dressing up in more than jeans and a hoodie.

It is about being you. For most of us, these four years of college are the last years we will have complete freedom to be an individual and to be as expressive as we want. So live it up, get dressed, and raise your hand in pre-calc for cryin' out loud!

Fun Fashion Tip

Want to make your eyes pop without wearing tons of makeup?



Use white eyeliner on the inside of your bottom eyelid, and add black mascara to your bottom and top lashes!

In the mood to swing

Christopher Shannon / Juniatian

Matt Lovell and Katy Weyworth swing dance in the Ellis Ballroom. The swing danging club meets every Monday evening at 9 p.m. in the Ellis Ballroom.

The Rhyme, Rhythm and Reason

FOLK: the yours, mine and and ours of music

Lisa Detweiler

What is it that gives music meaning? Is it a climactic riff of notes, a clear tonal voice, the message of a song? The problem with the music of our generation is that stereotypes and style dictate our music choices, and our music choices dictate the stereotypes. For instance, tattoos, piercings and plaid mean you listen to punk music and despise your parents. Leather and long hair mean you play a Fender guitar and are headed to drug rehab. Levis, work boots and a can of Copenhagen translate to driving a Ford and listening to country and bluegrass.

Music should unite, not divide; but it is becoming progressively harder to point to a song and say, "This is the music of my generation." We no longer understand the meaning behind the music—the story, the failures and successes. This is precisely what makes folk music not only an evolving form, but a historical primary source that provides a glimpse into the politics and lifestyle of a generation.

Folk music refers to the music of the people. This is perhaps why many will close their ears to any discussion of the folk associated with the blue collar, redneck, ridge-running Appalachian Americans. However, this stereotype could not be more false. At some point we have all sung, heard and enjoyed a folk song.

Do you remember singing "I've Been Working on the Railroad" as a child? This song was popularized during Westward Expansion. Some believe it is an adaptation of a hymn sung by Irish work gangs. Others trace it back to a Louisiana Levee song of African Americans. This is a reference to the Louisiana Levee Company formed in 1871. This company was responsible for rebuilding the levees that were destroyed in the military campaigns of the Civil War.

Regardless of its origin, folk music is purely American; its story is neither black nor white, north nor south.

The origins of folk music date back earlier than the 1880s, when it was brought to America by the earliest European settlers. For this reason, some of the earlier ballads mirror traditional pieces from England, Britain and Scotland. One of these haunting tunes, "Lady Margaret," was recently adapted and popularized in the film "Cold Mountain."

"Lady Margaret" was traditionally a tune about a woman dying on her lover's grave, although the version of "Cold Mountain" switched these roles. Regardless of time or title, a story of lost love is told. Originally, it was an adaptation of a ballad titled "Sweet William's Ghost," a story Sir Walter Scott once reported hearing from a woman in Shetland. According to the story, a woman, after losing an engagement with her fiancé, returned to find him dead. Only by touching his dead cold hand would she be able to prevent a visit from his spirit.

There are many songs of the 1960s that we don't associate as being folk music. "We shall Overcome," popularized by Pete Seeger, was originally a slave spiritual song adapted in the 1940s during the labor strikes. At this point the "I shall overcome" of the original version was changed to "We shall overcome," and it eventually became the song of America's Civil Rights Movement. Folk music became the music of protest and war in the 60s. We seem to define this era as a revolutionary period in terms of music as much as politics.

Compare this revolution to a ballad of Revolutionary America titled, "The Dying Redcoat". This was allegedly written by a dying British soldier in 1776, following the British landing in Manhattan. The ballad ultimately commended the efforts of the colonies and became a popular song among colonial ranks. "Fight on America's noble sons. Fear not Britannia's thundering guns; maintain your cause from year to year. God's on your side, you need not fear."

Whether it is the American Revolution, the American Civil War or the American Civil Rights Movement, folk music has recorded our identity. It has been the fuel for causes and an emotional offering for all those who hear it. Folk music is meant to be sung, not just heard. It represents the story that is yours, mine and ours. Sing it for you. Sing it for them. Sing it for us.

This issue's Reason:

For films with fantastic folk music and some historical context watch "Songcatcher" and "Cold Mountain."

Even if you don't like them, no one can ignore the blue eyes of Aidan Quinn and Jude Law—our very own Hollywood folky hunks—at least for the hour and half you will spend with them.

JC UP LATE presents:

Bring 'Em Out Fashion Show

Feb. 16, 8:30 p.m.
Ellis Ballroom

The show will premier Polyphony Clothing, a company founded by Tripp Rudolph and Ryan Conrad.

Other clothing lines (as of Jan. 29):
Confess Clothing
Pyknic Clothing
Aeropostale
Buckle
Industrie Clothing Store (State College)
Fashion Bug

Sponsored by Red Bull Energy Drink and Hooters

Haircuts and massages for students

Students may purchase clothing from the companies after the show.

Tickets are $2
Proceeds benefit WKVR and The National Eating Disorder Organization

Contact Ryan Conrad with questions or if you'd like to help with the show: polyphonyclothin@hotmail.com

Men's volleyball starts hot

Casey L. Shaw

Making history is the biggest accomplishment an athlete and a team can aspire to achieve in sports. The Juniata men's volleyball team (3-1) could make history again this year. The Eagles are striving to become the first team to win four Division III Molten National Championships in a row.

"We are ready to play no matter who the opponent," said first year head coach Jeremy Price.

An argument can be made that this year's team is as strong as any other Juniata team that has won the Molten title. Boasting seven seniors, the Eagles have a distinct advantage in terms of experience. With the Molten Invitational to be held at the Kennedy Sports and Recreation Center this year, the seniors hope to make history at home.

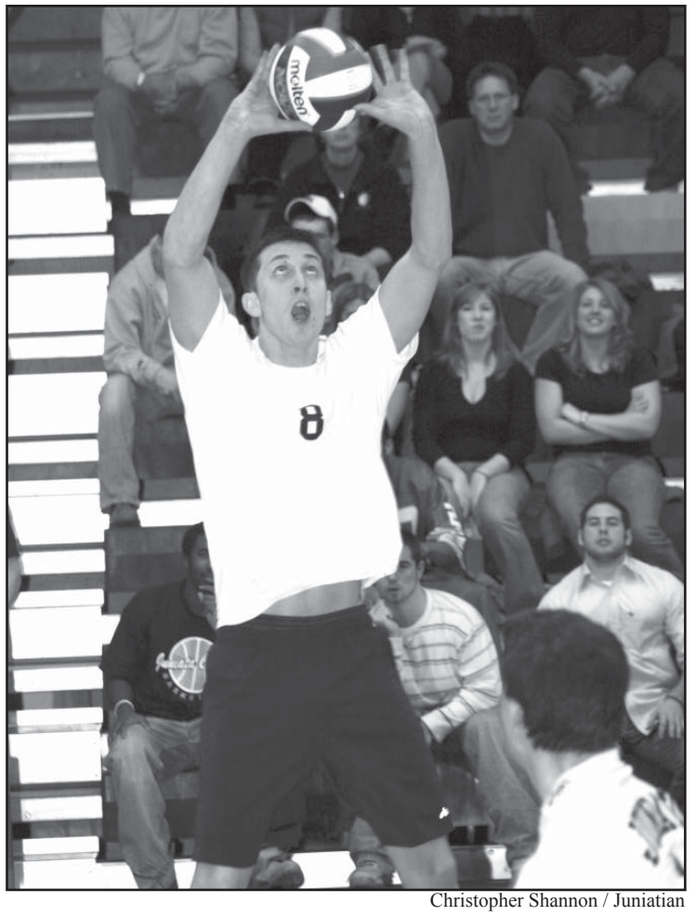
After finishing with a 14-13 record last season, Juniata looks to build off its previous success and depth. The Eagles' starters are a diverse group. The starters include sophomores Matt Werle and Dan Powers, junior Matt Fritz and seniors Nate Ocasio, Glenn DeHaven, Jeremy Barndt and Casey Dale.

But the Eagles won't be satisfied with the Molten trophy alone. Assistant coach Scott Horning said, "When we set goals for the year, our number one goal is to make the NCAA Championship Final Four." Juniata has never made the Division I tournament.

"When we set goals for the year, our number one goal is to make the NCAA Championship Final Four."
– Assistant coach Scott Horning

The Blue and Gold began its pursuit of history during what was hailed across campus as "Men's Volleyball Weekend" on Feb. 3-4. The home team defeated New York University 3-2 on Friday and blanked Springfield College (MA) 3-0 on Saturday.

The match against NYU was all Eagles early. They jumped out to a two game lead over the Violets.



However, the Violets battled back and tied it up 2-2. The men put the match away with a 15-11 fifth game. "We knew we had to go out there and get the job done. We knew were the better team," said Ocasio about taking the fifth and deciding game against NYU Friday night.

Saturday, Juniata's defense was the key to the victory over Springfield College (MA). Ocasio, DeHaven, Barndt and Powers all produced double digit kills in the match.

Senior right side hitter Nate Ocasio has played a key role early in the season. In the first four matches he has recorded a total of 71 kills, 15 digs, 5 service aces, 77 points and had a hitting percentage of .365.

Most recently the Eagles faced rival Penn State University in State College on Feb. 6. Results of that match were not available at press time.

The Eagles return to action tomorrow night at home against Princeton University.

Christopher Shannon / Juniatian

Sophomore setter Matt Werle sets a teammate during Juniata's first home match of the season against New York University on Feb. 2.

Christopher Shannon / Juniatian

Students and players alike celebrated after Juniata won a thrilling men's basketball game against Albright 76-75 on Jan. 20. Senior guard Aaron Chamberlain sunk a three point basket with four seconds remaining and then stole a Lions' inbounds seal the victory and set off the celebration.

Working as one to reach number one

Team defense key for Juniata

Jess Winemiller

Babe Ruth said, "The way a team plays as a whole determines its success. You may have the greatest bunch of individual stars in the world, but if they don't play together…" they won't be a contender for the Mid-Atlantic Conference (MAC) championship. Now deep into the season and over halfway through conference play, Juniata men's basketball (12-9) is stepping up to the challenge as one unit.

"We have been really helping each other, and playing as a team, five guys against one," said junior point guard Kyle Optiz about Juniata's defensive effort against Messiah College on Jan. 29.

The Eagles' exciting wins resulted in a 6-4 conference record.

The team mentality was evident when the conference leader, Messiah, entered Memorial Gym. The Eagles, who fell to the Falcons by 20 points in November, handed Messiah its first conference lost, 76-67.

Junior Brian Cannon noticed the roles were reversed this time around. "Last time they [Messiah Falcons] came out and were the aggressor….This time we flipped the switch on them. This time we forced them back on their heels, used their pressure against them."

Offensively, Cannon was an aggressor, posting 24 points in

continued page 18

Coming down the home stretch

Women's basketball needs wins to reach MAC playoffs

Derek Stanley

With four games remaining the Juniata women's basketball team (13-8) is on the verge of breaking the program's single season wins record, 13, which was set during the 2005 season.

However, the team's interests go beyond that record. Its focus clearly rests on the final four conference games. If the Lady Eagles win their remaining four conference games they will earn a berth in the Middle Atlantic Conference (MAC) playoffs. Securing that playoff spot will not be an easy task, as three of the Juniata's final four opponents have already handed the Eagles losses this season.

Most recently Juniata upended Widener University 65-61 on Feb. 3, guaranteeing the team's first back to back winning seasons since 1992, 1993. Sophomore Kelly Ashcraft led the Eagles with 15 points while also bringing down nine rebounds.

"We knew that our road to playoffs was going to start with that game. It was a win we knew we had to get. We're just trying to take it one game at a time to get where we want," said sophomore Claudia McDowell.

On Jan. 30, the Lady Eagles fell 63-32 to Messiah in Memorial Gym. However, the score does not reflect the quality of the game.

"They're a great team, and we played a great first half against them. We held them to 22 points in the first half which is not something many, if any teams, in our conference can say. We just have yet to put together a full 40 minutes against them, and are looking forward to meeting up with them again," said junior guard Ali Meckey. Meckey leads the team in three point percentage this year, shooting .459 from beyond the arc.

The Lady Eagles are coming together at the right time. After suffering a devastating overtime loss to Lebanon Valley College, 55-53 on Jan. 24, the team used this loss as a lesson and refocused for its next game against Moravian College.

"Going into Moravian, we were seriously focused on getting a win. [They] beat us pretty bad at their place [earlier in the season] so we had a chip on our shoulders going into it," said Meckey.

Avenging the 72-57 Jan. loss, the team used that chip on its shoulder to pull off the huge win 81-69 over the Greyhounds.

Junior Jess Winemiller led the Eagles over this four game stretch with 53 points, including a career-high 27 points during the contest with Moravian. She also leads the team overall with 235 points on the season and averages 11.2 points per game.

Juniata will return home Feb. 10 against Lebanon Valley. The Eagles will look to pay back the Flying Dutchman for an overtime loss on the road in January and will look to punch their tickets to the playoffs.

Christopher Shannon / Juniatian

At top, junior guard/forward Courtney Callas drives to the basket during Juniata's game against Elizabethtown on Jan. 17. Directly above, junior guard Ali Meckey looks to dish to a cutting teammate during Juniata's game against Messiah on Jan. 30. At right, Junior guard Mindy Werner sets to inbound the ball during an Eagles' home victory over E-town.

Tapered for the stretch run: Swimming looking forward to MACs

Derek Stanley

For the first time in Juniata women's swimming history all 12 members of the team has qualified for the conference culminating event, the MAC Championships.

Jan. 27, the women closed out their regular season with a win against Kings College. They finished with a 6-6 record.

Junior Kasey Brough posted a solid performance against Kings placing first with a time of 2:28:69 in the 200 Individual Medly as the women claimed the top three spots in the event.

"Kings was a fun meet for all of us, we got to choose the events we wanted to swim," said Brough.

Without a doubt freshman Kelly Serfling and Paige Black enjoyed the meet as their times qualified them for the championship in the 100 Butterfly and 100 Freestyle, respectivley.

The ladies preparation for the championships began approximately three weeks ago as they began to taper their workouts. The women swam less yardage during practice and instead focused on their stroke technique and conserving energy.

"Our engery just skyrockets at this time of year, we drive [head coach] Brian [McGrath] crazy, but it allows us to give it all we've got at the meet," said Brough.

Brough will receive multiple high seeds in the distance events at the championships and may contend for a gold medal at the championships.

The championships begin February 9th in Wilkes-Barre and the ladies training strategy will ensure peak performance from all the swimmers.

Steelers hire their first African American head coach

Brian Spinazzola

After a 2 1/2 week stretch of uncertainty, the Pittsburgh Steelers finally have a new head coach. Mike Tomlin, the former Minnesota Vikings' Defensive Coordinator, was hired by the Steelers on Jan. 21. Tomlin is the first African American head coach in the team's 74-year history.

Tomlin received a four-year contract worth about $2.5 million per year. He will be only the Steelers' third head coach in the past 38 years, preceded by Chuck Noll and Bill Cowher.

In an interesting coincidence, Tomlin was chosen to become the Steelers' next head coach on the very same day that two African-American coaches became the first of their race to coach in the Super Bowl—Lovie Smith of the Bears, and Tony Dungy of the Colts. Tomlin is also connected to Dungy, in that he was the defensive backs assistant under Dungy while at Tampa Bay. Tomlin will join Dungy, Smith, Marvin Lewis, Romeo Crennel and Herman Edwards as one of the NFL's six African American head coaches. For many, Tomlin's hiring shows that the NFL is making progress towards racial equality.

Tomlin was believed to be far behind the Steelers then- incumbent offensive coordinator Ken Whisenhunt, and long time assistant head coach Russ Grimm in the race for the job. But Whisenhunt took the Arizona Cardinals' head coaching job on Jan. 14. After Tomlin was hired, Grimm later accepted the Cardinals' assistant head coaching job under Whisenhunt.

Since Tomlin's hiring, several coaching moves have occurred. He recently hired Bob Ligashesky as the special teams coach and promoted Ray Horton from assistant secondary coach to primary secondary coach. However, Tomlin has retained several key members from last year's staff, including defensive coordinator Dick LeBeau, and linebackers coach Keith Butler.

It is possible that Tomlin benefited from the NFL's "Rooney Rule." In 2002, Steelers owner Dan Rooney lobbied for a rule that would require every NFL team to interview at least one minority candidate for coaching vacancies. However, while Tomlin might have benefited from this rule, Steelers management says that he was chosen because of the strong credentials that he showed during two interviews.

In another striking coincidence, Tomlin will become the fourth consecutive Steelers coach who was previously a defensive coach with another NFL team before being hired for the head coaching spot. He was the defensive coordinator of the Vikings. Bill Cowher was the defensive coordinator of the Chiefs from 1989-1991. Chuck Noll was a defensive coach for the former Baltimore Colts. Bill Austin was a defensive coach for the Packers in 1965.

Prior to being hired by the Steelers, Tomlin coached at various NCAA Division 1-A schools. He was a graduate assistant at Memphis in 1996, the wide receivers coach and the defensive backs coach at Arkansas State from 1997-1998, and the defensive backs coach at Cincinnati from 1999-2000.

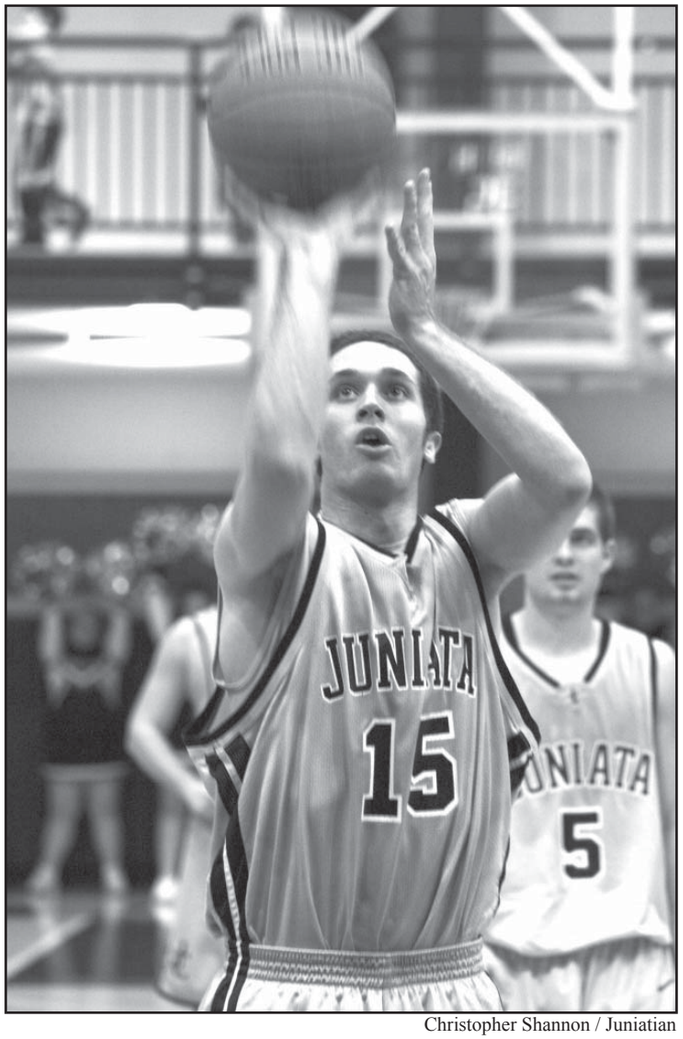
Art and athletes team up

Jess Winemiller

The Student Athletic Advisory Committee (S.A.A.C.) will hold a Live Art Auction Saturday, Feb. 24 in Ellis Ballroom in order to raise money for the Huntingdon Community Center (HCC). The preview for the auction will begin at 7 p.m. with the actual auction beginning at 8 p.m.

Each ticket costs $15, while a couple costs $25. Tickets can be purchased at the door or in advance from S.A.A.C. advisor Danny Young at extension 3518.

The auction is presented by Ross Galleries out of New York. A variety of art will be on display for the attendees. The selections will range from fine art to sports and music memorabilia. Also, the Juniata sports teams to intend to put up some school memorabilia for bid.



S.A.A.C is composed of athletes representing each of Juniata's varsity team. The club fell out of existence for a few years, only to re-emerge in the fall semester of 2005.

With direction from Young, also the head women's basketball coach, these athletes are looking to make an impact off the playing field or court as well as on it.

"Obviously, the main goal of this art auction is to raise money for the HCC. It provides a great outlet for families and children in the community" said Lauren Gates, president of S.A.A.C. "We are also doing our part to give back to a community that has given us so much."

The auction is open to students, faculty and community members.

"If nothing else, it is something to do on Saturday night; a chance to get out, try something new, and enjoy a wonderful evening," said Gates.

Christopher Shannon / Juniatian

Senior guard Aaron Chamberlain attempts a free throw during Juniata's game against Albright on Jan. 20. Chamberlain went 3-3 from the line on his way to a 16 point performance. Ironically, Albright missed four foul shots in the final 17 seconds to set the stage for a dramatic Eagles' come from behind victory, 76-75.

Working as one to reach number one

continued from page 15

game from the strong forward spot. In more than 20 games this season, Cannon has never been one of the five starters.

However, Cannon places his team's rising success above winning a starting spot. "It was a decision coach made at the beginning of the season. He is just sticking to it," said Cannon.

Cannon isn't the lone player hitting the 20 point mark. Optiz had a career-high point total against Moravian on Jan. 27 as the Eagles topped the Greyhounds, 70-50. He scored 21 points, 15 of those coming from behind the arc.

"I hadn't been shooting the ball as well as I am capable of, and it was nice to get my shot going and hopefully I can continue that for the last four games," said Optiz.

Once again, the defensive effort proved to be the team's strength during the contest. The Eagles forced the Greyhounds to turn the ball over 22 times and limited them to 32 percent shooting from the floor.

"We know that if we want to be successful in our league, we have to be able to defend," said Optiz. Moravian's 50 points are the fewest Juniata has allowed in one game all season.

After capturing big wins against Moravian and Messiah, the Eagles kept up the sweeping defense to hand Widener, who at the time was second in conference standings, a payback loss, 71-62. The Eagles fell to Widener in the fifth game of the season by 10.

Juniata only allowed the Pride to score seven points in the first 11 minutes of the second half. This allowed the Eagles to overcome an eight point deficit at halftime and eventually leave with another stroke in the win column.

"Team Morale? High. Conference Playoffs? On track. MAC Championship? Stay tuned."
– Brent Ferko

The Eagles now are standing at a tie for second with three critical games left. Each of those games are conference match-ups with playoff implications.

Junior guard/forward Brent Ferko said it best, "Team Morale? High. Conference Playoffs? On track. MAC Championship? Stay tuned."

McKenzie passes the reins to Dubois

Men's and women's soccer poised to take next step

Jeremy Barndt

In the fall of 2000, Scott McKenzie took on the task of coaching both the Juniata men's and women's soccer teams. This may not seem outlandish, until you realize that he coached two teams whose seasons run at the same time. Such a task is not for the faint-hearted.

Over his seven years at the helm, McKenzie has been able to build both teams to a point where they are competitive in the conference. So what is the next logical step in each team's progression?

Athletic Director Larry Bock said, "Each team has full squads with good players. It is just time to give each team [its] own full time coach."

Coach McKenzie is stepping down as men's head coach to concentrate on the women's team. Of his newly focused responsibilities he said, "Spending all of my waking moments worrying about one team eases the burden of coaching two teams."

Coming off the best season in program history (10-8-1), McKenzie said, "Our women's team is poised now to take the next step."

Members of the women's teams reacted positively to the announcement. "We are excited because now we have our own coach. We always thought it was unfair that he had to coach both teams. Now he can give us his all," said junior goalkeeper Lisa Russo.

On the other side of the ball, the men's soccer program will be taken over by former assistant coach Dan Dubois. Dubois looks to be the change that will propel the men's team to the next level.

Dubois wants to bring his own style to the men's team. He said, "I have an attacking coaching style. I like to go after teams and not wait around for the other team to make their move."

Coach Dubois in turn wants to play off his team's strengths, a solid team defense with forward scoring ability.

Coaching under McKenzie for three seasons, Dubois learned how to interact with the student athletes on a more personal level.

The men's team is excited to work with Dubois as well. "He brings a lot of energy, fresh ideas, and we have a lot of trust in him," said sophomore forward Fred McNeal.

With a strong returning roster, Dubois and his players look forward to competing for the conference championship next season.

One thing that can excite both teams is next season's conference shift. In the Landmark Conference, they will no longer have to go through the Division III perennial powerhouses like Messiah and Elizabethtown to reach the playoffs.

Dubois said, "The new conference will open up doors for us and we will no longer have to go through the roadblocks like Messiah."

The women's team is working just as hard to prepare for the upcoming season with their minds set on success. "We're coming off our best year ever and we are not satisfied with that. We are working hard to get into the postseason next year and compete for the conference championship," said Russo.

Although the women's team will be losing some strong contributors to graduation, McKenzie will not lack talent on his roster. With this past season's freshman class of 13, the Eagles could be strong for years to come. Combined, the freshmen contributed 23 of the team's 35 goals and footed 16 of the team's 20 assists.

With both coaches concentrating on their teams at daily practices, more time to recruit, and excellent young talent, Juniata soccer expects to be a force in the Landmark Conference.

Indoor track competes at Susquehanna

Photo courtesy of Cailtlyn Hinson

Juniata's indoor track team competed at the Orange & Maroon Classic at Susquehanna University on Jan. 19. Above: Tripp Rudolph runs a strong race, finishing 7th out of 33 runners. Juniata fared well on the day. In the men's 55 meter dash, the Blue and Gold claimed two top-six finishes. The women's team received a notable effort from Kelsey Buffenmyer who took first in the long jump and finished second in the high jump.

Juniata returns to Susquehanna tomorrow for a second meet and competes at Bucknell Saturday.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

FEBRUARY 22, 2007 | JUNIATA COLLEGE | VOLUME 88, ISSUE 8

New wing planned for music program

Julia Williams

Contingent on a large gift pledge to the College, Juniata is in the planning stages to add a new music wing to the Halbritter Center for the Performing Arts.

Spurred by Marlene and Barry Halbritter's gift designated to study the feasibility of such a project, a planning committee comprised of trustees, faculty, administration, staff and students is currently reviewing architectural sketches of the proposed wing.

While sketches will not be made public until after the April board of trustees meeting, President Thomas Kepple did share known details about the proposed music wing.

Currently, the wing is planned to be 15,000 square feet, which would more than double the current available music space at Juniata.

Construction would begin at the very earliest in summer 2008. The cost for the two-story addition is currently estimated between three and four million dollars.

The music wing would be located in the library parking lot. A new, slightly larger parking lot would be constructed in the space currently occupied by Swigart Hall, a building that has been scheduled for demolition since the 1991 Campus Master Plan Study.

When asked why the College is planning new construction for a program that does not offer a POE, Kepple said: "A music program is an important amenity to us, just like having a football team. It's attractive to a lot of students."

Many believe that Swigart Hall is failing the music program for several reasons. In regards to Swigart Hall's functionality, professor of music James Latten said it is "totally and completely unfit and inappropriate for music study and practice."

For instance, Swigart Hall lacks soundproofing. As a result, the sounds from a music class often interfere with students practicing piano or receiving voice lessons.

The building is considered so

As part of her internship with the Juniata College Museum of Art, senior Jillian Seraphin works on choosing historical photos of the College for the art museum's Juniata College exhibit.

Internships common for JC students

Office of Career Services provides resources for finding internships

Jason Najarian

With rising competition among job seekers, work experience prior to graduation can be a valuable item on resumes. According to Juniata's Office of Career Services, about 75 percent of all Juniata alums have participated in some sort of academic internship, and the practice is still strong.

Even though it is common for students to pursue internships, many do not know where to start. The College has resources to help students seeking internships, whether they are just starting to look or trying to finalize the process.

The Career Services Office is the place to start, where there are many print and electronic resources that are helpful in finding contacts. No matter how far or early into the process a student is, Career Services can provide assistance.

Darwin Kysor, director of Career Services, said, "We work with students at whatever level they come to us."

One of the first things a student must decide is what type of internship he will pursue. The two types, credit and transcript-notation, entail different requirements and responsibilities.

A transcript-notated internship does not award academic credits, but is listed on student's transcript. This type of internship requires an agreement between the student and the employer, and the student usually performs a presentation on her work after the experience.

A transcript-notation internship includes a minimum of 240 work hours. It is typically done over the summer and ties into a student's courses. Before taking a transcript-notation internship, it must be approved by Career Services.

Generally, internships for which a student receives a salary are transcript-noted.

A credit internship is a bit more detailed because the student receives academic credit for his work. Specific job duties and academic components are required, along with the support of a faculty member who is willing to sponsor the student and verify the validity of the internship.

A credit internship ranges anywhere from two to 14 credits, depending on the needs of the student. It requires a minimum of two hours of work per week, and can sometimes be a full-time job. Students must pay for each credit they earn with this type of internship.

In both types of internships, students are evaluated while on the job.

"Employers evaluate a student's performance and students evaluate their experience," Kysor said. "Site visits are made to as many as possible. [We visit] nearly all credit internships and over 75 percent of transcript-notation internships."

When confronted with the idea of looking for internships, students may not know where to start.

Caffeine: Juniata students' drug of choice

Is the habit helping students get to class or is it time to start weaning off the buzz?

Mindy Bozick

All over the country, caffeine is becoming a popular means of dealing with the hustle and bustle of the hectic American lifestyle. Juniata College is no exception to the nation's growing addiction to caffeine.

On campus, coffee and espresso can be found for sale in several places, and Juniatians are enjoying their fair share.

A highly caffeinated campus

Retail Supervisor for Sodexho Food Service Mary Hornbaker, whose job involves overseeing the operation of Jitters and Café a la Cart, said that in order to keep up with the caffeine demand on campus, she must order large amounts of coffee and espresso beans.

Hornbaker said that every week she orders 24 to 30 pounds of espresso beans and around 30 pounds of coffee beans.

According to Hornbaker, around exam time and when "a lot of papers are due," even more coffee may be needed.

Sodexho orders 24 to 30 pound of expresso beans and around 30 pounds of coffee beans each week

Usually, the average pound of coffee beans can produce around 30 to 40 eight-ounce cups of coffee. This means that more than 850 cups of coffee sold in an average week at Juniata.

Jitter's employee Jeanie Santillo said that she understands why so many people drink so much coffee.

"In order to get all of their work done, students need that extra caffeine boost to stay awake in classes after a long night. You have to do what you have to do," she said.

Jitters patron, Olivia Grugan, agreed that the reason she drinks coffee is to curb the effects of sleepless nights.

Grugan also said that she's not sure if it actually gives her energy, or if it's "just a placebo," but in any case, she believes it helps her deal with lack of sleep.

Senior Laura Drews said that she believes just the opposite.

"I believe that one of these days the caffeine will stop working for these addicted people. I believe that your body is not meant to be active for as many hours as caffeine allows it to be," she said.

The truth of the matter is that coffee, espresso and other caffeine products are becoming a quick fix for people who are not getting enough sleep.

But Juniatians are far from being alone in their caffeine consumption. Around 90 percent of the American population consumes caffeine in one form or another every day. More than half of all American adults consume more than 300 milligrams of caffeine daily, which is, according to doctors, two times what the average person should be consuming per day.

What is caffeine?

According to the Food and Drug Administration (FDA), caffeine is a natural drug that is produced in the leaves and seeds of many plants. It is also produced artificially and added to certain foods. Caffeine is defined as a drug because it stimulates the central nervous system, causing increased heart rate and alertness.

Most people who are sensitive to caffeine experience an energy boost, causing them to feel more awake. But like many other drugs, caffeine eventually causes chemical dependency, potentially leading to altered caffeine sensitivities.

Caffeine sensitivity refers to the amount of caffeine that will produce a physical response in someone, which varies from person to person.

Generally, the smaller the person, the less caffeine is needed to produce effects.

However, caffeine sensitivity is most affected by the amount of daily caffeine use. The FDA says that people who regularly drink beverages containing caffeine can develop immunity to caffeine effects. In short, the more caffeine a person consumes, the more

PAX-O plans series of events for war's four-year anniversary

Charlie Allison and Brittany Moyer

To commemorate the four-year anniversary of the Iraq war, PAX-O has planned a series of events to educate the campus community about the conflict. PAX-O is Juniata's student peace organization, affiliated with the Peace and Conflict Studies department.

The events include weekly candlelight vigils, a panel discussion of war veterans, showings of two Iraq War documentaries, a student debate and a protest for the war's end.

The candlelight vigils are held outside of Ellis Hall every Thursday at 6 p.m., regardless of weather. Co-sponsored by PAX-O, the Brethren Student Fellowship and the Muslim Students Association, the vigils are meant to acknowledge the suffering of American troops and Iraqi civilians and to spark dialogue about the war.

"We've had a pretty good turnout so far," said sophomore Sebastian Brown, a member of PAX-O. "About twenty people showed up at the last one, and we're really trying to get people's attention with this."

The war veteran's panel will occur March 1 at 7:30 p.m. in Neff Hall. War veterans from inside and outside the Juniata community will answer questions about their individual war experiences.

Inspired by the successful campus screening of Al Gore's film "An Inconvenient Truth," PAX-O also will show "Why We Fight" on Feb. 28 at 7:30 in Neff. "Why We Fight" is an acclaimed documentary that explores the anatomy of the U.S.'s war machine.

After spring break, on March 13. Dr. Emil Nagengast, professor or politics, will moderate a student debate about the war.

PAX-O is also planning a demonstration in Huntingdon for March 17 to appeal for Congressional action to end the war.

Speaking about the demonstration's message, Brown said, "We voted for [our representatives in Congress] in hopes they would take substantive action, and they haven't been able to open the floor to debate on the subject, let alone get any changes made." The protest is meant to urge Congress to make these changes to end the war.

Christopher Shannon/ Juniatian

A group of students gathers outside Ellis Hall during a candlelight vigil to raise awareness about the suffering caused by the war in Iraq. PAX-O, the Brethren Student Fellowship and the Muslim Student Association co-sponsor the vigils, which are held every Thursday at 6 p.m. outside of Ellis. As part of its Iraq war series, PAX-O is also showing the documentary "Why We Fight" on Feb. 28, holding a panel discussion of war veterans on March 1, moderating a student debate about the war on March 13 and planning a protest for the war's end to occur in Huntingdon on March 17.

Student government and JC clubs: What does your activity fee pay for?

Elaina Clark

Every year, Juniata students are required to pay $125 for an activity fee, and with about 1,500 students on campus, that makes for a big chunk of change.

So where does this money go? It goes straight into the student government account where it is then distributed to various organizations and clubs on campus.

Presently, the student government budget stands at $8,000 for the rest of the school year.

At the beginning of the school year, the account balance was $194,250. The student government allocates a total of about $72,000 for clubs' yearly budgets, $12,000 in additional funds for clubs and numerous other up-front expenses.

One of the organization's largest expenditures is the annual contribution of $89,000 to the Juniata Activities Board (JAB).

With the exception of JAB's payout, student government does not have to give money to every club. However, the odds for clubs being awarded additional funding are high. Demetri Patitsas, president of student government, said, "We have yet to deny anyone flat out."

According to Shawn Rumery, treasurer of student government, clubs have a better chance of receiving additional funds if they fundraise, keep good records and make the request is made earlier in the year.

In order for a club to receive additional funds, they must first submit a form, which can be downloaded online. After submission, the club is invited to the next allocation board meeting where it is asked to give a five to ten minute presentation on its request. The board will then ask questions of the club members and vote to allocate or not allocate the funds.

If the club is asking for more than $750, the student government Senate must also approve the request before the club can receive any money.

The allocation board consists of ten elected representatives, usually treasurers, from the Common Interest Sector groups that represent similar clubs.

The student government senate is made up of the officers for each class.

After a club receives additional funds, it is required to keep detailed records of how the money was spent.

Rumors have also spread lately that clubs receiving funds from student government must display the logo of student government in places where the money is used.

Patitsas said that there was no policy requiring the logo, but that the practice was encouraged.

Rumery added, "It isn't required, but it is suggested that they mention student government."

Chris Rosenker, a chemistry club member, presented to the allocation board and senate this past fall semester. Rosenker and others petitioned for $750 to send additional students to the American Chemical Society meeting in Chicago. The petition was granted. Rosenker said, "Once they understood what we were asking for, they were alright."

He also said that bearing the Student Government's logo was not brought up at all.

Zachariah Page, president of the cycling club, petitioned for $2,000 to buy jerseys and bike tools. The cycling club only received $790 for tools, but Page said, "They definitely seem like they understand. We didn't get the $2,000 but I completely understand."

There are no changes planned for the Student Government's allocation process, but there does seem to be optimism for increased effectiveness.

"Students are more aware that there is a system and it will be more effective," said Patitsas.

Bailey Oratorical Contest

Final Round:
Tuesday, Feb. 27 at 8:15 p.m. in the Suzanne von Liebig Theatre

Finalists:
Elena Amato, Laura Drews,
Lisa Detweiler, John Peter Melle, Magda
Sarnowska, Josh Scacco and Adam Stanley.

Come out to hear these seven students give their unique perspectives on the topic of sustainability.

Contestants are competing for three top prizes.
First prize: $1,000; second prize: $500; third prize: $300

Confused about Room Draw?

http://www.ourmanintokyo.net

TONIGHT at 7 p.m. in the TnT lounge!

Pizza will be served!

Not sure how the process works? Need a roommate?

Let the Residential Life Staff fill you in and answer some of your questions related to room draw.

Caffeine on campus

continued from page 2

caffeine she will need to produce similar effects in the future.

According to Coffeefaq.com, after drinking a cup of coffee, its caffeine takes 15 to 20 minutes to enter the blood. Caffeine's effects can then last three to four hours.

Caffeine also acts as a diuretic and a mild laxative, often leading to frequent bathroom breaks throughout the day.

When should someone cut back on the juice?

If a person is ingesting too much caffeine, she may want to cut back. The FDA suggests that a healthy caffeine consumption rate is around 150 mg of caffeine a day.

There are approximately 250 milligrams of caffeine in one 12-ounce cup of Starbucks' regular brewed coffee, and close to 100 mg of caffeine in a single shot of espresso. Consuming more than this amount is not advised.

Kicking the caffeine addiction is never easy, much like fighting an addiction to other drugs. The best way is to cut back slowly; otherwise one could end up with annoying headaches, body aches, irritability and even slight depression. These symptoms usually accompany caffeine withdrawal.

Limiting intake by substituting non-caffeinated drinks for caffeinated sodas and coffee can be the best way to wean-off of the coffee habit. Alternative drinks include water, caffeine-free sodas and caffeine-free teas. Keep track of how many caffeinated drinks are consumed each day, and substitute one drink per week with a caffeine-free alternative.

As a person cuts back on the amount of caffeine consumed, she may feel more tired than usual. This is the body's way of indicating a need for more rest.

Apple > coffee

Research shows that one green apple contains more natural caffeine than a cup of coffee, so eating an apple is a healthy alternative to coffee when a student needs an energy boost.

Independent studies and credit by examination classes: essential options at a small school

Kendall Markel

Juniata offers a wide variety of course options for its students, and one of its key attractions to potential students is its unique Program of Emphasis (POE) approach. The College also offers other personalized curricular options that are not given as much recognition: independent study and credit by examination (CBE).

Independent study is an option for students who want to pursue an area of study not normally offered in Juniata's course offerings. Upperclassmen often take advantage of this opportunity to gain insight into specific areas of their POEs.

Procedurally, a student must make arrangements with a faculty member qualified to teach the desired subject before an independent study can commence.

The curriculum committee and the registrar's office manage independent study requests. Students must register for an independent study at least two weeks before the semester during which the credit will be earned. A student cannot enroll in more than two independent studies per semester.

The instructor will then assign a syllabus for the course after receiving a proposal from the student. The instructor must also send the registrar a layout of the course requirements, such as examinations, papers and faculty-student conferences.

Students are not permitted more than two independent studies in a POE.

Professor of French Michael Henderson's first experience facilitating an independent study was with a student who had studied abroad in Strasbourg, Germany, and wanted to research the connection between the Pennsylvania Amish and customs.

Henderson described independent study as "essential" for a small college such as Juniata. He also discussed how important independent studies are in helping students make preparations for graduate school.

Another option, the credit by exam (CBE), exists for students who want to take a course but are unable to attend all scheduled class meetings. CBE is intended for use as an option when scheduling conflicts prevent a student from taking a course required for graduation.

CBE allows students to earn the credits for a class by doing all of the coursework, but without needing to attend classes regularly.

Not all courses are offered CBE, and students must check with instructors to see if the option is available for a specific course. The decision to offer a course CBE rests solely with its instructor.

According to Registrar Athena Frederick, this semester there are 44 courses offered as CBE.

Senior Jill Seraphin is taking one of those courses, a museum education class, which helped her resolve a scheduling dilemma.

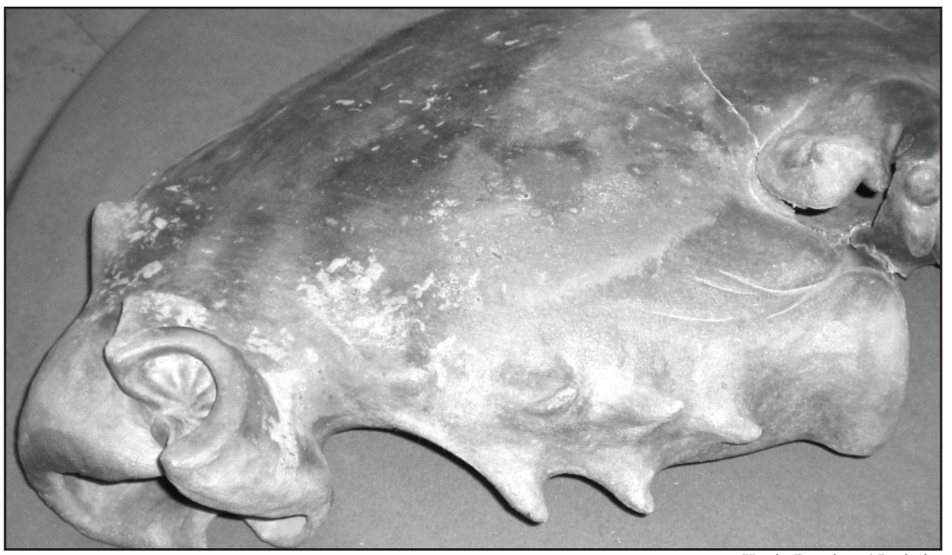
"I needed [the course] to graduate and I wanted to go abroad, so I needed the CBE so I could go abroad my junior year," Seraphin said.

Despite the apparent simplicity of taking a course CBE, it is not as easy as it may seem.

"It's harder for me because it's not scheduled and there's no interaction. A lot of it [the coursework] is on [me], so I need lots of time for organization," Seraphin said.

CBE can pose extra work for faculty members, as well. For most CBEs, faculty members still require periodic meetings with students to answer questions or gauge progress. Professors also grade the student's work as with any other class. All CBE courses are taught in addition to the professor's normal teaching load, for no extra compensation.

Henderson pointed out that the instructor must judge whether the quality and requirements of the course may be compromised if it is offered CBE.



He also emphasized some of the difficulties CBEs can present for a small department.

"It's a lot of extra work for a professor. It's rewarding work, and we do it, but it taxes our time," Henderson said.

CBE is only offered to full-time students. The deadline for CBE registration is the end of the drop-add period during the semester in which the course is available.

Whatever the dilemma, be it Juniata not offering an advanced course in a certain subject or a student having a difficult time with scheduling, the registrar's office has several options for students in a bind.

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture is located? Send your guess to the Juniatian at juniatian@juniata.edu. Correct answers will go into a random drawing for a random prize. The winner will be named in the Juniatian's next issue.

Last issue's picture was of the art sculpture in Good Hall lounge. Congratulations to winner junior Mandi Yeager, and thanks to all others who submitted guesses!

Internship tools available for students at Career Services office

continued from page 1

"The starting point in the internship process is a good resume," said Kysor. He suggests to students that they "work on developing a resume. Once the resume is together, start identifying potential employers."

Career Services has many tools to help students find contacts.

"We keep files of all places students have done internships from the past five to seven years," said Kysor. This is in addition to the many print and online resources available.

Some students may be concerned about the availability of internships in their areas of study.

"[Internships] are available to any POE, but it's a matter of supply and demand. Sometimes it varies by year," he added.

Some internships that are in high demand, such as those in the health professions, are difficult to find. Others may be limited by employer's demand that year.

Once a suitable internship has been found, students need to iron out the details according to Juniata's criteria. Items such as credits and supervision are worked out with the help of staff and faculty.

Senior Jennifer Jones has pursued two internships: one last semester with JCEL and another this semester with the J.C. Blair Hospital. She said the internships have helped her see the differences between the health and business settings while learning much about herself in the process.

"It's really nice to be in a professional working environment," said Jones. "Employers look for that kind of experience."

Junior Megan Kobuck sought an internship in accounting with JCEL after seeing a message in the daily announcements. She said the internship was a good way to fill credits and gain experience.

"Class is realistic, but there is a difference between being in the classroom and being in this setting," she said.

Kysor also emphasized the benefits of doing an internship. "It's a great opportunity to learn things outside the classroom. If possible to fit it in, I recommend it. I can't think of a field that wouldn't benefit from one."

Examples of SJuniata internships: summer '06 - spring '07

Legislative Intern, Senate of Pennsylvania
IT Specialist, Naval Sea Logistics Center
Financial Analyst Intern, Memorial Medical Center
Pharmacy Intern, Kopp Drug
Sea Turtle Technician, Georgia Sea Turtle Center
Athletics Compliance Intern, Auburn University
Veterinary Assistant, Lititz Veterinary Center
Congressional Internship, Pittsburgh Mediation Center
Web Development Intern, Concurrent Technologies Corporation
Chemistry Intern, University of Hawaii
Animal Husbandry/Education, The Maritime Aquarium
Corrections Counselor, SCI Smithfield
Productions Intern, Blair County Ballpark
Athletic Intern, Juniata College
Collection Management, U.S. Holocaust Memorial Museum
Documentation Internship, Datatel, Inc.
Observing Pediatric Care, Pediatrics & Beyond
Sports Management, Kennedy Sports and Recreation Center
Political Communication & Public Administration, JC Blair
Clinical Orthopaedic Spine Research, Johns Hopkins University School of Medicine

College plans for new music building

continued from page 1

terrible that prospective students and applicants for adjunct positions are not shown Swigart Hall, according to Latten.

Concert choir member Adam Stanley said of the current music facilities: "They're sub-par. We make do, but there's no storage space or real soundproof practice rooms. Swigart is just a house."

Swigart's electrical system is also in need of repair. The light outside Latten's office has no switch. In order to turn the light on he must screw in the bulb in and out. The building also uses electrical fuses, not a circuit breaker, which is a more modern technology than what was available during the building's construction. Each time a fuse blows, rather than flipping a switch, professors need facilities to come change a fuse.

Furthermore, Latten said, "The piano lab in the basement of Swigart is, rarely but all too often, filled with one or two inches of water on the floor, in and among the electrical cords which serve the interactive pianos. In our third floor practice room area, the combination of poor soundproofing, old pianos in small misshapen rooms and lack of climate control has virtually curtailed students' willingness to practice there. They try it once or twice, but then it ends."

Also, the various performing groups lack permanent practice space. The constant moving of the wind symphony between Swigart and Rosenberger Auditorium has resulted in damage to instruments due to temperature changes. Concert choir is currently practicing in Alumni Hall in the Brumbaugh Academic Center. Professor Russell Shelly, director of the choir, has had to move the choir to six different practice spaces since he started at Juniata.

Despite challenges, the music program at Juniata is growing. Approximately 400 students are involved with the music program every semester either through an ensemble, performing group or music class.

Adjunct professors providing music and voice lessons have even needed to add additional days to their schedules.

Over the last four years, wind symphony has grown from 24 to 75 students, orchestra from 8 to 26 students and jazz ensemble from nonexistence to a full ensemble of 22 members. The retention rate for these performing groups is 96 percent.

Latten credits this success to how rehearsals are run, students' attitudes, ability to receive a fine arts credit and students' willingness to continue pursuing music after high school.

The Juniata College Concert Choir is full with 50 students. Shelley must turn away students every year. Shelley credits the choir's popularity to the quality of the program and the experiences students have as a part of choir. As for the choir's retention rate, he said, "In 17 years at Juniata, I can name the students who have not continued all four years, and it's less than five."

Despite the department's growth and promise of a new facility, there will not be a music POE offered at Juniata anytime soon. Shelley offered reasons against the creation of a music POE.

"Externally, the last thing the state of Pennsylvania needs is another tiny music program," he said. Typically, small liberal arts colleges lack the enrollment and facilities needed to offer a quality degree in music.

Internally, the department appreciates that music classes aren't required, therefore the students who participate do so by choice.

Shelley said, "There is a huge difference between working with students who are there because they want to be there and students who have to be. We'll choose the 'want to' any day."

A POE in music was once offered at Juniata. Shelley remembers the last student with a POE in music as graduating in the early 1980s. The degree was officially discontinued in the early 1990s when the music department was cut from three down to two full-time faculty members.

Courtesy of the Alfarata

Junior Joe Houck plays the french horn in Wind Symphony. A new music building would provide a practicing area for music programs.

Student government wants you!

Mike Chirdon

One of student government's goals this year is to have more people running and voting in the March 20 elections. To accomplish this goal, they have made several changes to the elections process.

For the first time, the election for the executive board will happen at the same time as the election for class officers. According to Demetri Patitsas, executive board president, this is to increase voter turnout and cut down on the confusion of having two separate elections. In the past, there was a significant drop in the voter turnout between the executive board elections and the class officer elections.

Two years ago, only around 100 students voted in the executive board elections. Last year, there were approximately 400 voters and this year the officers hope to at least double that number.

"Voter turnout is really a strong indication of how successful student government has been over the year," said Patitsas.

To increase the number of running candidates, the executive board is actively trying to recruit good leaders to run for positions. The board has even been in contact with students who are abroad this semester who would like to run for positions on either the executive board or class offices.

This year's election season will also include an open forum discussion of executive board presidential candidates. Scheduled for March 15, the forum will give students a chance to ask the candidates questions about their plans for next year, and it will give candidates an opportunity to introduce their platform.

The election process begins Feb. 26, when student candidates can begin collecting student signatures. Students interested in running for executive board must have 100 students' signatures in order to be put on the ballot. Students running for class offices need 50 signatures from members of their class.

The officers are deciding on the best way to allow students who are abroad to complete the petitioning process. One idea is to allow them to start a Facebook club.

Petitions are due by March 2, the day before spring break.

After the petitioning process, candidates can run their campaign any way they see fit.

Sophomore class officer Tripp Rudolph recommends running as part of a group. Last year, along with his running mates, he put up campaign posters in visible locations around campus like under the clock in Baker. Three out of the four running mates won in the election.

"Whether you liked our signs or not, you couldn't help but notice them," said Rudolph.

Freshman class officer Laura Rupprecht ran a successful campaign without running mates. She had her picture taken with a variety of people on campus with a sign that read: "Laura Rupprecht for Secretary." She then posted these pictures around campus and on Facebook.

Shawn Rumery, executive board treasurer, said that any of these methods would work. According to him, the main thing you must do is be visible.

"You should get your name out early and often by using various forms of media like posters, Facebook, e-mail, the Juniatian and Channel 99. Make your message unique, and make sure that you include a face with your name," he said.

If students have any questions about running for a student government position, Patitsas encourages them to contact a member of the executive board either by e-mail or at extension 3313.

An inside look at Student Government positions

Though the executive board and class officers work together as a team, each position has its own set of responsibilities.

The executive board **president** sets agendas for and runs monthly student government meetings. Additionally, the president works closely with members of the administration to address student concerns and meets with the board of trustees.

"The president of the executive board sets the tone and decides what the group is going to be all about," said Patitsas.

The executive board **vice-president** works along with the president. It is the vice-president's job to add a different perspective to the president's point of view. Also, the vice-president runs the Registered Student Organization (RSO) approval board. The RSO approval board meets when a group of students want to form a new club on campus. The board listens to the students plan, makes suggestions, and ultimately decides whether or not the club will be approved.

The executive board secretary is a catchall position, according to Patitsas. There are many routine responsibilities such as taking minutes at meetings, scheduling meetings and sending e-mails to the student bovernment senate. There are also many event-planning duties that come along with the position, such as reserving facilities for student bovernment events, meetings and retreats.

The technology officer is in charge of everything that involves technology, such as running the student government Web site and coordinating online voting during elections. The technology officer is also responsible for trying to improve technology around campus.

Jigar Patel, current technology officer, has recently been working on projects to improve the efficiency of computers in the Cyber Café.

The executive board treasurer is in charge of the student government budget. The treasurer has to keep track of how much money there is left in the budget, and he or she must see that allocated money gets to the right place.

"There is a lot of responsibility vested in keeping track of the funds and in ensuring that they are moved appropriately and efficiently. It can be a tedious task, especially when the numbers that I have on hand fail to match up with the numbers that Accounting has on hand," said Rumery.

Due to their technical nature, the positions of treasurer and technology officer are not voted on by the student body as a whole. Open nominations are taken for these two positions, and the entire Senate approves them. These positions are intended to be two-year positions.

"One important thing that the executive board does is to try to improve communication between students, staff, and faculty members," said Rejane Frederick, executive board vice-president.

Each class has four class officers: president, vice-president, secretary and treasurer. The responsibilities of each position are similar to their executive counterparts, but overall goals are focused on the individual class.

"The sophomore class has been trying to raise money to plan an event for our class. For example, we want to have a barbeque in the spring," said Rudolph.

Other responsibilities include attending weekly class officer meetings and monthly senate meetings and planning All Class Night.

Internships: too many credits?

Evaluations of credits per internship: Is sitting in the gym worth nine credits?

EDITORIAL

As one student intern sits idly in the athletic center for hours searching for something to do, another toils in a biology lab dreading the amount of work she has to complete within the next few hours.

How many credits is each receiving? The first student will rack up anywhere from two to nine. The second will receive one.

This issue is not specific to internships and biology labs. Students who sing in the choir have practice three days a week, sectionals in the evenings, trips, concerts and are to practice on their own time. These students earn one credit per semester. Three credit courses do not usually entail as much time and outside work.

The Registrar and curriculum committee determine credit amount by how many hours of work are put into a course or an internship (3 credit course=3 hours/week inside the classroom). The amount of work involved in each credit is determined by the course level (100-400). In theory, this method seems fair and logical. In actuality, students can earn a plethora of credits with little work and vise versa.

Internships are one of the easiest places to spot inconsistencies. They are established with the assumption that students will want to work hard and gain meaningful hands-on experiences. This is not always the case. Sometimes a student will need the credits in order to fill a Program of Emphasis (POE) or graduation requirement. Her goal is graduating, not necessarily applying the theories she has learned in the classroom in a professional setting.

Even though all internships are approved by Career Services, some seem to fall through the cracks. In the recent past, a Juniata student worked for a family business, having his parents sign-off on the work he was receiving academic credit for on his transcript. Others have worked for their coaches, completing available superfluous tasks. These internships are convenient and are sometimes seen as favors to the students, helping them earn the credits they need. But should such experiences count for the same, or more, academic credits than someone struggling through QM or Ideas and Power in the Modern World would earn? Should an intership monitoring membership IDs at the Kennedy Sports and Recreation Center count as much as completing spine research at Johns Hopkins Univeristy? Many would say no, and therein lays a problem.

Determining what can be considered a course, how many credits a student completing it receives and specifying the course level all must go through a rigorous review process. Faculty members submit proposals justifying each facet of the course to the curriculum committee for approval. Internships are not subject to such intense scrutiny. They must be sponsored by a faculty member and be approved, but by what set of criteria? What system suggests that a person doing data entry at an insurance agency is engaged in the same rigorous intellectual activity as a student taking Theoretical Modern Physics or working as a legistlative intern in the U.S. Senate?

Assessment of an internship's academic validity can also often come into question. Interns must check in with their faculty sponsors, keep journals or logs and write papers about their field experiences, but they can easily exaggerate the work they have completed. Working security at a sporting event may not seem too impressive, but it can be called a "sports management" internship that helps the intern develop "people skills" and become more "assertive."

And, even if this hodge-podge of pseudo skills is acquired during the twenty hours of work an intern completes in one week, is it really worth five academic credits? Other students are contemplating Ruskin and learning every muscle of the human body for less credit.

Internships provide valid learning experiences that can often shape a student's initial professional development. Some students do go work at the U.N. or in a hospital where they gain practical, professional experience. These internships are closely monitored by employers and faculty sponsors. Plus, most students sincerely care about gaining a meaningful experience. To them, the credits are a bonus recognizing how hard they are working.

However, too many inconsistencies in the current system exist. An internship should be just as intense as the average course. Students should learn just as much and gain an appropriate hands-on experience in relation to their fields. Just because the work is completed outside of the classroom in the "real world" does not necessarily make it more meaningful.

The way internships are approved and evaluated needs to be revisited in order to ensure that every student is receiving the appropriate amount of credits for their work whether it be inside or outside of the classroom.

Realpolitik: A broken link in media chain leads to war

Christopher Shannon/Juniatian

David Sanger, New York Times' chief Washington correspondent, talks with students during an afternoon reception on Feb. 6. Later in the evening, Sanger lectured to a packed Alumni Hall about the lessons he took from his experience as the Times' White House correspondent.

James Trent

When David E. Sanger visited Juniata earlier this month, he explained how the media's relationship to the American public allowed a buildup to war.

As former Chief White House Correspondent for the New York Times, Sanger showed how the media focused on the wrong issues before war in Iraq, leading to a misled and misinformed public.

For one, almost all reporting focused on Iraq, disregarding other international priorities. The American public was overwhelmed with debate about weapons of mass destruction and ties to Al Qaeda, making other international threats go unnoticed.

Even worse, nearly all of the reporting conveyed the same information. Instead of showing different perspectives of the prewar situation in Iraq, the media focused on the White House's press releases, which avoided major issues. For instance, no one brought up the ticking time bomb of sectarian violence in Iraq.

In an almost comedic tragedy, our nation's media didn't scratch

It was like that game "telephone," except instead of causing giggles, it caused a war

the surface of what the American public needed to know about Iraq.

The media was like a broken link in a chain. The media was supposed to show the public the situation as is, so the public could decide what was important. After

continued page 9

SUSTAINABILITY IN THE NEWS

On campus:

- Juniata has purchased a bio-diesel converter, enabling the College to begin moderate-sized production of bio-diesel. The bio-diesel energy will provide heating oil for off-grid campus buildings by the end of the semester. Initally, fryer grease from Muddy Run Cafe will be used to make the bio-diesel, but Juniata will pursue oppurtunities to work with Huntingdon-area businesses as well.

- Within the next month, there will be recycling bins on every floor of every on-campus dorm, in addition to the existing large bins in the dorm common areas.

Off campus:

- Check out Nike's Reuse-A-Shoe program at nike.com. Nike will take old sneakers and recycle them to make outdoor basketball courts.

- Parents Magazine found that an average bottle of water costs $1. That means that we spend nearly $8 per gallon on bottled water, or four times as much as we spend on a gallon of gasoline. The same study showed that "40 percent of bottled water is actually tap water with added minerals."

Ask the Administration

The Juniatian asks the administration everything you want to know

There is a discussion on the Juniata Forums about the introduction of a new Web mail service. Is Juniata planning on switching e-mail providers? If so, when would this occur, and what are the reasons for the change?

"Campus Technology Services (CTS) is currently pursuing several new endeavors as it relates to e-mail. As discussed on the Forums, a new Webmail interface is currently being finalized to replace the existing entry page. To see the mock-up of this new design, please see the Forums discussion 'New Webmail – Please give us feedback.' Other than the obvious facelift, this new page will feature RSS feeds pulling in items from the Announcements and the TLT blog. The overall page length also removes the need to scroll down and to click on the log-on link. Please visit the Forums for other ideas that are being discussed as well as posting your own input. Many thanks to sophomore Scott Thomas for his efforts on creating this new design!

"The other item that CTS is currently evaluating is the possibility of using Gmail for the storage and processing of Juniata's e-mail. During the next several months, CTS will evaluate the pros and cons of outsourcing e-mail storage as well as the impact that it has on security, FERPA and other sensitive considerations. Due to the large amount of increased SPAM and the growth in media attachments and e-mail usage overall, CTS realizes the importance for the increase in e-mail storage space as well as providing better tools for e-mail management. CTS will keep the campus informed as we move forward in evaluating several e-mail solutions."

- Associate Vice President and Chief Information Officer Dave Fusco

All of Juniata's academic departments have one department chair, except for the religious studies department. Why does it have two department chairs?

"The religion department does not have two department chairs, but rather two endowed faculty chairs. The department chair is Don Braxton, but both Don and Bob Miller have faculty chairs. A faculty chair typically is a $1 million gift to the College permanently supporting the faculty position's salary. We have 22 of these, and hopefully many more over time."

–President Tom Kepple

E-mail your question for a Juniata administrator to juniatian@juniata.edu, and the editors will forward it anonymously to appropriate administrator.

Submit your answers to juniatian@juniata.edu or our mailbox #667

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

The Landmark Conference

As many of you know, the Landmark Conference was formed a year ago and is now getting ready for actual play beginning with next fall's varsity sports. Its members include: Juniata, Susquehanna, Moravian, Drew, Scranton, Catholic University, Goucher and the U.S. Merchant Marine Academy.

Also beginning next fall, we will play football in another conference new to us, the Centennial. The football institutions in the Centennial include Juniata, Franklin & Marshall, Dickinson, Gettysburg, McDaniel, Johns Hopkins, Ursinus, Muhlenberg and Moravian.

We will continue to play men's volleyball in the EIVA Conference.

The Landmark and Centennial conferences give us many advantages over the MAC, our current conference. The academic quality of the institutions are much closer to Juniata's, and our students get an opportunity to play in new areas where we have many alumni, including New York City (at U.S. Merchant Marine Academy), Baltimore (at Goucher and Johns Hopkins) and Washington, D.C. (at Catholic University). We will also continue our long rivalries with Susquehanna and Moravian.

We believe the playing field will be much more even, giving our teams more opportunities to participate in conference championships and in the Division III NCAA tournaments.

The presidents of the Landmark institutions have also agreed to partner in the future on academic and operations opportunities as well.

Realpolitik: Broken link

continued from page 7

that, public opinion could have filtered through Congress, and Congress could have limited the Bush administration's actions.

But before the war, the public was so ill-prepared by the media that an informed decision was impossible.

Sanger blames the broken link on television news. Television shows a very different picture of what's happening in the world, and in the buildup to Iraq, it showed a picture that was out of touch with reality.

Polls done after the war showed a serious disconnect between those who watche¬d television news and those who used other sources of information, such as newspapers and radio. In a study published in the Political Science Quarterly, 67 percent of Fox News viewers believed that the "Hussein was working closely with the al Qaeda terrorist organization."

National Public Radio listeners showed results of 16 percent.

In case you're still unsure, Hussein disliked Al Qaeda, and Congressional testimony has shown that there was no connection.

Television news, by nature, requires a lower quality of reporting. When people watch television, they want to be entertained. Emphasis is removed from substance and placed on sensationalism, liveliness and patriotism. While newspapers like the Times pointed out threats to the U.S. like Iran and North Korea, television networks obsessed over Iraq.

On top of this, TV news networks reported stories as soon as possible, without proper analysis, in order to be on the cutting edge. Leading up to the war, Sanger explained, one TV station reported what another found first, regardless of its accuracy. It was like that game "telephone," except instead of causing giggles, it caused a war.

The media's link between the public and policy was broken. Televised news invited the White House's agenda into our homes, promoting the war with a warm glow.

THUMBS UP, THUMBS DOWN

DOWN: to treadmills facing the walls in the Fitness Center in the Kennedy Sports and Recreation Center. We realize that there is a legal reason behind the reconfiguration of equipment, but this thumb will only turn up when the athletics department springs for some plasma TVs to adorn those lovely cinderblock walls we're sprinting toward.

UP: to spring break next week. This thumb should be self-explanatory.

DOWN: to any professor who assigns a ridiculous amount of work over the aforementioned break. You expect us to understand discrete mathematics and international political negotiations, but you can't understand "break means break?" Do the right thing and make us do nothing.

UP: to the series of the O.C. tonight. We don't know what FOX will put in this Thursday timeslot, but we pray to St. Simon that it includes Paula Abdul and her best friend Jose Cuervo.

DOWN: to the "to go" vegetarian wraps from Jitters and Café a la Carte. Iceberg lettuce and cheddar cheese shreds? Vegetarians are opposed to meat…not taste.

UP: to Britney Spears. God love you, Brit. Now your head looks like a vanilla Magic 8 Ball. Our question? "Does KFed suddenly look like the smart one?" It is decidedly so.

War creates big business for TV

The BBC reported that Fox News Channel had a 300 percent increase in viewership after major combat operations in Iraq. People liked Fox's "patriotic spin."

Eid dinner 2007

A festival of food, friendship and dance

M. Piazza

Held Sat. Feb. 17, the eleventh-annual Eid dinner was a spectacle of delicious foods and presentations. Flowing dances and in-depth presentations brought the Muslim holiday alive.

The Eid holiday is celebrated in Muslim cultures ten days after the end of Ramadan, around the time of American Thanksgiving. Because that time of year is busy for students, the Muslim Student Association [MSA] hosts the dinner in February.

"On the phone I told my mother that we were having the Eid dinner this week," said Imane Tounsi, an international student from Morocco. "She was so confused, as this is not the time of year we normally have the dinner. Once I'd explained, she laughed and hoped that the students here would enjoy it just as much as we had at home."

Students, professors and community members who attended the dinner seemed to enjoy it. "It was fun. Really tongue tingling food … and the entertainment was so different from what I'm used to seeing," said Gillian Thomas, a freshman who attended the event.

In predominantly Muslim countries, like Niger, Afghanistan and Iran, Eid is a day-long Christmas-like celebration. Gifts are given, relatives visit and past wrongs are forgiven. The Eid dinner condensed this holiday into a three-hour event.

An invocation of Allah through a reading of the Qur'an began the

continued page 14

Christopher Shannon / Juniatian

Professors' children Soren Bogardt and Richard Widman play in a tent assembled for the Eid dinner on Feb. 17, while senior Abdullah Alriyami, a Muslim international student from Oman, eats his dinner nearby. The event featured a reading from the Qur'an, an explanation of the Eid holiday, two debkha dances and an elaborate dinner.

In the Name of Fashion

The perfect fit

Kelly Popernik

Your jeans are too short, your shirt is down to your ankles and nothing seems to fit like a glove.

Finding the right clothing can be a grueling experience. You might have wide hips or ten-feet-long legs that never seem to look right in pants. Retailers make it harder by selling sizes that fit newborns.

We all have different bodies, and something that looks amazing on one person can look a little scary on another. It might be easier to blame it on the lighting or the mirrors in the dressing room, but the best solution is finding out what looks best with your body type.

Have a tall and slender figure?

The biggest issue for you is finding clothes that are long enough. No one likes pants that look like capris when they aren't capris. Go straight for tall or long jeans. Something needs to balance out those long legs too, and a longer shirt will do the trick. Most women want to grab a mini skirt to show off their never ending legs. A pencil skirt is a better option, and make sure it hits the knees. Wearing heels can be a good or bad thing, depending on how you feel about your height. If you don't feel like being taller than you already are, throw on a pair of ballet flats.

The number one thing to wear with this body type is a tailored jacket with a great collar.

What about a pear figure?

You should try to avoid tight fitting skirts and go with a more flowing style. For wider hips, a skirt that flows out at the bottom will be flattering. Tight skirts will only make your hips look wider.

Whether it is your pants or a skirt, avoid thick fabrics and go with light ones that flow.

Your upper body will look great with a tailored top. The top should be snug but not too short. Make sure it hits below the belly button. Try to wear colors that are on the lighter side, because it will draw attention to your face.

Are you a small, petite person?

Clothes can either make petite girls look taller or shorter. The first and easiest solution is wearing heels to look taller. Being on the shorter side, you can pull off straight leg jeans, making your legs look longer.

Another trick to looking taller is wearing vertical stripes. Stay away from crazy prints because they might make you appear to shrink.

One of the best things to do, if you love a pair of pants that are too long, is taking them to a tailor and having them hemmed. It is worth the extra $25 for the perfect fit.

What looks best with a round figure?

If you have a round figure, wearing a print or pattern will do you wonders, helping you achieve the shape you want. Make sure the print is big. Small prints have the tendency to make people look wider than they really are. Jackets that are either long or cropped will also work well, as long as they hit above or below the waistline.

Pencil skirts will work great. Try to avoid wearing cargo pants and horizontal stripes. Cargo pants have pockets that hit the middle of the leg and will draw more attention to wider hips or a large rear end. A thin belt paired with jeans or dress pants will look best.

And if I'm curvy!

A revealing v-neck shirt with just enough cleavage is the best top for you. Make sure it is fitted. You don't want it to be too loose or flapping in the wind because it is so big. Pairing a shirt that creates a line under the bust with a small squared handbag will flatter a curvaceous figure the best.

Avoid wearing pants with a high waist. Low rise pants with a little flare will compliment your legs and accentuate a great stomach. A little flare at the bottom of the pants will balance out where the jeans hit the thighs.

If your behind is extremely curvaceous, do not wear any pants with crazy prints on them. Wear a pair that is simple and has larger pockets. Boot cut pants are the best way to go with curvy hips.

Also, solid colors and stretchy fabrics will help accentuate those curves.

Mixture of all the body types?

Having a big chest can be annoying when choosing clothes. Whatever you wear, make sure a bra is included at all times! Halter tops that are not too low cut will look great.

If you have a small waist, you should go straight for the wrap dresses. I mean it; sprint to them!

Fashion shouldn't be about who is the skinniest or whose cleavage looks best. It's about wearing what looks best for your body type. Remember: No one can fit perfectly into anything. But you can still work those clothes no matter what!

Fun Fashion Tip

Have dry hair or can't get the frizz to go away?

Don't rinse out all of the conditioner in your hair. By leaving a little bit in, it will make it smoother and tame it down.

MY TAKE

"Notes on a Scandal": A noteworthy film about obsession and control

Christopher Burlingame

As the tagline for "Notes on a Scandal" says, "One woman's mistake is another's opportunity." In this drama, Dame Judi Dench ("Mrs. Henderson Presents" and "Casino Royale") assumes the role of a vicious and unrelenting opportunist who is driven by loneliness and madness.

Dench, in her seventies, has always distanced herself from the typical grandmotherly roles presented to aging actresses. Here, she launches herself headlong into a role as a manipulative villain, who can only be paralleled by literature's Humbert Humbert ("Lolita") and Patrick Bateman ("American Psycho").

"Notes" is based on Zoë Heller's 2003 novel about an affair between a married art teacher and a student in one of northern England's public schools. The affair is told through the eyes and diary of Barbara (Dench), a matronly school teacher with a penchant for obsession.

The film follows the aforementioned plot. Interspersed throughout "Notes" are passages from Barbara's diary that reveal a different personality than the cold exterior she displays in public. She befriends the new art teacher, Sheba, played by Cate Blanchett ("The Aviator" and "Babel"). When Barbara discovers Sheba's illicit affair with a student, she offers to keep the affair a secret in exchange for Sheba's friendship.

Throughout "Notes," Sheba must maintain the delicate balance between concealing her affair from her family and appeasing a domineering Barbara. Their relationship develops, and Barbara alludes to a lesbian connection between herself and Sheba. Barbara's diary passages establish her madness as she obsesses over her role in Sheba's family and marks personal victories over Sheba as "gold star days."

The affair between Sheba and the student is hardly the focus of the film. It's the psychological interplay between Dench and Blanchett's characters that sets the film apart from a typical slice of life or hometown scandal movie. "Notes" serves as a case study of Sheba's struggle to hold her family and career together. Barbara complicates Sheba's life with ultimatums, using her manipulative skills in attempts to bring Sheba's bohemian life crashing down.

"Notes on a Scandal" is up for four Academy Awards with nominations for both Dench and Blanchett as Best Actress and Best Supporting Actress respectively.

Blanchett's performance was respectable; however, she didn't convey the innocence necessary to make her a sympathetic character. She is portrayed as the victim, but it's hard to empathize with a character who abandons her husband, her adolescent daughter and her son with Down syndrome for a sexual partner younger than her own daughter's boyfriend.

On the other hand, Dench was convincing. The contrast between her diary and her actions added a greater depth to her character. Her performance was, for lack of a better word, "disturbing."

Dench's performance makes "Notes" worth seeing. Sitting in the theater, I often shivered as she delivered one of her biting lines and carried out her role as evil incarnate. I left the theater with my skin crawling; I couldn't escape the horror of Dench's character.

The film's storytelling was fragmented at points, and its dialogue, filled with a thick English dialect, was sometimes difficult to understand. But "Notes on a Scandal" is frightening and satisfying because it illuminates the darkest core of human nature.

Final Take:

★★★½

Strong performances, an excellent adaptation and a haunting ending make "Notes on a Scandal" worth the ticket price.

Come and celebrate the Chinese New Year!

Saturday, Feb. 24, 6:00 p.m. in Baker

Spicy cabbages, General Tso's Chicken, Twice Cooked Pork, Stewed Pork, Dumplings and much more delicious food will be available!

Admission will be $5 for students, $7 for general, $3 for under 12, FREE for under 3

Help is still needed! Contact carnenj04@juniata.edu if interested.

Enrico IV on the runway

Juniata's current theatre production, "Enrico IV," which runs tonight, Friday and Saturday at 7:30 p.m. in the Suzanne von Liebig Theatre is "part eccentric fashion show, part clownish pomp and part musical extravaganza," according to its description in the daily announcements. Student performers include those shown here. Above are (left to right) sophomore Megan Monahan, juniors Mandi Yeager and Adam Vachon and sophomore Josh Beckel. Below, sophomore Kathleene Clark models a costume created by guest artist Liz Prince.

Winter Kid's Carnival

Anna Elias/ Americorps/VISTA volunteer

A young participant at Juniata's annual Winter Kid's Carnival plays "duck pond" with her father's help on Feb. 18. Sponsored by JC's Office of Community Services, the event brought many children in from the cold to enjoy a summer-like afternoon of carnival games, snacks, music and fun.

The YouTube phenomenon

Sara Marie Cieslewicz

Forget Hollywood movies. Forget TV. YouTube (www.youtube.com) has taken over video entertainment. It is a consumer media company that offers the free service of creating, posting and sharing videos on the Internet. YouTube has narcoleptic poodles to horrendous skateboarding wipe-outs. It has the "Evolution of Dance," to "Noah's 6 year self-photo project." It has everything.

Senior Dustin Sier recently posted a video on YouTube featuring him climbing the walls of South Hall. His clip has had 210 views that he figures were mostly by his fellow hallmates in South. When asked why he posted this video he said, "It seemed like a good idea at the time; I didn't have one on there yet."

The number of people who don't have a posted clip or haven't at least watched such videos are becoming smaller by the day. According to YouTube's records, approximately seventy million of these videos are watched daily.

People can post themselves doing anything from tweezing their eyebrows to doing a fifteen minute keg stand. It doesn't matter, as long as a person has the means to post a video and its content meets YouTube's Terms of Use, it can be shared with the world.

YouTube was established in 2005 by Steve Chen, Chad Hurley and Jawed Karim. It was later sold to Google for $1.65 billion. Named one of TIME's Best Inventions in 2006, YouTube was originally created as a place to easily post videos.

YouTube's creators hacked together a simple process for taking videos in any format and making them run on any Web browser on any computer, explained TIME. Originally, the trio thought people would share travel logs and informational movies. However, people soon started up-loading movies of themselves, which created a cultural phenomenon.

continued page 14

JuniataTube

The Juniatian's 10 Favorite JC-related videos

Simply type these titles into YouTube's search bar to find the videos. Clips with generic titles (i.e. no "Juniata" in the name) can easily be found by typing the title and the phrase "Juniata."

10) Borat Interview; "Do you like Giant or Weis?" – Even though we're definitely tired of Borat by now, we just can't get over senior Mo Khoshnevisan's dead-on Kazakhstani accent. Our favorite part? "WAYYEEIISS."

9) Slacklining – It's 38 seconds of us holding onto the edges of our chairs saying, "Is he going to fall…oh…wait…yes…no…yes…AWWW!"

8) Wall Crawl – Hey, Dusty Sier …nice abs.

7) Juniata College CompSoc Monitor Drop 2000 – We love to watch this one when technology is being difficult. We only wish that everyone on campus could throw something off of a building every so often and get away with it.

6) Juniata Snow Day – This video appeared during our first real snow this year. It may not be the funniest on our list, but you do have to be impressed by the turnaround time.

5) Study Abroad – We're sorry, Pete Patitsas, but this video is so funny that it challenges bladder control. Our suggestion for improvement--cut the whole 2001 Space Odyssey/Olympics-esque music montage in the beginning.

4) Juniata College Hyp. 2006 – Hypnosis is always funny. Our only regret is that there is no clucking like a chicken.

3) Danger Snake (starring senior Peter Bibeault and junior Andy Adams) – Conclusive proof that bio POEs aren't always thinking clearly. Do you see any English majors playing with snakes? Nope, they'd much rather make sarcastic remarks about your snake-handling abilities from the safety of the snake-free library.

2) Drunk Bus – We don't know who produced this, but you have to love a bus full of drunken idiots trying to sing a song they don't know the words to. This is how the song goes, people: "Sing us a song you're the piano man, sing us a song tonight, we're all in the mood for a melody, and you've got us feelin' alright." Duh.

1) Juniata's Dreamteam F.S.U., Fall 2005 – For two reasons: a) It features our favorite and utterly adorable Layout Editor Rebecca DeHass. b) How can a well-produced video about tampons, toilet paper and Glad Clingwrap not be our top pick?

Student art exhibit

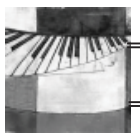
Students to show peers their artwork

Julia Bogue

From March 15 through April 7, Juniata students will have the opportunity to view the art work of their peers at the annual student art exhibit. Located in the Henry and Mabelle Shoemaker Gallery in the Carnegie Museum of Art, the exhibit will display the works students have created this year in classes taught by Juniata art professors Alexander McBride, Monika Malewska and Gwendolyn Yoppolo.

The artwork will include life and still life paintings using oil and canvas, black and white photography, digital photography, mixed-media sculpture, ceramics and works on paper.

The pieces to be displayed were chosen by Juniata fine arts faculty, art history professors, the museum's curatorial staff and Museum Practicum students.



Monika Mawleska, assistant professor of art and art history, said, "We tried to choose the strongest work of the semester and include as many students as possible in the exhibit, provided the limitations of the space."

Professors and students look forward to the exhibit. Emily Fitzgerald, a Museum Practicum student, said the student exhibit is one of her favorites, and that "it's going to be good."

Rachel Droessler, a painting student, said, "We have plays for the drama students, and [the student art exhibit] is a way that the art students can show their work to other students."

The student art can be sold at the student's discretion.

The musuem is located on the corner of Moore and Seventeenth streets. Hours of operation are Mon.-Fri. 10 a.m.-4 p.m. and Sat. 12 a.m.-4 p.m.

The Rhyme, Rhythm and Reason

Motown: Keepin' it classy

Lisa Detweiler

If Memphis and Detroit could somehow be placed next to one another on the map, you could localize black popular music of the 1960s. The sounds of these regions combined the doo-wop style of the 50s, the richness of gospel and the depth of soul into a new genre.

The music from Memphis smelled like the bayou, and the music from Detroit smelled like metropolitan streets. Motown took soul and made it classy. This is not to say that soul did not have an inherent class of its own. But the genre we know as Motown took the solid sad tones of soul and gave them shoes to dance in.

Motown began to blossom between the end of the classic rock era and the arrival of the British Invasion. Who was responsible for this movement? His name was Berry Gordy Jr. Gordy's work ethic drove him to the music industry. He worked in the automotive industry, a grocery store and, spurred by his passion for jazz, eventually opened a record store.

Although his shop eventually closed, he broke into the music industry as co-author of hits such as "Lonely Teardrops" by Jackie Wilson. This led to larger endeavors with the lead singer of The Miracles, Smokey Robinson.

Tamla-Motown, the first name of Gordy's label, was shortened to Motown. This was a reference to Detroit's nickname of "Motor City," the birthplace of the genre.

It is easy to throw around names of Motown legends: The Miracles, Gladys Knight and the Pips, Martha and the Vandellas, The Supremes, The Four Tops, Rick James, Stevie Wonder and Marvin Gaye. Because honestly, who doesn't feel sexy listening to one of their songs? Yet the list is not limited to these magicians of music or to one decade only.

These musicians took preexisting genres and twisted them into their own. They took heavy and sorrowful, to smooth and sultry. Let's consider James Jamerson, a bassist of the era, whose genius can be heard in "My Girl" and "I Second that Emotion." Jamerson took the emotion of a chord sheet and seconded them in his own unique way, setting the trend for the style. He once said, "They'd let me go on and ad lib. I created, man… It was repetitious, but had to be funky and have emotions… My feel was always an Eastern feel. A spiritual thing."

It was as spiritual as Gospel music. Jamerson's bass lines have their roots in Gospel music's meditative use of repetition. James Brown, the late godfather of soul, also employed repetition in his music. Brown would often repeat his lyrics until he and his audience were both worked into a kind of frenzy. Many of us wish musicians today had that same capability.

Improvisation is also a key characteristic of Gospel and Motown music. Call-response is a kind of improvisation used in Motown music. The lead singer would say something to which the backup singers would respond. This would create a very conversational element, similar to the dialogue between preacher and congregation.

The context of its development was what made Motown great. It thrived in an industry dominated by white men and women. It also incorporated more women vocalists than most white genres at the time. Its form also utilized completely unconventional techniques from other popular music. It was a style that someone couldn't help but love, a style that helped to bridge the gap between racial tensions of this period. Motown was a social equalizer, a pleasure to the ears and undeniably classy. Who will second that emotion?

This issue's Reason:

"Berry wanted to make crossover music. Crossover at the time meant the white people would buy your records. Berry's concept in starting Motown was to make music with a funky beat and great stories that would be a crossover that would not be blues. And that's what he did."

– Smokey Robinson

The Naked Truth: Sharing is caring

Rebecca

Everything we ever needed to know about having sex, we learned by the time we graduated from kindergarten. It's a wonderful time in a child's innocent life when we learn how to do everything from use positional words (such as in, on, top, bottom, etc.) to how to zip and unzip. It's easy to forget the invaluable knowledge gained between story time and recess because it was such a long time ago, but those lessons just might be the ABCs to putting the XYZ in your love life. Let's refresh our memories…

Consonants and vowels. "Mmmm" is the sound beginning with the letter M. "Oooooh" is the sound associated with the letter O. Don't be afraid to express your letters outside of the alphabet. Try it doggie-style. B-I-N-G-O. B-I-N-G-O… and Bingo was his name-oh!

Colors. We learned the rainbow and the connotations for its those colors. For example, green means go and red means stop. Despite that knowledge, some are still gunning through those red lights in the bedroom. I suggest that if you're going to risk running the red light, you use your high beams for safety and get those windshield wipers ready.

Handedness. As a lefty, I remember the damage I did to a piece of paper if I used a pair of regular scissors. It became imperative, at an early age, that most of us understood we're better with one hand than the other. Know your strengths and limitations. But for those of you out there with a partner who's ambidextrous…you lucky, lucky dawgs. You're getting in more double-time than Billy Blanks!

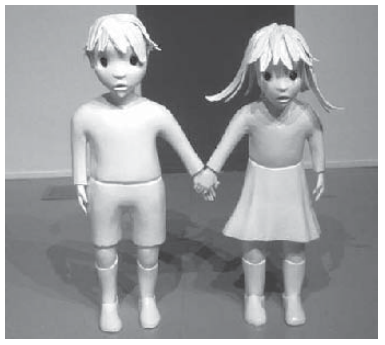
Repitition. We learned everything in patterns: colors, shapes, numbers, letters and songs. And we were rewarded with gold stars for being the king or queen of repeating. If at first you don't succeed, try again. Why else would that conductor ask "Dinah won't you blow, Dinah won't you blow" twice?…Well someone's horn got blown, but it was probably the guy strumming his old banjo. Fee fie fiddly-i-ooooooh.

Exercise. We didn't get up and stretch in class for nothing. We were learning the value of exercise, as movin' and shakin' is needed to have a healthy body. Heads, shoulders, knees and toes, knees and toes. Do you ever wonder why we practiced bending over so much? Practice makes perfect kids, remember the repetition! Then again, maybe you can have too much repetition. Just ask Old Mother Hubbard.

Patience. Waiting for snack time was the longest part of my (half) day of Kindergarten. Instant gratification was something we all wanted. But sometimes we are just too impatient. The race is running, you've hit the finish line, but you're partner is the kid in gym class who wasn't training for the Olympics. Patience is a virtue. Virtue is a grace. Put it all together and you'll have a happy face. Hey, she'll (or he'll) be coming around the mountain when she (he)…well, you know…

Attention. We were taught about what are good and bad ways to get attention from others. A good way was raising your hand. A bad way was putting your hand up the teacher's dress. Of course, show and tell was the very best way to get attention. I loved the days when boys brought in their Super Soakers. They knew size mattered when it came to who had the biggest one in class and they weren't afraid to show it. To this day you can tell who has the biggest gun. Again, invaluable information.

Bathroom. Proper use of the restroom is a lesson I can't forget. I remember the day I learned to lock the door. I never got caught with my pants down again...



Imagination. Hey, Yankee Doodle stuck a feather in his hat and called it macaroni. That's creativity… and I have a feeling he came to town more than once. So mind the music and the step and with your girl be handy.

Naptime. Sleep is vital, especially if you need to start rowing your boat gently down the stream again anytime soon. Just remember, be well-rested, for life is but a dream…and the breaststroke can be exhausting.

Sharing. I'll be the first to admit, I'm selfish. I hated partner activities in kindergarten, like counting activities with M&Ms. If someone else is involved, you don't get all the sweets. I always gave my partner the brown M&Ms. Luckily, he was unconcerned by the M&Ms aesthetics and let me sip from his straw (the one in his milk carton). Don't even get me started on how excited I was when I found out how good he was at finger painting. Let's just say I started giving him a few red M&Ms here and there to keep him napping next to me…

.....

I could go on and on, but I'll save it for another column. All in all, kindergarten prepped us for everything from multiplication to fornication, while giving us ample time to nap. No matter what has happened since that time, we must remember the simple rules of kindergarten: Share your milk and cookies, and it will guarantee you a front row seat for show and tell.

Eleventh annual Eid holiday at JC

continued from page 10

dinner. It gave students a taste of the prayers that begin the Eid celebration day. The dinner consisted of ten different courses that were prepared by student volunteers in the day preceding the event. The unique dishes resembled what the Muslim students would have eaten had they been at home.

Performances by a Turkish band from State College and by 2006 alum Mohammad Jami and sophomore Sebastian Brown illustrated the rich Muslim musical tradition. The debkeh dances provided the feeling of laughter and entertainment that accompanies the Eid celebration.

"I just want to thank everyone who helped make the dinner what it is tonight. The food, the advertising never would have been possible if each individual hadn't been willing to give their time, and it was all worth it," said Tounsi, as the dinner reached its end.

"It's a beautiful celebration every year, but it takes so much work to get it there. And, everyone in UCJC [United Cultures of Juniata], MSA and the International Club participates in some way to make the Eid dinner what it is," said Kati Csoman, the director of international student and scholar services at Juniata.

The money from the tickets and cookbooks will go towards next year's dinner. The clubs split the cost of the dinner three ways.

Individual club members joined different committees, which were were a new idea to help ensure that each aspect of the dinner was completed on time and done well. There was a committee for food, advertising, organizing the flow of the dinner and entertainment and presentation. Each committee had a student head working in coordination with an advisor, like Csoman who was head of the food preparation committee.

MSA, which headed the effort, made the decisions of who would be preparing what foods weeks ahead of time. By the time the dinner came, they simply had to hope that their efforts would pay off.

"I feel touched, moments when I stop my tears. It is wonderful that Juniata has accepted a piece of our home and are really interested in seeing what our culture is," said Sonia Eqbal, a senior and the president of MSA.

Things like the Debkeh dancing and the delicious lamb dishes brought hungry students to the dinner. Those who attended were introduced to the rich textures of Islamic culture and the complexity that lies behind the stereotypical image. It was a gift to be shown the personal side of this tradition.

Roving Reporter

After wondering if students were more interested in spying on people they didn't know or on people they do, the Juniatian canvassed campus to ask: What's the bigger drain on your time, Facebook or YouTube?

"Facebook, tag that."
- Anna Bloom, '09

"YouTube because Candy Mountian takes the cake."
- Erin Satterthwaite, '10

"Facebook, what's You Tube?"
- Danielle Brenizer, '10

"Stalker net is a way of life, who needs Facebook?"
- Amin Khoshnevisan, '09

YouTube

continued from page 12

Not everyone finds the amateur filmmakers entertaining, though. Some TV, movie and music executives have found reasons to file lawsuits, because copyrighted materials are frequently uploaded by users. Some companies, though, are refraining from taking legal action in order to create a partnership with YouTube. Examples are Warner Music Group, CBS, Universal Music Group and Sony BMG. The partnerships will allow these conglomerates' media to be available to video makers for a split of advertisement revenues.

Until recently, YouTube has had difficulty monitoring copyright problems while acting under the safe-harbor provisions of the Digital Millennium Copyright Act. YouTube is a copyright infringement sniffer. It can only wait for the rights holder's complaint before taking down individual clips from the site.

What compels so many users to create online clips? TIME explains that it is the easy access to cheaper video recorders and simple software to use in video production. "It's exemplified by sites like MySpace, Wikipedia, Flickr and Digg—hybrids that are useful Web tools but also thriving communities where people create and share information together," reads the TIME article. Thus the ease of the process encourages participation.

Another draw to YouTube is that, as a culture, consumers of today want to experience an unfiltered media. Mainstream propaganda just won't cut it. Consumers have acquired a "show-me" attitude that wants an active participation in what is broadcasted to the public. Consumers desire to be, and are, the broadcasters themselves on YouTube.

Neil Perrin of Juniata's Digital Media Zone (DMZ) staff chose YouTube as the subject for his a independent study. He is investigating what its selling viewpoint is to audiences.

So go ahead, next time you want to procrastinate writing that paper just a bit longer, head to YouTube and type in the search box the names of these videos for a laugh or two: Paxilback, Numa Numa, "Boom Goes the Dynamite" and The Brothers McLeod present A History of Rock.

JC Up Late brings out the fashion

Julia Bogue

On Feb. 16 at the "Bring 'em Out Fashion Show," Juniata students had the chance to view the fashion designs of their peers. As part of JC Up Late, the show, which benefited WKVR and the National Eating Disorders Association, featured mainstream clothing lines modeled by Juniata students. The brands included Confess Clothing, Industrie Clothing and State College's Gia & Company bridal collection.

The show also featured Pyknic Clothing, designed by Joe Perna and friend Stephen Thompson. Premiering at the event was Polyphony Clothing, founded by Ryan Conrad and Tripp Rudolph. Some clothing was then sold after the show.

Polyphony Clothing, designed by Conrad, Rudolph and Elena Amato was inspired by Conrad's love of surf shops.

The logo of the company is a treble clef turned upside down. Polyphony is a musical term, defined as a collection of two or more independent parts joining as one.

Polyphony premiered three articles of clothing at the show. For women, Polyphony débuted a gray zippered hoodie. Polyphony was written across the lower back in green and the Polyphony trademark was on the front. For males, a white zippered Polyphony hoodie was modeled. The trademark was printed on the back. The third item was a baby blue vintage t-shirt with the word Polyphony and a design printed on the front.

The clothing was printed by ProActive sports in Altoona. The company helped the Polyphony staff select the shirts. The personal financing of Conrad and Rudolph and donations from the "POLYPHONY Clothing Movement" Facebook group made clothing production possible.

"I think [the show] was a great success, but it would not have been possible without the models and facility people. It was great that people took time out of their day to help," Conrad said. "I think premiering at the fashion show really worked out well, because it got us name recognition, and we have already sold quit a bit."

Senior Aaron Shotts said, "I thought [the show] was a great way to get Polyphony's name out. It was the first fashion show I've been to, so it was nice to see some familiar faces up there and the money going to a good cause."

Having a business in the final stages of review by JCEL, Conrad offered some insight to future entrepreneurs. He said, "I think that you need to first have the motivation, and then surround yourself with good people. It will then work out. I think it's a great feeling to have something I thought about this summer come true. The credit is really due to Elena Amato, who helped design the clothing, to Justin Kauffman, who helped develop the Web site to my business partner Tripp Rudolph."

POLYPHONY

For more information, check out the Facebook group or the website www.polyphony-clothing.com

Kevin Dundore / Juniatian

Junior Corinne Barbaras, Sophomores Cassie Dickmann and Tripp Rudolph were among the many models who strutted the catwalk on Feb. 16 at the fashion show premiering Polyphony Clothing designed by Juniata students Ryan Conrad, Tripp Rudolph, and Elena Amato. Look for the upside down treble clef logo around campus!

The golden boys

Playing for one another in postseason

Jess Winemiller

Play for the guy in gold next to you. The Juniata men's basketball is looking to ride that team commitment all the way to the Commonwealth Conference Championship. With a conference record of 9-5, the program has captured a spot in playoffs for the first time since the 1988-89.

Despite a minor setback against Lebanon Valley College, the Blue and Gold finished the season strong to ensure a long-awaited postseason appearance.

"It's our team motto to play for the guy next to you, that is really all I think of."
– Chris Jasiota

"To do something for this program that hasn't been done in almost two decades is such a gratifying experience because every guy on the team sacrifices a number of things for one another," said senior captain Chris Jasiota.

In its last regular season game, Juniata went on the road to Reading, PA and put away Albright College, 82-70. For a team that takes pride in its defense, it was the Eagles' offense that stood out. Led by senior guard Nick Hager's 17 points, the team shot 51 percent from the field.

The win gave the Eagles the best conference record in the program's history. By topping the Lions, Juniata also secured the second seed and home court advantage for the first round of playoffs.

The results of the semi-final game versus Susquehanna last evening were not available as of press time. The outcome and box score can be found on Juniata's athletics homepage.

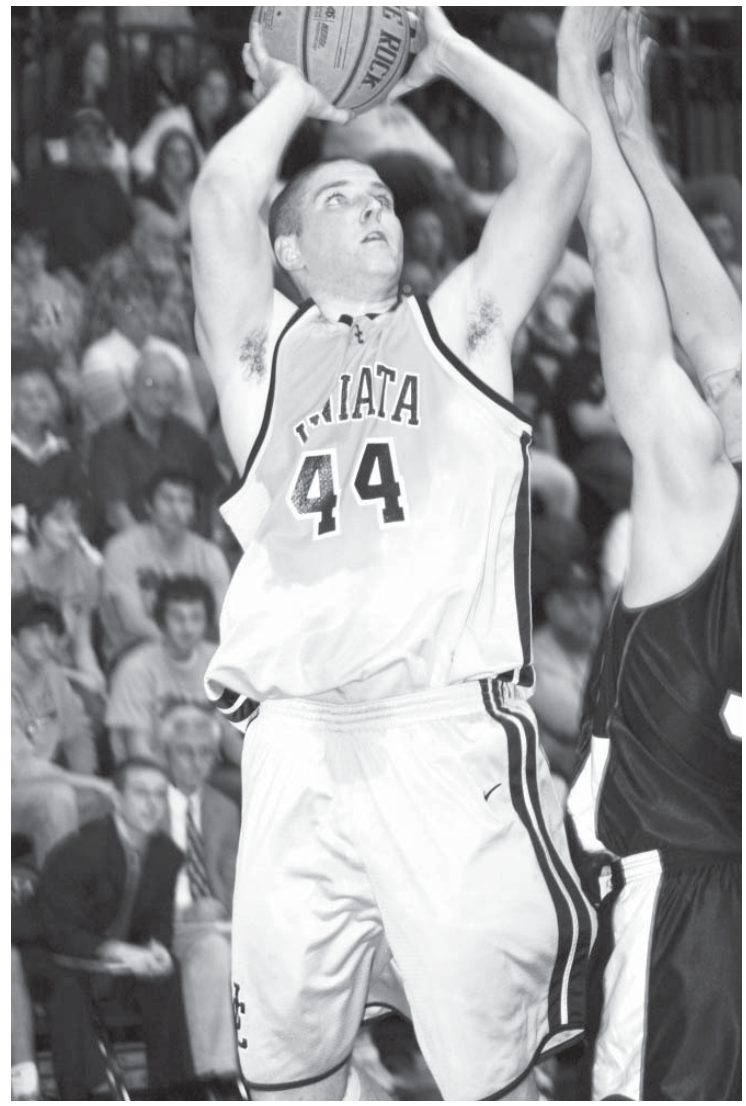
The road to playoffs was paved by solid and consistent defensive execution. Juniata started by capturing the victory over Elizabethtown College, 63-51, on Feb. 7. Even with a secure lead, the Eagles' defense stood fast until the last second, holding the Blue Jays to only two points in the last six minutes.

"Our defense has been the catalyst to our success. When we are scoring well, it is when we are pressuring the opposing team into turnovers and bad shots," said Jasiota.

In his final year, Jasiota is stepping up his game at just the right time. He was a force inside as he recorded a double-double with 15 points and 14 rebounds against Elizabethtown. Jasiota attributes his individual success to practice preparation and the contagious energy of his teammates.

"It's our team motto to play for the guy next to you," said Jasiota. "That is really all I think of…" along with the rest of the team.

Jasiota was not the only player to finish with a double-double. Senior guard Aaron Chamberlain also racked up 10 rebounds to match his 10 points.



On Feb. 10, however, Lebanon Valley College tested the Eagles' defensive pressure and execution. The Flying Dutchmen shot 47 percent from the field as well as 44 percent from behind the arc to ensure a win over Juniata, 74-65.

"The loss to Lebanon Valley made us realize we have to come ready to play every game," said junior guard/forward Brent Ferko. "Nothing is going to come easy to us."

The loss set up a big conference match-up at home against Susquehanna University on Feb. 15. The two day postponement of the contest only made the team's anticipation and excitement grow.

"We had to come into that game playing like we have been playing, complete team ball, and come out with a win no matter what," said Chamberlain, "We know that we

Junior forward Brian Cannon elevates for the shot during Juniata's game against Lebanon Valley on Feb. 10. Cannon netted 13 points on the evening. He was one of four Eagles to hit double figures.

Eagles are flying high

Veteran leadership paying dividends

Casey L. Shaw

It has been a busy two weeks for the Juniata men's volleyball team as it has matched up against Division I opponents Penn State University (PSU), Princeton University and George Mason University. The team also faced Stevens Tech and Rutgers University-Newark during this hectic stretch of the season.

On Feb. 16 Rutgers University-Newark came to the Kennedy Sports and Recreation Center. Delayed by weather complications, the Scarlet Raiders did not arrive in Huntingdon until hours after the scheduled 7 p.m. start. Even after an extended travel time, Rutgers stepped off the bus ready to play and handed the Eagles a loss in the first game. Juniata soon found its rhythm and came away with a 3-1 victory.

Senior Jeremy Barndt finished the evening with a .400 hitting percentage, 15 kills and led the team with seven blocks. Sophomore Matt Werle contributed 54 assists, three aces and eight digs.

The Eagles suffered a tough home loss against George Mason. The Feb. 15 match was highly contested, but the Eagles were unable to gain the necessary momentum and fell 3-2 to the Patriots.

"We feel like we take a few steps forward, then a few steps back," said head coach Jeremy Price.

Despite the loss, junior Matt Fritz put forth a solid effort and finished with 22 kills, a .390 hitting percentage and two blocks. Werle led the team with 56 assists and 15 digs.

The Eagles rebounded from a slow start against Stevens Tech on Feb. 10 and took games three and four quite easily. The Blue and Gold trailed the Ducks in the first game but rallied and notched another home victory.

Juniata established itself and began to gel as a team by posting a .398 hitting percentage. The Eagles discovered a part of their identity as a comeback team and relied on one and other to pull together for the 'W.'

After suffering two losses to the Ivy-leaguers last season, the Eagles sought redemption against the Princeton Tigers. Juniata turned the tide on Feb. 9 and avenged their losses with a 3-2 victory over the Tigers.

"Any team the beat us last season, we definitely want to beat them this season," said assistant coach Scott Horning.

With the contest tied at 2-2, the Eagles came together on a few key plays during the fifth game. Senior Nate Ocasio's kill started the chain reaction and was followed by sophomore Dan Powers' block. These two plays put the Eagles in a position for Barndt to seal the win with a powerful kill.

Fritz finished with 14 kills while Barndt and senior Glenn DeHaven combined for 24 kills. Barndt led Juniata with eight blocks.

The Blue and Gold traveled to State College to play PSU on Feb. 6. The Eagles led the first game, but were overpowered by their Division I foe. The final score of 3-0 does not justify how close the match actually was.

Powers claimed a personal victory against the Lions, finishing with a .667 hitting percentage and 11 kills.

The Eagles played at Saint Francis University Tuesday night, but results were not available as of press time. The team will travel to the Rutgers-Newark this weekend to play in the Golden Dome Classic. Juniata is slated to play New Jersey Institute of Technology and Rutgers in that tourney.

Christopher Shannon/ Juniatian

Sophomore guard Claudia McDowell defends against Susquehanna during the Eagles' final home game on Feb. 10. Even though the Eagles forced 25 turnovers on the night, they fell to Susquehanna 62-57.

Despite best effort Eagles fall short of playoffs

Women's basketball finishes tied for last playoff spot, loses the tiebreaker

Derek Stanley

Going into the final weekend of the regular season, the women's basketball team knew that it needed a win and some help to punch a playoff ticket.

The team (15-10) did its job, winning the final game at Albright College, 59-42. However, with a Susquehanna win on the same afternoon, the Eagles tied the Crusaders for the final playoff spot. Since Susquehanna defeated Juniata twice this season, the Eagles will not advance to the Commonwealth playoffs.

"This is not a good feeling. We should have taken care of business earlier in games that we should have won. It is also annoying because we were in a similar position last year," said sophomore guard Claudia McDowell.

As frustrating as it is, the Eagles can't be blamed for their performance against Albright. McDowell led the Blue and Gold, posting her first career double-double (15 points,10 rebounds). Sophomore forward Steph Hatch also chipped in 15 points while posting three blocks. Meanwhile, junior guard Ali Meckey led the team defensively, tallying a team high seven steals during the contest.

"I was feeling pretty good. We were all just having fun and we knew we had absolutely nothing to lose being in the position that we were. Everyone was just feeding off of each other when something good would happen," said McDowell.

Despite this great effort, the Eagles will not advance after dropping two of their previous three games including a "must win" contest against conference rival, and playoff bound, Susquehanna University.

Turnovers played a key role in those losses as Juniata committed a total of 37 turnovers in those two games. The turnover

continued page 19

Swimming finishes fifth at the MACs

The Juniata swim team finished the MAC championship meet in fifth place. Although this position is a drop from the third spot the Eagles held in each of the past three seasons, the result marked the fifth straight year that the Eagles placed within the top half of the conference at the year-end meet.

Throughout the championship meet on Feb. 9-11, the Eagles saw strong performances from different swimmers at different distances. The best Juniata finish came from junior Kasey Brough who grabbed a silver medal in the mile race. Her time of 18:18.12 also earned her a spot in the Juniata record books.

Other impressive individual finishes included a fifth place finish from senior Amy Sutherland in the 200 backstroke and a sixth place mark by junior Carlie Zoubek in the 200 breaststroke.

Juniata's best finish in the relays came from the team of freshmen Paige Black and Colleen Cribbs, sophomore Kristin Musselman and Sutherland with a time of 3:51.99 in the 400 freestyle.

Kauffman works out for Pirates

Christopher Shannon/ Juniatian

Earlier this month, junior first baseman Dan Kauffman participated in a workout for Major League Baseball's head scout in Pennsylvania for the Pittsburgh Pirates. The focus of the hour and a half long workout was Kauffman's hitting with a short interview afterward.

Scouts from the Pirates will also be taking a closer look at Kauffman on the team's spring break trip to Arizona, as well as at a few home games this season.

The junior standout may be faced with a difficult decision this upcoming June during the MLB draft. "I've thought a lot about it. It's a tough decision. If I go early enough [in the draft] and everything works out right, I'd go. Once my baseball career was over down the road I would finish my last year of college to earn my degree," said Kauffman.

Juniata baseball set to begin season

Men look to capture conference crown

Derek Stanley

After going 30-12-1 during the 2006 campaign, the Juniata baseball team will begin its season in Lynchburg, Virginia later this week. Leading the Eagles are junior captains Dan Kauffman and Jay Enoch.

One of the toughest challenges for this year's squad will be finding someone to protect Kauffman in the line up so that he can continue to produce. Kauffman led the team last year with 15 home runs, 45 walks and a .694 slugging percentage.

That task became more difficult this summer when the two players projected to bat around Kauffman in the line-up suffered injuries. Junior Josh Lingenfelter fractured a vertebrae in his back, which may prevent him from playing this year. Junior Steve Wilk, set to bat after Kauffman, underwent surgery ito repair torn ligaments in his shoulder. His playing time may be limited.

Kauffman said, "Personally I try and go out every game and do what I know how to do. I know we are young, but we still have guys all around me that will do fine. If I repeated what I did last year statistically, I'd be happy."

On the defensive side of things, Enoch will be the ace of Juniata's proven pitching staff, and will strive to improve on the eight wins and 60 strikeouts he posted last year.

"Our pitching staff is very experienced this season. We return three conference starters as well as a closer who has had years of experience finishing conference games for us," said Enoch.

> "Personally I try and go out every game and do what I know how to do."
> – Dan Kauffman

Jeff Hayes will be that closer for this year's squad. During the 2006 season Hayes led the team with a 2.10 ERA and four saves.

The experience of the pitching staff will have to compensate for the inexperience of Juniata's fielders.

"As far as position players are concerned, we are very young. We have a lot of freshmen that will step in and play right away. We have one starter [Kauffman] that will be returning in the field with experience in the conference games," said Enoch.

The young fielders will gain some valuable experience with the team's first three games in Lynchburg. However, after these games the Eagles will be placed directly into the fire as they travel to Arizona for their annual spring trip. While in Arizona the Eagles will play nine games.

"It is a constant grind for the players, but it is an experience that you only get once a year. It is also a good place for the young guys to bond with the older guys as we spend a lot of time together," said Enoch.

The Eagles will need this acquired camaraderie and experience gained throughout the season to achieve their captains' goals.

"We have two goals for our team this year. Our first goal should be to top our win total from last year of 30. Our second goal is an annual goal, and that is to win the conference championship. We strive to achieve this goal at every team workout and practice," said Enoch.

Although reaching these goals poses a challenge, even larger goals are in the back of Kauffman's mind.

"We want to win a national championship. Since we lost so many guys we'll see how we develop, but that is something we would love to do," said Kauffman

The Eagles' home opener will be a double-header on Mar. 17. They will face Commonwealth Conference rival Susquehanna University at noon and 2:30 p.m.

Kevin Dundore/ Juniatian

Indoor track close to finish

The Juniata men's and women's indoor track teams competed in their final regular season meets on Feb. 17 at Susquehanna University. The meet marked the third time the Eagles have made the trip to Selingsgrove, PA in the past two months. However, last weekend's trip will not be the last. On Feb. 24 the Eagles will once again compete at Susquehanna, but this time for the MAC Championships.

Familiarity with the venue could prove positive for the Eagles who have recently posted strong finishes there. Most recently the men's team found its greatest success in the jumping and sprinting events.

Two Juniata jumpers, junior Matt Booth and senior Randy Anderson, placed in the top eight in the long and triple jumps.

Three Eagles' sprinters ran to top eight finishes as well. In the 55 meter dash, Anderson took second. Freshman T.J. Breya placed fourth in the 55 meter hurdles and Junior Eric Hoover took eighth in the 800 meter dash.

On the women's team sophomore Kelsey Buffenmyer posted Juniata's lone first place finish. Buffenmyer won the high jump with a mark of 1.57 meter.

Three women's sprinters placed in the top five in different races. Taking third in the 5000 meter was senior Meghan Fahy. Junior Caitlin Hinson took fifth in the 55 meter dash. Senior Elena Amato also posted a fifth place finish, hers coming in the 400 meter race.

Golden boys

continued from page 16

are a great team. We know how we can play, and then it just all comes together."

Chamberlain's shooting definitely came together as he hit a career-high of seven three pointers and finished the game with a season-best 23 points.

"It felt amazing that I could contribute like that to our team. My confidence started building and building and everything felt good" he said.

The Eagles were feeling it right alongside of Chamberlain as they completed the contest shooting 50 percent from the field. That statistic didn't top their three point percentage, however, as Juniata left the court shooting 52 percent from long-range.

Juniata's convincing win left it with an 8-5 record in conference play. It also secured a berth in the Commonwealth postseason.

"To know that this has been a total team effort is just great…laying a foundation for the future basketball program here," said Jasiota.

Women lose tie breaker

continued from page 17

problem can be directly correlated to lack of communication.

"When times get tough in a game, instead of talking and working through them, sometimes we shut down and close our mouths. Communication can't be lost, and when it is, things go badly," said Meckey.

The Eagles will need to work on their communication and refocus during practice this week. Despite not making the Commonwealth playoffs, their season may not be over. The team will be waiting patiently next week as bids are announced for the Eastern College Athletic Conference (ECAC) tournament.

The selection criterion include division winning record, head-to-head results, results against common opponents, strength of schedule and season conference standing. The Blue and Gold finished the regular season with 15-10 record, 6-8 in the Commonwealth Conference.

"We believe we have a good shot at getting in. We have some quality wins on our schedule that give us a really good shot," said Meckey.

Beyond a possible ECAC appearance the Eagles have much to look forward to in the 2007-2008 season. Coach Danny Young does not lose one player from this year's roster to graduation. The squad will boast five seniors and nine players who saw significant minutes this season. That experience should bode well for Young and her team in the new Landmark Conference.

Top ten finishes for both the men's and women's indoor track team at the Bucknell Winter classic

Softball looks to stay together

Jeremy Barndt

It is hard to gauge this year's softball team based on last year's record. Last season, injuries to key players forced six freshmen to step up and assume important roles. The 2007 squad looks to capitalize on this experience, the return of key injured players and a long off-season of hard work.

"Our goals this year are to hit, hit, hit, and to stay together as a team," said junior Amanda Albanese.

Out of the 15 players on the roster, 13 are either freshmen or sophomores. The only two juniors are the elected co-captains, Albanese and Kaleigh Driscoll.

Both Driscoll and Albanese have experience at the fast-paced college level and are both vocal leaders. The team looks to avoid last season's leadership difficulties.

"We had no leaders last year. We did not even have any captains. This year we do have captains and they are very easy to go to," said sophomore Jackie Morley.

With strong leadership and team unity as major focal points, the team dedicated itself to its off-season workouts. Through the winter months, the team takes part in captains' practices, weight training, batting practice and team bonding activities. These gatherings help strengthen their comraderie.

"There are 15 girls on the team and 15 key players," said Albanese.

Some of the key players this season can be found on the young pitching staff. The three pitchers are sophomores Elsann Machotka and Pam Mansell and freshman Alyssa Erb.

Machotka has the most experience after she stepped into the pitching circle in place of injured players in 2006. Since making the switch from outfield to pitcher, Mansell has spent the off-season working on her technique. Erb will have to rely on her natural pitching abilities and learn on the fly to make up for her lack of college experience. The presence of starting catcher, Albanese, should reassure the young pitching staff.

At the plate, the team expects continued production from sophomore outfielder Liz Schmitt. As a freshman, Schmitt led the team in home runs, RBIs, total bases and slugging percentage. She also ranked high in both total at bats and hits.

Another important bat for the Eagles will be sophomore shortstop Tara Carl. Carl had a solid freshman campaign providing 19 hits and 12 runs from the lead-off spot.

The Eagles' have shown success with their young players as they already won two exhibition games during a tournament over fall break.

Over spring break the team will travel to Myrtle Beach, South Carolina. The Blue and Gold will play a series of games and take advantage of the warm temperature for more outdoor workouts.

The Eagles' season and home opener will be on March 17, as they take on Susquehanna in a double header.

TKep's Tie of the Issue

This week President Kepple sports a stunning tie adorned with tiny sharks. We feel this tie screams: power, daring, a wild streak perhaps. But mostly, we think that he's reminding us all that he's the biggest fish in this little pond.

Pointless Knowledge

1. On average, the life span of an American dollar bill is eighteen months.
2. The Atlantic Ocean is saltier than the Pacific Ocean.
3. The search engine Google got its name from the word 'googol', which refers to the number one with a hundred zeros after it.
4. The first product that Sony came out with was the rice cooker.
5. The average office desk has 400 times more bacteria than a toilet.
6. The WD in WD-40 stands for Water Displacer.
7. 'Jedi' is an official religion, with over 70,000 followers, in Australia.
8. One-third of Taiwanese funeral processions include a stripper.
9. Ninety percent of women who walk into a department store immediately turn to the right.
10. A cow gives nearly 200,000 glasses of milk in her lifetime.

Majority rules, but minority rights?

Student proposes new student senate seat and vote turned it down

Kendall Markel

On Feb. 22, senior Brandyn Lau went before the student government to ask that a new representative seat be created on the student senate. The new seat would be made to represent the lesbian, gay, bisexual and transgender (LGBT) community on campus. The senate voted on the idea, and the motion failed by a vote of 11 to 7.

The proposal would require a constitutional amendment, and therefore involves many steps of consideration.

The Feb. 22 senate vote was to determine if the proposal for the new seat would then, in turn, be voted upon by the student body.

In order to overturn the senate's decision, Lau and the LGBT community had to obtain 250 signatures in support of the new seat. They succeeded in gathering over 500 supporters to sign their petition.

At tonight's 8 p.m. student government meeting, Lau will present his signatures to the senators. The senators will then revote on creating the proposed seat. If a majority of the senators vote in favor, Lau's proposal passes, and the LGBT seat will be put on a ballot for the student body to vote on within the next two weeks, according to executive board vice president Shawn Rumery. The seat would be created if a majority of those who vote are in favor.

If, however, the proposal fails again in the senate tonight, Lau must bring ten percent of the student population before the senate, which the student government constitution calls an "open forum." If Lau brings ten percent, the senate must revote immediately. Whether approved or not, the proposal will be put to student body. But if not approved, the proposal must pass with a two-thirds majority vote, instead with a simple majority.

The All Ways of Loving (AWOL) club, a social and activist student group for the campus LGBT community, is currently represented in the student senate through the Multicultural and Diversity Common Interest Sector (CIS) group. This CIS group represents all multicultural and diversity clubs. But Lau argued that AWOL's CIS representation does not adequately represent the Juniata LGBT interests.

In addition, there are presently two senate seats for domestic minority representatives, whose job is to speak for minority interests on campus.

A makeover for Webmail

Jason Najarian

Within weeks, Juniata will upgrade the interface of the Webmail program used for campus e-mail. This is the first of many changes planned by Campus Technology Services (CTS) aimed to increase communication and improve technology across campus.

According to CTS, the majority of campus users access their e-mail accounts through Webmail instead of Microsoft Outlook. As such, the log-in section of Webmail will be revamped to display a section with announcements and CNS advisories. Currently the daily announcements are often overlooked by students, and increasing their visibility and readership is a goal of CTS.

Scott Thomas, assistant Teaching and Learning Technology Center (TLT) manager, described the changes to Webmail at this point as mostly visual and aesthetic, with no new software involved. Software upgrades currently being evaluated and planned for the summer.

The new interface for Webmail will show three main areas, according to junior Jigar Patel, TLT manager. One section is random selections from the daily announcements, along with Rich Site Summary (RSS) feeds that allow users to subscribe to the news topics of

Senior Lisa Detweiler (center) won the Bailey Oratorical Contest on Feb. 27. She spoke of ways to reform animal grazing to promote sustainability. Seniors Elena Amato and J.P. Melle, shown with Detweiler, President Tom Kepple and communication professor Donna Weimer, placed second and third, respectively.

Humanities to hit Raystown Field Station in 2008

Charlie Allison

In the spring of 2008, Juniata College will offer a semester-long program called "Humanities in the Woods" at the Raystown Field Station.

The program, open to 14 students, was first suggested, in part, by Paula Martin, assistant provost.

"My job was to develop programs that would work out of the field stations, so students could live out there," said Martin. "It was also necessary to find faculty who were interested in teaching."

"Humanities in the Woods" will feature such courses as "Nature in Film" and "The Art of Environmentalism." These courses will help students explore humans' connections to nature.

The humanities program will be held at the Field Station every even-numbered spring.

The professor presiding over the program is professor of communication Grace Fala.

"What draws me to the Raystown Field Station is my own love of nature," said Fala. "I am looking forward to revisiting some of my old authors, from Plato to Dewey to Emerson, who also who had close ties to nature. I am looking forward to collaborating with my colleagues with quirky personalities and wild imaginations, both good tools for teaching."

Professors David Hsiung (history), Donna Weimer (communication), Paula Wagoner (anthropology) and Nancy Siegel (art) will also teach in the program.

A sister program, "A Sense of Place," will occur once again in the fall semester of 2007. The "Sense of Place" contains science-based courses on subjects including geographic information systems and sustainability. Though the programs boast different curriculums and instructors, both attempt to promote learning and group dynamics through total immersion.

"Students loved it [in 2006]. Waking up on the lake each day is amazing; living and learning on the lake, the outdoors is your classroom," said Dennis Johnson, professor of environmental science, and participant in the "Sense of Place" program.

The qualifications for acceptance into both programs are similar.

Despite the name, any current freshman or sophomore in any POE may apply. There are no prerequisites for the program, and participants will fulfill their IC requirements as well as earn credits in the fine arts, communications and other FISHN courses.

Everyone living at the Field Station will take the same courses, with the exception of their personal research projects.

Independent research, even in the humanities, is an important part of life at the Field Station. Students will also earn credits for this research while they are there.

Depending upon what research a student pursues, students can earn between 13 and 15 credits.

Professors will also use a unique form of block scheduling, visiting the site only once a week to teach a three-hour class. This is the same form of scheduling used for the "Sense of Place" program.

Students interested in the program must register online using Juniata's standard course registration system. They must also submit an application to apply. Unlike traditional registration, however, students can register and apply through the end of the semester. It is recommended that interested students apply early, as spaces fill up quickly.

However, as Martin said, "If we have more than 14 applicants we will choose based on class standing. We will also look at the date of application, because we give points to the early applicants."

Applications can be obtained outside of Paula Martin's office in BAC B209. For more information, contact Grace Fala, Dennis Johnson or Paula Martin.

Halbritter Center space must be reserved far in advance

Mike Chirdon

Students have raised questions about why the newly renovated Halbritter Center is one of the hardest buildings on campus in which to schedule events. Since the space is in high demand, the answer lies in scheduling events far in advance.

Chad Herzog, director of performing arts, explained the reasons why space in the Halbritter Center—which is made up by the Rosenberger Auditorium and the Susan von Liebig Black Box Theater—is difficult to reserve.

Two departments, music and theater, use the building as their primary space for classes and rehearsals. On Monday through Wednesday nights, the auditorium is used for band, orchestra and wind symphony rehearsals. No other events can be scheduled in the auditorium on these evenings.

Since the theater department started offering a POE, it now puts on four major performances a year, rather than one as in the past. The Black Box Theater is occupied almost constantly for rehearsals and performances.

In addition to student performances, the Rosenberger Auditorium is also used to host the monthly Juniata Presents events. Events for that series are often scheduled up to a year and a half in advance.

Though there are two performance spaces, the Halbritter Center is never double-booked for large events. Because the auditorium and theatre spaces share a lobby and bathrooms, there is not adequate capacity for two concurrent audiences, according to Herzog. The Center is double-booked for rehearsals, however.

Herzog said that scheduling for the next academic year typically begins in January, and the schedule fills up quickly. There are usually several weekend dates open early each semester before the performance schedule picks up, he said.

If a club wants to host an event in the Halbritter Center, Herzog suggests that the club officers request a date as soon as possible to ensure that there will be space. He also suggests that clubs consider hosting their events early in the semesters.

Recently several event coordinators have run into trouble reserving space in Halbritter, since they didn't know such advance scheduling was necessary. The student government faced problems finding a weekend date for All Class Night, eventually deciding upon the evening of Sunday, March 25, and was still unable to reserve the stage for a practice session. According to student government treasurer Shawn Rumery, this causes problems because classes are not able to practice with the sound system and lighting.

Similarly, junior Ryan Conrad, Juniata Activities Board major event chair, said that he tried to schedule the Black Violin concert in Rosenberger for March 17, but the stage was already booked for the concert choir show. As a result, the Black Violin Concert was held in the intramural gym.

Senior Christina Jones, who co-chaired Mr. Juniata for the past three years, said that she has never had a problem scheduling the event for the Rosenberger Auditorium. She and Circle-K, the group that organizes Mr. Juniata, usually schedule the space about a year in advance.

Conrad said, "Sometimes trying to schedule events is frustrating because we only get a few months' notice from some bands, and we have to find places besides Rosenberger to host concerts. I think it would be a good idea for my class to donate a portable stage as a senior gift which would make it easier to schedule big concerts."

Sustainable bike program coming to Juniata

Julia Williams

Late this spring, Juniata students will begin to see bicycles popping up around campus. Informally known as The Bike Project, this Leaders in Motion initiative will provide bikes for the community to share free of charge.

Once the program is kicked off, look for 22 blue and gold bikes stationed outside of Juniata buildings. Use the bike as needed and return it to a station for the next person to use. Regarding this policy, senior Jill Seraphin said, "It will be interesting to see if the honor system will work."

There are two objectives of the project. First, Leaders in Motion hopes to encourage students to shop more in downtown Huntingdon. Second, the group wants to promote sustainability. Junior Eric Hoover, who is completing an independent study on sustainability, said, "It's another step in creating a culture of sustainability at Juniata."

The idea for a communal bike project was one of many ideas suggested to Leaders in Motion by Rob Yelnosky, vice-president for finance and operations.

The Juniata College Cycling Club has offered to perform maintenance services for the communal bikes. Leaders in Motion credit sophomore Sarah Weick, treasurer of Juniata Cycling Club, for providing bicycle expertise and a connection to the Cycling Club.

Leaders in Motion, a recent program at Juniata for first-year students interested in leadership, is comprised of five students. They have split up the tasks to work toward launching The Bike Project. Jonathan Borrelli is the group's liaison to the administration. Jason Fischel works with area businesses to secure donated and purchased bicycles. Derek Dye is in charge of spreading the word about the new project. Vanessa Cerria, Dustin Gee and Dye are working toward business sponsorship of the communal bikes. Eventually, they would like to place a map of Huntingdon Borough in Ellis lobby which would highlight sponsoring businesses.

How to find scholarships on campus

Julia Bogue

Many scholarships are available to incoming freshmen, including academic awards given to students upon admission and full tuition awards. However, once enrolled as a Juniata student, finding internal money can be quite difficult as scholarships at Juniata cannot be applied for. To find money, students must turn to outside scholarships, some of which are very competitive.

Need-based scholarships

Students cannot apply for need based scholarships. Rather the recipients of these scholarships are determined by financial need.

"Financial need is determined by the FAFSA. There is not a specific income cut off for determining financial need, rather all the information gathered from the FAFSA is taken into consideration including income, assets, household size, number of dependents in college, etc.," said Valerie Rennell, associate director of financial planning.

"If students apply for need based aid via the FAFSA, financial aid first receives the information and determines if the student is eligible for any other aid, such as federal based aid, state based aid, loans or Juniata money," said Rennell. "Then any need based money goes on as a Juniata scholarship fund. They can be funded by many named scholarships. Financial aid looks at who qualifies for the fund and then rewards them with the appropriate scholarship[s]."

For students paying for the costs of college themselves, their financial need is still determined by their parents' incomes.

"Federal guidelines ask specific questions to determine a student's dependency status for financial aid purposes. In order for a student to be independent…[he or she] must be 24 years of age, married, a veteran, an orphan or ward of the court or have dependent children," Rennell said.

Students can receive these need-based scholarships at any time throughout their academic careers at Juniata. Once the student has been awarded a scholarship, it is renewable every year.

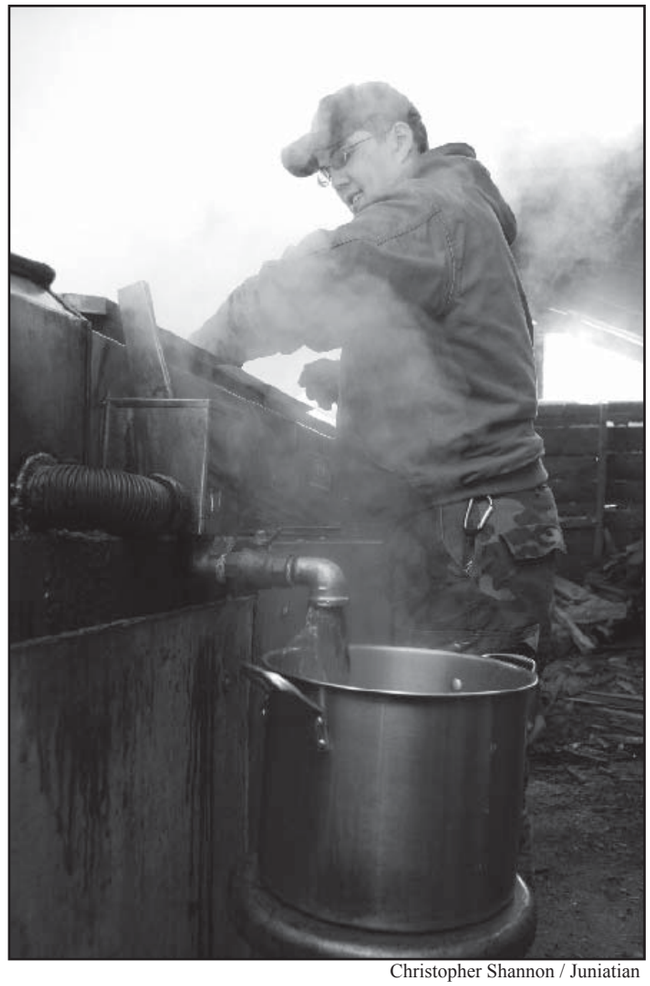
After a scholarship is awarded to the set number of students, the money is then tied to those students for their time at Juniata. The scholarship cannot be given out each year to new students, because the money is being used. An example of one such need-based scholarship is the North American Indian Scholarship which can give up to $11,200 to four students at a time. The amount of money is not divided evenly between the recipients. The amount granted is determined by financial need.

Department scholarships

For students seeking scholarships who may not qualify for financially need based scholarships, department scholarships can be awarded.

These scholarships are made possible through the donations of alumni or friends of the College. Students cannot apply for department scholarships. The recipients are determined by the faculty members of the appropriate departments.

Most departments choose the recipients of their scholarships based upon GPA, community involvement or other criteria that the scholarships and/or donors establish. Each department then presents its scholarships to the recipients at Spring Awards Convocation.



An example is the Esther M. Doyle Theatre Scholarship granted annually to the student who "has made the most significant contribution to theatre at Juniata College through participation in the presentation of drama, either in performance or as a member of the 'crew.' The winner of the award is selected from the full-time members of the freshman, sophomore or junior class," as described in the 2006 Spring Awards Convocation program.

Competitive outside scholarships

Students can also compete in larger scholarships beyond the Juniata campus. Students have had success with the St. Andrews Society Scholarship, winning it eight years in a row. The scholarship gives five U.S. students a set amount of money ($17,000 in 2006), and admittance to one of five universities in Scotland.

continued page 5

Sapsuckers

Christopher Shannon / Juniatian

Sophomore Brian Pearson empties some newly finished syrup from the finishing pan during the Sapsuckers' annual Maple Fest on March 17. It takes 40 gallons of sap to produce one gallon of syrup and one tap of sap creates only one pint of syrup. For the best flow of sap, the Sapsuckers look for days when the weather is around 40 to 45 degrees during the day and around 20 at night. That occurs only during about four weeks of the year, making the Maple Fest a very important club occasion.

Changes to Webmail

continued from page 1

their choice. Another section will be devoted to JC news, including sports and events. A third section will be a CTS/CNS tips and advice section on subjects such as technology troubleshooting and planned network downtime.

Even though the Webmail changes are focused on promoting the daily announcements, some students feel that the changes will not promote readership.

Sophomore Nicole Hines said, "Even with the new changes and updates, if students don't care about the announcements, changing where they are won't change their outlook on them."

About the proposed changes to Juniata's e-mail system, David Fusco, associate vice president and chief information officer, said, "Nothing is set in stone yet, but we are looking at several different options. One of the possibilities is having Gmail host our e-mail. In a sense, everyone would get a Gmail account but retain the .edu e-mail address."

By going through Google's Gmail program, each Juniata student could receive two gigabytes of storage and improved spam filters. CTS stressed that this is only a possibility at this point, as security and scheduling are important parts of the process.

"We will either upgrade our servers, or will we move to an outsourced service such as Gmail," said Fusco.

Other technology benefits of outsourcing would include a Google chat program and Google Docs and Spreadsheets. Google Docs is an online word processing program that would allow students to work on documents directly through the campus network. Fusco said this could potentially replace the Arch as the portal for students. "It would be like a 'webified' U-drive. You could drop all your documents and spreadsheets in there," he said.

Despite the interface change, Webmail will be functionally identical. Fusco said, "The biggest change will be getting people used to a different interface. Students will be fine. Faculty and staff typically use Outlook as a client to access their mail, [and they] can still use that."

The changes to Webmail were a project led by Thomas. Each CTS employee has a personal project to pursue. Other examples include 360-degree video tours of the campus and redesigned logos. A public TLT web log will detail what projects the TLT staff members are involved in.

An upcoming student survey is planned to measure how students feel about changes to campus technology. Those who participate will be entered into a raffle for a Nintendo Wii. It will include questions about cable TV, the campus phone system, Internet access and a variety of other topics.

Fusco said, "We are trying to engage students earlier in the process."

Operation Shoebox gives a taste of University Jerky to soldiers

M. Piazza

In an effort to give a little something extra to U.S. soldiers, seniors Brandon Long and Julia Williams, founders of University Jerky, have decided to donate 200 bags of their product to the troops serving in Iraq. The two are encouraging students to make a four-dollar purchase of one bag of jerky, which will then be sent to troops as a part of Operation Shoebox.

Over winter break, Long heard about another similar organization called Operation Troop Appreciation, an organization run by Juniata alumna Kristen Holloway ('97). Her nationally praised organization, based in Texas, sends a number of comfort items to soldiers not provided by the U.S. government.

Operation Shoebox is a program that is unaffiliated with Operation Troop Appreciation, though the organizations share similar goals.

Holloway and her associates find donations that fit the different desires of soldiers overseas, package the products and then ship them out.

Now University Jerky is one of those comforting products that some soldiers will receive.

"We wanted the business to be able to help others, and it was neat to find something so soon that allowed us to help so many," said Long.

Instead of donating a large sum of money to Operation Shoebox, Long and Williams decided to invite students to purchase jerky to donate. They advertised through the Arch, by word of mouth and on their Web site (universityjerky.com).

Students who want to donate can purchase jerky at Muddy Run Café, Jitters or Café a la Cart using cash or DCB. Online ordering is also available. Those who purchase jerky at a campus location must deliver it by hand to Long or Williams to be packaged.

"We wanted to make the donations as easy as possible," Long said.

In addition to the jerky, donators can also include a note of thanks or encouragement to the soldiers.

So far 17 donators have donated 150 bags.

Once the goal of 200 bags of jerky is reached, Long will send one large package to Operation Shoebox which will then be shipped to Iraq. The jerky will be repackaged with other items that the soldiers want and need.

Even after the initial 200 bags are collected, Long and Williams will continue to accept donations for additional packages to be sent overseas.

Debate over LGBT senate seat

continued from page 1

One of the domestic minority seats is held by senior Imane Tounsi, who felt that Lau should have approached her about the LGBT issues before suggesting a new seat. It makes "the student government look inefficient," she said.

But Lau and the LGBT community were displeased with their representation through the minority seat.

"The domestic minority seat was a role that was not communicating and keeping in touch with the LGBT community," said Lau.

Executive Board President senior Demetri Patitsas said that the minority representative was "not elected properly" so that the seat could represent minorities to its maximum ability. To become a domestic minority representative, a student must obtain signatures from campus minority groups, and then it is voted upon who fills the spot. Perhaps the groups who elected the minority representative did not have the LGBT community in mind when choosing a representative, said Patitsas.

Patitsas pointed out that often, there are not enough people interested in running for office to fill and "fit the criteria" of some of the senate seats. When a representative is not elected, one is appointed.

On Feb. 26, the student government made Lau the second representative for domestic minorities on the senate. This was a quick way to allow Lau to represent the LGBT community while he organized the petition.

The senate was left with the dilemma as to whether it could "fill the minority leader spot" with the LGBT representative or "create a new one," said Patitsas. LGBT community members want a new, visible and permanent presence on the senate so they can assure their unique views are represented.

At the Feb. 22 meeting, Lau was given five minutes to present arguments for the proposed seat and to answer the questions of the senators. Then the senators deliberate, during which a senator motioned for a vote, and another senator seconded the motion.

Originally, senators were not anticipating a vote on the issue to occur immediately following the presentation, according to sources. However the senators needed to took a vote before the meeting closed.

Patitsas said: "The senate deliberated for nineteen minutes, but we didn't leave until [the senators] came to a decision."

The proposal was then voted down.

Vice-President of the freshman class Erin Stein said the freshman representatives split their two available votes because they did not have "enough time" to discuss the issue during deliberation to make a solid decision.

Stein pointed out that Lau's proposal was a different and more difficult issue than what the senate usually votes upon: granting clubs additional funding.

When the senate votes, the four classes, each represented by class officers, are given two votes. Other seats, like the Juniata Activities Board and domestic minority representatives, are given one vote. Each of the ten Common Interest Sectors is allowed one vote.

Executive treasurer Shawn Rumery said that with perfect attendance "35 students have 23 votes."

At the Feb. 22 meeting, there were only 18 votes due to some members not being able to attend.

Lau became involved with the representation movement when he learned there was currently no representative in the student senate for the LGBT community. He did not feel that the student senate voted with LGBT students in mind.

"You [should] look at what needs to be represented. Juniata encourages students to think, evolve and act, but when are we going to start acting?" Lau said.

Rosalie Rodriguez of the Office for Diversity and Inclusion said that there is "no exact number" to gauge the size of the LGBT community, because the College does not ask sexual orientation questions on its applications. Rodriguez also stated that the LGBT community has grown over the years, and that there is no indication of future decrease.

Senior and Executive Board Vice-President Rejane Frederick said that Lau's presentation and the senate's vote opened up "a lot of intrinsic reflection." This outcome has allowed for discussion on changing the way student government is run.

Frederick said, "This topic will point out inefficiencies in the [senate] structure." The Executive Board is determining how effective the frequency and length of their meetings are in making important decisions like creating the new LGBT seat.

Each student government senate meeting is an hour and thirty minutes.

Students present at NCUR

M. Piazza

On April 12-14, a total of 21 Juniata students will attend the National Conference of Undergraduate Research (NCUR), held this year at the Dominican University of California in San Francisco. After months of research, write-ups, reports and study, these students are prepared to give presentations on a variety of topics.

There is a diverse set of disciplines being represented POES from physics to religious studies.

Student presenting were first asked by their professors or advisors to begin researching. Once the students finished with their research, they sent abstracts of their papers to the NCUR board to be read. About 85 percent of the people who applied nationwide were accepted. Juniata students performed better than the national average; every Juniatian who applied was accepted.

"Generally when I went to NCUR [in previous years] I came away with the feeling that our students are much better prepared than other students for the challenges they're going to face when they leave Juniata," said David Reingold, professor of chemistry.

The presentations at NCUR require a larger amount of work than many undergraduates are ever exposed to, but provide good preparation for graduate school and work in a research capacity, according to Reingold. In addition, the conference allows students to compare themselves to others in their fields and to learn about other issues in their fields.

Research topics are varied and include everything from tracking goods crossing the Canadian and Mexican borders to the advertisement of videogames. Each is a serious research project that took months of work.

"My paper was 15 pages long [and] took a month to write, not to mention the research that I've been doing since last spring," said Rachel Mongerson, a junior with an English POE who will present research on dialects of New York City and other northeastern cities.

Mongerson, after condensing her paper to eight pages, prepared a poster of the details and important points in her paper.

Each research project is presented in one of two ways, either by the submission of a paper and a presentation speech or by a poster and a speech.

Each presentation is a maximum of 15 minutes and must display an in-depth understanding of the topic as well as an ability to communicate the important details without confusing the audience.

"I'm actually presenting two papers this year. One is my thesis and one is an expansion of a project," said Laura Drews, a senior with a communications POE, who researched videogames at length.

Sarah Bender, a senior presenting a piece on dynamic computer modeling for homeland security, summed up the experience: "I really appreciate this opportunity as it gave me a chance to do something that you usually don't do at an undergrad level."

Juniata license plates available

Elaina Clark

Juniata Pennsylvania and new Juniata Maryland license plates are now available for purchase. The plates, popular among alumni, are available for students as well.

Bub Parker, director of alumni relations and volunteer development, said, "The plates are primarily targeted to alumni but are open to parents, current students, friends of the College, as well as employees."

"Parents probably are the best promoters of Juniata College," Parker said. "We want current students and parents to know they can purchase these plates."

Parker said that the only restriction for purchase is that interested buyers need to be registered as residents of Pennsylvania or Maryland.

Since the program's inception in 2001, there have been over 400 Pennsylvania plates sold.

Currently, there are 17 people waiting for their Maryland plates. The alumni office needs 25 committed buyers to begin the actual ordering process.

The Maryland plate also features a different design from its Pennsylvania forbearer. The Pennsylvania plate has the Founders tower as its graphic, and the Maryland plate features the interlocking JC emblem.

The plates cannot be customized, and the plate numbers are determined by the numerical order of purchase.

The Pennsylvania plate costs $20 and the Maryland plate is $25.

"People are going to start seeing them [the license plates]," Parker said. He also said that eventually every state could have a Juniata license plate, even in Montana where there are two alumni.

Anyone wishing to purchase a plate must fill out a form that can be acquired through the alumni office by e-mailing or calling toll free at 1-877-JUNIATA.

Campus scholarships

continued from page 3

To be considered for this scholarship, students must be in the top fifth of the sophomore class and complete a rigorous interview process.

Junior Justin Schultz is studying abroad in Scotland at the University of Edinburgh. Schultz encourages students to apply. He said, "Honestly, there is a lot to be gained from this experience. This scholarship will make things happen for you…the opportunity is so great!"

Students interested in applying for the scholarship can inquire about application through the Center for International Education.

Select students can also compete for the national Goldwater Scholarship. The Goldwater is a "premier undergraduate scholarship for outstanding sophomores and juniors in science, math and engineering. It is awarded annually to 300 students based on personal diversity, academic achievement, research experience and career plans" according to Juniata marketing write-ups.

It is worth approximately $7,500 per year for a maximum of two years.

For a complete list of scholarships Juniata students have won in the past, check out the Web site www.juniata.edu/about/fellowships_successes.html.

For students looking for less competitive scholarships who do not qualify for financial need, check out the website www.juniata.edu/admission/finplan/external.html.

Check out the 11th-annual Kick Butts Day

March 28 is the 11th-annual Kick Butts Day, the Campaign for Tobacco Free Kids' celebration of youth advocacy, leadership and activism.

Come to the table in Ellis Lobby from 11:30 a.m. to 1:30 p.m. to get your lungs screened or to watch "Truth" videos about the effects of using tobacco products.

Information provided by Juniata Health and Wellness Center

Student government must remember constitution

Vote against sexual minority representative undermines representative institution

EDITORIAL

According to the preamble of its constitution, Juniata's student government was established "in order to meet the representative needs of all who attend this institution." The student government senate's recent vote against a motion to create a new sexual minority representative seat (see story, page 1) did not reflect that responsibility.

The motion, proposed by senior Brandyn Lau, was an attempt to give sexual minorities, of which there is a growing presence on campus, a greater voice.

To overturn the senate vote, Lau had to collect 250 student signatures, which would then send the vote to the student body to vote on the seat's creation. Lau ended up collecting more than 500 signatures of Juniata students who supported the creation of a sexual minority representative seat. Out of all the people Lau approached to sign his petition, only one person verbally objected to the motion for moral reasons.

"Who are [the senate members] really representing if so many of the student body are in support of this?" said Lau.

Senate members cited different reasons for voting against the motion. Some felt the additional sexual minority seat was unnecessary, since the senate already has two domestic minority representative seats. The domestic minority seat was created two years ago to represent the growing racial and sexual minority groups on campus, according to senior Rejane Frederick, vice president of the student government executive board.

However, Lau and Juniata's LGBT community did not feel properly represented by the existing seats, which are responsible for representing all racial, ethnic, sexual and gender minorities on campus.

"Sexual and gender minority issues are specified, just as every minority group's issues are," Lau said. "Minority issues cannot be blanketed."

Some senate members felt they didn't have enough time to deliberate. Others were concerned that if this specific minority group was given a seat, it would set a precedent for giving a seat, and therefore a vote, to every group that asks for more representation.

In these senators' minds, "opening the floodgates" to allow representation for every group would result in the senate having too many voting members. Their worry is like the case against direct democracy: if everyone has a vote, inefficiency results because it's harder to reach decisions. In reality, though, the Juniata community is small, and thus the number of other minority groups that could come forward asking for representation is small.

Even so, it doesn't matter how many seats the student government would be faced with adding. If the student government's purpose is to represent the student body, there is no justifiable reason to turn away a group concerned about its underrepresentation.

In the case of sexual minority representation, Lau brought the motion because it would create an outlet and voice for Juniata's lesbian, gay, bisexual and transgender community. But this right for representation is not limited to LGBT students. It's the responsibility of the student government to ensure this right is extended to any marginalized student or group.

Here, we have a value: to honor our student government constitution's preamble by representing all portions of the student body. It should be the concern of the student government to fit its voting structure to this value, not compromise this value to its voting structure.

PAX-O protests war's fourth anniversary

Christopher Shannon / Juniatian

Students, professors and community members stand on the 4th Street bridge on March 17 and protest the Iraq war on its fourth anniversary. The group met on the steps of Ellis Hall and marched down to the bridge, carrying anti-war signs and a banner reading "Honk Against the War." The group did not leave the bridge until it counted 100 honking cars. The protest was covered on page one of the "Altoona Mirror."

Letter to the Editor

Cries for peace called to Congress

Dear Editor,

On Monday, March 19, we regretfully entered the fifth year of our misguided venture into Iraq. Ostensibly, this year's commemoration of the start of the war looks no different than it did last year, and the year before that, and the year before that: anti-war protests are held across the country as Iraq continues to spiral out of control.

If anything, the situation in Iraq is worse now than it was the last time we commemorated the war exactly one year ago. As the recent Pentagon report clearly indicated, Iraq is now officially consumed by a full-scale civil war. So besides the deteriorating state of Iraq, what is different about this March 19?

First of all, the people of this country, and yes, even of this town, are fed up with the lack of progress in Iraq. Walking around Huntingdon last week, handing out flyers promoting our March 17 peace march, J.P. Melle and I were taken aback by the town's eerily warm reception of our message. From a Friendly's bartender, to a Huntingdon attorney, to an elderly lady getting her cut in the local salon, we—and our frustration with the war—were welcomed with open arms.

Trying to make sense of this phenomenon, I turned to J.P. and asked what exactly was going on. He responded: "People aren't happy with this war."

Secondly, we now have a Congress that is up to the task of holding the president accountable for his negligent oversight of this war. Up until now, all calls to end the war have fallen on the deaf ears of a Republican-led Congress that has been little more than a rubber-stamp for the Bush administration. Even the Democrats, now in control of Congress, have resisted taking binding action, such as cutting off funds, to end the war.

However, the Democrats have proven to be more willing than their predecessors to seriously consider alternatives to a further US military buildup to stem the violence. For the first time in four years, a majority of Congress is in the hands of people who are sincerely concerned with finding a solution to this costly war and appreciate the importance of our participation in such a process.

Times are changing. Those Americans who once avoided being absorbed into the seemingly futile debate over Iraq's future can now find hope in knowing that their cries for peace won't go unheard. Because of this, I am convinced that this March 19 will be different and that next year we'll be commemorating the end, and not the continuation of, this war.

Sincerely,
Sebastian Brown
Class of 2009

Realpolitik: A soldier's Iraq

James Trent

U.S. troops in Iraq are starting to come home, and with them they bring stories. Veterans' stories are valuable for many reasons, but especially at this moment while conflict continues. Before historians begin writing the history of the Iraq War, veterans show it to us through a soldier's eyes.

At a panel of war veterans last month on campus, veterans were invited to show us the soldiers' side of the situation. One was a marine, Paul Abernathy, who at the age of 23 fought in the Anbar province of Iraq. That is the place often heard about in the news, the site of countless gunfights and explosions.

As part of the Marine Corps, Abernathy must have expected what came with the job. The marines historically are the first ones on the ground, spearheading attacks to make way for other forces. They face some of the toughest opposition and take some of the worst casualties.

In the opening days of the Iraq War, the marines acted as expeditionary units, which in Abernathy's words meant that they would travel lightly and "go raise as much hell as possible." They would go deep into enemy territory and be supplied by airdrops, while all other forces had huge caravans to supply them. The marines' duty was to misdirect enemy movements, eliminate high priority targets and on top of this try to stay alive.

During the day, while his troop moved throughout enemy territory, Iraqi forces would attack from seemingly nowhere. Gunfire would ring out from all directions, coming from building tops and shadowed windows, instantly turning the landscape into a vicious combat zone.

Day after day, at any moment, his next footstep would be into a surprise attack, a new gunfight to the death.

Abernathy said, "It was never a matter of if; it was a matter of when."

As Abernathy answered questions about his service, he noted that there wasn't time to think about the war beyond combat and survival. When his troop was allowed to recuperate in base, soldiers did anything they could to take their minds off of their work.

"When you're [fighting], you're there, but when you're not, you escape," he said. They would listen to music and talk, but would never talk about the war.

They would hear news from the U.S. concerning politics and protests, yet simply not care. According to him, the politics had no impact on morale, and after hearing his description of combat, that made sense. With tracer bullets whizzing overhead and mortar shells exploding nearby, who can hear whispers of protest over shouts of "Incoming!" Or better yet, who would care?

When Abernathy returned home, the shouts of war began to fade. He started to have the conversations that he avoided on base. Conversations among brothers in arms expanded to include those who they were fighting for, and last month, the Juniata community.

Veterans like Abernathy have the perspective necessary to understand what we can only hear from the news. Many of his explanations for the current state of Iraq were based on what he saw with his own eyes.

For example, recently U.S. troops have been educated about aspects of Iraqi culture necessary for cooperation and goodwill. But Abernathy explained how in 2002, troops were buying small rugs on the black market to clean their boots. One afternoon, an Iraqi correspondent entered their barracks to find the rugs covered in mud. Falling to his knees in tears, the correspondent said that these rugs were Muslim prayer rugs and offered money to take them away. Despite this episode, Abernathy said he is sure that troops continue to use the prayer rugs as entrance mats today.

With these stories, soldiers write history long before pencil is put to paper. Unlike other wars, this history is not yet written. Before it's handed over to the historians, we may learn from veteran's stories. Instead of relying solely upon the secondary analysis of events, we may consider the ones who took part in them.

When all is said and done, whether or not we do may change what historians write once and for all.

Ask the Administration

Many students appear in different photos on the new homepage. Are students asked if they wanted to publicly represent the College? What kind of rights do students have if they do not want to be included in marketing materials?

"All Juniata students have been asked to complete the "Permission for News and Photo Release" located at http://www.juniata.edu/services/press. The permission statement addresses use of news and photos in print and electronic publications to support marketing initiatives.

If students see their photos on the Web site and do not wish to have them there, they can contact the marketing office to confirm or change their status to 'no' in the electronic press release system and have the marketing department remove their photos from the Web."

Candice D. Hersh
Marketing Coordinator

At Juniata, nearly one-third of all students play on a varsity team, yet the Athletics tab sits at the very bottom of the new Web page. Why was it placed there instead of at the top, where viewers look first? Would the homepage creators consider moving the tab to a more prominent location at the top of the page?

"As you can imagine, it's impossible to give equal treatment on our homepage to every area. Some might argue that 'giving' is most important because every student depends on scholarships. Others point to the 50 percent who study abroad and urge priority for the 'international' link.

Like the case for athletics, there are logical reasons for elevating many of the links now on the bottom of our homepage. What drives our design are the needs and interests of prospective students and their families. Unlike those who know us well and may rely on The Arch or bookmarked favorites, visitors need the navigational links we've chosen. We will watch our Web hits to be sure that these changes don't hurt athletics or other areas."

John Hille
Vice President for Advancement and Marketing

THUMBS UP, THUMBS DOWN

to St. Patty's Day. We feel the thumb is needed to cheer up all the resident assistants who had to clean up that green vomit. Remember: nothing gets out stomach acid and Green Dye #8 like a little bicarbonate of soda and some lemon juice.

to the new Juniata Web site. We can't find anything anymore. We tried to download a transcript request from the Registrar's Office and instead were directed to listen to Pat Kepple's All-Time Favorite Southern Gospel Music Volume I. We like listening to her rendition of "Give Me That Ol' Time Religion," but we'd rather get us that ol' stamped transcript.

to the Thumbs Up Thumbs Down editors...we've made it all year without making a typo and calling it "Thumps up Thumps Down." Wey to gu!

to an early onset of Daylight Savings Time. We're all for saving energy, but it cut our spring break by an hour. Who's saving us? ...Who is saving us???

to Brangelina for adopting AGAIN. Who's next? The Jolie-Pitts are currently considering the adoption of the Federline boys and Dannielynn Smith to ensure that's American's white trash is not underrepresented in their United Nations family.

Juniata Concert Choir brings music to Trinidad

Elaina Clark

Trinidad and Tobago's official tourism Web site boasts that "there is no place in the world quite like this tiny twin island republic of 1.3 million ethnically diverse people." After our experiences on spring tour there, the Juniata College Concert Choir, including myself, would have to agree.

Forty-one people, composed of traveled to Trinidad. The group included current choir members, choir director Dr. Russ Shelly and select alumni.

On March 3 we arrived in Port of Spain, Trinidad. Our home for the week was the Cascadia Hotel. We were fortunate to have rooms because Trinidad was hosting the Cricket World Cup.

The hotel had a pool, restaurant, bar and continental breakfast. Every morning we were delightfully surprised to find chicken wings, roast beef, fish and other meats to compliment the normal pancakes and eggs.

Our first concert was on Sunday at Trinity Cathedral. The church was breathtaking with high wooden cathedral ceilings and stone floors. The choir sang well and the congregation asked for an encore.

The following days were typically spent with a concert every morning and afternoon for elementary and high school students. Our repertoire included songs in Latin, Spanish, Portuguese and Swahili, and it featured cultures from around the world. The children's favorite seemed to be "Wanna Baraka," a Swahili song from Kenya.

Most of the schools we visited were private and single-sex. All children wore uniforms. Some had never seen foreigners or heard classical choral music before. It was humorous to hear them say, "Look at dem white chicks."

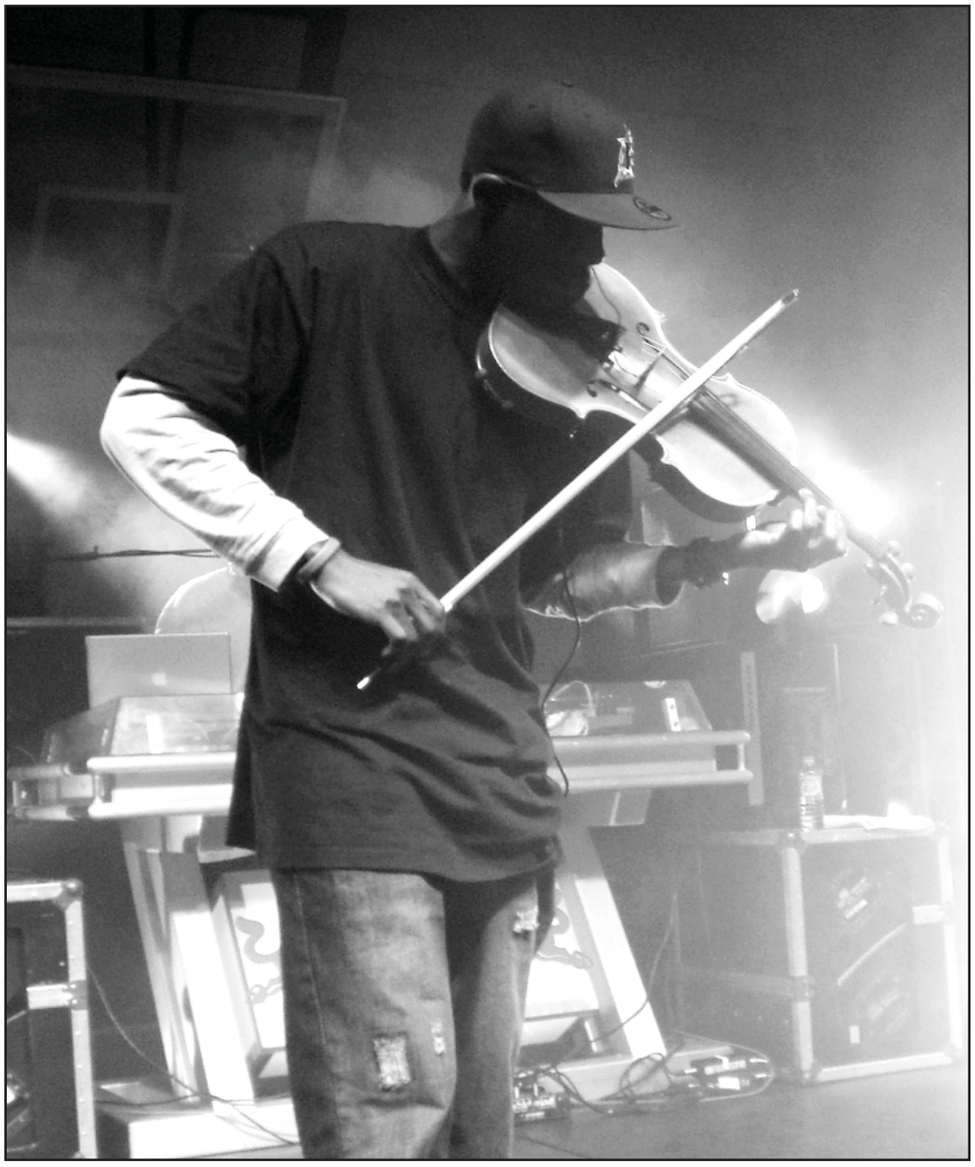
Before and after concerts we socialized with students and teachers. They were very interested in the choir. We were always treated to delicious food from the schools.

Marci Chamberlain, a freshman alto, said, "They were so appreciative of us and our music! They were asking us for our autographs, and we were taking pictures with them and discussing the repertoire."

On two occasions, the choir was entertained by steel pan groups. One was a family band, whose 13 year old daughter was a world champion steel pan player. The other was the world renowned group, Exodus, under the direction of Desmond Waithe. Waithe had attended the choir's homecoming concert in Huntingdon after the last Trinidad tour five years ago. Exodus played while we all danced to the fun island sound.

We also visited a pan yard where the drums are manufactured. We were told the history behind the steel pan, which originated in Trinidad. We were also shown how the drums were created and tuned.

We saw wildlife in Trinidad during a tour of the Coroni Swamp. The whole choir piled into a boat and set sail to observe the scarlet ibis. Hundreds arrive at sunset to sleep on a small island in the swamp.



The last concert was on Saturday at Mt. St. Benedict Abbey Church. Mt. St. Benedict is a beautiful white monastery set on a high hill. We sang with emotion that can only come from an experience like the tour and the joy of creating music.

Craig Drake, sophomore tenor, said, "The people that I spent nine days with in Trinidad, current members and alumni both, have touched my life and heart, and gave me memories that will last a lifetime."

On the last day we went to Maracas Beach. It was the picture perfect Caribbean paradise. Nestled in a cove, the beach had white sand, blue waters and coconut palm trees. Although it rained a little, we still enjoyed the water. Many choir members tried a local specialty called bake n' shark. It was absolutely delicious!

The tour was organized by Dr. Frank Worrell, who is originally from Trinidad and is currently a professor at the University of California, Berkley. He is an associate of Dr. Russ Shelly. Dr. Worle not only organized the concerts and entertainment but treated us like family during our stay in Trinidad.

Classical Collision

Kevin Dundore/Juniatian

Black Violin performs as part of the Classical Collision event in the intramural gym on March 17. The group performed mainstream hip-hop songs and some originals on the violin. Before the show, students dressed in black and white dress attire, gathered in Baker for dinner and watched a show by the Illusionist, Jason Bishop.

Global Threads fashion show

Given the success of the first Global Threads fashion show in 2006, Asian Sensations United decided to share the clothing of the world with the student body once again. Global Threads II will be held Fri., March 30 at 8 p.m. in the Baker Refectory.

Global Threads II will feature clothing and styles from countries all over the globe, including India, Japan and the U.S.

The event will also debut the Juniata College Step Team and feature Greek dancing.

All proceeds from the event will go to a charity that has yet to be announced.

For more information, contact Han Nguyen, president of Asian Sensations United, at nguyehd04@juniata.edu.

To look at pictures from last year's event, visit the Asian Sensations United Web site, at http://clubs.juniata.edu/asu/.

Skype me, baby!

Simple communication for free

Sara Cieslewicz

Skype, a peer-to-peer Internet network offered through free downloadable software, provides free computer to computer voice and video conferencing and messaging. Skype is irresistible. It offers quality service similar to AOL Instant Messenger.

Suzanne Ostyn had heard about Skype but never used the program until she experienced difficulty finding a cheap, available phone to use while studying abroad in Greece. Public phones were scarce and had bad reception. By using Skype and a laptop with an internal microphone, Ostyn's telephone problems were solved. "Skype was really great for me studying abroad, especially because it was free! I got to talk to people I cared about more often," she said. Ostyn highly recommends the program to students heading abroad.

Whether it is to keep in touch with friends at a distance or an educational resource for interviewing, Skype is a way around expensive cell phone bills.

Founded in 2003, Skype has grown popular because of its free services and its peer to peer decentralized technology. Since it is not on a basic server-client model, the network can easily accommodate more users without an intricate or expensive centralized infrastructure.

Skype's free services are computer to computer based, including: calling with or without video, one-to-one and group chat, conference calls with up to nine people and call forwarding to other Skype users.

Only Internet to Internet calls are free. Calls between computers and other communication devices can incur charges. For example, calls from the Internet to mobile phones or landline users are not free. Skype can dial a landline phone or mobile phone through the SkypeOut feature. It costs approximately $.02 per minute. SkypeIn allows users to receive calls on their computers dialed by regular phone subscribers and regular phone numbers. However, the caller will be billed local rates.

Conference-calling is also possible. You can select multiple contacts and conference with up to five people in a call on any computer, even up to 10 people if they use a PCs with an Intel Duo Core Processors.

Skype video calling is one of the few cross-platform video-conferencing solutions between PCs that run Windows and Macs. It only allows one-on-one video chatting. More than two users can also chat in a conference. The video feature is not available for three or more users. The only requirements for free video calling are owning a webcam, speakers and microphone.

Once you download the software and plug the webcam into your computer, Skype automatically detects it and offers to test if everything works correctly.

Gina Piccolini plans to use Skype during her study abroad to Athens, Greece. She purchased a kit at Wal-Mart, the EZ Video Tech kit for $28.00. It included two microphones and two webcams (a set for her and a set for her family). "It is nice because the service is free from anywhere in the world, as long as you both are using it from an Internet connection," said Piccolini. She was familiar with the program because of professor Kathy Jones' Educational Technology course.

Jones uses Skype to attend meetings in Philadelphia. Instead of traveling, she can provide input without missing classes and postponing other responsibilities. Jones incorporates the instant messaging system with the audio call. This allows her to take notes and have documentation of the conversation. The only problem Jones has experienced was the video feed being a little fuzzy or jumpy.

Quality can vary. Some users experience dropouts, broken connections and compression distortion while others have no trouble at all.

Jones recommends Skype not only for students, but for future educators because it is, "One more tool in the toolbox. People should be aware of it, especially teachers, as one more way to contact and to connect with people…for free!" she said.

Skype's use in education is unlimited. It is a new way for students across the globe to interact with each other and learn from professionals whose fields are related to the curriculum they are studying. Students could become pen pals with children from countries as far away as Japan and talk with them live.

Telecommunication media is cumbersome; Skype is more interactive. Jones gave an example of a fourth grade class that used Skype to learn about climate and temperature. The students used it to connect with a man in northern Canada. The man took his camera and pointed it out his window to show them a thermometer that read 65 degrees below zero. The class was shocked and left with a lasting image.

Skype Public Chats or Skypecasts allow people to make or find new contacts. Skypecasts are live audio conversations that allow groups of up to 100 people to converse. They are moderated by a host who can mute, eject,or choose users to speak. Conversations are initiated by a group in order to send a certain message or discuss recent events. Imagine the fun this campus would have in a Skypecast about the Iraq War!

Bottom line, Skype is a great deal for FREE long distance communication.

Photo courtesy of Michael Zauzig

Michael Zauzig talks to his friends at home using Skype while he is abroad in England for the semester.

Get Skype!

Skype is so simple it is not even funny. Its Web site, www.skype.com, explains how to download and use Skype in the clearest terms possible.

1. Download the Skype software (which is free).
2. Choose a Skype name.
3. Check that your sound, microphone and speakers are on.
4. Make your first call by choosing a friend's Skype name and then press the large green "call" button.

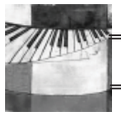
The Naked Truth:

Everyone needs some MoSex

Rebecca

A few weeks ago, a few of my fellow Juniatian editors and I took a quick trip to New York City to participate in a "New York Times" conference for college students. Of course, we had some time to kill beforehand and being the studious girl that I am, I suggested we take an educational trip to a museum, but not just any museum. We went on a journey to the most glorious museum in the city: The Museum of Sex.

MoSex, as the Museum is nicknamed, sticks out like a sexually remodeled hacksaw in the midst of NYC. Sex hacksaw? Keep reading and see if you learn as much as we did.



Keep your hands to yourself. The first of the MoSex's three exhibits was mostly hands on with costumes, whips and bondage equipment. There was a bondage set-up that one German man could not keep from climbing onto. He handcuffed himself in and proudly posed for my camera. He seemed to enjoy the attention much more than he should have, and as I walked away I silently thanked God he hadn't done something crazy like strip. I was in NYC for the pizza, not for Wiener schnitzel.

Show and tell is fun. Just in case you haven't watched celebrity porn in your own dorm room, you can watch Paris Hilton's adventure on a flat screen amidst a group of strangers. Security guards are really there to mop up the saliva and keep people moving toward other eye-popping exhibits. It was the first time I had seen Paris without a little rat dog in her hands in a long time. Well, I guess her hands were full already.

Nutrition is important. Studies speculate that women would often choose chocolate over sex. But until I visited the museum, never have I heard of a women literally going "coo-coo" for eating her Cocoa Puffs. "Feederism," or sexual satisfaction from consuming large amounts of food and gaining weight, is just among the many fetishes featured at MoSex. There's another food fetish where you treat your partner like food (minus the cannibalism aspect). Season the person up, tie him/her to a pole, stick an apple in his or her mouth and roast 'em over an open flame. And then there's the meat thermometer. Insert your own joke here...

Creativity is key. On display are a few interesting creations and photos of their inventors. One guy cut a hole in a box, and if you push a red button, pop goes the weasel! (I think Justin Timberlake visited MoSex during his last "Saturday Night

The Rhyme, Rhythm and Reason

Films that rock my socks

Lisa Detweiler

I would like to declare this the music appreciation edition of "The Rhyme, Rhythm and Reason." Whether you are a writer, performer, historian or listener, you probably have at some point defined music as power. It can be a time machine that takes you back to your middle school minutes in heaven. It can be something that hurts, moves, defines and liberates. Music means and does more than you think.

In order to bring you and music together in a more intimate relationship, I have compiled a list of four films that touch on the creation and love of music. The list is not even close to complete, but these are some to classics worthy of consideration. Grab your popcorn; the first showing is now.

"Amadeus": This 1984 film is a work of art. The plot portrays the life of Wolfgang Amadeus Mozart through the eyes of Antonio Salieri, a popular composer in Vienna who claims to have murdered Mozart. Is it all true? Well, not exactly. (Next issue's article will shed some light on this).

If you are bored by the historical context of this film, fast forward to the last few scenes where Mozart is writing one of his most famous pieces, the "Requiem." If you have an intense loathing for classical music, this scene will change your mind. We're offered a glimpse into the mind of a musical genius and see the man behind the music.

Mozart's music was revolutionary. It was not completely accepted by the politics of his day. In this scene, we see him compose as if he could hear each instrument separately, yet together with the whole. We hear the layering of instruments, which reveals the complexity and beauty of classical music. Don't forget, Mozart mastered his first scherzo in only 30 minutes at age four.

If you come away with anything from this film it will be awe, and an overwhelming question: Where are the Mozart's of our generation? Please don't tell me Ozzy.

"Immortal Beloved": Just to stick with the classical theme and give recognition where it is due, I recommend this 1994 film for the Beethoven lovers. We all recognize the fourth movement of his Ninth Symphony. It is known as "Ode to Joy." Perhaps it's a stereotype to portray artists as insane, but try being a musical genius and losing your hearing. It's not known what caused Beethoven's hearing loss. Some say abuse from his father; others say lead poisoning.

The plot surrounds the mysterious "Immortal Beloved" referred to in one of Beethoven's letters, even though he was never married. The identity of this woman is still unknown. I prefer to think that his immortal beloved was actually music itself. Nonetheless, we get to experience the ultimate tragedy for a true musician--his private struggle of deafness. Musicians of today: That is a real struggle. Not something you invent for MTV.

"School of Rock": I do recognize that we just took a drastic jump from drama to comedy. I think we can all recognize that rocking out and sticking it to the man is a worthy kind of music appreciation. This 2003 film resurrects our inner-child. It reminds us that music is a gift that can give confidence and mold an individual's identity.

Have you ever thought about who you would be if you had picked up a basketball or football instead of a guitar or vice versa? Most importantly, it reminds us that classical can meet classic rock. Cellos and violins have strings, too. Don't discriminate. Jack Black didn't.

"Sister Act": Oh Whoopi! I feel confident that everyone in my generation identifies this 1992 film as an essential part of our childhood. Why did this one make the list? Well, your voice is an instrument. It seems obvious, but it's overlooked quite frequently.

Sometimes it's fun to dump the diction, boost up your diaphragm and let loose the way the music allows you. If nuns can do it, so can you. This film shows us how incredibly liberating music can be. Forget tempo, crescendo and descants. Just sing.

And lastly, I commend this film for reminding America that Catholics have fun, too. Although right now I am wishing my grade school was run by Carmelite nuns. Hallelujah, Amen.

Please dispose of your trash in the receptacle by the exit. Thanks for watching.

Cellos and violins have strings, too. Don't discriminate. Jack Black didn't

This issue's Reason:

"This was no composition by a performing monkey. This was a music I had never heard. Filled with such longing, such unfulfillable longing. It seemed to me I was hearing the voice of God."
-Amadeus, Salieri describing Mozart's music

"Music is...a dreadful thing."
-Immortal Beloved, Beethoven

"God of Rock, thank you for this chance to kick ass. We are your humble servants. Please give us the power to blow people's minds with our high voltage rock. In your name we pray, Amen."
-School of Rock, Dewey Fin

Naked Truth: MoSex

continued from page 9

Live" trip to NYC.) My personal favorite, though, was a hacksaw that had the saw part hacked off and a certain anatomical replacement in its place. I'm thinking of getting a patent for my own idea. It involves a Suzanne Somer's Thigh Master, a few batteries and….oh, just forget it. I'll leave the mulberry bush go rounds to the professionals.

It is better to give than to receive. I bought a keychain that holds condoms—without injuring them, like a wallet does—for my brother. Considering I could have bought him a breast stress ball, I feel I chose a responsible gift. It's like giving someone a keychain of pepper spray; it's for his own protection.

Choices can be difficult. Life in plastic, it's fantastic. It's the adult version of Just My Size Barbie princess dolls (minus the dress and crown; you provide the magic wand) that come in more options than black and white. Custom order your doll's hair color, body type, toe nail color and landing strip. Best part? You can touch. You can play. You can say she's always yours. Imagination, life is your creation.

Say unto others as you'd want said to you. I would pay the entrance fee again just to go in and watch the visitors that enter. There are eighty-year old women watching porn, couples of all kinds, and even a few people who I would bet a hundred dollars were asexual before going inside. Best comment of the trip was a senior citizen to his wife: "Damn, too bad I didn't get to choose what yours felt like!"

Repetition is the key to learning. It would be worth another five hour drive to see the new exhibitions. The three floors of the museum change so often. In the past it has had exhibits like "Men without Suits," and "Vamps and Virgins." I have no doubts that such exhibits provided intense climaxes for such a fantastic experience.

Check out the museum's Web site, which features two online exhibitions, including "Sex Inventions" and "Sex in America," as well as brief summaries and visual aids from past, present and future exhibitions. Visit www.museumofsex.org for details.

And if you're ever in NYC, don't hesitate to go take a peek. Once you get some MoSex, you're gonna want mo' of it!

Juniata Presents: La Guitara

Ashley Appleman

According to La Guitara's official Web site, the ensemble's slogan is: "Gender Bending Strings." On Sat. March 24 at 7:30 p.m., three members of the 14 member collaborative ensemble will bring those strings to the Rosenberger Auditorium in the Halbritter Center for the Performing Arts as part of the Juniata Presents series. Patty Larkin, Badi Assad and Ellen McIlwaine will share their skills and highlight the contributions of women guitarists throughout history.

Larkin, the group's founder, is a singer, songwriter and an inventive guitarist. "Guitar World" called her music, "genre-stretching, string-popping alterna-folk." She eloquently mixes celtic, folk, rock, funk and blues.

McIlwaine, one of the world's greatest slide guitarists, has played with Jimi Hendrix, Johnny Winter, Taj Mahal and Jack Bruce. Her music is based on the blues but has been influenced by everything from Egyptian and Indian music to R&B.

The third performer, Assad, contributes to La Guitara through her powerful and unique style. In concert, she simultaneously plays guitar, provides her own percussion and sings. Her music is based on traditional Brazilian guitar, world beat, and neoclassical compositions.

"Minor 7th" magazine raved that La Guitara's music is, "A veritable smorgasbord of tasty, sassy, sweet and raw playing from some of the best in the world, period."

Admission is free for Juniata students. General admission for the event is $20. The cost is $12 for Juniata employees, seniors (65+) and youth under the age of 18. A portion of the proceeds will be donated to Guitars in the Classroom, a music education program for children.

MY TAKE

Breach cannot crack box office code
Spy-flick lacks luster and intrigue

Christopher Burlingame

From the opening scene of "Breach," the movie lacks the necessary mystery to fuel the flames of an effective spy thriller. It opens with press conference footage of the former Attorney General announcing the capture of the F.B.I.'s most notorious mole, Robert Hanssen.

The real life Hanssen, played by Chris Cooper ("Syriana" and "American Beauty"), was arrested in February 2001 after sharing U.S. military and intelligence secrets with the Soviet Union and then Russia. According to the movie's tagline, Hanssen's actions represent the greatest security breach in U.S. history.

"Breach" chronicles the undercover operation to oust Hanssen as a Russian spy. The film follows F.B.I. employee Eric O'Neill, played by Ryan Phillippe ("Flags of Our Fathers" and "Crash"). O'Neill is assigned to shadow Hanssen as his personal assistant and to help build an espionage case against him. O'Neill struggles to balance his respect for Hanssen with his own doubts about the mission.

Despite a blockbuster budget, "Breach" does little to escape the humming fluorescent lights and drab suits of Washington. Most of the film takes place in Hanssen's windowless office or on the way to it. "Breach" lacks the exotic locales, fancy weaponry and secret code-breaking that add drama and awe to spy movies.

"Breach" also lacks the essential action sequences that define the espionage/thriller genre. There are no scenes with Hanssen diving from a drainage ditch or any intense shootout sequences.

Aside from showing Hanssen wrapping up a package, the film was devoid of acts of espionage. Instead, the most intense scenes involve O'Neill trying to remember in which briefcase pocket Hanssen's Palm Pilot belongs. Although there are only so many ways Hanssen can walk down the hall while O'Neill scrambles to hide something else, the movie hardly keeps the audience on the ends of their seats.

I could have easily watched a documentary to get the information the film attempted to dramatize.

"Breach" would have been a more effective thriller if it had not revealed the most memorable lines and most exciting scenes in the trailer. Unfortunately, the trailer draws in the moviegoer, but the film doesn't offer much more in the theater.

Director and co-screenwriter Billy Ray ("Flight Plan" and "Suspect Zero") tried to accomplish too much by adding a human element. Ray's script often centers on the stress added to O'Neill's relationship with his wife. The relationship is strained by Hanssen's overbearing Catholic dogmatism and O'Neill's wife's rejection of the Catholic Church. This sub-plot dragged and became overplayed on the screen. Too often, the sub-plots seemed to be the focus, not the plot itself.

With many files on Hanssen still tightly locked away in government filing cabinets, the filmmakers and cast had their hands tied. The film's greatest fault was its limited access to the nuts and bolts of such a complex story. "Breach" would have been better served if the filmmakers had waited for Hanssen's files to be released.

One of the few saving graces for "Breach" was Cooper's acting. He brings Hanssen's malevolent and vicious nature to life with the simplest gestures and a commanding on-screen presence. He plays up Hanssen's manipulative skills and religious fanaticism. Cooper's sunken eyes and larger than life persona make him the menacing face of evil in this film.

"Breach" is now playing in State College and Altoona. It is rated PG-13 for violence, sexual content and language. The movie's running time is 110 minutes.

Final Take: ★★★½

"Breach" is a bland depiction of an interesting plot against America. The concept had so much unexplored potential. At least Cooper creates a convincing portrayal of America's most devious spy. The film lacks action and proves that great stories in Washington do not always transition well to the silver screen.

JC Dance Ensemble's Annual Performance

'Now and Then' proceeds go to Huntingdon PRIDE

Julia Williams

The Juniata College Dance Ensemble will hold its annual performance on March 31 in Rosenberger Auditorium. Performances are scheduled for 1:30 p.m. and 7:30 p.m. with Bub Parker, director of alumni relations and volunteer development, as a master of ceremonies.

The admission prices are $4 for adults and $3 for students. All proceeds will be donated to Huntingdon PRIDE, a nonprofit organization that provides assistance to disabled residents.

This year's theme, "Now and Then," will apply to the music, costumes and even decorations around the auditorium. The routines will highlight a wide array of styles including tap, contemporary, hip-hop, jazz, stomp, lyrical and ballet.

The show is choreographed entirely by students. The senior choreographers are Regina Diehl, Thea Lothe, Evan McClennen and Rachel Meyer. Rounding out the choreography are juniors Jessica Edelmann and Jessica Saive and sophomores Angela Ferrelli and Kelly Crosset.

The ensemble typically consists of 20 to 30 women of varying experience participating in different dances. When asked about male members, dance ensemble president Rachel Meyer said, "We've always encouraged male participation, but we just don't get that many guys."

The club holds only one big performance a year. The ensemble works to present a huge production. The dancers work closely with the Oller Crew for professional lighting. Also, the club recruits an MC to provide a break between routines.

Since the ensemble's yearly expenses are modest, proceeds from the performance are donated to a charity. A different charity is chosen every year. Last year, the ensemble raised $800 for Huntingdon House, a local domestic abuse shelter.

Aside from its own annual performance, the dance ensemble helps other clubs with events. The ensemble has traditionally performed at Mr. Juniata and this year it performed at the Special Olympics and the psychology club's Battle of the Bands.

Meyer believes the club is growing and said, "We're involved in so much more on campus now than my freshman year."

In the Name of Fashion

Spring break- London style

Kelly Popernik

Sorry Paris, London is the fashion capital of the world.

After a six hour plane ride from Philadelphia, I arrived in London. I went to visit my best friend, Tara McMinn, who is studying abroad there this semester. She has a fashion internship three days a week and takes classes one day a week. Spring break was the perfect time to catch up with her and experience Europe for the first time.

After hearing all about what London is like, I saw it for myself. I would describe fashion in London as exhilarating and cool. The women's and men's fashion were different than what we see on the streets of New York or L.A.

U.S. fashion is much more simple and casual than London's funky and distinctive style. Tara said, "London fashion is all about being abstract....Anything goes here."

Jeans and tees from Abercrombie are unheard of. Americans were quite easy to spot in London, because they usually wore baggy jeans or a Mickey Mouse sweatshirt.

Currently the most popular pieces for women in London are boots, tights and dresses. The boots ranged from leather to suede, tall to short. Bright colored tights were in the windows of the storefronts. When I say bright, I mean fluorescent yellow and pink! However, I didn't see many people wearing them on the streets. Black or brown tights were most popular. The women looked trendy, yet with their own senses of style. They wore what they wanted and expressed themselves as individuals. For these women, caring about what other people thought of their clothing seemed out of the question.

The first thing that caught my eye in men's fashion was the tightness of their jeans! I could literally make out the shape of their ankles to the curve of their behinds. I am talking suctioned to their legs.

There seemed to be two styles on the streets. They either wore a suit and tie or street fashion. The men in suits worked during the day. After work they went out to the pubs in their work clothes. I wasn't used to seeing guys dressed for work in a bar; they looked more sophisticated. The men who dressed more casually wore skinny jeans, crazy shoes and jackets. Everything looked like it was one of a kind.

The shops were unlike any I have ever been in and the prices were hard to take. London has everything from department stores to boutiques.

Oxford Street is the place to shop. Located in the heart of London, the street is filled with clothing, jewelry and shoe stores. Top Shop is one of the less expensive stores. I could have spent hours there. I also paid a visit to the famous department store, Harrods. I would recommend visiting it, not only to see the five floors of fashion, but also the bedazzled staircase and the Princess Diana Memorial.

If you are looking for expensive designer clothing or jewelry, Bond Street has it all.

Shopping in London is also a little heartbreaking. The city makes New York look cheap. For example, I bought a yellow dress with patch-work at the top. It was 40 pounds. One pound is worth more than $2, meaning that my dress was more than $80. Needless to say, at the end of my trip my dad wasn't a happy camper. Perhaps London shops are expensive because the clothes are edgier? Whatever the case may be, it is worth experiencing.

London is the epitome of fashion. We should be just as expressive in the U.S., and we should forget about the person in the Mickey sweatshirt snickering about our tights and distinctive shoes. The city offers numerous stores that cannot be found in other parts of the world. If you plan on going to London, save up before the trip because of the shocking exchange rates.

One more thing—don't forget to sightsee!

Fun Fashion Tip

Want to know which eye shadows look best with your eye color?

*Green or hazel eyes pop with purple.
*Taupe or grey will look terrific with blue eyes.
* Bronze or copper tones will compliment brown eyes.

Juniata Idol is coming to FNL

Elaina Clark

Yes, the rumors are true. "Juniata Idol" has come to campus. Channel 98, the campus television station, is collaborating with Friday Night Live, JAB and Giant Monopoly to find Juniata's Carrie Underwood or Taylor Hicks.

Jigar Patel, co-president of Channel 98, said that all students could participate in the competition and could sing anything.

Auditions were held on Mar. 20. Channel 98 camera crews traveled around campus filming students who wished to participate. Students also auditioned in the Digital Media Zone (DMZ) in the Brumbaugh Academic Center and the new Gold Room in Ellis in a studio set up for the event.

Channel 98 aired the auditions on Wed. Mar. 21 at 8 p.m. Students were able to see their peers and hear judges' commentary. The judges for the two-round contest are Dave Meadows, assistant director of alumni relations, English professor Amy Mathur and Pat Kepple, Juniata's first lady.

Now, Juniata, it's up to you. Students can vote online at http://forums.juniata.edu. At least eight finalists will be chosen for the contest's final round.

Tomorrow evening, the live Juniata Idol contest will be held in Baker at 10 p.m. After hearing the finalists, students will be able to vote using laptops. The winner will be announced that night at midnight.

The first place winner receives $300, second place $100 and a $50 Sheetz gift card and third place wins a $50 Sheetz gift card.

When asked about the motivations behind the contest, Patel said, "The main reason we're doing it is to promote Channel 98."

Patel and co-president, Shane Gallagher, want to change this. They would like Channel 98 to air student run programs, movies and even the Bailey Oratorical live.

They also have hopes for Juniata Idol. Patel said, "If it works, it could be a tradition like Mr. Juniata."

Men's volleyball wins Golden Dome Classic

Brian Spinazzola

Despite a few early season missteps, the men's volleyball team (10-5) has ironed out its troublesome inconsistencies, winning four out of its last five games.

"We've been siding out well. Our serving has been getting been more consistent since the start of the season, and our defense is also more consistent," head coach Jeremy Price said.

Echoing his coach's sentiment, Matt Fritz said the team is just playing an overall better game. "We are just starting to play a lot more consistently as a team. Also, our practices are starting to have a lot more energy."

> "We've been siding out well. Our serving has been getting been more consistent since the start of the season, and our defense is also more consistent."
> – Head Coach Jeremy Price

Even though the Eagles have won four of their last five, Price still believes that there is room for improvement.

"We've done some good things, but we've got a long way to go in terms of where we want to be at the end of the season, and it's going to require some hard and focused work. I like where we're at in terms of the DIII part of our schedule, but we need to do some work to get where we want to be in terms of the Tait Division" Price said.

The Eagles rebounded from a loss to Princeton, and defeated NYU 3-0 on March 18. Nate Ocasio played a great match with 12 kills and five digs. Matt Werle contributed 47 assists, and also had five blocks.

The Eagles had been out of action for 17 days when they traveled to New Jersey to take on Princeton. The team lost a close and heated match 3-2. This loss ended the Blue and Gold's three game win streak. Ocasio notched 27 kills, five blocks and 11 digs against Princeton. Three other players reached double figure kills: Jeremy Barndt with 15, 10 for Fritz and DeHaven finished with 11. Sidelined for six weeks with an injury, this was DeHaven's first game back in the line-up.

The Eagles returned home on March 1 to tangle with East Stroudsburg University. The Eagles overcame a 2-1 deficit to defeat the Warriors 3-2. Barndt provided an excellent performance, posting a career high 24 kills.

"I felt like I was playing well, and everything just came together," Barndt said.

Along with Barndt, Juniata had three other players with double figures kills. Ryan McGinley had 11, Nate Ocasio slammed 18 and Matt Fritz posted 10. Werle had another big match, with 61 assists, two aces and five blocks. Barndt also had five blocks, and Steve Yeager helped out with 10 digs.

After his career performance against East Stroudsburg, Barndt was named the EIVA Tait Men's Volleyball Athlete of the Week for the week of Feb. 25-March 2. Barndt is currently the team's leader in blocking, and is only 25 blocks short of becoming one of the top five blockers in Juniata history.

"It doesn't really matter too much to me. As long as the team is playing well, and the team wins, I'm happy," Barndt said, when asked about receiving the weekly conference honor.

Juniata opened the Golden

continued page 15

Christopher Shannon / Juniatian

Senior libero Casey Dale receives a serve during a home match earlier this season. Dale is second on the team in digs per game averaging 1.74 digs per contest.

Softball kicks the season off right

Signs of good things to come

Jeremy Barndt

By looking at the Eagles' current record (4-4), one may think that they have had a mediocre start. However, this was one of Juniata's most productive preseason trips ever, as the team played eight games during its spring training at Myrtle Beach, South Carolina. Two of Juniata' losses came to Division II teams, Tusculum College and Catawba College.

The Blue and Gold picked up four wins against Division III teams: Grace College, Concordia College, Rochester Community and Technical College and in an exhibition game against conference foe Widener University. Juniata's two Division III losses came against Bridgewater College and Oneonta College.

The Eagles saw many improvements from last season's spring break trip. They performed well at the plate, with seven players hitting over .333. Overall, the team made more contact and reduced its number of strikeouts. During the eight-game stretch the team only had 24 strikeouts.

"As a team, we concentrated on making contact with the ball. Last season the team struck out looking a lot" said freshman designated hitter Sarah Eckard.

Being such a young team, seven freshmen saw playing time, gaining valuable experience.

Freshman first baseman Rachel Nagy enjoyed a great week at the plate. Nagy had team highs of one homerun, six RBIs and an impressive .391 batting percentage.

"I was trying to make good contact with the ball. If you aim for the fences, you will often pop the ball up. It was very exciting getting my first home run of my college career," said Nagy.

The Blue and Gold also got a strong pitching performance from freshman Alyssa Erb and sophomore Elsann Machotka. Erb pitched five of the team's games, posting a 4-1 record and a 4.02 ERA. She recorded a team high 34 strikeouts, five complete games, and only issued seven walks. Machotka had a remarkable ERA of 1.50, only giving up one run in a six inning complete game effort.

One of Juniata's most exciting wins came against fellow MAC team Widener. Juniata drew first blood, scoring in the bottom of the fifth inning as sophomore second baseman Tara Carl crossed homeplate on a Widener error. Widener answered, scoring a run of its own in the top of sixth inning. Juniata regrouped in the bottom of the seventh. Sophomore right fielder Jackie Morley started the inning with a single and advanced to third base on a sacrifice by junior catcher Amanda Albanese and a Carl single. With Morley on third and Carl on first, Nagy stroked a single and drove Morley home, giving Juniata a 2-1 victory.

Although the team is hitting very well, one area that the players would like to improve on is situational hitting.

"If we can improve our hitting with runners in scoring position, especially with two outs, we will find ourselves in a position to win a lot of games," said Nagy.

So far, the team's communication about improvements has been exceptional. After each game, the players talk about what went wrong and what they can do to improve. They look to build on their spring training success as the season continues.

Last week's games against Susquehanna and Mount Aloysius were postponed. So Juniata opens up its conference schedule with a doubleheader against Moravian on Sat., March 24.

Eagles take off in Arizona

Team goes 7-2 during southwestern trip, looks ahead to conference match-ups

Derek Stanley

The Juniata baseball team (7-4) started its season off on a hot streak. During their spring break trip to Chandler, Arizona, the Eagles went 7-2, including keys wins over DeSales University and 22nd ranked Aurora University. A portion of the team's accomplishment can be attributed to its focus.

"On the trip we were focused strictly on baseball. We woke up and [ate], slept and breathed baseball for the entire week," said junior pitcher and co-captain Jay Enoch. "We got one day off and even on that day most of us went to watch a spring training game between the A's and Cubs. There was never a day away from baseball."

The relievers also played a major role in the team's success. "We got a strong performance from our bullpen; they picked up the starters a lot all week. Markovich, Brown and Clifford gave us crucial performances," said Enoch.

Markovich threw in six games, including a spot start against Beloit College, and appeared in relief in the others. He recorded one win and an ERA of 2.57 striking out 10, while allowing only 14 hits for the week.

During a game against Wheaton College, Markovich entered in relief and threw five and a third scoreless innings, as the Eagles came from behind to win 9-5.

"I was just trying to stay ahead of the hitters and keep them guessing. I'm not a strike-out pitcher, so I used my off speed pitches to get a lot of groundballs and fly outs," Markovich said.

Despite going five solid innings in his lone start, Markovich doesn't see his role changing.

"I see my role as continuing to come out of the bullpen for middle-relief work. I feel most comfortable coming out of the bullpen and we already have a great set of starting pitchers who get the job done," he said.

Included in this solid starting pitching rotation is junior Andrew Snyder. Snyder went six and a third innings against Aurora, giving up just six runs on nine hits while picking up the victory. The Eagles led the entire game, winning the contest 12-6.

Freshman second baseman Anthony Trutt turned in a solid offensive performance against Aurora, recording three hits, three runs and one RBI in four at-bats.

The team had a recent scare as junior co-captain Dan Kauffman, who leads the team in home runs, RBIs, and on base percentage, fouled a ball off his foot during batting practice and needed x-rays. The x-rays were negative and Kauffman will take the field against conference foe Widener University March 23.

"Heading into conference play we just need to keep our confidence up. We know we can play with good teams from how we beat DeSales and Aurora. We just need to stay positive and keep the momentum in our favor," said Kauffman.

Enoch agreed. "In Arizona we came together as a team and accepted the strong performances of those individuals who played well, including the influential play of all the freshmen. We are feeling very confident, and look to carry it over against Widener" he said.

The Eagles will return home on March 24 for a double-header against Widener at noon and 2:30 p.m.

Take me out to the fantasy ball game

A fantasy baseball primer for beginners

Casey L. Shaw

The 2007 Major League Baseball season will soon be upon us, and that means that it is fantasy baseball season!

For those who have never participated in a fantasy baseball league, this will be a crash course on how to become involved with a very addictive game.

The first thing a newcomer needs to do is find an Internet site to play on. Novices should try joining a site that allows you to play for free. Some great sites include yahoo.com, foxsports.com, and cbssportsline.com. Yahoo! is free and user-friendly. It allows participants to join non-competitive beginner leagues.

After choosing a site, the next step is to create a user account and sign up for a team. You will need to pick a team name. Some sites allow you to pick a jersey or logo to represent your entry. After registering your team, the next step is to join a league.

Three common types of fantasy baseball leagues exist. There are public, private and keeper leagues. In public leagues you can gather a group of friends together or you can play against people that you don't know. This keeps the competition from becoming too personal.

The league creator (a.k.a commissioner) customizes a private league. He or she configures all aspects of the private league and personally invites only the managers he or she wants to join. To join a private league, you must obtain the league name and password from the commissioner.

In a keeper league, a version of a private league, you pick a roster every year and must pick at least one player that you will keep over a three year span. Keeper leagues are for more advanced and seasoned players.

Within all three types of leagues, there are two different styles of play.

In a head-to-head format, your team will match up against another manager's team. You set your line-up once per week. The object of head-to-head play is to accumulate the best stats across a multiple categories. A new weekly match-up begins every Monday and will consist of several games based on your league's statistical categories. Each stat category counts as one game, and the team with the highest stat total at the end of the week wins.

In a Rotisserie scoring system, fantasy teams are ranked from first to last in each of multiple statistical categories. Points are awarded based on the finishing order in each category. The points are totaled to determine an overall score and rank in the league. For example, in a 10-team league, the team with the most home runs will receive 10 points; the team with the second most will receive nine points and so on down to the last place team. In this system, you can change line-ups daily.

Once you join a league, you only have two things left to do—pick a type of draft and pre-rank the players you want. There are live drafts and offline drafts. During a live draft, you need to be present at a certain time designated by your league to select your players, just like during the Major League Baseball draft. There are usually 15 rounds in a live draft and it can take up to two hours.

Drafting can be time-consuming. For beginners, an offline draft would be best. In an offline draft, you pre-rank the players you want and then you are e-mailed your roster at a later date. When you draft a player, he is unavailable to any other members in your league, unless you work out a trade.

The draft is often the most important part of playing fantasy baseball. The entire fantasy season relies on how well you draft, unless you want to depend on trading and free agency. Trading players and signing free agents is what makes fantasy baseball addictive. You can win or lose a league based upon how good of a "general manager" you are.

Each league has a league home where participants can see the standings, post messages and see the transactions made by other teams. Once the league begins, competitive banter between teams just adds to the fantasy baseball experience.

There are often prizes given to fantasy players who have the top teams within their leagues or sites. The better prizes are awarded on pay-sites. However, some free sites offer prizes from corporate sponsors.

The next Juniatian will feature draft advice and general managing tips for the 2007 season.

Top 10 tips for drafting your baseball fantasy team

1. Use player rankings from Web sites to guide you, but follow your instincts and draft who you feel is best for your team.
2. Know the strengths and weaknesses of all the players in your pre-rankings.
3. Avoid players who may end up being one year wonders.
4. Don't allow spring training stats to sway you on draft day.
5. Aim to use the middle rounds of the draft to take sleeper picks.
6. Keep in mind your league's scoring system when pre-ranking players.
7. Draft players that can play at multiple positions.
8. Keep an eye on player injury reports before the draft.
9. Don't draft relievers with the hope they will end up starting during the season.
10. Be pitching-minded at first, offense is easier to come by than defense is.

A Year to Remember

Men's basketball reaches post-season games for the first time in over a decade

Derek Stanley

The men's basketball team added three firsts to the program's history in the final two weeks of the 2006-07 season.

After reaching the post-season for the first time in over a decade, the Eagles reached the MAC Commonwealth Championship game for the first time ever.

Though the Blue and Gold fell to Widener on a last second three-pointer, 61-60, the Eagles impressed coaches in the region enough to receive a bid to the ECAC tournament as the fourth seed. The berth in the eight team tournament was the first ever for Juniata.

After defeating Bethany College 72-62 in the ECAC's opening round, the Eagles advanced to the semifinals to face number one seed Penn State-Behrend. Juniata fell in the contest, 77-69.

Leading the way, senior center Chris Jasiota posted a double-double with 17 points and 10 rebounds against Penn State-Behrend. He fell one rebound short of doing the same against Bethany.

Jasiota closed out his career as Juniata's all-time leader in blocks (87).

Jasiota and junior Brian Cannon were rewarded for their stellar seasons by being named to the MAC all-conference team. Cannon was named to the first team, while Jasiota was named to the second team. This is the first time since the inception of the Commonwealth Conference that Juniata has landed two players on the all-conference squads in the same season.

Coach Greg Curley was also recognized for the team's standout season by being named Commonwealth Conference Co-Coach of the Year. This is the first time in his six seasons at Juniata's helm that Curley has earned this honor.

The Eagles will lose three solid performers from this year's roster, including Jasiota, and two productive guards, Aaron Chamberlain and Nick Hager.

Cannon and junior point guard Kyle Opitz will return as the team's two most productive offensive threats in 2007 when Juniata joins the new Landmark Conference.

Christopher Shannon / Juniatian

Senior guard Nick Hager takes the ball to the basket in an early season match-up against Bethany College. The Eagles bested Bethany in that November contest and made the season sweep of the Bison in an ECAC first round playoff game on Feb. 28.

Volleyball tops Dome Classic

continued from page 13

Dome Classic with a 3-0 victory over NJIT. The scores of each game were 30-26, and the Eagles fought hard to win each game. Fritz and McGinley each recorded 13 kills and Werle contributed 44 assists. Steve Yeager tied his career high with 18 digs.

The Eagles rode this victory into the championship round against Rutgers-Newark, and defeated the Scarlet Raiders in three straight games.

Werle had another impressive performance, amassing 42 assists and 10 digs. He was also named the tournament MVP, totaling 86 assists over the two matches. Fritz and Dan Powers also received tournament honors, as they were named to the All-Classic team.

"I don't think I played any better than usual. I just to try always play the best I can. I took every game the same way and played with the same energy," Fritz said.

Powers said, "I was really surprised that I made the All-Classic team."

Juniata travels to Stevens Tech tomorrow night and to Springfield on Saturday before returning to play Penn State at home on March 28.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

APRIL 9, 2007 | JUNIATA COLLEGE | VOLUME 88, ISSUE 10

Student body narrowly approves LGBT seat

Sexual and gender minority students overcome early setbacks in creation of representative position

Kendall Markel

On April 4, the student body voted with a 51.8 percent majority to create a new seat on the student government senate to represent Juniata's lesbian, gay, bisexual and transgender (LGBT) community. The seat's creation was the outcome of a nearly three-month long debate.

A total 463 students voted on the referendum, with 240 votes cast in favor and 223 votes cast against.

The morning after the vote, students were varied in their reactions to the outcome.

"I didn't think it would be that close. Either not a lot of people voted or people were really decisive and the campus was split," said freshman Clare Coda. "If just a few more people voted in the other direction, it could have come out differently."

Junior Laura Weber said of the new position, "I think it will be good. The school is always promoting diversity. You can't have diversity without covering that aspect of the college community," said junior Laura Weber.

Sophomore Keenan Drenning expressed his opposition. "It doesn't matter what group it is; I don't think there should be a specific seat. It's unequal. A member of the LGBT community could run for a general seat on the student government."

The vote was conducted in an online poll administered by the student government executive board. The exact referendum question read: "Do you favor adding an additional clause to Article 2, Section 2 of the Juniata College Student Government Constitution to read: The Sexual and Gender Minorities students shall comprise one seat (one vote) on the Senate."

The student body vote occurred because of the student government senate's 11 to eight approval on March 22 to allow the LGBT to move to the next step of creation. This vote overturned the student government's Feb. 22 decline of the proposition.

Senior Terasa Prentiss, who has helped lobby for the LGBT seat, said the creation of a sexual and gender minority senate position would represent other sexual and gender minorities that are not widely recognized, such as asexuals, pansexuals and people

continued page 6

AICUP reviews campus labs for safety

Jason Najarian

On March 20 through 22, Juniata underwent an inspection by the Association of Independent Colleges and Universities of Pennsylvania (AICUP). AICUP is an organization comprised of colleges that peer inspect each other's labs and general facilities. By undergoing voluntary inspections, the College can avoid failing surprise inspections by state and federal agencies and can make proactive improvements to the College's labs.

Four AICUP inspectors from other schools examined Juniata under Environmental Protection Agency (EPA) guidelines.

David Reingold, chair of the chemistry department, said the inspections were campus-wide.

"The inspections are done on the whole college. They are looking at art labs, von Liebig, Brumbaugh, waste storage and other operations," he said.

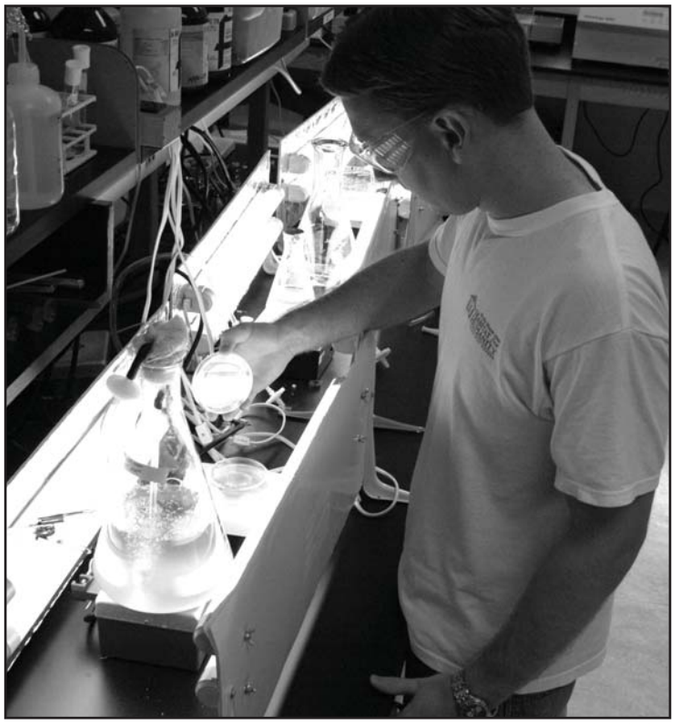
The environmental inspections are performed only once, but AICUP is considering other future programs. Although AICUP is not a part of the EPA, it performs an inspection similar to the EPA's.

The inspectors looked across campus to see how chemicals and facilities are managed. Through these investigations, AICUP aims to ensure that schools are free from environmental and safety hazards associated with mismanaged chemicals and materials.

In exchange for hosting these peer AICUP inspections, the EPA classifies Juniata as a very low priority on its list of locations to conduct surprise visits.

The EPA, as well as other agencies, has the right to come to the College unannounced to check that its regulations are being followed.

The results of the AICUP inspection will not be available for one to two months, but Roy Nagle, director of Juniata's environmental health and safety, was optimistic about the results.



"I'm pleased with the campus-wide effort….Every school has violations; I'm confident we will have some. In general the problems are pretty minor," Nagle said.

According to the EPA, the inspections usually examine a facility based on one congressional act, such as the Clean Air Act, but can include multiple acts or be focused on a specific problem such as a polluted river.

Surprise inspections by the EPA and other agencies can be very costly. Nagle described the impact the EPA inspections can have: "Fines are based on the number and kinds of violations. One problem flask can lead to thousands of dollars fined."

He also gave an example of how one hazardous waste beaker could

Equestrian clubs raffles pony

Photo courtesy of Justine Kobeski

Justine Kobeski, vice president of Juniata's equestrian club, and Cameron Sklavos-Gillette, equestrian team captain, pose with Punkin, a pony that the team recently raffled off in a fundraiser to help pay showing fees. The team sold over 70 raffle tickets, which were sold for $20 each. The raffle winner could choose to take the pony or win $500 cash. On March 18, the team announced the winner: Deb McKnight, from James Creek. But McKnight chose to donate the $500 and Punkin back to the team. The team's trainer, Donna Harris, keeps Punkin in her barn in Cherrytown, located approximately half an hour from Juniata's campus. Team members travel to Harris' barn three to four times a week, and club members go anywhere from once a week to once a month. The equestrian team would like to thank Harris for boarding and working with Punkin, McKnight for her generous donation and the Juniata faculty and staff for purchasing tickets and continued support.

New Web site receives more hits

College aims for a more user-friendly site

Julia Williams

Juniata officially launched its new Web site on March 1. However, the process began in September. The change was sparked by a need to improve the content, navigation, layout, database and code of the site.

The biggest change, according to Coordinator of E-Communications Rick Stutz, is the new navigation. The College wanted to make navigation more user-friendly for its core audience, prospective students, while keeping current students, faculty and alumni in mind.

Associate Vice President for Marketing Bill Noblitt said: "We've tested the new navigation with prospective students, and it's tested very, very well."

The site was tested with high school students for feedback.

The site is also tallying more hits than ever before. One way the College tracks Web site hits is by counting the number of pages a user views once at the Juniata Web site. The old site averaged less than three page views per visit, while the new site is over four page views per visit.

The POE pages, listing descriptions and required courses, are the most visited within the Juniata site.

As for the design process, the College assessed what needed to change based on making the site more user-friendly.

Brad Jameson, a former graphic designer for the College, and Stutz worked through several possible layouts.

Of the layout, Stutz said: "It was fueled by our main user, which is the prospective student."

Once Jameson and Stutz decided on a design, they showed it to the Juniata College Cabinet and President Kepple. Pleased with the new layout, the committee gave approval to proceed with the new Web site.

The next step was to build a template for the site with proper coding. Stutz attributes the success of this process to freshman student interns Doug Roth and Drew Hufford and sophomore student intern Whitney Glosenger.

Stutz also met with all academic and administrative departments as part of the design process. Overall everyone was pleased.

"We didn't want to do anything in a vacuum," said Noblitt. "We wanted the campus community to buy into it."

Content additions and changes varied by department, depending on what was needed. Departments on campus learned how to update their own content and add news.

The transition was made according to the organization of the Web site. Therefore, main areas such as campus life, academics and admissions were the first to change. The process of transitioning content from the old layout to the new was estimated to take up to a week. However, officials were happy to be able to change layouts in a day.

It's a little hard to navigate; as with anything new there's a learning curve

Responding to the new Web Site, students had mixed reactions.

Senior Joy Galuschik said: "I like the colors. It looks more like a college website. I'm not sure if it works better, but it definitely looks better."

Junior Marty Balaban said: "I enjoy the aesthetics. It's a little harder to navigate; as with anything new there's a learning curve. It was definitely a necessary step for the College because the old site was outdated with pictures and quotes of graduated students. The new site better represents the current state of the campus with attending students and very recent graduates."

Students also are frustrated about receiving 404 errors instead of Web pages. These errors occur for several reasons: the page no longer exists, the user is following an outdated bookmark or there is a break in the Web site code. If a 404 error is reached, e-mail Rick Stutz with the link to the page not found.

Future of German program at Juniata is uncertain

Mike Chirdon

After the department of world languages and cultures completed its periodic review in 2005, it placed continuing the German language program at the top of its priority list. The administration, though, was not certain that it wanted to commit to this because of recent low enrollment in German classes.

After the 2007-2008 school year, longtime professor of German Klaus Jaeger will retire. In order to continue the German program, the world languages and cultures department would need to hire a full time replacement for Jaeger. It is possible that this faculty position could be reassigned to another language or to another department altogether, however.

Henry Thurston-Griswold, chair of the world languages and cultures department and a professor of Spanish, does not believe that the enrollment numbers in German classes are low enough to warrant dropping the program.

This semester, five German classes are offered and a total of 46 students are enrolled in these classes. The average German class size is nine students. Though that number falls below average class sizes for many other departments (for example: English-24 students, biology-21 students, and world religions-15 students) Thurston-Griswold said that there are many good reasons to keep the German program.

The exchange programs in Germany are first-rate.There are three locations where students can study: Marburg, Münster and Bocholt. Students have the opportunity to take classes in their content areas at these universities, and Juniata offers a dual bachelor's degree program in business with Bocholt.

Director of Study Abroad Jarmila Polte said that Germany is "the cornerstone of our study abroad program." She also said, "Cutting the German language program would have a great effect on the crucial programs that are available in Germany."

Students who have gone to Germany have been very successful. Six of Juniata's last ten Fulbright scholarship winners have been students who studied abroad in Germany or German-speaking countries.

"Language is the door to opportunity," said Polte, "and those opportunities are available in Germany."

There are also faculty in other disciplines like politics, economics, religion, computer science, environmental studies and chemistry that have professional contacts in Germany. This makes German a very well-rounded program.

Thurston-Griswold also said that there is a high level of interest in German in Pennsylvania due to rich German heritage in the area.

Provost James Lakso said that he believes that there are many good reasons to continue the German program, but the determining factor will be student enrollment in German classes.

"Ultimately, you don't offer courses that students are not taking, but that is not the case with German at this point," he said.

Lakso believes that it is possible to increase enrollment in German courses. He said that the administration is committed to work with the world languages and cultures department to increase enrollment by recruiting new students with an interest in studying German at the college level.

"We will work collaboratively with the department and enrollment to identify students with a strong background in German and get them to come to Juniata," Lakso said.

Thurston-Griswold is confident that there is untapped potential in the German program. He believes that by publicizing and marketing the program, Juniata will be able to increase enrollment.

When the possibility of dropping the German program was brought to the faculty's attention, some professors took the opportunity to lobby for the addition of an Arabic program or the expansion of the current Chinese language program to replace German.

Both Lakso and Thurston-Griswold said that there are currently no plans to add an new language program at Juniata, and there is no plan to replace German with Arabic or any other language.

Chris Shannon/ Juniatian

German professor Klaus Jaeger leads a discussion with junior Jonathan Knepp and sophomore Anna Bloom in an independent study class about German author Bertolt Brecht on April 2.

The primary reason that Juniata is not planning to add Arabic is that it is difficult to find qualified Arabic instructors. Lakso said that even institutions which have serious plans to add Arabic programs and more resources than Juniata are struggling to find qualified faculty.

"Just because someone can speak a language does not mean that [he is] qualified to teach it," said Lakso.

Polte said that Juniata currently offers no study abroad programs in Arabic speaking countries, but it is possible that a summer program may be available in Morocco in the future.

Thurston-Griswold said that the world languages and cultures department is lucky at this time to have a qualified Chinese language instructor, Jingxia Yang. He also said that Chinese would be the most likely candidate for expansion because there are related classes available in departments like history and philosophy and study abroad opportunities in Dalian, China.

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture is located? Send your guess to the Juniatian at juniatian@juniata.edu. Correct answers will go into a random drawing for a random prize. The winner will be named in the Juniatian's next issue.

$2 million of refurbishments to improve Good Hall

Changes to be made to upper floors this summer and lower floors in 2008

M. Piazza

This summer, the upper two floors of Good Hall will be refurbished, and followed by the lower two in the summer of 2008. The work will go on during the summer break and will be paused for the fall and spring semester.

After much planning and fundraising, the College is now financially ready to proceed with the refurbishments.

"Due to an anonymous gift of $500,000, and the support from the faculty and other donors, we have raised a million dollars and we are borrowing another million to make this refurbishment possible," said President Thomas Kepple.

"The refurbishments in Good Hall should make current students more comfortable, alert and involved in class, and it will also encourage prospective students to attend, as the building will be more appealing," said Kepple.

In an attempt to make Good a place where learning can be more interactive, Kepple created a committee, headed by Rob Yelnosky, vice president for finance and operations, to decide upon changes to the building.

The committee's job was to determine what functional changes could be made without going over the $2 million budget or violating the original building's code. More complex structural changes to Good, such as the much debated addition of an elevator, would require much more than $2 million and attention to newer building codes. Right now, according to Kepple, Juniata cannot gather more than $2 for this project. Therefore, major structural changes or additions are not a part of the current project.

The refurbishments that the committee decided on were as follows: new flooring, new windows, repainted walls, new white boards and chalk boards, upgraded technology pieces, new furniture and repairs to the heating system. The refurbishments will be similar to the improvements already made on the 200 floor of Good, but on a larger scale, according to Yelnosky.

"Each decision was geared to making Good the most optimal learning environment possible while running it as efficiently as possible," said Yelnosky.

One of the new furniture additions will be tablet desks in some classrooms, which will allow students to use laptops and books on their desks simultaneously.

The only problem with the tablet desks, according to Yelnosky, is that they will reduce the capacity of the different rooms. When the refurbishments are complete, Good will have seating for 645 students instead of the current seating of 733.

"We are hoping that the downsizing of classrooms will not hinder students in taking the different classes that are required, but instead encourage students to plan out their schedules for more than just the next year, and that way have a clearer idea of what they are planning in their POE," said Registrar Athena Frederick.

Reducing the capacity of the rooms means that professors will no longer be able to bring anyone up from their waitlists during the drop-add period.

Frederick said that this may lead to more sections of larger introductory courses being offered to account for the difference, but so far it has not been necessary to add sections for the fall.

Other new furniture includes: three seminar tables with movable chairs as are seen currently in Good Hall Room 220, flexible tables and long tables that the education, psychology and politics departments favor.

According to Yelnosky, the seminar tables will be used for smaller classes that are interested in discussion and debate rather than the lecture-style classroom.

The moveable tables will allow professors to change the orientation of the classrooms. Several professors choose to move around the current desks but this can be difficult and noisy. But as Judy Katz, professor of English, pointed out, in her classes it is the only way to really be able to see each individual speaker. The committee took this into account and chose flexible furniture that will allow for configurations in many shapes that will allow for face-to-face discussions.

The new windows and the repairs to the heating system will allow Good to retain more heat than it has in the past. The new floors and repainted walls will create brighter classrooms. In a few rooms, carpet will be added to help dampen sound travel between rooms.

There will be both white boards and blackboards in most classrooms. A few rooms will not have chalkboards to accommodate professors with chalk allergies. This should not cause any problems or complications in room allocation, according to Frederick, who said it is part of her job to decide where each course should be held.

Students, staff and professors are excited about the refurbishments. Kayla Stidsen, a junior, said, "I'm glad that the renovations are being done to Good because it really needs it, but I just wish that it hadn't taken until my junior year for it to happen."

"I'm thrilled that Good is going to get renovated, and I'm perfectly happy with moving out if the result is a wonderfully new l ooking building," said Lacey Rhodes, administrative assistant in Good. "I'm just hoping we make it back in before classes begin in the fall."

According to Yelnosky, Frederick and Kepple, the majority of professors with offices in Good are supportive of the refurbishments, even though they are being moved all over campus this summer.

Habitat for Humanity

Global Village: Project Thailand

This summer, seven Juniata students and two alumni members of Habitat for Humanity will travel to Korat, a province in the Northwestern portion of Thailand. Each person is responsible for roughly $3000, which covers expenses during the two week trip, plane tickets and travel costs and a donation to the Thailand Affiliate where they will be working.

Habitat's next fundraiser will be April 12, with Domino's Pizza. One dollar will be donated to the trip for every purchase made with a Global Village flier (they'll be distributed in dorms). For more information on how to donate contact Derek Morris at morridg04@juniata.edu.

To learn more about Habitat for Humanity projects visit www.habitat.org

Campus labs under observation

continued from page 1

rack up such costs.

If the inspectors find a beaker that is improperly stored, sealed or identified, they can fine for all of the individual violations. In other words, for every specific violation, there is a fine.

Nagle said that five or six schools have faced fines of over $500,000. Boston University was fined $750,000 after an oil leak in 1997. The highest fine Nagle was aware of was the University of Hawaii, with a fine for $1.7 million in 2001 for hazardous waste violations.

The inspections are completely random. Juniata was examined by the Pennsylvania Department of Environmental Protection in the past. There has not been a federal EPA inspection.

Nagle said: "We have been inspected by the Pennsylvania DEP for air quality, radiation protection, land recycling and waste management. No fines were assessed from any of the inspections."

Instead of fines, the AICUP peer inspections result in a report that is disclosed to the EPA. As part of the agreement, Juniata does not have any financial penalties, but agrees to fix any of the problems found by the inspectors within 60 days of the findings.

As part of AICUP, Juniata sent Nagle, Science Supply Coordinator Sherry Isenberg, Science Technician Yanping Rinehart, Director of Facilities Services Tristan delGiudice, Assistance Director of Facilities Services Earl Martin and Architectural Trades Supervisor Dave Coder to be trained as auditors for the EPA. They learned how to perform a comprehensive audit based on a variety of acts and regulations.

There are protocols based on the specific area being examined, and there can be over 100 questions to be answered for an individual room. For instance, a question for an art lab might be about how photographic solutions are managed and stored.

All the schools involved send representatives to help audit each other. Nagle, Rinehart and Martin have gone to other schools in the past to perform inspections.

Nagle said that the inspections tie into the sustainability effort on campus.

"We're already seeing evidence of a cultural change in how people view their space[s]," Nagle added. "It's things like buying just what you need and minimizing hazardous waste."

JC wireless: All a person needs to know for connectivity

Mindy Bozick

Over the course of the academic year, Juniata's wireless network has received criticism from students regarding the network's reliability. Many students have complained about "spotty" connection problems in some of the residence halls and academic buildings.

Recently, Juniata's Campus Network Services added a few upgrades to the four-year-old network in an attempt to make wireless Internet more accessible to students and staff alike.

New features have been added to all academic buildings and residence halls to make the Internet connection more reliable and more easily accessible.

Within the last two weeks, Sunderland and Lesher Halls received an upgrade and they now have new equipment. Dave Fusco, associate vice president and chief information officer, said that this cut down on students' complaints about the service. He also said that there are plans to continue to go around to the other residence halls to add more access points as well.

Sherwood and East Hall residents frequently report that wireless service is poor in their buildings, a problem Fusco attributed to cinderblock walls impeding wireless signals. Additional access points have been installed in the buildings to help alleviate the problem.

Fusco said that over the summer, all of the hard-wired network connections in the dorms were replaced. The new jacks on the walls in each dorm room allow for better access to the network. He said that before this summer, the wired networks in the dorms were running at a 10 megabits per second (mbps) speed, but with the upgrade each student has access to an individual link that has a speed of 100 mbps.

According to Fusco, problems occur because so many students access the wireless network. He encourages students to "plug in to the wall when you can."

He added that the more people there are using a wireless access point, the more slowly the wireless network will perform. When plugged in, it does not matter how many people are on the Internet at that time. It is an individual service and the computer will have access to the full 100 mbps.

Fusco said that while the individual wall ports give students 100 mbps of speed, one wireless access point in a dorm only has 54 mbps of speed that is then divided between all the users simultaneously accessing that wireless access point. Multiple users cause the reliability of that network to decrease and often bog down the wireless service.

Users who create their own wireless networks from the hard-wired connections in dormitories also affect Juniata's wireless networks. Those networks negatively impact the signal fidelity of the official wireless network and, according to Fusco, violate the school's policies.

When students create their own access points, they do not have access to the Juniata Virtual Private Network (VPN). Also, they will not be protected by the safety measures that the Campus Technology Services takes to ensure a secure network.

The Juniata VPN is the network that allows all users with a valid EagleNet username to connect to a common network community.

Fusco plans to create a more wireless-friendly Juniata with changes to the network that will become apparent in the coming months. Labs will be made into more "collaborative spaces," and each professor will be issued his or her own laptop. Incoming freshman students will be encouraged to bring their own laptops as well.

Eighty-one percent of the 2010 class brought laptops this year. Fusco expects that next year the numbers will be higher. Even though Fusco plans to make Juniata more mobile, he does not foresee Juniata becoming entirely mobile for a very long time.

CROP Meal at Juniata for world hunger

Annual charity supported by college and Huntingdon community

Charlie Allison

On March 27, Juniata hosted the annual Comparative Research Program on Poverty (CROP) dinner, a charity event dedicated to alleviating world hunger.

Sponsored by Juniata's Christian Ministry Board (CMB), the event called for students to forfeit their meal-plans for a night so that faculty, staff and community members could buy tickets to a meal in Baker Refectory. The ticket proceeds went towards hunger alleviation.

Students who ordered out instead of dining at Baker also benefited the CROP cause. Local restaurants such as OIP, China Buffet and Pizza Hut donated part of that evening's revenue to the event.

According to Chaplain Dave Witkovsky, the dinner garnered approximately 150 guests and $1200 dollars.

Seventy-five percent of the profit went to the Comparative Research Programme on Poverty and the remainder went to the Huntingdon Food Bank.

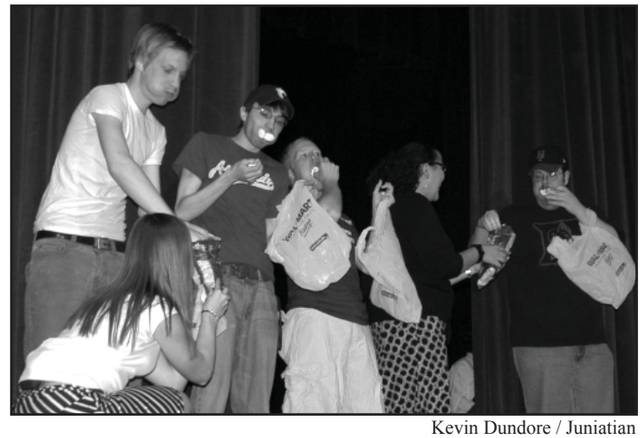
The aid of Sodexho, Juniata's food service provider, was critical to the success of the CROP dinner.

Patrick Walker, the Harrisburg regional director of the Church World Service said, "[Sodexho is] an excellent organization. Sodexho encourages their employees to take an interest in hunger-related issues. They don't have to help us with this but they do. They are a highly-valued partner."

The campus ministry conducted an extensive advertising campaign for the CROP dinner on campus and in the community. Student sign-up sheets were posted in all campus dormitories, at the entrance to Baker and at a table in the Ellis Hall lobby.

Written announcements were posted at area churches, and students were sent on Sundays to give a verbal reminder to the congregations. Fliers were also posted in local businesses.

Tickets were $8 for adults, $5 for six to 12-year-olds and free for children below five.



The CROP dinner is a less common CROP-oriented event, according to sophomore Sarah Roby, president of the CMB. The more common CROP-centered event is a "CROP-walk."

Last spring, sophomore Sarah Roby, president of the CMB, helped to create and successfully implement a program called "Don't Flush Your DCB." Created with junior

Derrick Morris, the program uses excess student meals and turned them into donations for CROP. Using somewhat unusual advertising—the most memorable of which was fully-clothed Morris sitting on a toilet in Ellis—the event garnered thousands of dollars, according to Roby.

They plan to repeat the "Don't Flush Your DCB" event this spring in hopes of duplicating their success.

All Class Night '07

Kevin Dundore / Juniatian

Christopher Shannon / Juniatian

All Class Night 2007: Classier Than Ever provided laughs all around on March 25. Above, class representatives from the audience compete in a marshmallow-stuffing contest. Below, three men's rugby players chug beers during the senior skit. At the end of the night, seniors placed first, juniors second and freshmen third.

Using Career Services

Mindy Bozick

Finding a job after college or even an internship during school can be stressful. Juniata's Career Services Office, located on the bottom floor of Ellis Hall helps students who need assistance developing career ideas or finding job opportunities.

The Career Services Office, directed by Darwin Kysor, offers many services to the Juniata community. Focusing mainly on assisting students as they explore their interests both academically and by potential career choice, it provides many resources to help students receive relevant information about their future career goals and to participate in a hands-on experience with those careers.

Kysor and his staff provide opportunities for students to examine their POEs and determine what they can do with them in the future.

His office offers a series of workshops in the fall and spring that focus on important professional skills like writing resumes, developing interview techniques and planning for graduate schools.

Career Services provides students with the resources and skills to maximize the possibility of being hired by employers or accepted to graduate schools.

The office's other services include providing students with information about and access to events like job fairs and internship fairs in Pennsylvania and neighboring states. These various events provide students with opportunities to better present themselves to future employers.

Kysor and his staff can also help undecided students to choose the right POEs and guide students to find what they want out of their education at Juniata.

Freshman Alicia Szarmach came to Juniata to be a veterinarian. After a bad experience with organic chemistry, she decided that this career choice was not right for her, but she had no idea where to go from there. A professor advised her to visit the Career Services Office for help in deciding what career she would enjoy, but more importantly a career in which she would have personal success.

Szarmach said: "On the Career Services Web site I was able to take quizzes that helped me understand my career options, and the Career Services Office helped me figure out what to do with the information the quizzes gave me."

She said that she is currently exploring a sociology/psychology POE and that might want to go into social work to work with children. Even though she's "not quite sure what she wants to do yet," she is happy that she had someone to help.

Kysor said that many students change their POEs but then do not quite know what to do next.

"If you're an education major, you know that you're going to teach, but if you're a bio major, what all can you do with that? We help to figure that out," Kysor said.

As part of the Career Services program, Kysor said that every year he matches juniors with alumni that have the same or very similar careers as the students are pursuing. Students and alumni are encouraged to correspond with each other in hopes that the students will gain straightforward and accurate descriptions about what to expect with different occupations. Also, the alumni can provide helpful information about how to prepare appropriately for applying for jobs.

Additionally, in both the fall and spring semesters, Kysor offers a class called Career Planning that is available to students who wish to explore their career interests while also taking a one-credit class. Kysor said that approximately 80 people a semester take the class and "even though it's generally a freshman/sophomore class, juniors and seniors have taken it in the past."

Kysor and his staff encourage students to stop in the Career Services Office or to check out the Web site at www.juniata.edu/career for more information.

LGBT senate seat

continued from page 1

questioning their sexual orientation/gender.

Several students who attended the open forum had questions about the kinds of issues an LGBT representative would present to the student government. The LGBT community wants to change the College's mission statement to include gender minorities as a group that would be protected from discrimination. Also, the LGBT community wants to address the need for more unisex bathrooms on campus for gender minorities who feel uncomfortable with only male and female bathrooms options.

The main argument against the new seat was that LGBT issues should be represented by the domestic minority representative, which already exists. Another concern expressed, first by senior Magda Sarnowska and then by other senators at the meeting, was the kind of "precedent" passing the LGBT seat would set. Senators worried that if this seat was created, then in the future the senate would be bound to creating seats for all other groups seeking representation.

Senior Brandon Lau, who has led the LGBT representation movement, retorted that the "precedent" set would be a good one, because if groups are underrepresented and need student government attention, they should be granted it.

Lau also pointed out that the LGBT community needed a permanent seat that a "visible" and "trusted" representative could fill.

Previously, Lau and the LGBT community collected 563 signatures of students in support of the new seat. This petition permitted Lau to call for a forum during the open-floor portion of the student government meeting.

The forum, held April 3, was for students to come and learn about the prospective seat and ask questions about LGBT representation. Twenty-five to 30 people attended, including executive treasurer Shawn Rumery, executive secretary Laura Sweltz and office of technology Jigar Patel.

When asked how this new representative would keep in touch with the LGBT community, Lau said the representative would use "networking." This approach would rely on word-of-mouth communication amongst different groups within the community that would report back to the representative. This would better include less-vocal sexual and gender minority students.

Rumery also discussed the future use of open forums to elect group representatives, such as the domestic minority representative and the LGBT representative.

Lau first called for the new seat on Jan. 25 as a concerned and underrepresented student.

"These positions will not only represent people who can identify themselves as a sexual or gender minority but also for those who feel uncomfortable publicizing their concerns," said Lau.

On Feb. 26, the student government appointed Lau to fill the empty second domestic minority representative on the senate.

Because there was some question as to whether the LGBT community was being adequately represented, and there was an open spot for another domestic minority representative, the student government executive board offered Lau the position.

As a senator, he was able to vote on the proposition on March 22.

Secretary of the senior class Kathleen Candando spoke openly in favor of the LGBT seat.

"Bottom line, there's a group who wants representation. They want a voice on the senate, and it's our obligation to hear them out and grant it," said Candando.

Computer labs on campus

Why some labs are for private use

Julia Bogue

Some students have recently expressed frustration about not being able to access private departmental computer labs on campus. However, when asked if private labs are necessary, most students recognized the need for such facilities.

Junior Lindsay Brunner said: "I don't think they're bad, as long as there are enough computer labs for everyone else. I understand the need for different [software] programs for certain POEs."

Senior Jonathan Zunkel, a mathematics and peace and conflict studies POE, who performs research in the private psychology computer lab, also thought that the labs are necessary, "especially while running experiments, because it would be very disruptive for students to come in."

Private computer labs are reserved by their respective departments; however, many can be used with permission.

A private lab for theater POEs is located in Halbritter Center for the Performing Arts.

"I wouldn't think of it as a computer lab," Director of Performing Arts Chad Herzog said. "It is more of a performing arts management studio."

A performing arts management class is held in the lab, which houses only Apple computers with specialized software and other equipment. Students are expected to spend a minimum of ten hours a week outside of class working in the lab.

The lab is kept locked for security purposes, but each student in the class is issued a key.

Herzog said: "Even though it is a quote-unquote private lab, if someone needs an application that is on one of the computers, if they approach me or ask one of the students, [we] are more than happy to help."

The information technology (IT) department also has its own private labs located in Brumbaugh Academic Center (BAC).

Room C299 of BAC, used by the Innovations for Industry class, is set up for projects that "are for clients outside the College, and the equipment is set up for that ongoing development," said Loren Rhodes, chair of the information and technology department.

The lab is kept locked and each student is given a code for the "protection of the class and student projects that are ongoing," said Rhodes.

Room C102 of BAC is also a private teaching lab.

"The room is heavily used, and it is rare that there is not a class in there," said Rhodes. After class, and when few students are using the lab, the entrance is controlled by a keypad lock for security purposes. Each class is given a code to unlock the lab.

Rhodes said: "It's not a prerequisite that someone needs to be one of our students or in one of our classes [to use the lab]." However, in order to use the equipment in the labs, students must request access from an IT department member.

The psychology department has private and research labs located in Good Hall and von Liebig Center for Science. Good Hall, Room 119 is a private teaching lab. The computers there are not connected to Appserver and are used for research and to run psychology programs. Few outside of the psychology department would find the machines in this lab useful.

David Widman, psychology department chair said, "A non-psychology student could ask for permission, and permission could be granted depending on the reasons for needing it [access to the labs]."

Chemistry and biology also have private computer labs located in von Liebig. David Reingold, chair of the chemistry department, said that the lab in von Liebig, Room 2073 is "available [to the public], but we think that chemists should have priority there because there is some specialized software that's only available there." Classes are also taught in the lab.

The art department has a private computer lab located in Good Hall, Room 201 used to make digital photographs and graphic images. Printers capable of high-quality printing are also in this lab.

The Writing Center, located in the basement of Beeghly Library, differs from other computer labs. The Writing Center is "not a lab; it is a different evolution," said Carol Peters, director of the Writing Center. During the day, the Writing Center is used as an instruction lab. The librarians "teach any classes that teachers ask us to teach" said Mary Murray, head of library instruction.

At night the room becomes the Writing Center. Students not receiving instruction cannoy use the computers in the Writing Center due to confidentiality.

The room is kept locked for security purposes.

Many of the computer labs perceived to be completely off limits by students may actually be open for use, as long as permission is requested and granted.

Kevin Dundore / Juniatian

Senior Joe Daft (right) and freshman CJ Smith (left) work in a computer lab of von Liebig Center for Science.

The student votes that reveal closeted attitudes

EDITORIAL

Juniata was a different kind of place in 1965. Students were expected to behave in a certain way. Men and women lived in separate dorms, no one would dare wear jeans to class and few if any students were concerned with social change.

But in mid-March of that year, 100 Juniata students and faculty marched to the steps of the Huntingdon County Courthouse to protest the holocaust of civil rights that was happening in Alabama. A few hours after that demonstration, 15 students and faculty crammed themselves into five cars and made a trip south to participate firsthand.

On March 16, the Alabama State Police, under orders from the governor, tried to put a violent end to the protests there. When police charged towards demonstrators with everything ranging from whips to cattle prods, three Juniatians were injured.

These protesters were in a minority at Juniata—not of color, race or gender, but of ideology. They were idealists who stood in opposition to the College's administration that threatened them with dismissal. They stood in opposition to their fellow students, who concerned themselves

more with matters of academia. They stood in opposition to the majority of the nation that chose to do little.

But these 15 fought. These 15 were beaten down. These 15 stood and insisted that all voices, black, white or otherwise, have the right to be heard.

Forty-two years later, the voices remain nearly as silent.

In the last three months, Juniata's sexual and gender minority students, often referred to with the LBGT (lesbian, gay, bisexual, transgender) acronym, have been lobbying for the creation of their own seat on the student government senate *(see story, page 1)*.

Senior Brandyn Lau began petitioning student government for the seat in the early days of 2007, presenting his ideas and informing the senators about LGBT issues.

There were a number of meetings on the subject, and several weeks ago the issue came to its first vote on the floor of the senate.

The motion was defeated by a vote of 7 to 11.

But all was not lost. Lau and his associates began collecting signatures from every corner of Juniata to bring the issue before the senate once more for vote.

Finally, after completing mountains of paperwork, the student senate approved the motion for the creation of the seat by a vote of 11 to 8.

The margin approving the bill was narrower than the margin by which it was initially defeated.

Eight votes, after months of explanation, were still cast by senators who believed that LGBT students were either not deserving of representation or were already represented by the domestic minority seat.

The issue then went to a student vote on April 4, where students narrowly approved the referendum by 51.8 percent.

Out of 463 voting students, 240 voted yes to the seat's creation and 223 voted no.

Forty-eight percent of the 463 votes cast by students declared the Juniata community's opposition to social equality, resistance to social change, desire to suppress a significant and growing minority voice and their closeted homophobia.

Perhaps you may feel that it is not your battle to wage. It is

This is more than one percent in opposition for every year since the events in Alabama.

Juniata has learned little since those events. Especially considering that out of more than 1,400 possible student votes cast either for or against the creation of the seat, only 463 were cast.

We smile for the photos in the College catalog. We sign up to join AWOL and UCJC during Lobsterfest. We pride ourselves on the number of cultural classes we've taken, and we proudly show off our knowledge of Martin Luther King, Jr. and Mahatma Gandhi.

But we only do it to maintain the shiny veneer of publicity pamphlets. If we meant it, we all would have voted on April 4. If we meant it, we all would have told the 223 dissenting students that they were wrong, and that sexual and gender minorities deserve their own voice on the senate.

But we did no such thing.

Instead, just as we did 42 years ago, the majority of us chose to remain locked in our rooms, locked in the library, locked in our own lives.

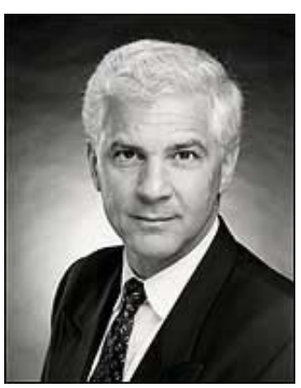
Perhaps you may feel that it is not your plight, not your battle to wage.

It is.

While no one would claim that the battle for LGBT rights, here or anywhere else, has ever been as bloody, violent or socially-changing as the battle for the rights of African Americans, few would argue that there exists a greater battle for the basic rights of any other group in the coming century—and it is a battle that all of us will witness.

However small a seat on Juniata's student senate may be, however small an entry history may provide it, it is nonetheless a prerequisite for this college's advancement not as an institute for higher education, but as a prerequisite for one that claims to be as diverse and tolerant as we do.

There needs to be a revolution at Juniata, a revolution to eliminate apathy and to install a sense of social responsibility that extends beyond lecture halls and into the real world.



The lack of concern over the LGBT seat shows us just how far we have yet to go to achieve our glossy, pamphlet dreams.

Bomb Scare: The History of Nuclear Weapons Policy from Hiroshima to Tehran

A lecture by Joesph Cirincione

April 16 at 7:00 p.m.

Alumni Hall A100 BSC

Cirincione is the Senior Vice President for National Security and International Policy at Center for American Progress. He served as director for nonproliferation at the Carnegie Endowment for International Peace for eight years.

Now a professor at the graduate School of Foreign Service at Georgetown University, Cirincione worked for nine years in the U.S. House of Representatives on the professional staff of the Committee on Armed Services and the Committee on Government Operations and served as staff director of the Military Reform Caucus. In conjunction with the Hiroshima-Nagasaki Legacy Exhibit, a graphic representation of the lives changed by nuclear weapons, showing in Alumni Hall April 2 to April 9.

Sponsored by the Baker Institute for Peace and Conflict Studies

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.
Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Presidential Perspective

Dr. Kepple explains Campus Continuum

Have a topic that you'd like Dr. Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

In their senior years, Mike Brown ('02) and Fred Taber ('02) did a study to determine if Huntingdon was an attractive town for retirement housing. Through a survey of the literature on retirement housing and then a survey of several Juniata alumni classes, Brown and Taber concluded that many things make Huntingdon an excellent place for retirees.

So when the folks from Campus Continuum—a company that develops, markets and operates university-linked retirement communities—approached us in the summer of 2006 to see if Juniata would be interested in partnering on a unique retirement housing development, we already knew it could be a success.

We proceeded with a much broader survey of alumni, parents of past students and others. This survey response has also been very positive. Clearly many people consider retiring in a development directly linked to a college very attractive, confirming Brown and Taber's earlier study.

Currently, a subcommittee of the Board of Trustees is working with Campus Continuum to determine if Juniata should proceed with this project and exactly all the details. The committee will report its findings to the full Board at the April meeting. If the Board approves the project, we will proceed to the design and marketing stages.

Although we have not established all the details, the project would be approximately 120 housing units for persons who are 55 years of age or older. It would be located on about 30 acres the College owns on Route 26, just as you leave Huntingdon. The housing units would be of "green design." Owners of the units would be able to audit a selected list of Juniata courses and would have access to performing artist and athletic events.

CORRECTIONS

In Issue 8's student government story, senior Shawn Rumery was identified as both student government vice president and treasurer. He is the student government treasurer.

In the same issue, the Juniatian mistakenly misspelled two students' names. We apologize to Caitlin Hinson and Kasey Brough for the error.

Realpolitik: Sustainability falls upon deaf ears

James Trent

After American physicists realized the power of a nuclear bomb, the U.S. didn't properly fund their research for two years. While Germany was seizing uranium sites, stealing high tech equipment and kidnapping German scientists, U.S. funds to physicists came at a slow trickle. To start the Manhattan Project, physicists almost threatened to blackmail U.S. officials by publicizing their findings to enemies abroad.

When scientists speak to politicians, their words can easily fall upon deaf ears. This is because politicians weigh so many complex options, often without knowing the in-depth background knowledge behind them. Even when advocating new weapons in a worldwide war, physicists had a hard time driving their issue home.

The problem arises when advocates have trouble showing the weight of an issue to politicians. We see this today with environmental sustainability.

In order to properly legislate about sustainability issues, politicians must come to understand their implications. But because they don't personally have time to analyze the wealth of research devoted to them, politicians must depend on the briefings of environmental lobbyists and environment advocates nationwide.

Today, the words of these environmentalists lack political potency. Environmental goals have not reached the level of other political objectives, because politicians

Palestinians on the move: Biking for justice

Photo courtesy of Karin Brown

Palestinians, along with Internationals and Israeli civilians, participate in a peaceful bike race on March 23 calling for the freedom of movement.

Karin Brown

Streams of Palestinian youth funnel down the streets of Ramallah on March 23. Car traffic has been diverted—well, for the most part—and bikers have proudly taken to the road. Palestinian flags flap in the wind, hanging precariously out of helmets and backpacks or off of bike racks and baskets.

It's a race. Palestine's first ever sports event.

Literally hundreds of young Palestinians have come out for the bike race. It's a ride that will take them from the green hills of Ramallah through the treacherous curves and steep hills of the Judean desert, descending nearly 1200 meters to reach their final destination of Jericho, well below sea level.

As exciting as that sounds, it's not quite that simple.

Not only do the racers have to navigate the plethora of potholes on the main road out of Ramallah, the cars and trucks fighting for access to the road, the hairpin turns and sharp descents; they also have to get past a series of Israeli checkpoints that separate these two Palestinian cities.

Often the presence of, or connection to, an international person can help to facilitate the movement of Palestinians through a checkpoint, a right that is often delayed or denied to Palestinian citizens by Israeli soldiers. And so, many internationals and Israeli civilians set out on bikes alongside the Palestinians, all in support of a simple human right: the freedom of movement.

As we round past the back of Qalandia checkpoint, the bike race seems to be in the clear. We make it up our first big hill of the day but are suddenly stopped—a flying checkpoint has sprung up.

There are hundreds of known, permanent checkpoints throughout the West Bank. But a flying checkpoint is a road block that can appear in a matter of minutes with few or many military vehicles and personnel delaying and/or denying travel for Palestinians in a place that they would normally have free access to.

Confusion takes over.

No one can get a clear answer from the Israeli soldiers why the bikers are being stopped. Not the race organizers, not the Ecumenical Accompaniers, not the internationals, not the Israeli civilians, not the press…

Finally, it is explained that for "security reasons," no bikers are allowed beyond that point.

Hundreds of bikes lay strewn along the side of the road. It is an abrupt and deflating end to what had the potential to be such an uplifting and uniting event for many: a peaceful bike race calling for justice. The bikers—Palestinian, international and Israeli alike—faced the same seemingly arbitrary issues with travel that most Palestinians do on a regular basis.

This denial of passage puts an end to our bike ride, a clear enough statement in and of itself.

Karin Brown, a Juniata '06 peace and conflict studies alumna, now lives on the Mount of Olives in Jerusalem. She currently works for an international humanitarian aid NGO, performing a needs-assessment of Palestinian Christian youth in the West Bank and Gaza.

Ask the Administration

"If freshmen are banned from parking in any lot besides the one by the field hockey field, why do we have to pay the exact same parking fee that other students pay to be able to park in any lot on campus?"

As you probably know, quite a few residential colleges prohibit first-year students from having cars on campus. The rationale is that students who have chosen to attend a residential college should use the first year to get fully acclimated and connected with studies, activities and other students without the distraction of having a car and being tempted to go home or leave campus on weekends. For the same reasons, we try to discourage first-year students from bringing cars to campus and require first-year students to park in the Winton Hill lot, the South Hall lot or the College Ave. lot.

"At many other schools, students can pay more to park near their own dorms or academic buildings, but others can choose to pay less for outlying lots. Why does Juniata charge one blanket fee for parking, instead of charging based on a student's choice of lot location, as most other schools do?"

Allowing students to "buy privilege" is contrary to Juniata's heritage and traditions. We do not allow students to purchase priorities for class registration or room selection; imagine paying more to get classes on the ground floor versus those on the fourth floor, or paying more to live at 2111 Moore Street than to live in Hess Apartments. Incidentally, I'm not sure where the "many other schools" and "most other schools" references are from, but I would suggest comparing our $25 vehicle registration fee to many or most other schools.

"Why does it cost $100 to have a room key replaced? Is that a fair price for a new key and lock that probably costs the school much less to replace?"

There are times when damage fees and/or replacement fees are inflated as a deterrent or as extra precaution, but the $100 key replacement fee is actually about right. It is true that the actual replaced key is less than $100, but when a key is lost, we change the lock core. That way, if the old key was stolen or is found by someone else, it will no longer work in the lock. Then the roommate's key must be replaced, and summer camps and conferences keys must be replaced (there is a separate set of keys for summer camps and conferences held at Juniata). So the $100 fee goes towards cutting two new sets of keys, installing a new lock core that must be entered in our database and paying for parts and labor fees.

Answers from Kris Clarkson, dean of students

Real Politik

continued from page 9

have not come to understand how they relate to each other.

A sustainable future and a political present have yet to meet. In order for the gap to be bridged, those concerned with the environment must provide political substance to their proposals, as physicists did with nuclear technology. Politicians should be shown how environmental sustainability is an issue of national security.

Those concerned with the environment must ask, "Why is Venezuela such a big deal?" It goes beyond Venezuela's president, Hugo Chavez, saying nasty things about the U.S. or Venezuela's constitution being changed to make him re-electable for life.

Venezuela is an issue because it can do these things without a single repercussion from the U.S. No matter what Chavez does, the U.S. will continue to import Venezuela's number one export: oil.

And the same could be asked about Iran. "Do we care only about Iran's nuclear program?" Again, the answer is found not only in another nation's actions, but in the U.S.'s inability to respond to them.

Our dependence on these nations' oil reserves means that our politicians' options are limited. The U.S. is unable to take actions which endanger exports from the world's largest oil suppliers. What we see is a direct correlation between our dependence on oil and our political interests abroad. Reducing our dependence on oil is thus a political interest.

Of course, it is an environmental interest as well. Reducing dependence on fossil fuels is Sustainability 101. In ways like these, the connection must be made between the interests of sustainability and the interests of politics.

Once environment activists start urging politicians to reduce U.S. oil dependence instead of urging them to save the environment, they will be heard. Exploiting political objectives will be the means to a sustainable end. In the above scenario, alternative energy will suddenly seem to be a political tool instead of an environmental one. In reality though, it will be both.

Furthermore, in this situation, politicians would make considerable personal political gains by campaigning to reduce oil dependence, since this appeals to those interested in the security of the U.S. as well as the welfare of the environment.

Oil dependence is a heavy issue, and environment advocates may be the first to help lift this burden from our backs. However, to convince us to remove this burden once and for all, they must emphasize its weight.

If there's one thing that must change, it's the distance between the realms of environmental and political interests that we see today. As long as the environmental appeal isn't potent enough to politicians, and the political appeal remains unused, we will remain unsustainable.

Juniata professors and staff rock it

Elaina Clark

Whenever students think about math professors or book store managers, they probably do not see them playing Gibson Les Paul guitars and rocking out in their spare time. However, this image is a reality as more Juniata professors and staff are participating in bands and ensembles.

Three Quarters Blues (TQB) is a band that was founded almost two years ago. The members are Assistant Dean of Students Dan Cook-Huffman; professor of psychology Phil Dunwoody; Bookstore Manager Jeremy Santos and General Manager for Sodexho Hal McLaughlin.

Cook-Huffman is a vocalist and plays the keyboard, Dunwoody plays the bass and harmonica, Santos is a vocalist and plays guitar and McLaughlin plays the drums.

TQB plays blues, country, rock-n-roll and folk music. The band performs cover songs from artists like James Taylor and Collective Soul.

Dunwoody said, "We are a rock band with a blues influence."

When asked what kind of audience TQB aims for, Santos said, "People our age. We also play for students. They look at us as classic rock, but they know every song we do."

As busy professors and staff members at Juniata, TQB finds time to practice on either Friday or Saturday nights. The musicians devote even more time before gigs.

TQB's latest performance was in the Amphitheatre at Raystown Lake last summer. Its next performance will be at the TGIF (Thank God It's Friday) party for faculty at the house of Grace Fala, professor of communication, on April 27.

For more information about the band or to hear TQB's music, visit www.threequartersblues.com.

Santos and Dunwoody play with TQB but are also composers and have solo careers as well. Dunwoody, also known as Dr. Phil, plays acoustic guitar and harmonica and sings traditional blues, folk and modern music at Boxer's and at events on campus like Meal for Crop.

Santos has played acoustic guitar and sung at Alumni Weekend for the last 12 years. He has also played at orientations, Mimi's and private parties. Santos mostly performs Beatles and James Taylor songs, but he said, "I'll try and do anything."

Accounting, Business and Economics professor Dom Peruso is also an active musician. Peruso is a drummer who plays with Wine of Nails and more frequently with the Duke Morison Quartet, a jazz and Latin group. Peruso was also in a heavy metal band until a year ago.

The Duke Morison Quartet was formed about a year and a half ago. The group has played at Boxer's and performs frequently at Mimi's. The group's next event is on April 14 in Johnstown, PA at Dively's Tavern.

Peruso said, "The jazz group, [Duke Morison Quartet], can appeal to people who like music and for the casual listener."

Although Peruso has made theatre soundtracks for St. Francis University, he says that he has no real plans to take the band to the next level. He jokingly said, "Maybe for my next sabbatical."

Geology professor Larry Mutti is also part of the elite professor and staff musician group. He is a vocalist, composer and player of the accordion, autoharp, guitar and fiddle. He has played in two bands called the Crooked Stove Pipe and Eclectic Shock Therapy.

Mutti has performed at Boxer's, Caffeine and the Healthy Harvest in downtown Huntingdon. His next event will be from May 25-27. During this time, he will act as a board member of the Huntingdon Co. Arts Council in its fourth annual Folk College, where students can participate in workshops and concerts and hear tips from professionals.

Intensive English Program Instructor Prudence Ingerman, chemistry professors Ruth Reed and Paul Schettler and math professor John Bukowski also participate in an ensemble called the Moore St. Pro Musica.

Courtesy of Three Quarters Blues website

Jeremy Santos plays guitar and sings while Hal McLaughlin plays drums for professor band Three Quarter Blues.

Moore St. Pro Musica is under the direction of Wilfred Norris, professor emeritus of physics. The ensemble plays music from the Middle Ages, Renaissance and Baroque periods and performs in period costumes.

Ingerman, Reed and Schettler play recorders in the group. Bukowski plays the cello. Ingerman also plays the krum horn, which is a double reed instrument similar to the oboe.

Moore St. Pro Musica has played for Madrigal, weddings, funerals, arts festivals, art exhibits and schools. Its next event is set for May Fest in Huntingdon on April 28 from 12-2 p.m.

Ingerman said, "We keep getting better and better."

Besides performing in the Moore St. Pro Musica, Ingerman is also a singer and songwriter of folk music. She has recorded two family-oriented CDs in Canada.

So the next time your geology professor is a little too enthusiastic about plate tectonics, or your accounting professor gets unnerved when you confuse debits and credits, visualize them rockin' it in a band, and you might see them in a different light.

In the Name of Fashion

The incredible shrinking sizes

Kelly Popernik

Fact: American society values a body that is thin.

Fact: A lot of emphasis is placed on a person's clothing size.

Fact: We want to look healthy and good, but going to the gym and dieting doesn't always fit into our schedules.

Given these facts, we can come to see how Americans are wearing smaller sized clothing while continuing to get bigger.

The phenomenon is called "vanity sizing." It involves the clothing getting bigger, but the label remaining unchanged. For example, if a woman wore a size twelve in Gap jeans last year, her new size is a ten or an eight this year—even though she is physically the same size and weight.

Retailers are skewing sizes so that consumers will feel good trying on clothes. Companies can choose how they label their garments because there are no laws or regulations that prohibit this. So there are now such sizes as double zero and extra-extra small.

Abercrombie & Fitch is using this marketing strategy. Abercrombie purposely makes it possible for women who are usually a size four to fit into a size zero.

Banana Republic also uses this method and was one of the first companies to offer double zero pants and dresses this year.

Depending on each individual, vanity sizing can be positive or negative. For those of us who are happy with our health and body size, fitting into a four instead of a six is exciting and deserves a "hell yeah!"

But perhaps vanity sizing also contributes to the continued weight gain in the U.S. Companies are allowing people to get larger, but still fit into the same size clothing. Companies do this so that people concerned about their weight aren't averted from shopping; they don't have to worry about reaching for a larger size.

Vanity sizing can be a negative concept for someone who is unhealthily overweight. By fitting into a smaller size, they might think they are magically becoming healthier. Adopting a healthy lifestyle might not matter anymore because the jeans fit. This is a problem.

Vanity sizing can also really making shopping a pain. If one store is skewing its clothing sizes but another store's clothes remain the same, we have to try on pair after pair of jeans to find which one actually fits. Then, our self images are constantly on a roller coaster because we don't know what our true size is.

This phenomenon isn't limited to ladies. Retailers are also making men's clothing bigger but keeping the same sizes. This is making it harder for the smaller fellas to find properly fitting clothes in stores. Therefore, they are forced to shop online or order from a catalog. (In this case, I recommend Banana Republic because it produces an adequate amount of small clothing for men.)

In either case, vanity sizing is making an impact. The only people it's not affecting are the lucky ones who could care less about a silly number and go for what fits regardless.

The multi-billion dollar retailers that produce these shrinking clothes are at fault. As demonstrated above, vanity sizing is doing more than just twisting sizes.

Vanity sizing is happening, and it's continuing to increase among retailers. It has a positive effect on those of us who can slip into a six instead of an eight. Being deceived in this case seems to be okay and hopeful.

But the time to be really outraged is if clothing sizes stay the same but the number goes up. Keep your eyes peeled.

My Take

300 Spartans could not fend off sub par reviews

Christopher Burlingame

Swinging swords, cheesy dialogue and gratuitous blood make "300" an action movie for the beer and bro generation. "300" plays up all of the elements that appeal to little boys who still haven't abandoned their Superman complexes and comic book dreams—like splashing viscera, nude women and "One for the Gipper" type soliloquies. But it does little to extend beyond visual spectacle and falls short of being dramatically spectacular.

Modeled after Frank Miller's graphic novel by the same name, "300" is a visually stunning and stylized comic book re-telling of the Battle of Thermopylae of 490 B.C. Unfortunately, the graphic novel style does not quite make the leap to the silver screen because the drab backdrops and brown tones prevent the world from coming to life.

The title is a reference to the number of Spartan soldiers that fought against the Persian forces of over 100,000 men. King Leonidas of Sparta (Gerard Butler of "Beowulf and Grendel" and "The Phantom of the Opera") and his 300 hand-selected men held off the Persian forces for three days of battle.

"300" is a series of storyboards copied and pasted from the original work. One compliment to director Zach Snyder ("Dawn of the Dead" and "Playground") is that he remained very true to the stylistic art of Miller's graphic novel. However, changing mediums should add a new facet to the work. "300" falls short of achieving a self-sufficient artistic statement.

The movie is filled with over-the-top battle sequences that last entirely too long. Anyone going to see this movie must first suspend all disbelief. Also, patrons should be interested in epic battle sequences that are created in a dark room with a great deal of caffeine and an extremely fast computer processor. Slow motion dismemberment is set to crunching and wailing guitars. It all seems like a Metallica or Guns N' Roses video gone horribly wrong.

And, it also seems like stop motion blood splattering was used to distract audiences from the terrible acting. One should expect more from such an epic than the shouted, campy dialogue and the rippling musculature found here. Part of the acting faux pas may be related to director's reliance on computer-generated backgrounds. They prevent the actors from doing anything more than dancing with their swords in front of a green screen.

Butler and his fellow actors spent more time rubbing self-tanner on themselves than developing fully realized characters. As such, the movie relies on characters that are little more than cardboard cut-outs from Miller's original work.

The worst aspect of all was the shouted dialogue and voice-overs. Ideally, dialogue should reveal a character's personality. At the very least, dialogue should advance the movie's plot. Characters shouting lines like, "This is Sparta!" do neither.

Also, the voice-overs often state the characters' actions, which may pay homage to the graphic novel genre's word balloons. However, it is entirely unnecessary on film. Both the dialogue and the voice-overs create an aura of redundancy that does not belong in cinema.

"300" is a preachy and gruesome portrayal of ancient Greece that, at best, holds true to Miller's original artistic vision. At worst, it illustrates the descent of what appeals to modern moviegoers. Fortunately, for the moviegoer with high expectations and an eye for aesthetics, "300" does offer some breathtaking images and sprawling vistas that can only originate in the illustrated world of comic books and graphic novels.

"300" is rated R for graphic battle sequences, some sexuality and nudity. It is currently playing at the Clifton 5 in Huntingdon and also in the Premiere Theater 12 in State College.

Final Take: Mind-blowing visuals do not make up for the shoddy script and poor acting in "300." The movie is best suited for die-hard Frank Miller fans who can excuse cheesy dialogue and those who are accustomed to excessive beheadings and spear impalements.

Final Take:

★★

"300"'s mind-blowing visuals do not make up for the shoddy script and poor acting. The movie is best suited for die-hard Frank Miller fans who can excuse cheesy dialogue and those who are accustomed to excessive beheadings and spear impalement.

Juniata Idol

Anna Elias/ Americorps/VISTA volunteer

Junior Mandi Yeager, the winner of Juniata Idol, performs "Natural Woman" during the final round of Juniata Idol on March 23.

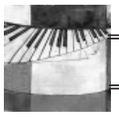
Roving Reporter

After watching Juniata Idol, what other TV show spoof would you like to see Juniata produce to run on Channel 98? Why?

"The Price is Right. That's a classic, but no one could replace Bob Barker."
-Brittany Carr, '09

"Legends of the Hidden Temple. Khaki safari shorts, sweet uniforms and Olmec; it doesn't get better then that."
-Rio Tomlin, '10

"Family Feud. This whole campus is one big family."
-Laura Rupprecht, '10



"Next. Everybody watches that show."
-Carlie Zoubek, '08

"Deal or No Deal, cause you don't have to be smart to do it."
-Jess Milheim, '09

"1 vs 100, but we need Bob Saget."
-Tim Auman '09

The Rhyme, Rhythm and Reason

Musical murder she wrote:

The Mystery of Mozart and Salieri

Lisa Detweiler

As promised in my last column, to follow my recommendation of the film "Amadeus," I have brought you the tools to play Musical Mystery Theater. I'll let you be Sherlock Holmes. I'll be Nancy Drew. If you bring a friend, he can be Scooby Doo.

We will be inspecting a historic case that has been open for centuries—the alleged murder of Wolfgang Amadeus Mozart by Antonio Salieri. This is the "who done it" of the classical world. However, we must first jump into our time machine and understand the late 18th and early 19th century Holy Roman Empire. More specifically, part of our crime scene is the court of Emperor Joseph II.

Each court had a composer. His purpose was to create pieces for court entertainment that were often used as nationalist propaganda. Italian composer Antonio Salieri held this position in the court of Joseph II. Salieri was known for his excellence as a teacher and prolific writer. Unfortunately, history has cast as shadow on his reputation. He is remembered as the man whose jealousy supposedly led him to murder Mozart. Don't get too excited just yet. This case is wide open.

This all began with a rumor that Salieri confessed to poisoning Mozart. Salieri allegedly admitted this in his last days while battling his feelings of guilt. (I personally would have preferred a juicier, lustful confession involving a secret woman, but murder will suffice.)

The story becomes more interesting because Mozart believed that he was poisoned before he died. While writing his last piece, the "Requiem," a musical piece for a funeral service that was commissioned from a stranger, Mozart told his wife that he felt he was writing the piece for himself. He said, "I feel that I will not last much longer; I am sure I have been poisoned. I cannot rid myself of this idea."

Did Mozart mean poisoned in a figurative sense? Was it his poetic metaphor for being tired and overworked?

Mozart worked on the "Requiem" up to the last hours of his life. His sister-in-law, Sophie, recalled that his last action was an imitation of the sound of the kettle drums in the piece. (He really went out like a true musician. How romantic! It takes a certain motivation to complete a piece when you are completely disabled. I'd prefer to have a drink.)

Doctors throughout history have developed suggestions of natural causes that could have led to his death. Prior to death he was suffering from high fevers, an overall swelling of the body and the inability to sit up. Many have suggested kidney disease, which would explain the bloating and fever. Others suggest that he was poisoned with mercury, which attacks the kidneys. No one is sure. Even if there was a way to test, it would not answer the question of who was the culprit.

This leads us to the next question in our investigation. How did Salieri become an actor in this musical drama?

Numerous letters and records reveal conflicting opinions of Salieri's character. Some say that he was threatened by Mozart's genius and abused the power of his position to try to destroy Mozart's reputation and career. Salieri influenced the court's opinions of music, refused to support Mozart's "The Marriage of Figaro" and stole Mozart's aristocratic music pupils. These pupils were most likely beautiful women.

(Mozart, you can't have everything. Throw the man a bone.)

This relationship doesn't completely make sense. Salieri loved Mozart's music and attended a number of his operas. Yet Mozart mentioned their feuds in a letter to a friend, referring to Salieri's plots, "which however, have completely failed." Mozart apparently would not let himself be stopped by this tension. As such, maybe Salieri felt it was time to take more drastic measures.

But after Mozart's death, Salieri was one of the few people to attend his rival's burial and he taught Mozart's son Perhaps this was his way to atone. Maybe he saw an opportunity for redemption by tutoring Mozart's son.

Nonetheless, why are we so afraid to acknowledge the possibility that he was *actually* a friend to Mozart? (We are cruel people.) Sadly, Salieri's work faded from the scene, while Mozart's lived on.

Although, there is no definite conclusion to this piece, let's look on the bright side. Both ended up as characters in a major motion picture. (Good observation, Scoobs.) Or, maybe like 2pac, Mozart isn't dead at all.

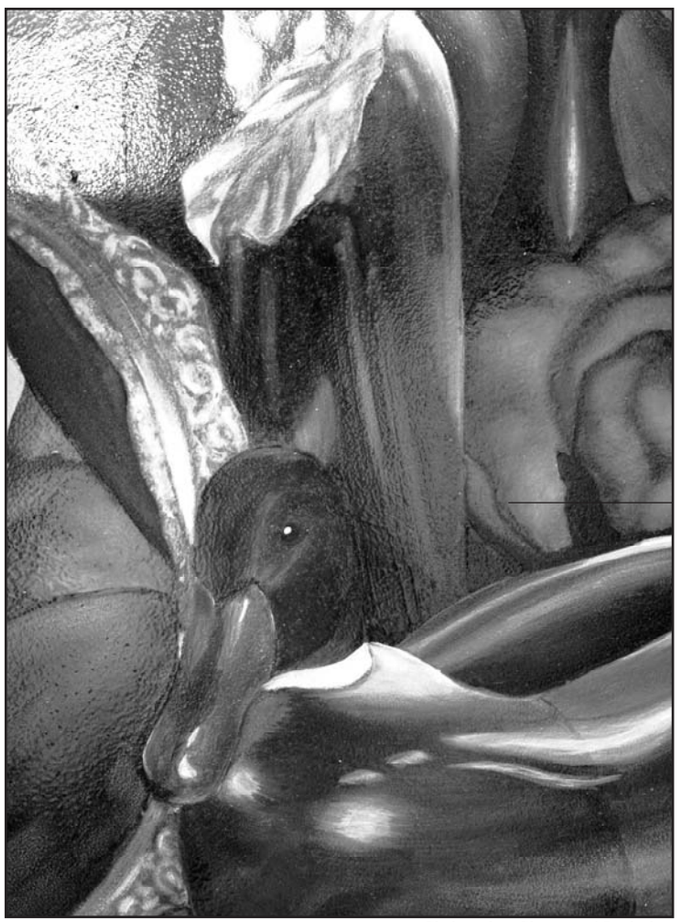
The mystery goes on.

The student art exhibit

Embracing open creativity

Sara Cieslewicz

As an extreme amateur in the art field, I took a stroll through the Juniata College Museum of Art and was pleasantly surprised at the Student Art Exhibit's fresh creativity. From a variety of paintings to abstract ceramic configurations, there is no limit to the impressions that these artworks can make on the student body's mind.



The shades she used are reminiscent of an old smoking room

Senior Dina London's "Untitled," a framed digital photograph, is an aerial shot of the forest-filled earth. Wrapped in circular layers, the photo's shape looks like the world as a whole from outer space. The middle orb has a sliver of the blue cloud-filled sky in the middle with a green forest on both sides. This orb serves as a crazy marble-like center for the entire piece. London's work provides a completely different view of the earth's heavily vegetated surface than usually expected.

"Untitled," a set of soda and gas-fired stoneware by senior Wahida Toomey, is a set of four animal cup figurines in dark, earthen colors. The animals in the collection, excluding the ram, have their body and head facing upward with their mouths wide open. The goat inspired figure has, along with the other animals, distinctively sharp teeth that one would normally not associate with a goat. The ram has off-white handles in the shape of horns. They are accompanied by an exceptionally realistic texture for its fur. Its mouth, nose and eyes make the ram appear kind and majestic. The reptile figure has rows of intimidating jagged teeth, and the last figure, a disgruntled hedgehog, has white glass spikes all over its body. As a whole, Toomey succeeds in creating unique figures that could be used as exceptionally entertaining glasses or cups that can bite back.

Junior Alyson Jacques' "Under Painting Project" is a still-life painting of a collection of items that are not typically associated with each other. In the piece, images of a mallard duck, the bottom of a blue crystal vase with stems visible through the glass, green foliage, large red roses and a wooden chair leg all play upon each other in contrasting dark, musky colors. The shades she used are reminiscent of an old lounge or smoking room. The painting is full of dark reds, mustards, hunter greens and natural browns. Almost hidden in the fight for space, lovely half-circle designs are entwined on the surface of the foliage. And, there is a distinctive bare gray spot on the left side.

The aforementioned creations are not the only gems on display. In a world of heavy work loads, hostile bosses, menacing student loans and persistent love handles, there are many potential subjects for a student's piece of art. The student exhibit does not just bring the college student back to its middle school art class roots; it offers an impressive collection that the wider community should definitely take time to see.

Christopher Shannon / Juniatian

Senior Alyson Jacques' "Under Painting Project" is part of the student art exhibit now displayed in the Juniata College Museum of Art.

Kvasir literary magazine promotes arts

Sara Cieslewicz

"Kah-veser?" No. "Kiv-azer?" Uh, no. Nice attempt though.

"I know that a lot of people do not know what [Kvasir] is because they don't know how to pronounce it," said sophomore Emily Hauser.

Kvasir—actually pronounced Va-sur—is Juniata's student literary magazine, which promotes art on campus by publishing student poetry, short stories, prose, essays, drawings and photography.

Named after the Norse god of creativity, Kvasir (also the club's name) holds poetry readings and slams, inspiring students to use their inventiveness as an outlet to share pent up emotions, thoughts, ideas and feelings.

"I've submitted for a long time. Having a history writing poetry, I wanted to see it published," said junior Laura Rodgers.

Kvasir usually has one fall issue, one larger winter issue and other smaller mini-issues throughout the year. Issues are published at the print shop on campus.

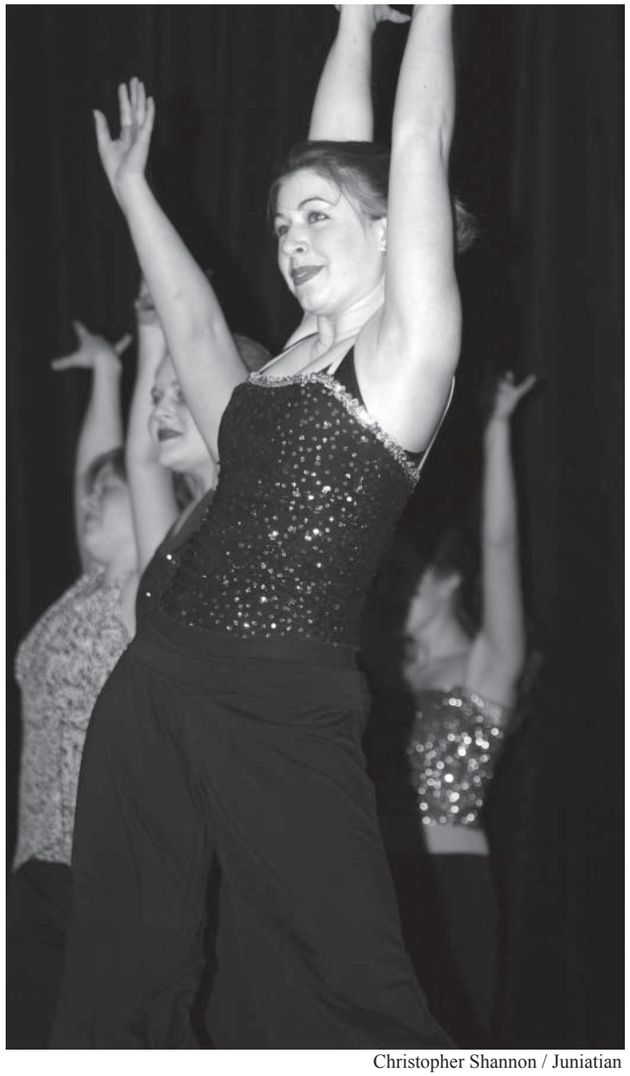
The Kvasir staff meets every Monday at 9 p.m. in the Ellis Blue Room to review submissions and decide which ones will make it into the current issues. Enough submissions are taken to fill out an 18-22 page layout.

Recently, Kvasir has experienced a lack of submissions. The club officers have considered possible causes for the lack of participation.

"People are creatively lazy," said junior Suzanne Ostyn, president of the Kvasir club.

The club's advisor, professor of English Peter Goldstein, believes students do not submit because they tend to be hesitant to share personal poetry. They may also be afraid of the magazine rejecting their submissions, or their work load may prevent them from wanting to write anything extra, he said. Goldstein encourages students in his Poetry Writing course to submit poems because, in many cases, they would not consider doing so otherwise.

The literary magazine is unique because its contents only have the boundaries of the page.



"We could print 52 pages that all say f*** and we can get away with it," said Ostyn.

Goldstein applauds the organization's accomplishments. He believes that it provides quality material and gives its officers an excellent learning experience. He also feels that potential is all in the way creative license is facilitated. Kvasir "is what any individual group of students makes of it," Goldstein said.

Like any common interest group on campus, as long as there are those who appreciate its purpose, it is successful.

Kvasir will continue to supply its readers with creative works. The club members hope to reach more branches of the college community.

Then and Now

Christopher Shannon / Juniatian

Sophomore Angela Ferrelli performs a jazz-inspired dance with the Juniata Dance Ensemble at their show on March 31. The show, entitled "Then and Now," benefited Huntingdon County PRIDE. The Juniata Step Team made their debut in the show's second half.

The Naked Truth: Sex around the world

Rebecca

Gettin' your freak on. Se frotter. Hacer el amor. There are some big differences in the way people get busy around the world. Every culture has a unique twist to their grind. While some of the following are surprising and some aren't so exciting, you can't help but imagine what it's like to be go at it from a different angle.

Take Human Sexuality... One look in that textbook and you'll be pulling into Sheetz for a 60 second three dollar glove pick-up

The French were definitely drinking. "Cosmopolitan" lists 99 sex facts in the April 2007 edition, one of which is: French people try to cover up the harsh reality of pubic lice by calling it *papillons d'amour*. In English, that would be "butterflies of love." I believe that is what we call a *faux pas*. That sounds like something a Paula Abdul would tell Sanjaya on Idol: "Well, it wasn't your best performance, but you look great. I love what you've done with your *papillons d'amour* this week."

They really are Olympic jackrabbits. Again, "Cosmo" states that of all nationalities, the Greeks are the most active in the bedroom. I know of about three Greek men on campus, so get 'em while they're hot ladies—I heard that junior Mike Zanic has a body comparable to that of Hercules! Start running when you hear that ice cream truck bell ringing because those men sure know how to handle their gyros.

FGM is reversible. According to the United Nations, approximately 150 million women around the globe experience some form of female genital mutilation (FGM), with the practice being most prominent in Africa and the Middle East. However, there is a movement to reverse the damage from mutilations. Although it sounds like a good laugh, there is a program where you can adopt a clitoris. Clitoraid (which I hope is sponsored by Band-aid) uses the donated money to rebuild the female's pleasure button. For further information, visit www.clitoraid.org. As the Web site says, "Give someone you've never met a gift they'll never forget!"

You'd think we'd know better. The U.S. has high rates of sexually transmitted diseases (STDs) and teen pregnancy. My recommendation: take human sexuality with Ron McLaughlin. One look in that textbook and you'll be pulling into Sheetz for a 60-second, $3 glove pick-up, instead of pulling out and being stuck with a luxury tax for years to come.

Using the fake V-Card. In our culture, we tend to use oral sex like a fake ID card. Is it really a lie to say you're a virgin if you've been givin' or gettin' but not really goin' at it? Similarly, some Latino cultures use the backdoor the same way we use down-towning. No one stole the cookies from the cookie jar if there aren't any crumbs, right? Whatever, we need to stop being so anal about the definition of virginity and sex. Just ask the Brokeback Mountain boys.

Just in case you'd need to know: the American gesture for "ok" is also a gesture of rear entry in Brazil. Unless you are a-OK, keep your hands in your own pants.

There's a third gender? At least there is in Dateline, Mexico. "Marie Claire" recently featured a story on Muxes, as they are called. These are men who portray themselves as women. But it's not because they are homosexual, it's because they are mama's boys. One day, Mama decided Tito makes a good margarita, and does so especially well when in make-up and high heels. The next thing you know Mama and Tita are out at the bar lookin' for some men. Reasoning behind this? Well… someone has to shave Mama's old lady mustache when she's nothing but a hairy dustbag.

Eskimos get special gloves! And it's not because they experience colder weather. Because they are at a higher risk for STDs, new condom wrappers were designed specifically for Eskimos in 2002. The wrappers featured pictures of animals like caribou and whales because they were seen as necessary for survival in traditional Eskimo culture, in hopes of making condom use more appealing to the people. Lifestyles are a choice, and are obviously different in other cultures. So if we put an Xbox on a condom wrapper…

Regardless of how we go about it, we're all aiming for world peace in the bedroom. Whether we're talking about crabs or butterflies… it's all under the same great blue sky.

Men's volleyball avenges early season losses

Team has won seven of last nine games

Brian Spinazzola

Having won seven of its last nine games, the men's volleyball team (13-6) is on a roll and looking to avenge early season losses as they work toward a fourth consecutive Molten championship.

After losing to George Mason in a five game match earlier this season, Juniata served up a slice of revenge on March 31. After dropping the first and third games, the visiting Eagles rallied from a 2-1 deficit to down the Patriots 3-2 in an EIVA Tait division game.

Ryan McGinley posted a career-high 16 kills for the Blue and Gold, and also registered nine digs. Three other players reached double figures in kills, Jeremy Barndt (14), Nate Ocasio (13) and Dan Powers (12). Defensively, Steve Yeager led the team with 14 digs.

The Eagles tried to avenge an early season loss to Penn State University when the Lions came to Juniata on March 28. Despite a strong performance, the team fell to the No. 6 ranked Nittany Lions 3-2. The Blue and Gold won the first game 30-26, but then dropped the next two games. Down 19-24 in the fourth game, the Eagles rallied with a 7-0 run and went on to win game four 30-28. However, a slow start in the decisive fifth game doomed Juniata as it came up short 10-15.

"That has been our style all year. We're a comeback team. We just couldn't come back from the deficit we built up in the fifth game," Ocasio said.

Juniata had three players post double figures in kills. Ocasio led the Eagles with 16, Barndt posted 12, and Glenn DeHaven had 10. Defensively, DeHaven and Chris Gass put up four blocks each, and Yeager had 15 digs.

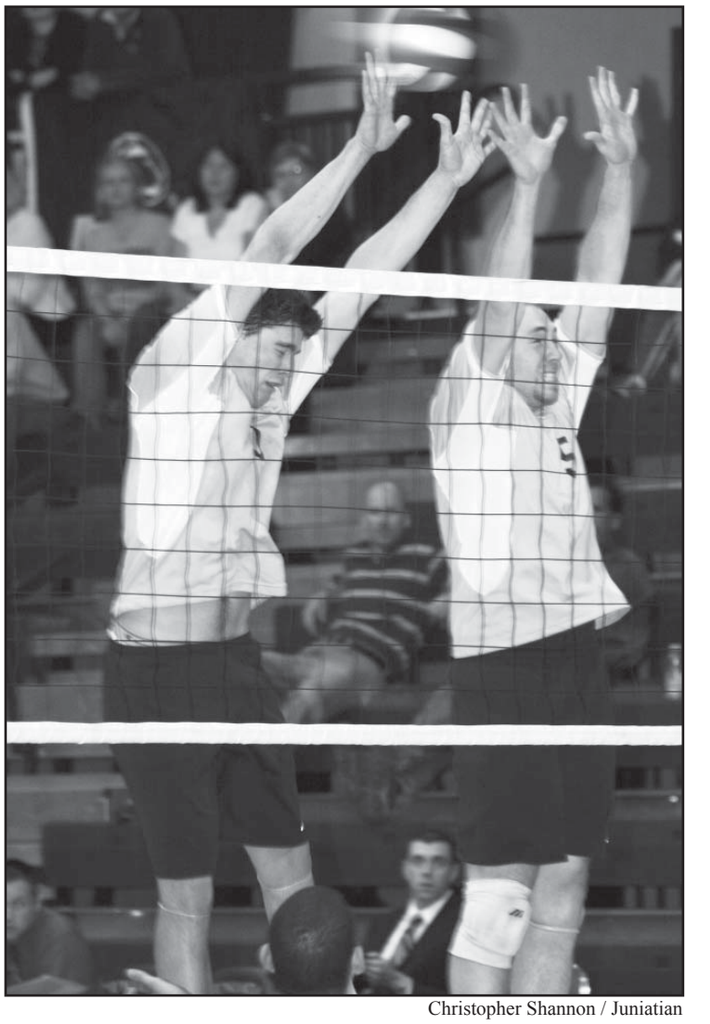
It took the Eagles five games against Springfield College to claim their 33rd straight victory against a Division III opponent on March 24. Juniata came back from a 2-1 deficit to earn its twelfth win of the season. Slamming a career-high 28 kills, Matt Fritz put on an offensive display. For his play against Springfield College and an earlier game against Stevens Tech, Fritz was selected as the AVCA/Sports Imports Division III National Player of the Week.

"I feel like it was a big high point for me. I have struggled with being consistent this year and it felt really good to be able to string my play together for a couple matches," Fritz said.

Two other players also reached double figures in kills for Juniata, as Ocasio hit 19, and DeHaven 14. Matt Werle dished out 64 assists, and Steve Yeager contributed defensively with a career-high 17 digs.

"It feels great, but it also means that our blocks are doing the right thing, and that allows me to read behind the block. When our defense does well, it all starts with the blocks," Yeager said when asked about reaching his career high.

On March 23, Juniata defeated the Ducks 3-0. After a close battle in the first game, Juniata rode its momentum to victory in games two and three.



"We underestimated them at first and took them too lightly, and realized that they were better than we thought. So we knew that we had to step up our game," DeHaven said when asked about the Eagles' slow start in the first game.

Although the team is on a hot streak, some of the players acknowledge that there is still some room for improvement.

"Consistency." Yeager said. "Lately we've been up and down, but we're looking to put together a consistent match."

Results were unavailable for the matches at East Stroudsburg on April 3 or .the EIVA Division III Championship against Springfield College Apr. 7 as of press time.

The Eagles will return to action at home against St. Francis tomorrow at 7 p.m.

Baseball on winning streak in conference

Derek Stanley

Thus far in its season, 'streaky' is the word that best describes the young Juniata baseball team (11-8-1). After dropping four out of five games earlier in the season, prior to Easter break the Eagles found their stride once again, winning four straight games against conference opponents.

"Right now we're riding a very big high as far as emotions go, but we are playing well and getting strong pitching coupled with some hot hitting," said junior co-captain and pitcher Jay Enoch.

The Eagles' most recent victory was a come from behind 9-6 win against Susquehanna University. After after falling behind 5-1 through six innings, Juniata rallied back with a seven run seventh inning to capture the win.

The Eagles sent 12 batters to the plate during the seventh inning with junior third baseman Steve Wilk knocking in the go-ahead run. Wilk's RBI single gave freshman pitcher, Tyler Clifford, his first collegiate victory.

"It's exciting to get the first win, but now that I have the first one I just have to keep working hard and pitching well enough to get some more," said Clifford. "[During the seventh inning] there was the usual chatter of 'we need to get some runs.' But as we kept hitting the ball and getting breaks, the excitement in the dugout kept increasing and we luckily just kept tacking on runs."

Clifford's composure on the mound helped him pick up the

continued page 17

Softball falls in conference play

Jeremy Barndt

After a promising offensive showing over spring break, the softball team (4-8) has struggled to get the bats going, dropping four in a row to conference foes. In the Mid-Atlantic Conference the Eagles dropped a pair of games at Moravian College and a pair at home against Widener University.

In the team's home opener against Widener on Mar. 31, the Eagles fell by scores of 9-0 and 8-1. The Eagles combined for seven hits in the doubleheader.

Juniata dug in during the second game, holding Widener scoreless until the top of the fourth inning. The Eagles then pushed their sole run across the plate in the bottom of the fifth as sophomore second baseman Tara Carl hit an RBI single, driving in freshman designated hitter Sarah Eckard. But with ten more games under their belt than the Eagles, Widener proved to be more seasoned.

"We had trouble hitting the ball and on top of that we made a lot of errors (seven) in the field making it impossible to be successful," said

continued page 17

Men's tennis acing opponents

Eagles off to strong start after last year's successful season

Derek Stanley

Despite being shut out during its third match, the Juniata men's tennis team (2-1) started off this season by dismantling conference foes Albright College and Lebanon Valley College.

The 8-1 win against Albright was especially satisfying for the team since the Lions had ended Juniata's season last year with a heartbreaking 4-3 loss in the playoffs.

After inclement weather forced the cancellation of the Eagles' first four matches of they traveled to Albright ready for the rematch.

"After losing against Albright in the semifinals of the playoffs last year, this win was bigger than ever for us. It was by far one of the most inspirational starts to the season we could have had," said sophomore Jonathan Skoner. "The win provided us with confidence in knowing that we had improved from last year, and as a new team we were ready to reach for our high goals this year," he said.

Skoner had an exceptional day against Albright, winning his singles match 6-3, 4-6, 12-10 at first singles. Also, when paired with senior Jau Feixas at second doubles, Skoner was able to pick up his second victory on the day 8-2.

"Winning both singles and doubles against Albright was a huge moment for me. Being my first match at number one singles in my entire tennis career, I really needed to come out there fired up and ready to play," Skoner said. "My groundstrokes were working well for me allowing me to work the angles, but my serve and approach shots were being a bit shaky."

Throughout the match Skoner seemed to hit a comfort zone, finding success with reliable approach shots and a rhythm in his service game late.

Skoner found himself in a third set super tie-breaker. He said, "Nervousness was sinking in, but thankfully I was able to remain calm and focus on my strategy of attacking his backhand and minimizing my unforced errors."

Senior captain Brandon Long had a similar day in the 6-3 win over Lebanon Valley. Long picked up a 6-2, 7-6 victory at fourth singles winning the crucial second set tiebreaker. In first doubles, Long and partner freshman Jarrad Silver, were able to earn an 8-6 come from behind win.

"In doubles, we forced a huge comeback with smart tennis. Sometimes all it takes is to just get the ball in play and not go for too much, and that really worked," said Long. "In singles, I kept riding the momentum from doubles, got out to a big lead and kept up my consistency throughout the match."

These two victories put the Eagles in excellent position to attain their goals for this season, but the third match proved to be a bump in Juniata's gold paved road to the playoffs. The Eagles only took one set from Grove City College this past Saturday in a 9-0 defeat. Sophomore Aaron Rhodes won the team's only set of the day in his fourth position singles match. But the team is not put off, .rather the players have maintained their focus and are ready to get back on track with their ultimate goal of returning to the MAC playoffs.

Their quick recovery showed in a close 5-4 victory over Frostburg State on April 4. In both singles and doubles matches several Eagles jumped out to quick leads and had to show mental and physical toughness to hold off late surges and notch victories.

Looking ahead, Long said, "We want to improve upon last year's 13-5 record, make it to the MAC postseason again and get to the championship game."

These goals are not the only challenge presented to this year's squad. For the third time in four years the men will be led by a first year head coach. After gaining valuable experience being an instructor at The Ohio State University, and as the head women's tennis coach at Juniata, Beth Bleil has taken over the helm this season. Bleil is currently a rated USTA player and competes in USTA tournaments. Bleil is also a Juniata alumna. During her career at JC Bleil was a member of the women's soccer team for four years, two of them as the team's captain.

When asked about the new coach, Long said that players are receptive to her new strategies. "She's put a greater emphasis on conditioning and mental toughness, and we've accepted these changes and have had no problems in following her lead. This is pretty apparent especially after our win against LVC. We've trained harder and have been a more cohesive unit this year, and it's going to show in our record," he said.

The team will look to rebound from its Grove City hiccup when it returns to action at Elizabethtown College today. The Eagles face Messiah on College Hill tomorrow at 3:30pm.

Christopher Shannon / Juniatian

Senior Jau Feixas and his doubles partner Jonathan Skoner celebrate a point during Juniata's match against Lebanon Valley on March 28.

Track and field prepping for MACs

Casey L. Shaw

The JC track and field teams have been training months. The Eagles started training before Christmas for the indoor track season. However, that training spills over and it prepares them for the outdoor season.

Juniata's winter work out have paid off early in the outdoor season as they finished well at both the Towson Invitational on March 24 and the Western Pennsylvania Championships on March 31.

Sophomore Kelsey Buffenmyer has been a consistent contributor for the women's team with fifth place finishes at the Towson Invitational in both the high and long jumps. Buffenmyer also earned second and fourth place finishes in the high jump and long jump respectively at the Western PA Championships. Other top six finishers at the meet included seniors Lia Bella and Lauren Gates and freshman Cassie Majocha.

For the men's team senior Randy Anderson, juniors Kyle Mazur and Matthew Booth and freshman Ryan Johnson have been top performers. Anderson, who recently earned All-American honors for the indoor season claimed two first place finishes at the Western PA meet. Johnson broke Juniata's 2005 record in the hammer throw win his 16th place finish at the meet with a throw of 35.18 meters.

Mazur and Booth picked up first place finishes at the Towson Invitational in the javelin and triple jump respectively.

With only 10 workouts left before the MAC Championships, the men's and women's track teams look to build off their early success. They will rely on their key performers and look for others to step up as they continue to train hard.

"We are running further distances in workouts to help us build up for the MAC meet," said sophomore Tripp Rudolph who is a mid-distance runner.

The men and women head to the Bucknell Outdoor Classic on April 14.

Christopher Shannon / Juniatian

Sophomore outfielder Kaylee Kachik takes a swing at a Widener pitch during game two of Juniata's double header on March 31.

Eagles fall in conference play

continued from page 15

junior catcher Amanda Albanese.

The team faced a similar problem in its conference opener against Moravian. The Eagles fell 4-1 in the first contest and 7-0 in the second. Juniata could not get its offense on track against the number 12 team in Division III, scoring only one run throughout the doubleheader.

Juniata held strong in the first game, taking the lead on an RBI single by freshman Rachel Nagy in the top of the first only to eventually relinquish the lead for good. Juniata could only muster up six hits in the two games, four of them coming off of Nagy's bat.

The Eagles can attribute some of their early miscues to lack of playing time together and their youth. Due to poor weather conditions, the team was not able to practice outside together for an extended period of time. When they took the field against Moravian, the Eagles had not played together outdoors in 16 straight days often canceling practice altogether.

"When we are forced to practice inside, we do not get to practice in game-like conditions. This means that we are practicing taking groundballs off of the gym floor instead of the dirt and playing fly balls off the ceiling instead of gaining a sense and perception of the ball outdoors. This leads to errors and lack of cohesion as a team," said Albanese.

When fielding a team with 13 combined freshmen and sophomores, on-field practice time is crucial to success. Not having the ability to adjust to bad hops on ground balls or tracking fly balls off the bat, the Eagles' inexperience is evident when facing more seasoned opponents.

As the team gains more practice time in the field number of errors should decrease. By spending some more time in batting practice and gaining knowledge about collegiate level pitching, the team's hitting should to return spring break form.

The Eagles are scheduled for a double-header at home tomorrow against Susquehanna.

Upcoming games

4/10 vs. Susquehanna 3:00 & 4:45

4/12 vs. PSU-Altoona 3:00 & 4:45

4/14 @ Elizabethtown 1:00 & 2:45

4/19 @ PSU-Altoona 3:00 & 4:45

4/21 @ Lebanon Valley 1:00 & 2:45

4/23 @ Frostburg State 3:00 & 4:45

Eagles trump conference foes

continued from page 15

win, and has also impressed his fellow pitcher and co-captain.

"Now in my junior season, I have gone through everything that all the freshmen are [experiencing] now. But for the most part, the freshmen we have on the pitching staff are pretty mature. Clifford is a tough kid and doesn't let a lot of stuff bother him. He is much more mature than a freshman pitcher normally is and it is showing in the success he has had in our early season," said Enoch.

Juniata's other three victories during the four-game winning-streak came against Moravian College by scores of 6-2, 9-3 and 7-1. Junior pitcher Andrew Snyder enjoyed a solid performance, throwing a four hit complete game, in the 7-1 win.

One component that may contribute to the Blue and Gold's streaky play is the compressed schedule they are forced to have due to inclement weather. Recently the Eagles have been scheduled to play 10 games in only eight days. This not only puts stress on the inexperienced players trying to adjust to the collegiate game, but also the arms of the pitching staff.

"When we have a compacted schedule like this, we know that everyone in the conference is doing the same thing. We know that it is a 'make or break' for this part of our schedule. Our upperclassmen have really stepped up their games and added a little excitement. And freshmen have followed along and have put a tremendous four-game winning streak together at a time when we were struggling," said Enoch.

Results from Juniata's match-ups against Messiah over the weekend were not available as of press time.

The Eagles will return to action today at home against Susquehanna at 3:30 p.m.

Christopher Shannon / Juniatian

Junior pitcher Andrew Snyder delivers a pitch to an awaiting Widener batter during the first game of a double header against the Pride on March 25. Snyder pitched 6 2/3 innings and recorded six strikeouts for the game to up his season total to 17. Snyder then pitched a complete game, four-hitter against Moravian on March 30. Snyder also had four Ks (season total now is at 21) for the game as JC won 7-1.

The draft is over and I'm a happy manager

Casey L. Shaw

My fantasy baseball draft is over and I feel like a child on Christmas morning. I could not have asked for a better draft.

A fantasy baseball general manager always has the idea of drafting a dream team, but that dream doesn't come true very often.

Usually a draft comes down to preparation. I recommend writing down your ultimate roster. This way you can gauge you team and plan accordingly to fill any holes.

Sometimes a draft can more than just preparation though. You may luck out and end up with a few beginners in your league that make errant or unadvisable picks. In this case, you can swoop in and grab great players that normally would have been unavailable in later rounds of the draft.

After entering my dream roster, I left the rest up to the automated system I had set up at yahoo.com. I went to class, daydreaming of my ultimate fantasy baseball team. When I returned to my computer, I was surprised to see how well the draft worked out for me.

The automated draft selected several of my top picks like Ryan Howard, David Wright, Manny Ramirez and Carl Crawford. They were on my original list because I expect them to carry my team by having big years at the plate. Also my pitching staff is solid with lesser-known performers like Jake Peavy, Daisuke Matsuzaka, Cole Hamels and Chien-Ming Wang. I was even pleased with my closers B.J. Ryan and Chris Ray whose stats should contribute nicely to my fantasy squad.

But fantasy sports are not strictly about stats. Letting bias into your selection sometimes pays off and adds a personal element that makes watching your favorite players more exciting. There were a few positions where I did not take the highest ranked player. I am a Phillies fan, so at first base I took last season's Most Valuable Player and most promising Philly, Ryan Howard over the Cardinals' standout Albert Pujols.

Also, I took the New York Mets' David Wright at third base over the Yankee's Alex Rodriguez. I think Wright has more to offer when it comes to stolen bases…and I am not a Yankees fan.

Overall, I am extremely pleased with how my draft turned out. But there is still room for improvement. I can strengthen it by going through the free agent list and offering trades to other general managers in the league.

I would recommend not making any blockbuster trades early in the season, unless you are offered a deal you just cannot refuse like Kerry Wood and Scott Podsednik for Johan Santana. Knowing the value of a player's stat contribution possibilities and past performance are essential to making worthwhile trades. Before trading, make sure the trade will work well with your managerial scheme.

Players that are in the last year of their contracts are ones to keep an eye on. It has been a trend since free agency started that players often have career years in the last season of their contracts. The best example recently was when Adrian Beltre had a phenomenal year for the Dodgers and used it to sign a huge contract with the Mariners.

This year's players to watch are Andruw Jones, Freddy Garcia and Carlos Zambrano.

The call-ups can often be what drives a team to the top and help win a fantasy league championship

Andruw Jones is looking for a big pay day at season's end. I look for him to build on last year's homerun total and pull his batting average up above his career .260. He also has above average speed, so look for him to turn in more stolen bases.

Garcia and Zambrano are two workhorses on the mound and are known for their ability to pitch more innings than most MLB starters. I look for both players to improve on last season's strikeout totals and wins.

This season seems promising for fantasy baseball managers. There will be an influx of young talent from the minor leagues this year. They will most likely be mid-season replacements after the trade deadline in July. The call-ups can often be what drives a team to the top and help win a fantasy league championship. Pay close attention to the free agency market as these players enter the majors ready to make an impact.

Every year there seems to be a player who sneaks in under the radar and has a great impact. My sleeper picks for this year are third baseman Andy Marte of the Cleveland Indians and Ryan Zimmerman of the Washington Nationals. Marte was the top prospect in the Braves' farm system before being traded twice last season in trade deadline deals. I look for him to have a nice year and he should be a free agent in almost all leagues.

Zimmerman looked great last year in his rookie season. His power numbers should increase and he is a great option at third base if you cannot draft a superstar.

The fantasy season is off and running and that makes this an exciting time for any baseball addict.

My ultimate fantasy baseball roster

C	Joe Mauer, Minnesota Twins
1B	Ryan Howard, Philadelphia Phillies
2B	Chase Utley, Philadelphia Phillies
3B	David Wright, New York Mets
SS	Jose Reyes, New York Mets
OF	Alfonso Soriano, Chicago Cubs
OF	Carlos Beltran, New York Mets
OF	Carl Crawford, Tampa Bay Devil Rays
UTIL	Travis Hafner, Cleveland Indians
SP	Johan Santana, Minnesota Twins
SP	Brandon Webb, Arizona Diamondbacks
RP	Francisco Rodriguez, Los Angeles Angels of Anaheim
RP	Jonathan Papelbon, Boston Red Sox
P	Roy Halladay, Toronto Blue Jays
P	Roy Oswalt, Houston Astros
P	Eric Bedard, Baltimore Orioles

Anderson establishes All-American status at NCAA meet in Terra Haute

Christopher Shannon / Juniatian

Christopher Burlingame

After a long winter season filled with practices and meets, it only took senior sprinter Randy Anderson 6.46 seconds and 55 meters to cap his indoor career by earning All-American status. Anderson's sixth-place finish at the NCAA Division III National meet in Terre Haute, Indiana makes him Juniata's fourth male All-American track athlete.

Anderson posted his fastest career 55m dash time (6.39 seconds) during the qualifying round. That 6.39 mark was even faster than his conference record-breaking race at the MAC Championships a few weeks before. By earning a spot into the national finals, Anderson only had to finish the race to be names an All-American.

"The top eight at Nationals make the finals, so I was excited. My whole goal was to make it to the finals and I was ranked third going into them, so I knew that I'd made All-American," Anderson said.

After such a successful senior indoor campaign, Anderson ran right into the outdoor track season. He hopes to improve upon last year's performance and ride the momentum from the All-America honors.

"My goal is to try to get back to Nationals and do a little better than last year," Anderson said.

Anderson will begin the outdoor season as the defending MAC champion in the 100 meter dash. He also currently owns Juniata's 100 and 200-meter dash records.

Off the track Anderson has earned accolades as well. This week he was named the 2007 MASCAC Men's Indoor Track & Field Scholar Athlete. Only one senior per sport is given the honor in the conference each season. The award is based on outstanding achievement in athletics and academics. Anderson is the fourth Juniata athlete to earn Scholar Athlete recognition since the award's inception at the start of the 2005-2006 academic year.

Florida owns OSU on gridiron and hardwood

Jeremy Barndt

Let's be perfectly honest, very few people wanted to see the NCAA final match-up that happened on April 2. Outside of those who went to Florida or The Ohio State University or those who went out on a limb and picked the top two teams in the country to meet in the finals in their March Madness pools, no one wanted it. We saw this same scenario three short months ago. Remember the BCS Championship Game where Florida blew out the Buckeyes 41-14?

But it happened, and fans in Columbus must not know what to do with themselves.

Other than being down 66-60 with 5:03 to play, the closest the Buckeyes were to taking the lead was 24-22 with 5:38 left in the first half. The Gators took the lead at 12-11 and never looked back. Often leading by double digits with the largest margin being 13, Florida always had a comfortable lead.

As sports fans, how many people wanted to see Florida repeat? Most people can't stand them, especially their outspoken forward Joakim Noah. Noah, a non-factor in the game, scored only eight points (six of them on free throws) and had four personal fouls. Everyone wanted OSU to mount a comeback and at least make the game interesting, but the Buckeyes' three-point shooting was horrendous at best.

Until their last two shots, the Buckeyes went 2-21 from behind the arc. Yes, TWO. Your eyes are not deceiving you. Chalk this game up to Ohio State's poor shooting, and Billy Donovan's great coaching. If you had told me before the game that Greg Oden would have 25 points, 12 rebounds, four blocked shots,and only three personal fouls, I would have called it a landslide in Ohio State's favor.

The fact is, Oden played 38 minutes, the most he's played in the entire tournament due to his foul trouble. Donovan sent four big men at him, combining for 15 personal fouls and constantly applying pressure. You could see how it affected the 40 year-old looking man as he huffed and puffed down the floor in the second half.

In fact most of the Buckeyes looked tired. And that helped open up the three pointers for the Gators as Donovan's teams ran pick and rolls for Lee Humphrey, Corey Brewer and Taureen Green. The trio combined for all of Florida's three-pointers, shooting 10-18 from three point land. The Buckeyes left them unchallenged and the Gators were more then happy to keep pouring them in.

Florida shot well from everywhere and everyone. As a team, Florida went 22-25 from the foul line, while the Buckeyes went 11-17 and only made one free throw the entire first half. With four players scoring in double digits and two others with eight points, the Gators proved to be the most balanced team in the country.

Riding hot shooting hands and tremendous speed, Florida became the first team to repeat as NCAA champions since the Dukies did it in 1991 and 1992. It is only the sixth time the feat has ever been accomplished in the men's game. Donovan's club became the first ever to repeat as champions with the same starting five. And after the school's gridiron title, Florida becomes the first university ever to hold both the football and basketball national titles in the same year.

Brewer was named the Final Four's Most Outstanding Player, probably unjustified as Florida big man Al Horford put up 18 points, including many baskets as the shot clock was winding down, and 12 boards. Even in a losing effort, Oden had an amazing game and should have been considered.

Junior forward Joakim Noah of the University of Florida cuts down the net from the team's second NCAA Championship in two years.

Ohio State found itself in a familiar state throughout the tournament, playing from behind. Playing an overtime game with Xavier in the second round and mounting a 21-point comeback against Tennessee, many thought that OSU should have been out long ago. Let's just be thankful that they did not come back in this one. We would have never heard the end of the questionable officiating. Most likely due to criticisms about fouls being called on Oden during the tournament, Florida received many ticky-tack fouls while Oden was free to punish in the paint on the other end.

Let's hope the junior Gators disband and head to the NBA so we don't have to see them back again next year. No one, not even anyone in Gainesville, should have to watch Noah bang his chest or hear him speak in post game interviews.

Are we marketing the real Juniata?

Marketing department answers student claims about potrayal of diversity in photographs

Sara Cieslewicz

Senior Heather Foltz recounted a time in the spring of 2005 when a marketing department photographer moved and spaced out students in her God, Evolution and Culture class to prepare for a photo. To Foltz, it seemed that the photographer's focus was including the class' racial minorities in the photograph.

Although many students feel that Juniata's marketing photographers target students of racial minorities, Candice Hersh, Juniata's coordinator of marketing promotions, said this isn't so.

"We want to be true to Juniata, to represent Juniata in the right ratios," said Hersh. "A lot of people say that the marketing department has a disproportionate amount of diversity in our brochures. If anything we err on the other side in not having enough."

Currently, Juniata's student body is 53 percent women, five percent domestic minorities and seven percent international students, according to the Juniata Web site.

In response to experiences like Foltz's, Hersh said that while the department includes diverse students, it is also incorporating many others.

"When a photographer goes into a classroom, he or she waits and watches for interaction, reaction and great facial expressions on all students' faces," said Hersh. "The photographer is inclusive of all the students in the classroom, regardless of race and ethnicity."

The marketing department's goal, according to Hersh, is to present images that show the different aspects of the campus' strong community traits.

"Prospective students want to see realistic photographs, representational of all ethnicities on Juniata's campus. Therefore, when sending a photographer into the classroom, our goal is to capture all students engaged in academic learning," she said.

Sophomore Darae Calloway, an African American student, was contacted by Juniata's Digital Media Zone to be a virtual tour guide on the new Juniata Web site. Calloway believed that she was asked to do the project not only because of her communication skills but also because of her race.

"No matter how you market the Web site, [prospective students] are going to come here and realize

continued page 4

Minimum wage increase affects lab costs

Jason Najarian

It may have slipped by unnoticed for many students, but Juniata recently raised most lab fees from $50 to $75. It can be easy to complain about rising fees, but labs are a costly operation.

The increase was put in place primarily due to the minimum wage increase that occurred in Pennsylvania beginning in January 2007. This will boost wages from a minimum of $5.15 to $7.25 an hour over a two-year period.

Jill Keeney, chair of biology, said that "an increase in the minimum wage can lead to a huge increase in costs."

Keeney said the most costly element of running campus labs is the manpower needed to help teach them. Most labs require student assistants, and paying their wages is a large portion of budgets.

David Reingold, H. George Foster chair of chemistry, said that his department has $13,000 budgeted to pay for lab assistants next year.

Consumables, especially chemicals, also add to the price tag, but Keeney said that "paying for the people is always the most expensive."

Norman Siems, chair of physics, agreed that teaching assistants' salaries are a huge annual expense.

When the wage increase occurred, the departments were told to maintain their current budgets. In order to make up for the difference in funds, the departments chose to increase the lab fees.

"We didn't have to cut elsewhere because of the lab fee increase, and [we] will be able to move forward with updates," said Siems.

Students may be surprised to know that the majority of lab fees do not actually go into the labs, though. Instead, they get transferred into a communal fund for the campus.

"Lab fees don't go directly into the budget. They go into a College

PA bill to change CPA requirements

Accounting degree credit hours jumping from 120 to 150

Julia Williams

Senate Bill 251 is trying to shift Pennsylvania from a 120 to a 150 credit hour state. This would require those sitting for their Certified Public Accountant (CPA) exam to have completed 150 credit hours of higher level education. The bill passed unanimously in the Pennsylvania State Senate and is waiting to go before the House of Representatives.

CPA licensure is granted by the state, and states set their own requirements. Currently, Pennsylvania requires 120 credit hours and two years of experience or 150 credit hour and one year of experience to obtain licensure. If the bill is passed, all students sitting for the CPA exam beginning Jan 1, 2012 will need 150 credit hours and one year of experience.

Senior accounting student Lindsey Merilli said, "I see the point in taking extra credits if they're in accounting, but if the extra credit hours can be in anything then what's the point."

The 150-hour rule creates a slight problem for four-year schools not offering a Masters program, like Juniata College. However, Juniata has no plans to develop a Masters program in the face of Senate Bill 251.

Currently, Juniata has an informal arrangement with Saint Francis University and a formal arrangement with Lehigh University for accounting students pursuing their masters. Juniata students must have an acceptable grade point average and satisfy entrance requirements for these institutions. According to Accounting professor Patricia Weaver, most accounting students begin employment after Juniata.

According to accounting professor Dominick Peruso, it is unlikely the college has the numbers to support a masters program. Also he said, "I don't think Juniata will want to start a masters program based on its mission."

Q&A with Dave Fusco about technology on campus

Chris Burlingame

Is Juniata going to eliminate public computer labs in favor of having each student bring a laptop to campus?

Yes. The overall goal we are trying to move toward is mobility. Every full-time faculty member will get a brand new laptop this summer. This fall and beyond, we will be moving toward a model where students bring laptops to Juniata. Of this year's freshman [class], 81 percent brought in laptops, according to the IA statistics.

What is the rationale behind the change?

We want to create more collaborative workspaces. People just aren't building fixed labs [anymore] and we are preparing students for the real world of business with its collaborative workspaces. We are trying to get students ready for a more mobile world. Right now, there are over 1100 Juniata owned machines. This includes all faculty, staff, public labs, private labs, specialty equipment, etc. These represent machines that Juniata owns, but are not all necessarily open for student use. Also, right now 96 percent of students bring computers to campus and 81 percent of those have brought laptops. That means right now we have almost a two to one ratio for computers to students.

Are students going to buy laptops as part of the freshman tuition?

We are still working on it. In the fall of 2007, it will be up to incoming freshmen to find and fund a laptop.

Will Juniata offer laptops at a discount if/when laptops become part of the tuition?

We already have a partnership with Dell and Apple right now for a reduced cost. We also have a partnership with ACUP for reduced rates on software. The used computers from the faculty will go to the adjuncts and the others will become loaners for students to check out with their Gold Cards. We are looking at a possible semester lease program for laptops.

Is the administration afraid that such a program would actually deter some students from coming here who may not be able to afford a computer?

We are looking at ways to provide a low interest lease option and we're working out the details. From a marketing strategy, we don't think it will be a deterrent because people who look at fixed workstations (public computer labs) will recognize the advantages of collaborative workspaces.

Some used computers will become loaners for students to check out with Gold Cards

Right now the Help Desk will not work on personal machines in many situations. Would the Help Desk change policies to assist students with personal computers?

It is yet to be determined. We almost would have to outsource that or make everybody get the same machine.

Are other schools like Juniata doing the same thing?

Most definitely. In fact, I would hate to say we're a little behind other schools our size. It's definitely a growing trend.

How will these changes affect things like free printing on campus? The rumor is that free printing is soon going to be taken away. Is there any truth to this and if so, what has precipitated this change?

It's our goal to keep printing available in public areas. We do need to become more aware of how we are printing.

How much does student printing cost each year?

I'm going to guess that we spend $20,000 a year for paper, toner, print repair and maintenance.

Is Juniata going to discard wall phones in dorm rooms?

We've not yet decided finally. How we spend your [students'] money with the tech fee is very important to me. Would you rather have hard phones or more Internet capacity in your rooms? On average we only bill 12 students a month for long distance calls. We would rather use our funds elsewhere.

Does the administration expect every student to use a cell phone?

It's not an expectation to use that, and a model that we may use is having calling cards available in the bookstore. Most students use cell phones anyhow. We are not reducing services, but just moving it elsewhere.

Is this a cost issue?

We are trying to make wise decisions for using your tech[nology] fee money.

If this technology (computers, printers, phones) will be eliminated, where will all of the old technology be going? Will it be for sale, just thrown away or donated?

The technology will first go to the adjunct instructors, then to the loaners and then possibly for sale to students.

Is Juniata dropping cable in every room?

No, that would be foolish. We are looking at the possibility of having an a la carte system where students can choose the type of cable services [that they want].

How were these changes decided upon? Was it purely administrative or was there some kind of student input?

First and foremost, we always want student input. We meet with Demetri (Patitsas) and Jigar (Patel) regularly and the Senate, and [we] develop surveys for student input. Also, we continue to talk to students openly.

Have the changes to the Webmail system been finalized yet and what are the main advantages to switching to the Google-based system?

We are hoping to have the new Webmail up soon. It's pretty much ready to go except for a few RSS feed issues. We are trying to create a much clearer and cleaner system with multiple tabs and announcements and RSS feeds. [The] only thing changing is the interface (log in screen).

The Appserver in the library frustrates many students; and I have few different questions about it. What is the advantage of using the Appserver?

It was a new solution for us, but we are trying to add more functionality for students, in general. It was created to allow us to centralize software access from one interface. We have been having several problems from [students] not logging off properly. People need to make sure to log off both the Appserver and the local session. Make sure you log off twice.

How does the school decide which labs to put Appserver in?

It's based on the kind of software that needs to run in that lab. It has been placed in a majority of public spaces.

What does the future hold for technology at Juniata and why are these changes going to be made? Also, when will they be put into effect?

The future of technology is really wrapped around being in a more mobile, ubiquitous environment for faculty, staff, administrators and students. As far as a timetable, the full-time faculty will be going mobile this summer and we highly suggest laptops for freshmen. Changes will continue over the summer like improving the Appserver and continuous changes [will be made] throughout the next academic year.

Congratulations to the Class of 2007

The Juniatian bids a fond farewell to our valued editors and staff members:

Seniors save planet using Baker's leftovers

Mike Chirdon

Four students are organizing efforts to use leftover vegetable oil from the fryers in Baker to save the environment, one carbon emission at a time.

Senior Celina Isenberg has been researching bio-diesel for over a year. Her efforts are beginning to pay off this semester.

Isenberg is working with fellow seniors Eben Pendleton, Maggie Morgan and Laurel Guttenberg on a bio-diesel project as their capstone project in environmental science.

The students work with Sodexho and Facilities Services to transport the leftover oil from the fryers to the chemical storage shed behind Brumbaugh Academic Center for storage. The oil is kept there until it is ready to be processed into fuel.

Isenberg and her associates plan to mix blends of bio-diesel and regular fuel for heating on campus. The blends will be approximately 20 percent bio-diesel.

"Blends are better performance-wise and are more realistic in terms of what we are able to produce," said Isenberg.

The students meet once a week to process the bio-diesel. The process involves adding lye and methanol to the vegetable oil and running it through a pump. Then the mixture must sit for about a day while the glycerin byproduct settles to the bottom of the tank. After this, the bio-diesel is separated from the glycerin and moved to a second tank where it is rinsed with water to remove other impurities.

According to Isenberg, there are both advantages and disadvantages to the use to bio-diesel. The main advantages are that it is a non-petroleum form of fuel and it lowers emissions. The major drawback is that bio-diesel performs inconsistently in cold weather.

"This is why using [bio-diesel and traditional fuel] blends is a good compromise," said Isenberg.

This project is still in the planning stages. The students plan to test the bio-diesel blends in select buildings to be sure they will work efficiently and cost-effectively. The blends may also be used to power the golf carts that are used on campus.

Kevin Dundore / Juniatian

(Left to right) Seniors Eben Pendleton, Laurel Gutenberg, Celina Isenberg and Maggie Morgan prepare to make a batch of biodiesel fuel on campus as part of Juniata's sustainability campaign.

Summer courses: cost high, enrollment low

Julia Bogue

Few students choose to take summer courses at the Juniata. In fact, last year only 58 students enrolled in a summer course. Instead many students choose to work or take courses elsewhere during the sunny months.

According to Registrar Athena Frederick, "The cost is the biggest hurdle for students."

At Juniata, summer courses cost $660 per credit hour. Financial aid is not applicable, and room and board fees are not included. Campus housing is limited, and rooms cost $65 per week. During the normal academic year, the cost of credits is included in the $26,900 tuition, allowing students to take up to 18 credits before an overload fee is imposed. For part-time students the cost is $1,175 per credit for each course during the normal academic year.

Frederick said that "it takes some planning" for students to afford summer courses. Students can obtain loans for the summer session, but only if they have excess funds left over from their loans in the fall and spring.

Students electing not to take summer courses at Juniata often decide to take them at different institutions. Many students choose to attend nearby Harrisburg Area Community College or at a Penn State branch campus.

Summer courses at Harrisburg Area Community College cost $97.50 per credit hour. Courses at Penn State Altoona cost $300 to $400 for part-time students per credit hour, or $2,000 to $5,000 per semester.

Last year 53 students brought transfer credits to Juniata from summer courses.

Only credits transfer when a student takes courses elsewhere, not the grade the student earned in the course. This can be a disadvantage to students taking summer courses elsewhere in hopes of boosting their GPAs.

If student plan to take summer courses at different institutions, it is best if they check with the registrar's office to ensure the credits will transfer. Schools must have accreditation from a regional accrediting agency in order for credits to be considered for acceptance at Juniata.

There is a list on the Juniata database of institutions that the College has accepted credits from in the past. A transfer clearance form should be filled out before courses are taken. There is a transfer limit once students matriculate. That limit is different for each student.

Students who can decide to attend one or more of Juniata's summer courses will find that the summer session is organized in a slightly different way compared to fall and spring classes.

All summer courses are offered during two sessions; sort of miniature semesters setup during the summer. Session One runs from May 14 to June 3. Session Two runs from June 11 to June 29. Most classes meet Monday through Friday for three hours, meaning that classes move much faster during the summer.

The deadline for registration is five days before the class begins. Students can register on the Arch.

Another reason many students do not stay for these sessions is that many summer courses are already available during the regular school year. There are few courses that are unique to the summer.

Frederick said: "Remote Field Course is the only one [course] that is special to summer."

Peter Goldstein, professor of English and chair of the English department, is teaching two courses this summer.

"I teach the contemporary poetry course because it is a CA course and students sometimes need that course to graduate," said Goldstein. "And there are always a few people who enroll in it every year."

He said that he is teaching Forms of Literature for similar reasons.

Lynn Cockett, professor of communication, is teaching Introduction to Communication.

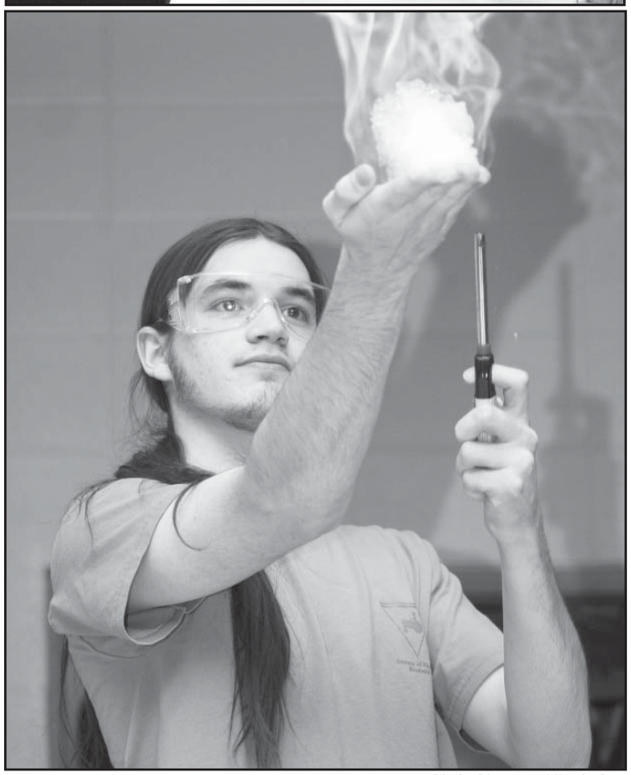
"A lot of students tend to need it for their POEs and during the semester I like to leave it open for incoming students who want to start their POEs early," said Cockett.

Some professors design summer classes differently than they do during the regular fall and spring terms.

Cockett said: "The way I structure the courses is based on how many students are in it."

Both Goldstein and Cockett said that the smaller the class, the more discussion occurs.

"They [summer courses] are a useful way, to get requirements out of the way, and because the classes are small, you get a lot of attention from the instructor," Goldstein said.



Many students, despite the difficulties associated with summer courses, said that there are number of benefits to taking them. One such benefit is the ability to have a lighter course load during the traditional academic year.

Senior Kris Brown said that summer courses "took a load off of having all that pressure during the year."

Students can also study abroad during the summer for credit.

Phun with Physics

Chris Shannon/ Juniatian

(Top): Senior Alison Earnhart demonstrates angular momentum using a bicycle tire at this year's Physics Phun Night on April 10. (Below): Sophomore Eric Flummerfelt illustrates the properties of methane bubbles. The event was put on by students in Juniata College's Society of Physics Students with the help of some students in the education department. Audience members ranged from Juniatians to grade school students from around the Huntingdon area.

Marketing photos too diverse?

continued from page 1

that it's not the case," said Calloway.

Hersh said that the marketing department has no say in what photos are used in the Web site. The Web development team, led by Coordinator of E-Communications Rick Stutz, chooses which photos to include. She said, however, that they may be chosen because they are great photographs with action and high quality images.

Some students, like sophomore Devin Conway, haven't noticed a misrepresentation of the student body's racial composition in marketing materials.

"When I look at the Web site, I don't even look for diversity; I look for people I know," said Conway.

Hersh said that the marketing team does target people who are "photogenic" to ask them to appear in photos. When asked, however, Hersh said it is hard define the traits they deem "photogenic."

Marketing department student interns said they use Facebook and the online student directory, familiarly known as Stalkernet, to find photogenic students. Hersh acknowledged, however, that the photographs found in these places might not always be professional nor show one's true appearance.

Interns said that they also send e-mails to members of groups within the student body in amounts of around 36 to 56 students. Hersh said that tour guides are often asked to participate in marketing projects, as they are trained to market Juniata and understand what is needed.

The department also targets newer students so that prospective students who visit will see these people on campus, according to Hersh.

President Thomas Kepple previews many of the marketing materials to guide the marketing department to the right "proportion" of diversity, while bringing errors to attention.

Any student can volunteer to be part of the photo process, according to Hersh, but he or she must be available during specific photo shoot times.

Because the indoor professional photo shoots occur between 10 a.m. and 2 p.m., many students are not available to participate.

Professional outdoor photographs are taken at times dependent on light and weather. The outdoor shots typically include certain buildings in the background.

"The goal is to make people want to and realize that they do fit in at Juniata. The photos have to be fair and represent Juniata's community," said marketing department intern sophomore Rachel Kern.

Hersh hopes to advertise an upcoming photo shoot in the announcements to update interested students. Otherwise, those interested in participating should e-mail Hersh to become part of the on-call model list.

Sheetz gift card offered for JC stories

The marketing department is currently offering two $50 Sheetz gift cards to the student and faculty member who submit the best Juniata stories to the department via an online survey.

Senior Gabi Cushman, one of the marketing department's student interns, is building a database of student and faculty quotes to use in enrollment brochures and publications.

Cushman feels that with an incentive the survey will have more responses, especially since they [the stories] are larger and require more thought and effort. "It is just an incentive to get enough back," said Cushman.

Each survey, which asks about true first-hand experiences, takes about ten minutes to complete.

The survey can be accessed online at http://jcitmat.com/phpsurveyor/index.php?sid=5 for students and http://jcitmat.com/phpsurveyor/index.php?sid=4 for faculty.

Possible changes to accounting progam

continued from page 1

students at Juniata will be to pursue a master's degree somewhere else after graduation. A large number of Juniata's accounting graduates currently receive jobs with private industry and the government, which do not require 150 credit hours.

Peruso does not believe the change will affect enrollment in Juniata's accounting program. The liberal arts education at Juniata provides open options for students after their four years here. Juniata accounting students are prepared for a wide array of employment, and historically, accounting graduates enter careers in the public, private, and government accounting sectors.

The 150-hour rule started in Florida in the mid1980s. Pennsylvania is one of the last states to make the change. The motivation for Pennsylvania to change is a need for CPAs to do business in other states. Many states have CPA reciprocation arrangements, but the states involved must have matching requirements. All states surrounding PA have 150-hour rules in place.

According to Weaver, employers had good accountants, but recognized a need for accountants with a liberal arts background. Weaver believes the intention of the requirement was good, but in practice, the 30 extra credit hours were loaded with accounting courses thereby defeating the original intention.

Weaver said, "I think you still can have someone in accounting who went for five years who still can't have a conversation on current events."

In May 15 students will graduate with a degree in Accounting and Finance. Typically there are between 12 and 15 accounting and finance POEs in each graduating class. These students comprise 30 to 37 percent of the Accounting, Business, and Economics department.

Gaining and maintaining RSO status

Kendall Markel

Juniata had 95 registered student organizations (RSOs) during the 2006-07 academic year, but not all were active in the same manner.

RSOs are not required to maintain a certain number of members or hold a certain number of meetings or events each year to remain an RSO, according to Director of Student Activities Staci Weber.

However, club officers must go to the yearly student government allocation meeting, fill out an RSO reflection sheet and attend officer orientation meetings with Weber to be considered an active club.

RSO reflection sheets tally the events and activities the club organized and keep track of the club's financial status.

At the beginning of each academic year, Weber meets with the presidents and vice presidents of each club and suggests how to organize events, reserve space on campus for club events and promote activities.

Weber also has separate meetings with the club treasurers. She teaches them how to fundraise and gauge the cost of events.

Weber said clubs have different purposes and therefore might not have events or activities, but perhaps only meetings. She used Hillel, a Jewish cultural club, as an example. Hillel is an RSO, but it is mostly a support group for the Jewish community on campus. It might not organize major events like Fiesta Latina, she said, but it still serves a purpose for the campus.

To become a club, a group of at least ten interested people must complete a new RSO petition form, found on the Student Activities Web page. The club is officially registered if Weber and the student government senate approve the petition.

All new RSOs receive an automatic $200. Existing clubs must apply to the Allocations Board for funds, which come out of the $75,000 overall RSO budget. The Allocations Board divides the budget among the ten Common Interest Sectors (CISes), which each represent an area of RSOs. Each of the CIS representatives meets with the club treasurers from his or her sector to gain an idea of how much money to request from student government for the following year.

Usually, if clubs do not plan on being as active as in the previous year, but still want to have club status, they adjust the amount of money to request or do not ask for more.

If funds are retracted from inactive groups, the money goes into the Petitions Contingency Fund, which other clubs use if they go over their activities budgets.

Each club belongs to one of the CISes, which each are represented by one representative seat on the student government senate. The CISes are: advocacy, arts, collegiate club sports, communication, intercollegiate club sports, multicultural, outdoors, science, services and spiritual.

If a club decides to be officially inactive, either due to lack of membership or mission, members must complete an RSO Withdrawal Form.

This week, the gymnastics club handed in an RSO Withdrawal Form. Since the College does not have gymnastics facilities to allow for convenient practices, many students who initially signed up for the club quickly lost commitment, said club president junior Kara George.

Junior and Executive Treasurer Shawn Rumery said: "This year, [student government] received $7,000 from club closings. I went around, finding out what clubs were inactive and took back money that they weren't using."

If the terminated club decides to organize again in the future, members must submit an RSO form and go through the club-creation process again.

George said that after last fall's Lobsterfest, she thought the club was going to "get off the ground." More recently, however, the club members couldn't find an agreeable time to travel to a gym in Altoona to practice.

Weber said that usually the members that comprise a club are "half of what [sic] sign up for those clubs at Lobsterfest."

"If a student signs up for three or four clubs, then it's unlikely that each of those clubs will be a top priority to that student," said Weber.

Senior Beth Woodhouse, editor-in-chief of the Alfarata Yearbook, said the yearbook staff tries to give "equal coverage" to all clubs on campus, whether they are affiliated with an academic area or not. But when yearbook staff members contact club leaders to arrange times to cover their events, club officers often say, "we're not doing anything this semester."

"If a club is small and inactive and they come to me, I recommend them to reevaluate," said Weber. Reevaluation implies that a club, if inactive, might want to rethink its club status if it has difficulty maintaining and attracting new members.

"Members might not come to meetings, but a club can still be small and active," said Weber.

Some clubs may seem inactive due to lack of visibility on campus, according to Weber. The equestrian club is very active, but because it holds its activities on an off-campus farm, the club is not as visible as others.

Woodhouse said that clubs affiliated with academic departments tend to be less visible to the campus. "You might not know who they are unless you are a part of that department. SPEAK is a club that organizes the soapbox speeches and the Bailey Oratorical. Those kinds of clubs help out their department," she said.

Clubs like men's and women's rugby are known for their active memberships. Woodhouse said popular clubs are given more space in the yearbook to fit in pictures of events and members.

"Juniata has a lot of clubs that do well. Juniata College's students are more involved than other schools," said Weber, who determined the level of Juniata's club activity by comparing freshman and senior surveys of Juniata students to those at other schools.

If club leaders have questions or concerns about the process, they should approach Weber.

This year, student government has recovered $7,000 from club closings,a mere fraction of the $75,000 budget allocated to RSOs

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture is located? Send your guess to the Juniatian at juniatian@juniata.edu. Correct answers will go into a random drawing for a random prize. The winner will be named in the Juniatian's next issue.
Congratulations to Pam Campanaro, winner of last issue's WOC.

Juniata enters Facebook contest for laughs

Stand-up comic and original writer for CollegeHumor.com, Steve Hofstetter, has announced a contest between college campuses around the world.

Whichever campus has the most students join Hofstetter's Facebook group wins a free show and 100 free copies of his book about college life, "Student Body Shots."

Juniata is in the running. The Class of 2008 has spearheaded Juniata's involvement and has spread the word about the contest. To help Juniata win the prize, log onto Facebook, search for the group, "Steve Hofstetter is My Friend," and join.

The contest began as a grass roots method of promoting student involvement in the entertainment selection process at their schools. "This is a great way to find out which campuses are most interested in a show…and which campuses are most obsessed with Facebook," Hofstetter said.

The most booked comedian on the college market, Hofstetter joined Facebook as a Columbia alumnus and has been using it to communicate with his fans.

He reached 200,000 friends on Facebook last year. At that number, he met the maximum capacity of friends permitted by the site. After having his account reset, he quickly reached his cap again.

Now Hofstetter encourages people to join his group, aptly named, "Steve Hofstetter is My Friend." Within minutes of the contest announcement, his group grew to almost 400 members and continues to rise into the thousands.

Juniata currently faces competition from roughly 100 other schools.

Ryan Conrad, the president of the Class of 2008, is Hofstetter's representative for Juniata. Any questions about the contest can be directed to Classof2008@juniata.edu.

Albert Bado: A story to inspire

Optimism carries a man across continents

Elaina Clark

In a small African village isolated from the modern world, there once lived a boy who dreamed of something more. Little did this boy know that his dreams would one day become a reality. He would rise out of his humble village and become something that his family and community could never imagine. This is the story of Niamboue "Albert" Bado, a student at Juniata College.

Like most small villages in Africa, Bado's village Doudoulcy in Burkina Faso did not have running water, electricity or telephone. Many people worked on farms and like his father, Bado was expected to one day become a farmer.

However, out of the 24 children in his immediate family, Bado was chosen to attend elementary school.

"I showed an unusual interest in education through my behavior," Bado said. He explained that when he was little the only way he would stop crying was if his grandmother, who was illiterate, would pretend to write his name in the floor. Bado said that he would write and laugh also. "I proved to have a very good memory and verbal skills." He said that this was shown through story-telling.

The elementary school was in another village and at age seven Bado had to walk six miles back and forth everyday. He remembers how hard the first day of school was because everything, even math, was taught in French. His village and family only spoke Guruns.

He said, "School was good. For me, I enjoyed [sic] it even if it was a challenge."

Learning French was not the only scary thing that Bado faced because corporal punishment was not unusual at his school. Bado said with a huge grin, "They didn't hit me because I was good at learning things." However, he remembers his friends getting hit because they could not learn as well.

Besides academic challenges there were always social ones. Bado did not have shoes like his wealthy classmates. This, however, did not seem to bother him. His motto was, "You have nice clothes but I will beat you in the classroom." That is exactly what Bado did.

After six years of elementary school, Bado had to pass an exam and earn a Primary School Certificate that would allow him entry into middle school. He not only passed but won a government scholarship. "If I had to pay, I don't think my family could afford it," Bado said. Most of his peers did not pass the exam.

Separated from his family and the only life he's ever known, Bado left for middle school ten miles from his village. It was too far to walk so he stayed with a distant relative.

As most middle-school students do, Bado began thinking about his future. He said that he was very tempted to drop out of school and leave for the Ivory Coast where young boys go to work in plantations and make decent money.

Bado said, "It's difficult to make a child decide a different path than their parents. I wanted to be a farmer too." He, however, went against the odds and decided to become a teacher.

This not only distinguished Bado but set him apart from his family and community. At the time, he was the only one of his 24 brothers and sisters, seven mothers and father that could read and write. He was also the only native from his village that was literate. Bado said that whenever anyone received a letter, it would be sent to him to read and translate.

Being educated was not an easy task. Bado said, "It's hard to be motivated because no one is reading. I had to really create my own personal motivation." He explained that doing homework was thought of as being lazy in his village in comparison to back-breaking farm work.

Bado continued to study hard and proceed with his education. After four years he faced another exam to enter high school. He passed it and earned another scholarship.

For three years Bado remained at the high school away from his village. Every three to four weeks, he rode his bicycle 31 miles to see his family. "My parents encouraged me to do well. I do everything to make them happy," Bado said.

His commitment to education was tested and rewarded once again when Bado passed another necessary exam, earned a scholarship and entered the University of Ouagadougou, making him the only person in his elementary school that attended college. In college, he studied English literature and linguistics for three years and acquired a license or degree in the French education system.

He is living proof that Africa is an optimistic peace-loving continent

At this point, Bado could have settled down in his village and become a high school teacher, but the department chair at Ouagadougou saw promise in his abilities. Bado was convinced by the department chair to apply for a Fulbright scholarship that would allow him to study in America.

Bado said that he was worried about being poor because nothing is fair in his country. He said that he was still in doubt up to the interview until he saw that it was being conducted by the American Cultural Center. "I was very happy on the interview day," Bado said.

He believes that he wouldn't have got the scholarship had the interviewers been people of his country. The scholarship would have gone to a wealthy student, feeding a "vicious cycle" that gives only wealthy people educational opportunities, Bado said.

That cycle was broken for Bado and today he is an English, education and linguistics POE at Juniata. He likes to ride his bike, play soccer, write stories, write in his blog and read books.

Prudence Ingerman, intensive English instructor said, "He's a good teacher and shows great promise." Ingerman and Bado are currently writing a book about Bado's history for the TESL (Teaching English as a Second Language) program in Otavolo, Ecuador.

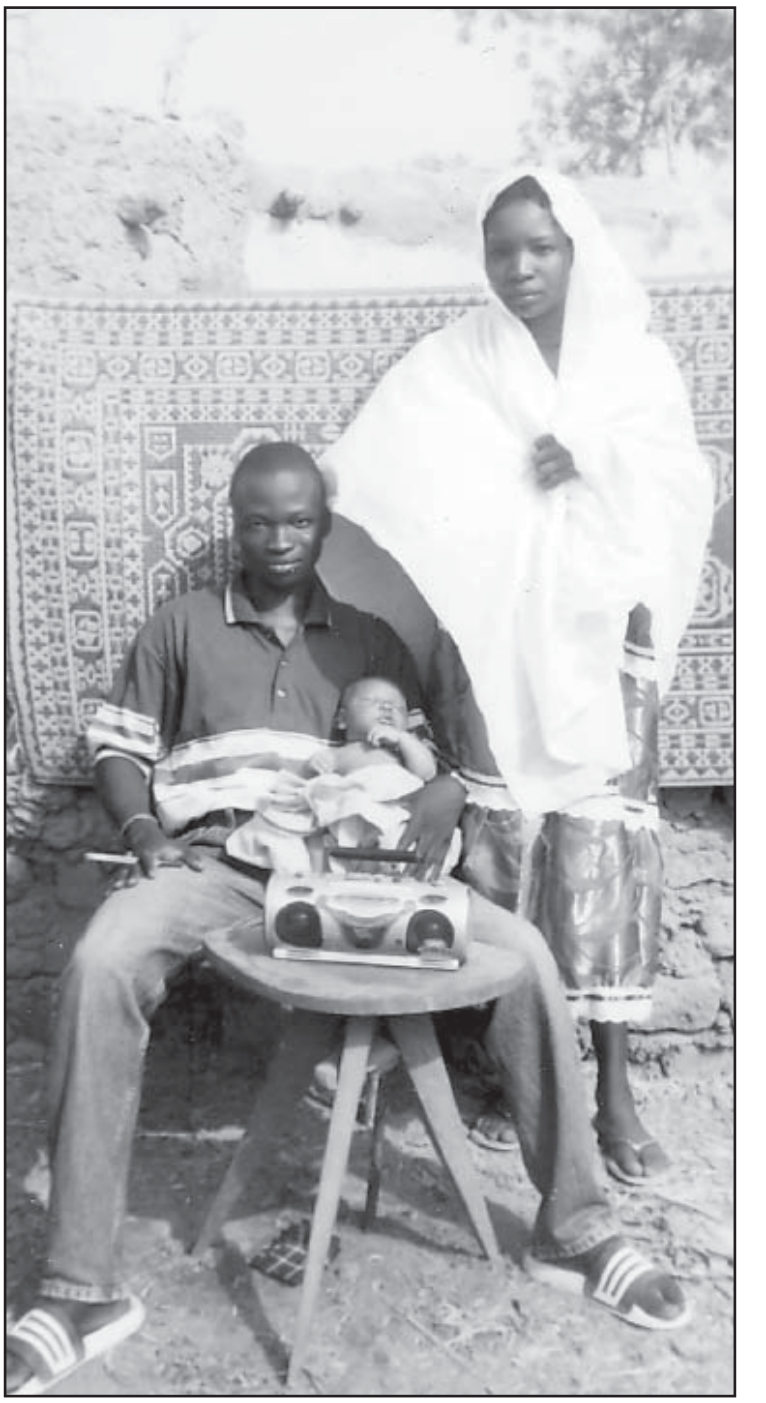


Photo courtesy of Albert Bado

Albert Bado (left) poses with his nephew and sister-in-law at his home in Burkina Faso, Africa. Bado was the only one of his 24 siblings chosen to attend school. He is now an English, education, and linguistics POE at Juniata.

Bado has achieved what most people from his home had never though possible and yet, he still remains determined to go higher in life. His next goal is to attend graduate school.

Although his future seems uncertain now because he has not received word on any scholarships, Bado appears to greet this challenge like every other one with laughter, hard work and a positive attitude. If he does not receive any scholarships, he will go back to his country, teach and hopefully return to the U.S. someday to finish his education.

Emil Nagengast, associate professor of politics, instructed Bado in one of his classes. "He is living proof that Africa is an optimistic peace-loving continent," Nagengast said.

When Bado was asked what piece of advice he could give he said, "Be optimistic and have perseverance. Don't let people tell you [that] you are nothing."

Burkina Faso facts:
Population: 12.8 million
Life expectancy: 47 years (male), 48 years (female)
from BBC News Country Profile

What are social norms?

What are social norms?

Social norms are beliefs and attitudes about what is normal, expected and appropriate in any given social environment.

Research has indicated that we often perceive behaviors such as alcohol use on campus as being out of control. However data about the actual use of alcohol shows that our perceptions are wrong.

According to a Harvard study, most students are choosing to drink moderately or not at all. And the National Social Norms Research Center reveals that "a clear majority of students surveyed at 140 U.S. colleges reported moderate drinking as the campus norm."

Social Norm Campaign on campus

Recently the JC Health & Wellness Center (JCHWC) received a grant from the Pennsylvania Liquor Control Board to address high risk and underage drinking on campus. One way to address this is through a Social Norm Campaign. The JCHWC is collecting data from current Juniata students to provide the campus community with the real facts about alcohol use on campus. To date, statistics indicate respondents claimed moderate to no alcohol use.

The JCHWC intends to finalize data collection and kick off the Social Norm Campaign in the fall of 2007.

To learn more about the Juniata Social Norm Campaign, or to learn more about what you can do if you or someone you know has a problem with alcohol, contact the JC Health and Wellness Center at health&wellness@juniata.edu or call extension 3353.

Information provided by The Health and Wellness Center

Lab costs

continued from page 1

pot," said Keeney.

The lab fees are combined with other operation costs that are then used for miscellaneous needs across campus.

Laurence Mutti, chair of geology, said: "Generally speaking, fees go in to budget black holes."

He said faculty worked with the administration so that the additional $25 from the lab fee now goes directly into the departments.

Labs face other costs in the form of machines and components. The von Liebig Center for Science and the Brumbaugh Academic Center both have staff in charge of buying supplies. For von Liebig, Sherry Isenberg, science supply coordinator, manages chemicals and other supplies.

Isenberg described the chemistry labs as the most expensive because of the large amounts of chemicals required for labs. She said that in the past two months chemistry lab costs were estimated at $8,088.

Many labs, such as those in geology, include field trips. Although costly, these field trips are important for a student's complete education.

"We can't run a viable program without field trips," said Mutti. "The extra $25 [per student] has been a tremendous help."

Other lab costs originate from upgrades such as the large changes the physics department went through a few years ago. With the large influx of students who needed the introduction to physics lab, two new sections of lab were created.

Siems said: "It was a huge expenditure to buy equipment for three to four lab stations."

Part of the reason the physics labs are in such demand is because all biology students are required to take a year of introductory physics labs. To help out, Keeney said that a portion of the biology department's budget was transferred to physics to help defray the costs the new labs.

Balancing the cost of a lab with its benefit to the students is a constant struggle.

Keeney said: "Faculty sit back and think about what techniques and processes are most critical to students and which ones we can offer."

English teachers needed at school in Guatemala

Ryan Richards ('06), now the Development and Volunteer Coordinator at the Colegio Miguel Angel Asturias in Guatemala, invites all Juniatians to consider working as an English teacher at the school.

THE POSITION

English Teachers will provide students with basic exposure to the English language, making use of various mediums, including music, movement, games and conversation.

The position would involve teaching kindergarten through second grade or third through sixth grades.

Teaching positions are for 25 hours per week, with a minimum six-month commitment.

The Colegio is not able to provide any financial support for this position at the present time. Comfortable living in Xela, Guatemala, including occasionl travel within the country, averages $400 per month.

NECESSARY SKILLS

Enthusiasm, and a love for children; some teaching experience; medium proficiency in the Spanish language; openness to innovative pedagogical methods; commitment to fighting poverty in Guatemala through educational reform

ABOUT THE SCHOOL

Colegio Miguel Angel Asturias is an internationally distinguished nonprofit K-12 school in Xela, Guatemala, that educates children from Guatemala's poorest and most vulnerable sectors of society. In addition to developing the critical thinking skills of students, the school's curriculum is uniquely designed to teach students what it means to be engaged and responsible citizens in their school, community and the larger society.

To find out more, contact Ryan Richards at ryan@colegiomaa.org or (360) 312-7679.

A year of life in the JC bubble

Reflecting on a year's worth of issues along with the drama and discussion that evolved

EDITORIAL

The warm weather of late August has long since faded into the coolness of a Pennsylvania autumn, transformed into the raw chill of the winter months and finally restored to the pale April sun. Lobsterfest is over, Mountain Day has passed, the Christmas lights of Madrigal have been extinguished and Pig Roast's rugby game has been called. A year at Juniata has passed.

The ballet that is Juniata's academic year has afforded the Juniatian's editorial board with enough controversial issues to fill a thousand Juniatians with editorials. Every two weeks since those first days in late August, this newspaper's editors have labored in their production of these pieces. Never has the decision to write an editorial been taken lightly, and the editors always choose to write pieces that will promote campus discussion.

More often than not, however, those who read what is printed here elect to dismiss it. One recent commentator serving in the student government even went so far as to call it poor, propagandistic journalism.

After all, it is far easier to lambaste the author of an editorial than it is to promote genuine conversation about the issue it discusses.

At the beginning of the year, the Appserver editorial that was printed here sparked not only a vehement argument on the forums, but also a series of closed-door meetings with Juniata's technology administrators. As usual, discussion in both of those arenas eventually deteriorated to the "destroy the Juniatian" variety.

Despite this, the editorial served its purpose, and the campus knew more about Appserver by the discussions' end than it had ever dreamed possible.

Later, another editorial criticized professors who assign copious amounts of work over fall break.

While few students objected to the points raised there, professors quietly condemned it. Once more, this newspaper faced harsh criticism for publishing the editorial in the first place.

Another editorial, this time outlining the steps necessary to create a sustainable culture at Juniata, altogether failed to produce any discussion—as did the editorial that followed outlining this newspaper's role as the only journalistic entity on campus.

These failures once again confirmed to the editorial board that Juniata students, staff and professors are not interested in discussing the issues raised in this newspaper, but are rather infinitely more interested in grilling it for everything else.

Most notably this year, this space featured two editorials on the sexual and gender minorities seat in the student senate. The first editorial outlined the reasons why the seat was necessary, while the second condemned those who stood in opposition to its creation.

Initially, campus conversation after these editorials was limited to talk about typographical errors and mispellings in the Juniatian.

But nearly one hundred forum posts later, students and faculty were truly assessing the issue at hand. People were reacting to what was printed. These editorials, for that reason, were succesful.

Yes, the Juniatian does all too often feature such errors. Yes, they are inexcusable. And no, this editorial will not seek to defend such mistakes. Instead, the precious space this editorial consumes will be used for something better, something above defending the mistakes outlined in the corrections box to the right.

We believe in Juniata. We believe that knowledge does indeed set one free.

But we also believe that this campus must move beyond bitter, small-minded attacks on the Juniatian and into thought-provoking, intellectual discussions about the real issues it prints.

It may be too much to ask. After all, most students are far more interested in seeing who can come up with the most original typo joke than they are in seeing a real campus change occur.

This editorial is not asking for mercy. We are not whining about being the target of sarcastic remarks. We are instead encouraging Juniatians to do something else: care about something.

It is apathy that has brought us to this place. It is apathy that has convinced all too many of us that it is better to make jokes than it is to argue an issue with passion and fervor.

Care about something, Juniata. Care about something that is larger than a "to" versus "too" error in an article. Care about something bigger than a misplaced comma or period. Care about something that will matter in the end.

The Juniatian and its writers, despite the typos, do indeed care about grander things. We just hope that eventually the rest of the campus can, too.

CORRECTIONS

The Juniatian regrets the following errors printed in the April 10 issue:

The newly-elected student government president Shawn Rumery is a junior, not a senior.

The Good Hall renovations article said, "Right now, according to Kepple, Juniata cannot gather more than $2 for this project." The actual figure Kepple cited was $2 million.

The CROP article contained several errors.
Derek Morris' name was misspelled.
CROP stands for Communities Responsing to Overcome Poverty.
Seventy-five percent of the proceeds went to the Church World Services for international use.
"Don't Flush Your DCB" was not created by Derek Morris and Sarah Roby, although they have been working hard to advertise the program along with Jen Jones who worked with Sodexho. Keri LaBella ('06) founded the program.
"Don't Flush Your DCB" takes unused DCB and purchases food for the Huntingdon Food Bank.

The Kvasir article mistakenly reported the group's meeting space. The meetings are held in Kvasir's office on the second floor of Ellis Hall.
Kvasir prints several small issues in the fall and one large issue in the spring.
Kvasir prints all submissions.

The Juniatian apologizes for all errors.

Although the staff writers and editors strive to produce an error-free newspaper, to our regret, at times mistakes do pass through our review. The Juniatian encourages members of the campus community to report any errors discovered in the paper at juniatian@juniata.edu.

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.
Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Letters to the Editor

Former Juniatian experiences VA Tech tragedy

In the spring of 2006, Heather Lockwood was a freshman at Juniata College and an editor on the Juniatian staff. This past fall Lockwood transferred to Virginia Tech where her siblings are also students. On April 16 she and the rest of the Virginia Tech community became a part of the most deadly school shooting incident in American history.

Lockwood, her sister and brother are all safe. Thirty-two other sons, daughters, sisters, brothers, mothers and fathers are not. Within two hours, those 32 victims lost their lives in a killing spree that has much of the nation in horror and mourning. The following letter from Lockwood, written on the day after the incident, recounts the day's events and her own response to the tragedy.

Dear editor and Juniatians alike,

Shock, that's all there really is to say.

To those of you who worried about my safety and have sent their warmest wishes, condolences, and love, I thank you with all of my heart.

This year has been a year like no other at Virginia Tech, and for those of you who remember, I was among you all last year. Deciding to transfer for various reasons, Virginia Tech has been my wonderful home for almost a year and this unfortunate experience only adds to what I will always remember. Virginia Tech is an amazing university and this event does not and should not label the caliber of the school.

Sitting Monday morning at a desk in the math emporium, which is a slightly off-campus academic site, I received a call from my sister and from that point chaos hit.

The whole day was one of anxiety, stress and lack of communication. Initially, the e-mail server was so blocked-up it was too difficult to check and see what exactly was going on around campus. Cell phone lines were also locked-up solid. Imagine trying to call your mom, dad and even your brother and sister who also attend school with you and not being able to tell them you are okay.

I remember seeing all the faces of the students around me. At first their expressions were nonchalant or showed disbelief. But as time passed, their faces expressed grief, anxiety and constant struggle for information.

I am usually brilliant at multitasking, but trying to maintain over 25 AIM conversations at once is a struggle. But it was the only thing we had to make sure all of our friends were okay. I never thought I'd say this, but thank God for Facebook, without it, many of us may not have gotten through the day with at least some sort of relief.

Most of my friends were on lock down in the dormitory that was a part of the shootings. Some of my friends were stuck in buildings around where the bulk of the shootings occurred. I finally made it home where I bunkered down with my sister, roommate and friends. We all sat silently in front of the T.V., all typing storms on AIM instant messenger. It was surreal to say the least.

I wasn't sure what to make of it all, but soon anxiety hit me and sometimes events like these make us physically sick for the strangest reasons. Tossing my cookies and trying to calm myself during the day, I found countless e-mails, voicemails, text messages, Facebook messages, all from family, friends and Juniatians.

My sister and best friend's respective sororities have felt great grief and deeply personal effects from the situation. My brother and other close friends have felt the greatest heartache they could ever feel as names, updates and stories unfold. It hit home for me when I saw my best friends for the first time.

I met with my sorority for the convocation where President George Bush, other government officials and Virginia Tech faculty spoke. We arrived to Cassell Coliseum at 10 a.m. where we waited for hours to get in the doors.

While tears streamed down our faces, camera men stood all around. The media is insensitive, terrible and heartless. While feeling the grief we felt, cameras were shoved in our faces as we tried to get away from them. But they still followed. It was disgusting, sickening and completely cold. I have never felt so disrespected in a time of worried minds. We were unable to stop our emotions or stop those who disrespected our personal space.

I sat in Cassell Coliseum in silence, as all the students did. It was a sea of orange and maroon decoration and dress. Finishing the solemn ceremony was Nikki Giovanni who is a brilliant, world renowned professor at Tech. Her poetry soared throughout the seats and over the public address system in Lane Stadium where over 20,000 students and public sat. She preached exactly what Tech is all about. "We will prevail….We are….Virginia Tech."

Virginia Tech is a campus full of school spirit, pride, unity and integrity. I have found that throughout my entire experience here I have learned what being a Hokie really means. If you ever have the opportunity to ask me what a Hokie really is, I'll I will only ever say: "I AM."

This experience has brought everyone together in a powerful way that we will always remember. Virginia Tech's spirit is spread throughout the entire nation and that is an amazing and beautiful thing.

Keep Virginia Tech in your hearts and thoughts. Forget about all college affiliations for a bit. At least for right now, me, you and everyone else, we are all Hokies.

Sincerely,
Heather Lockwood
Virginia Tech, '09

Student reacts to recent editorial

Dear Editor,

Okay, I have something to say about the editorial that was printed on page 8 of the Juniatian of this last issue.
